Prairie Grain Advance Payments Act.—This Act, which came into force on No 25, 1957, and was subsequently amended in August 1958 and November 1968, provic for interest-free advance payments to producers in Western Canada for farm-stored thresh grain (wheat, oats and barley). Advance payments of $1 per bushel of wheat, 40 cer

r bushel of oats and 70 cents per bushel of barley are made subject to certain restrictions to quota and acreage. The total of advances obtained in any crop year may not exceed ,000. Repayment is effected by deducting 50 p.c. of the initial payment for wheat, oats d barley delivered subsequent to the loan until the producer has discharged his advance.

Farm Credit Act.—The Farm Credit Act (SC 1959, c. 43, proclaimed on Oct. 5, 59) established the Farm Credit Corporation as successor to the Canadian Farm Loan ard established in 1929. The Corporation, which is a Crown agency, reports to Parliaent through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans for farmers. Under Part II e Corporation may lend up to 75 p.c. of the appraised value of the farm land and buildings ken as security, not exceeding $40,000 for one, $80,000 for two or $100,000 for three or re owner-operators principally occupied in a single farming business. Under Part III ns may be made up to 75 p.c. of the appraised value of the land and chattels, not exeding $55,000 for one or $100,000 for two or more qualified owner-operators in a single m business. Special provision is made under this Part for loans up to 90 p.c. of farm ets where the owner-operator is under age 35 and the management of the farm is conerably above average. Part III loans are further secured by insurance on the life of the rrower, and his farming operations are subject to supervision by the Corporation. nilar life insurance and supervision are available to Part II borrowers on an optional sis.

Under both Parts, applicants must be at least 21 years of age and principally occupied farming. Individual borrowers under Part III must be between 21 and 45. To qualify more than $55,000 under Part III, there must be at least two owner-operators under or one under 35. All loans are repayable on an amortized basis within a period not eeding 30 years. The interest rate is set by Order in Council and varies with the t of money to the Corporation.

The Corporation has 122 field offices administered by 253 credit advisers who are ponsible for informing local farmers about the services available, for pre-loan counselling credit use, farm planning and farm management, for accepting applications and for king farm appraisals.

In addition to the amounts repaid by borrowers, funds for lending to farmers may be rowed by the Corporation from the Minister of Finance. The aggregate amount of h borrowings outstanding at any time may not exceed 25 times the capital of the Coration. This capital was raised by amendment to the Act in 1968 from $40,000,000 to ,000,000. There were 68,496 loans to the amount of $1,111,520,366 outstanding as of r. 31, 1970.

Farm Syndicates Credit Act.—The Farm Syndicates Credit Act (SC 1964, c. 2 as amended by SC 1968-69, c. 32) authorizes the Farm Credit Corporation to lend to qua fied groups of farmers (referred to as syndicates). A syndicate is a group of three or m farmers, the majority of whom have farming as their principal occupation, who have sign an agreement acceptable to the Corporation with respect to the joint purchase and u of machinery, equipment or buildings which can be used profitably by them in their farmi operations. Co-operative farm associations and certain farming corporations may qual as syndicates for loans without the members entering into a formal agreement.

A syndicate may borrow up to 80 p.c. of the cost of machinery, buildings (includ site and other improvements) and installed equipment suitable for joint use, to a maxim of $15,000 per member or $100,000, whichever is the lesser. Loans are repayable ove period not exceeding 15 years for buildings and installed equipment, and seven years mobile machinery. The interest rate is based on the cost of funds to the Corporati advanced by the Minister of Finance, and its expenses in servicing loans. There is initial charge of 1 p.c. on the amount of each loan. Security is provided by a promiss note signed by each syndicate member, and such other security as may be required. Up Mar. 31, 1970, the Corporation had approved loans for 582 syndicates totalling $7,500,0

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 19 provides for direct money payments by the Federal Government on an acreage-and-yi basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace Ri area of British Columbia. Its purpose is to assist in dealing with a relief problem wh the provinces and municipalities cannot do alone and to enable the farmers to put in a c the following year. Payments for the 1969-70 crop year, as at July 31, 1970, total $5,230,281; payments made under the Act since 1939 amounted to $383,516,518.

Payments are made from the Prairie Farm Emergency Fund to which farmers cont ute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. T

ditional funds required are provided from the federal treasury. The total collected rough the 1-p.c. levy in the 1969-70 crop year, as at July 31, 1970, was $5,451,832; the nount collected since 1939 was $207,378,387.

Farmers operating land in the spring wheat area, and not covered by a federal-provin-l crop insurance scheme, are eligible for awards. Crop failure and natural causes eventing seeding and summerfallowing are taken into account in making awards. These y not exceed $800 in respect of any one farmer's total cultivated acreage.

The PFAA administered the Operation LIFT program in 1970. This program offered reage payments to farmers who reduced wheat and increased summerfallow acreage and s introduced by the Federal Government to alleviate problems arising from the huge eat surplus. Payments to farmers as of Dec. 17, 1970, amounted to $47,499,454.

Livestock Feed Assistance Act.—The Livestock Feed Assistance Act (SC 1966, 52) established the Canadian Livestock Feed Board, which is a Crown agency reporting Parliament through the Minister of Agriculture. The Board has four main objects which to ensure: (1) the availability of feed grain to meet the needs of livestock feeders; (2) availability of adequate storage space in Eastern Canada for feed grain to meet the eds of livestock feeders; (3) reasonable stability in the price of feed grain in Eastern nada and in British Columbia; and (4) fair equalization of feed grain prices in Eastern nada and in British Columbia.

In furtherance of these objectives, the Board may make payments related to the cost feed grain storage and transportation. Feed grain transportation assistance payments ve been made since 1941, and since April 1967 have been made under the authority of Livestock Feed Assistance Act. Under the Feed Grain Assistance Regulations of the propriations Act, the original policy was initiated in October 1941 to provide a market western feed grains, and to enable livestock feeders in Eastern Canada and British lumbia to obtain supplies of feed grains at a cost that would maintain livestock and ultry production at a high level. This program has been modified over the years to courage better utilization of both transport and storage facilities.

Section 3.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operat by the Agricultural Division of the Department of Mines, Agriculture and Resourc The Division consists of a director and a staff of 64 officers under the administration of t Deputy Minister of Agriculture and Co-operatives. For purposes of administration, t province is divided into nine districts in each of which is located a fieldman with permane headquarters. Officers in charge of different phases of agricultural development visit ea district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of $1 an acre on land cleared by privately owned equipment; the distribution of ground limesto at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance agricultural societies, marketing organizations and exhibition committees. An inspecti service is provided for poultry products, vegetables and blueberries, production of the lat being encouraged by the burning of suitable berry areas and the improvement of roads a trails leading to them.

Every encouragement is given to the production of livestock. Favourable marketi conditions and departmental assistance and loans under the Provincial Farm Developme Loan Act and the Newfoundland Farm Products Corporation Act have contributed increased output of poultry products and pork. The Provincial Veterinarian and his st supervise the health of animals program and the federal-provincial project for the eradi tion of bovine tuberculosis and brucellosis.

Prince Edward Island.—The Prince Edward Island Department of Agriculture composed of the following Branches and Divisions. The Extension Services Branch de with rural extension education generally, through its three Divisions: the Agricultu Economics and Statistics Division; the Agricultural Representative Division which h five district offices, each with an agricultural representative, a home economist and a fa management specialist; and a Women and Youth Division, which includes an Informati Section. The Production Sciences Branch supervises the regulatory function of the Depa ment and assists with agricultural extension programs. It has three Divisions: the Sc and Water Division, the Production Science Division and the Veterinary and Dairy Servic

The Department of Agriculture is also responsible for the forestry program in t province, which function comprises a third Branch of the Department; it is described Chapter XII under "Provincial Forestry Programs".

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "h the people to help themselves" through strengthening member interest in such organi tions as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Asso tion, various agricultural co-operative organizations, credit unions and producer a marketing organizations.

New Brunswick.—Provincial government agricultural policy and programs in N Brunswick are administered and directed by the Department of Agriculture and Ru Development. Under the Minister of Agriculture and Rural Development, the Dep ment is administered by a deputy minister, an assistant deputy minister and the direct of Branches concerned with: extension, livestock and dairying, veterinary services, poult plant industry, agricultural engineering, home economics, credit unions and co-operativ agricultural education and rural development. The Department also has a Farm E nomics Division and an Information Division, as well as a Farm Adjustment Board an Dairy Products Commission.

* Prepared by the agricultural officials of the respective provincial governments.

Quebec.—Agricultural policies of the Quebec Government, as applied by the Department of Agriculture and Colonization, are based on one overriding and clearly defined objective—to make agriculture profitable and bring it into line with the social and economic needs of the 1970s.

Its prime target is, therefore, a systematic modernization of farms. Government, in co-operation with agricultural and related associations, is trying to increase and improve production. It is also attempting to guide agriculture along truly professional lines, through conversion of production techniques to meet local needs and skills, through sound land-use development policies, and through adult education and practical management training in agricultural study groups.

To carry out this objective, the Quebec Department of Agriculture is divided into two main Branches—services connected with direct action on the part of the farmer himself, and departmental services directly related thereto, e.g., the regional agricultural offices and laboratories, and personnel and administrative services.

Under the direction of the Minister, Deputy Minister and three Assistant Deputy Ministers, these Branches work in co-operation with the scientific and technical services which function not only as a support group, but also contribute to their general orientation.

The Regional Offices and Laboratories Branch is responsible for counselling as well as for improving and increasing production, along well-considered lines. It is particularly concerned with farm reorganization through regrouping and developing up-to-date and viable units. It exercises a direct influence on farmers through its 12 well-organized regional administrative offices and laboratories.

The Personnel and Administration Branch supplies the manpower, co-ordinating labour relations, staff training and employee services and organizing promotional competitions through the Civil Service system. It also co-ordinates the work of various administrative branches of the Department and, in co-operation with the Accounting Branch, prepares part of the estimates. It also looks after the internal and external needs of the Department as regards supplies and equipment.

Each of these two main Branches operates in a specific field requiring the co-operation of other departmental services such as Legal, Accounting, Grants and Incentives, Agricultural Water Supplies, and Storage and Equipment on the administrative side, and Veterinary Services, Artificial Insemination and Herd Improvement, Farm Organization, Economics, Marketing, Education and Research, and Information services on the regional offices and laboratories side. Each of these Branches therefore plays an important role in the efficient operation of the Department and contributes to its effectiveness in direct action in the field.

The entire departmental structure is rounded out with the Agricultural Marketing Board, Farm Credit Bureau, and Crop Insurance Board, which implement legislation for both the farmer and the consumer. A Crown corporation, the St. Hilaire Sugar Refinery, completes the organization. It promotes the growing of sugar beets in part of the green belt around Montreal.

Ontario.—The Ontario Department of Agriculture and Food conducts a wide variety of programs to develop a sound agricultural industry and to help farmers. Most assistance is through self-help programs which benefit the individual farmer. The Department administers 47 separate legislative Acts, some of which are regulatory on an industry-wide basis.

Through the Agricultural Rehabilitation and Development Branch (ARDA) the province shares equally with the Federal Government the cost of rural development. In Ontario, ARDA is heavily committed to farm enlargement and consolidation, capital grants for farm development, retraining and research programs, development of community pastures where farmers rent pasture at cost, and soil, water and forest conservation projects.

Agricultural Manpower Services assists in recruiting, moving and placing farm work during the planting and harvesting seasons. This service operates under the Provinc Agricultural Manpower Agreement negotiated each year by the Federal Government a the provincial governments.

The Co-operative Loans Board makes loans to agricultural co-operative associati for the construction of cold storages, feed mills, processing plants, grain elevators, pot storages, dairies, creameries and cheese factories.

The Crop Insurance Commission of Ontario, a Branch of the Department, provi insurance against weather, insect and disease damage to winter wheat, spring grain, for crops, grain corn, soybeans and white beans. Premium rates are subsidized 25 p.c. by Federal Government and 5 p.c. by the Ontario Government.

The Soils and Crops Branch conducts programs of applied research to provide farm with specific recommendations for their areas. Soils and crops specialists frequently w with local branches of the Ontario Soil and Crop Improvement Association to relay information to the farmers. The specialists also supervise the county weed inspec who enforce the Weed Control Act.

The programs of the Veterinary Services Branch fall into the categories of service regulation. Services include administration of a mastitis control program, a certified h policy for swine and veterinary assistance for designated areas (mostly in the north districts); the Regulatory Division administers the Meat Inspection Act, the Brucell Act 1965, the Animal Contagious Diseases Act, the Livestock Community Sales Act, Dead Animal Disposal Act, the Rabies Indemnification program, the Mastitis Con program and the Animals for Research Act. The Branch provides diagnostic services livestock and poultry producers at five regional laboratories.

The Live Stock Branch supervises numerous livestock improvement programs administers the Warble Fly Control Act, the Artificial Insemination Act, the Dog Tax Live Stock and Poultry Protection Act, and the Hunter Damage Compensation Livestock improvement programs include dairy herd improvement; beef cattle perform testing; quality meat sire policy; bull, boar and ram premium policies; production tes in sheep and the federal-provincial sheep transportation assistance policy; and north Ontario livestock assistance. The Branch sponsors and endorses the Ontario Beef Ca Improvement Association and the county and district associations, makes grants avail to regional livestock clubs that hold sales of good quality breeding stock, and spon exhibits of livestock outside the province.

The Ontario Stock Yards Board, which operates under the Federal Livestock Livestock Products Act, was established to provide a marketing service for Ontario l stock producers and to protect their bargaining power.

The Ontario Milk Commission, a Branch of the Department, is responsible for d programs. Under the Milk Act, 1965 and through the Ontario Milk Marketing Board the Ontario Cream Producers' Marketing Board, the Commission is responsible fo producer marketing of milk and cream in the province. The Ontario Milk Marke Board directs milk from farm to plant and establishes prices. The Commission admini the Farm Products Payments Act, 1967, the Oleomargarine Act, and the Edible Oil Prod Act. It also carries out the milk quality program, audits plant records, supervises fluid milk, milk products and central milk testing programs. The Infra Red Milk Anal (IRMA) is the only recognized method for determining milk fat content in Ontario. Commission licenses processors and distributors, carries on extension work with produ operates milk-testing laboratories for the purpose of calculating producer returns, cer butter and cheese makers, graders and testers, and does inspection work on farm and in p

The Farm Products Inspection Branch promotes improved methods of disease con grading, packaging, marketing, handling, storing and transporting Ontario farm prod This is provided for under the Farm Products Grades and Sales Act and Regulations the Plant Diseases Act.

Under the Ontario Farm Products Marketing Board, a Branch of the Department of griculture and Food, 19 producer boards market 37 commodities with a total market value approximately $500,000,000 annually.

The Ontario Food Council Branch of the Department has the broad responsibility of nding methods to better co-ordinate marketing of Ontario farm products in Ontario, other anadian provinces and abroad. The Council includes representatives of producers, rocessors, wholesalers, distributors and consumers. Market development, import replace- ent, and expanding food information and consumer affairs services are major areas of the ouncil's work. The Ontario Food Terminal, operating under the Ontario Food Terminal ct, offers farmers the services of one of the largest volume wholesale fruit and vegetable arkets in Canada.

Research and education are administered by the Education and Research Division the Department. Under the Division, the Agricultural Research Institute of Ontario commends and co-ordinates research for the betterment of agriculture, veterinary medicine nd household science, undertakes continuous research on crops, livestock and farming ractices, and administers a number of services. Horticultural research is co-ordinated the Horticultural Research Institute of Ontario, which also operates under the Education nd Research Division. Fruit and vegetable product development research, and fruit nd vegetable variety research are the chief functions of the Institute. The Provincial esticide Residue Testing Laboratory tests samples of animal, vegetable and mineral igin for herbicides, fungicides and insecticides. The Laboratory continually tests milk llected from Ontario farms for pesticide residues. The Division is also responsible for re diploma-course programs at the Ontario Agricultural College at the University of uelph, and at the Colleges of Agricultural Technology at Centralia, Kemptville, New skeard and Ridgetown.

The Provincial Entomologist reports on insect control programs, as provided under e Plant Diseases and Abandoned Orchards Act, to determine pest control recommenda- ons for Ontario crops. The Provincial Apiarist is responsible for reporting on the bee and ney industry.

There are 54 county and district Extension Branch offices to serve Ontario farmers. nese are staffed by agricultural representatives who relay information about agricultural search developments directly to farmers. In addition, specialists on farm management d engineering are located strategically throughout the province. The northern Ontario sistance policies of the Department, which vary from year to year, are also administered the Branch. The Branch endorses and assists the 4-H Clubs and the Junior Farmers' sociation of Ontario.

The Home Economics Branch conducts an extension program for rural women's groups d for girls' 4-H home-making clubs. The senior program deals with the study of foods, trition, clothing, textiles, home furnishings, home crafts and home management.

The Information Branch publishes and distributes several hundred publications vering most areas of agriculture in Ontario, as well as home gardening and homemaking. ews releases, radio tapes and television are used to convey information on important anges in agriculture to farmers. Its film library distributes more than 2,000 films nually to the public.

The Agricultural and Horticultural Societies Branch advises and offers financial istance to agricultural and horticultural societies and ploughmen's associations through- the province and administers the Community Centres Act which authorizes grants to nicipalities for capital investments in community centres and recreational facilities.

The Ontario Telephone Service Commission provides technical and management advice the 66 Independent Telephone Systems (municipal and privately owned) operating rural Ontario.

The Farm Economics, Co-operatives and Statistics Branch does research into marke ing, policy, production, land use, and dairying; works with the Dominion Bureau of Statisti to collect and publish statistics on farm production and marketing; and provides servic to various Ontario agricultural co-operatives.

Manitoba.—The Department of Agriculture serves Manitoba through the followi branches.

The Extension Service Branch deals with rural extension education generally and h specialists devoting attention particularly to agricultural engineering, entomology a beekeeping, radio, TV and information, 4-H Clubs and women's work, manpower and rur development. Meetings, field days, and short courses are held; 39 agricultural represent tives and four assistants are located in 37 offices in the province, each serving from one five municipalities, four manpower extension agents serve the Interlake region, and home economists serve designated areas.

The Animal Industry Branch develops and administers policies that encourage t improvement and efficient production of different classes of livestock, including poultr supervises the grading of cream and inspects dairy manufacturing plants. Several A to promote high quality products for consumer protection are administered in co-operati with federal departments.

The Soils and Crops Branch encourages the development, production and improv ment of cereal, forage and special crops and horticulture and promotes proper land u through soil conservation programs. The Branch develops and administers policies th encourage good field crop husbandry, soil conservation, land development and weed contr

The Economics and Publications Branch deals with agricultural economics, sup vises the farm business clubs and publishes and distributes annually approximately 250,0 bulletins, circulars, posters, leaflets, etc. The Branch is responsible for publishing p vincial agricultural statistics and maintains an agriculture reference library.

The Co-operative Services Branch registers and supervises co-operatives and cre unions and administers the Acts governing them. It also collects and compiles statist on co-operative activity throughout the province. Producer marketing boards and Mark ing Commissions under the Natural Products Marketing Act are also served and admi stered through this Branch.

The Veterinary Services Branch provides a diagnostic laboratory for animal diseas administers the Veterinary Services District Act and the Veterinary Science Scholars Fund Act; and works in close co-operation with practising veterinarians and the fede Health of Animals Branch in the control of livestock and poultry diseases.

Saskatchewan.—The Saskatchewan Department of Agriculture is composed of following branches and services.

The Agricultural Extension Branch is the main extension agency of the Departm and has the primary objective of maintaining and increasing the over-all efficiency agricultural production. To that end it provides a basic extension program designed (1) ensure that the most modern farming techniques and the latest research findings made available to farmers; (2) provide leadership and general guidance in agricultu adjustment programs needed to bring about necessary social and economic progress; a (3) co-ordinate and administer field programs and policies sponsored by other branches the purpose of encouraging desirable adjustments in agricultural production and to c with emergency situations. The Branch endeavours to maintain close co-operation w other branches of the Department as well as with the University of Saskatchewan and Canada Department of Agriculture in the three-way co-ordination of agencies known the co-operative extension program.

The Production and Marketing Branch is comprised of three major Divisions—Ani Industry, Plant Industry and Veterinary. The first two provide specialist services

icultural representatives and agriculture in field crops, weed and insect control, soil servation, horticulture, apiculture, livestock and poultry, and administer related Acts l programs. The Veterinary Division administers the Veterinary Service District Act l Calfhood Vaccination Program, provides laboratory services and co-operates with the leral Government and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services and some ncial assistance for irrigation development programs and water utilization and control jects. Land reclamation and development and the construction of provincial community tures also come within its jurisdiction.

The Lands Branch administers Crown land, except forest reserves and parks in settled as, classifies it according to the use for which it is best suited and disposes of it under se or sale. The Branch also secures land control for land utilization projects, supervises v settlement projects, pays for clearing and breaking by farmers on provincial leases, rates provincial community pastures and operates training farms for people of Indian restry.

The Family Farm Improvement Branch gives farmers technical advice on farm buildings, farmstead planning, mechanization and materials handling. The Branch conducts earch for farm water and sewage works, provides technical and financial assistance for ir installation and administers the Agricultural Implements Act.

The Economics and Statistics Branch undertakes research and investigations required formulate and evaluate policies and programs that will ensure a high level of growth and ciency in Saskatchewan's agriculture; it collects, analyses and distributes economic rmation. The Farm Management Division carries out an extension program in farm iness management. Data on crop conditions, production, marketings and income are ilable from the Statistics Division.

Alberta.—The Alberta Department of Agriculture has seven Divisions whose activities co-ordinated by an Executive Committee made up of the seven Directors, the Deputy nister and his executive assistant.

The Plant Industry Division administers programs and policies relating to crop improvement, crop protection and pest control, weeds, soils and fertilizers, horticulture, culture and special projects. It operates a crop clinic in Edmonton, a horticultural earch station at Brooks and an extensive tree nursery at Oliver, which supplies millions rees yearly for farm planting and for reforestation.

The Animal Industry Division administers legislation, policies and programs in the ad area of livestock, dairy and poultry production and in processing and marketing. luded are: setting standards for and approving public sales of sires, ROP programs for f cattle, swine and sheep, extension programs for all classes of stock, administering stands and qualifications for the artificial insemination (AI) industry; supervising feeder ociations; brand registration and inspection; licensing of butchers, livestock dealers, kyards and AI technicians; pound districts and sale of horned cattle. The testing, ding and purchasing of raw produce by all dairy plants are under regulation, as are ndards of construction, manufacture, processing, sanitation and temperature control dairy and frozen-food plants. A regular cow-testing service to provide the basis for eding, feeding and culling dairy cattle is available to dairy producers, and chemical and teriological analyses are conducted for industrial directives. Licences are issued to ltry hatcheries, wholesalers, first receivers and truckers, and programs are conducted control of pullorum-typhoid diseases of chicken- and turkey-hatching egg supply flocks; ension programs, cost studies, disease tests and surveys, and research projects with ject to poultry are also carried out.

The Veterinary Services Division provides diagnoses of livestock and poultry diseases conducts investigations of disease conditions; provides lecture service for the University Alberta and for other groups; promotes policies aimed at reducing losses such as vibriosis

control, stockyard inspection, swine health programs and mastitis; administers the licensin of live fur bearing animals and pelts; and assists fur farmers in care, management an stock improvement.

The Extension Section of the Extension and Colleges Division co-ordinates the exten sion programs of every Division of the Department of Agriculture. In association wit other extension agencies, it assumes leadership in the formulation and implementatio of District and regional programs for agriculture, family living and community develop ment. The four Extension Branches operate mainly through 54 District Extension Offic co-ordinated and supervised by six regional agriculturists, and complemented by an expand ing staff of regional specialists in livestock, plant industry, engineering and home economic Leadership training is also provided. The Information Branch is in charge of extensio through mass media. It distributes bulletins, pamphlets, building plans, releases, timel articles and news material to the press, conducts radio programs five days a week over 1 radio stations and takes an increasing part, both directly and indirectly in the productio of television programs on all phases of agriculture and home-making.

Agricultural and vocational colleges are operated at Olds, Vermilion and Fairview, a three offering five courses in agriculture—a general course, or majors in plant science, anim science, agricultural mechanics and farm management. They also offer a complete busine course. Special short courses offered at one or the other of the colleges include land apprais and assessment, artificial insemination, welding and motor mechanics, irrigation technolog pesticide applicators, building materials merchandising, automation technology, dai production and custodial housekeeping.

The Agricultural Economics Division provides extension information on farm manag ment, credit and marketing to aid farmers in instituting good business practices on th farm; collects, analyses and disseminates agricultural statistics in collaboration with th Dominion Bureau of Statistics; conducts studies on farm production costs and return marketing, and resource and rural development; and provides advisory assistance on ec nomic matters to government departments, the agriculture industry and farm group Credit is made available to farmers for the purchase of land under the Farm Purchase Cred Act and for home improvements under the Farm Home Improvement Act.

The Water Resources Division administers legislative control over the province water resources and all functions connected with the allocation, apportionment, and dist bution of surface and ground water. Its basic responsibility is to foster an orderly develo ment of available water supplies to meet all the foreseeable needs of the province. Th the Division is responsible for Alberta's large-scale water conservation and developme program known as "The Prairie Rivers Improvement and Management Evaluatio (PRIME), embodying major water diversion and storage areas for the transfer of wat from areas of surplus to areas of deficiency. Divisional programs include: (1) design a construction activities on water control, water development and conservation when it in the public interest to do so; (2) inventory, distribution and magnitude of surface a ground water; (3) land development planning for irrigation purposes and the manageme and use of water as it relates to agricultural production; and (4) activities related to seepa and salted land reclamation, development and improvement of irrigation practices, a determination of the physical characteristics of soils relevant to the soil water phenome

The Program Development Division administers the ARDA and related rural develo ment programs, the Conservation and Utilization Branch, including the land assemb program, the farm adjustment and consolidation program, the land improvement a conservation program, the renewable resources research program, the Utilization of Lan and Forests Act and the Canada Land Inventory. Other Branches of the Division inclu the Agricultural Products Marketing Council, which establishes and regulates marketi boards and commissions to assist in the marketing of agricultural products; the Municip Agricultural Programs Branch, which assists in programs carried out by local authoriti administers the federal-provincial manpower agreements, and assists in the administrati and achievement of objectives of agricultural societies; and the Irrigation Secretariat, wh

inisters, for the Irrigation Council, the Alberta Irrigation Act in the areas of administra-, operation, maintenance, and reconstruction of irrigation projects and districts in province.

British Columbia.—The Department of Agriculture comprises four Divisions—inistrative Services, Production Services, Special Services and General Services. inistrative Services is responsible for the direction of policies affecting farmers' insti-s, grants, accounts, personnel and publications. Production Services includes the ary, Dairy, Field Crops, Horticulture, Livestock, Poultry, Farm Management and 4-H bs Branches, and district agriculturists. Special Services includes the Animal Pathology, ineering, Entomology, Markets and Statistics, Soils, Veterinary and Plant Pathology nches. The remainder—Agricultural Rehabilitation and Development Act (ARDA), rmation Service, British Columbia Marketing Board, British Columbia Milk Board the Crop Insurance Branch—are grouped under General Services.

In addition to the headquarters staff at Victoria, the Department maintains 19 district es in various parts of the province, as well as a veterinary laboratory and poultry-testing ion at Abbotsford, a beef-testing station at Kamloops and dairy and entomology labora-es at Vancouver and Cloverdale, respectively. Soil-testing facilities are installed at wna and Victoria.

Subsection 2.—Agricultural Schools, Colleges and Universities

All of the provinces of Central and Western Canada have agricultural colleges in ciation with universities that give courses leading to degrees in agricultural science home economics and also provide postgraduate courses; the University of British mbia has a faculty of Agricultural Sciences; Ontario, Quebec and Saskatchewan have rinary colleges. In addition, all of these provinces have schools of agriculture or oma courses that provide basic training for young people intending to return to farms nterested in employment in businesses allied with agriculture.

In Alberta, these programs are offered at the vocational, technician and technologist ls by three agricultural and vocational colleges which also engage in applied agricultural arch and offer programs in adult education and upgrading (see p. 570).

In the Maritime Provinces, training in scientific agriculture is available at colleges in ce Edward Island and Nova Scotia where courses leading to third-year admission to ee courses elsewhere are given. Vocational and short courses are available in all three inces. All colleges of agriculture engage in research and extension activities.

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a onsibility of the Dominion Bureau of Statistics. Valuable information is obtained ugh the Censuses of Canada, through partial-coverage mailed questionnaire surveys from the administrative records of government operations.

The Bureau collects and publishes primary and secondary statistics of agriculture on nnual and monthly basis. The primary statistics relate mainly to the reporting of conditions, crop and livestock estimates, wages of farm labour and prices received by ers for their products. The secondary statistics relate to farm income and expenditure, capita food consumption, marketing of grain and livestock, dairying, milling and sugar stries and cold storage holdings. In the collection of annual and monthly statistics, Canada Department of Agriculture and various provincial departments, as well as such cies as the Board of Grain Commissioners and the Canadian Wheat Board, contribute stical data to the Bureau and aid directly in DBS survey work. Many thousands of

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

farmers throughout Canada send in reports voluntarily and dealers and processors als provide much valuable data. The figures contained in this Section do not include estimate for Newfoundland; agriculture plays a relatively minor part in Newfoundland's economy and commercial production of most agricultural products is quite small. In the followin Subsections, details are given for 1969 with earlier comparisons; figures for the latest yea are subject to revision and it should be noted that many of those given for earlier year have been revised since the publication of the 1969 Year Book.

Subsection 1.—Income from Farming Operations

Cash Receipts from Farming Operations.—Estimates of cash receipts from farmin operations include data concerning cash receipts from the sale of farm products, Canadia Wheat Board participation payments on previous years' grain crops, net cash advances o farm-stored grains in Western Canada, deficiency payments made by the Agricultur Stabilization Board, and supplementary payments. Farm cash receipts from the sale o farm products include the returns from all sales of agricultural products except tho associated with direct inter-farm transfers. The prices used to value all products sold a prices to farmers at the farm level; they include any subsidies, bonuses and premiums th can be attributed to specific products but do not include storage, transportation, processin and handling charges which are not actually received by farmers.

Total cash receipts from farming operations for 1969, excluding supplementary pa ments, are estimated at $4,195,600,000 for Canada (excluding Newfoundland). Th estimate is 3.7 p.c. below the value of $4,355,200,000 obtained in 1968 but 3.4 p.c. abo the average for the five years 1964-68. This decrease in cash receipts can be attributed f the most part to lower returns from wheat and Canadian Wheat Board participation pa ments being only partially offset by increased receipts from the sale of most of the iter included in livestock and livestock products.

While the Maritime Provinces, Quebec and Ontario showed increases in total ca receipts ranging from 3.7 p.c. in Ontario to 14.6 p.c. in Nova Scotia, estimates for t Prairie Provinces and British Columbia were lower than for 1968. The greatest decli occurred in Saskatchewan where total cash receipts fell by almost 20 p.c.; in Manitoba a Alberta the decrease was 3.3 p.c. and 8.9 p.c., respectively, and in British Columbia it w only 1.8 p.c.

7.—Cash Receipts from Farming Operations (excluding Supplementary Payments)[1], by Province, 1965-69

Province	1965	1966	1967	1968	1969
	$'000	$'000	$'000	$'000	$'000
Prince Edward Island	40,641	37,016	33,830	34,541	37,87
Nova Scotia	50,835	54,074	54,182	54,984	63,01
New Brunswick	59,924	52,626	48,139	49,208	51,75
Quebec	503,790	589,845	620,120	636,275	678,09
Ontario	1,094,126	1,243,473	1,281,936	1,317,349	1,365,93
Manitoba	341,799	376,520	372,699	364,667	352,53
Saskatchewan	886,884	948,649	976,185	892,819	716,1
Alberta	664,199	762,950	792,901	800,981	729,53
British Columbia	163,898	188,026	196,784	204,424	200,7
Totals	**3,806,096**	**4,253,179**	**4,376,776**	**4,355,248**	**4,195,5**

[1] See text below.

In addition to the above income, farmers received supplementary payments amount to $9,900,000 compared with $8,000,000 in 1968. The 1968 payments consisted entir of those made under the Prairie Farm Assistance Act* but in 1969 payments to sugar b

* Payments to farmers under the Prairie Farm Assistance Act are made from the Prairie Farm Emergency F to which farmers contribute by means of a 1-p.c. levy on grain marketings.

wers in Ontario were also included. Thus, farm cash receipts from farming operations l supplementary payments totalled $4,205,500,000 in 1969, an amount 3.6 p.c. below estimated $4,363,200,000 in 1968.

Field Crops.—During 1969, farmers' total returns from the sale of field crops, cash vances on farm-stored grains in Western Canada and Canadian Wheat Board payments ounted to $1,479,400,000, 14.7 p.c. below the 1968 level of $1,734,800,000. This estimate resents about 35 p.c. of farmers' total cash receipts from farming operations, a fairly ge decline from the almost 40-p.c. share in 1968. The decline was caused mainly by siderably lower Canadian Wheat Board participation payments on previous years' in crops and lower returns from the sale of wheat.

With both marketings and average initial prices of wheat below those prevailing in previous year, 1969 returns from this source fell by slightly more than $125,000,000, a cline of 20.8 p.c. Although average prices of oats and barley at time of delivery were o lower than in 1968, increased marketings of both grains more than offset the lower ces, resulting in larger returns to the farmer. The average price received for flaxseed s also lower than in 1968 but a very large increase in marketings caused receipts to rise m $26,400,000 in that year to $57,000,000 in 1969. Returns to rapeseed producers were her in 1969 than in 1968; higher prices and increased marketings resulted in cash receipts ng from $33,200,000 to $50,500,000. Smaller increases were registered for corn, sugar ets and tobacco but receipts from potatoes rose from $61,300,000 to $67,000,000.

Canadian Wheat Board participation payments on previous years' wheat, oat and barley ps declined markedly in 1969 from 1968. For wheat, payments fell from $315,300,000 $60,200,000; for oats, from $8,400,000 to $4,800,000; and for barley, from $35,900,000 to 500,000. This decline was caused by smaller total final payments on the 1967 crop ative to those made in 1968 on the 1966 crop. The smaller payments reflect a reduction the per-bushel payments and the marketings on which the payments are made.

Livestock and Livestock Products.—Farmers' cash receipts from the sale of livestock and estock products in 1969 amounted to $2,603,000,000, an increase of 4.8 p.c. over the 1968 el of $2,483,400,000. Lower marketings of cattle and calves in the later year were only rtly offset by higher prices and cash receipts declined from $980,400,000 in 1968 to 59,600,000. Although hog marketings were also down, higher average prices brought eipts up to $461,300,000 from $409,900,000 in 1968, an increase of 12.5 p.c. Both sales d prices of eggs were higher in 1969 than in the previous year so that returns to egg oducers went up 15 p.c. to $188,400,000. Poultry meat receipts rose to $249,600,000, re than $20,000,000 above the 1968 level; average prices differed only slightly for the o years but marketings in 1969 were higher. Both quantity marketed and average prices dairy products rose during 1969, increasing returns to dairy producers by 5.1 p.c. to 76,900,000. In addition, dairy producers received supplementary payments amounting $86,900,000, which was 20.7 p.c. below the $109,700,000 received in 1968. Cash receipts m sheep and lambs showed a small increase from $8,700,000 to $8,800,000.

[1] See text on pp. 572-573.

Farm Net Income.—Two different estimates of farm net income from farming ope tions are prepared by DBS. *Realized net income* is obtained by adding together farm c receipts from farming operations, supplementary payments and the value of income in ki and deducting farm operating expenses and depreciation charges; this estimate represe the amount of income from farming that operators have left for family living, perso taxes and investment after provision has been made for operating expenses and depreciat charges. *Total net income* is obtained by adjusting realized net income to take into acco changes occurring in inventories of livestock and stocks of grains on farms between beginning and end of the year; this estimate is used in calculating the contribution of a culture to national income and for making comparisons with net income of non-farm busin enterprises.

For 1969, the estimated realized net income of farm operators from farming operati amounted to $1,379,500,000, 10 p.c. below the 1968 value of $1,532,800,000 and 11.8 p below the 1964-68 average value of $1,564,800,000. During 1969, the 3.6-p.c. decrease farm cash receipts and the higher farm operating expenses were only partially offset increased income in kind and supplementary payments.

The 1969 estimate of total net income, which takes into account changes in farm ventories, amounted to $1,688,400,000, 3.1 p.c. below the 1968 level of $1,743,100,000 4.9 p.c. above the 1964-68 average of $1,609,400,000. The decrease in cash receipts resul mainly from lower returns from wheat and Canadian Wheat Board participation payme being only partially offset by increased receipts from the sale of most of the items inclu in livestock and livestock products. The gain in the value of inventory change for 1 can be attributed to substantial additions to farm-held stocks of grains and a build-up the numbers of livestock on farms. Supplementary payments were also higher in 1 and operating expenses continued to rise.

In 1969, operating expenses and depreciation charges reached a new high level of ,429,100,000, a figure 1.8 p.c. above the 1968 value of $3,367,100,000. Farmers' outlays re higher in all provinces except Manitoba and Saskatchewan. For Canada as a whole, oss farm rent, fertilizer and lime, "other" livestock expenses, repairs to buildings, and the scellaneous category all showed decreases over the previous year. Most noticeable was e decline in outlays for fertilizer and lime which were quite substantial in the Prairie ovinces and only a little less so in Ontario; there was a considerable fall in the quantity rchased and prices were lower. Estimates of gross farm rents were down by 4.7 p.c. mpared with 1968, a drop caused by lower values of cash and share rents in the Prairie ovinces. The size of the hired farm labour force was reduced in the latter part of 1969 t, because wage rates rose to a new high, the outlay for wages to farm labour reached ghtly more than $300,000,000. Higher rates of interest and an expanded use of capital l to a further increase in total interest payments. Machinery expenses as a whole moved by about $20,000,000 to a record $554,400,000. Outlays for machinery repairs increased all provinces except Saskatchewan and the Maritimes. The general decline in feed ices was more than offset by a slight increase in the quantity purchased and outlays rose 4.9 p.c. from $528,500,000 in 1968 to an estimated $554,500,000 in 1969. Expenses curred in repairing buildings together with electricity and telephone bills varied very tle between the two years. Depreciation charges on farm buildings and machinery, hich rose in 1969, are intended to reflect the amount that farmers would have to pay to commodate the decline in the value of farm buildings and machinery due to obsolescence d wear.

9.—Net Income of Farm Operators from Farming Operations, by Item and by Province, 1965-69

(Exclusive of Newfoundland)

NOTE.—Includes estimated rental value of farm homes, supplementary payments made under the provisions of Prairie Farm Assistance Act and payments under the Western Grain Producers' Acreage Payment Regulations.

Item and Province	1965	1966	1967	1968	1969
	$'000	$'000	$'000	$'000	$'000

Subsection 2.—Volume of Agricultural Production

The index of physical volume of agricultural production for Canada (1949 = 100) is imated at 179.7 for 1969, about 5 p.c. above the 1968 estimate of 171.1. This is the cond highest point on record, being exceeded only by the 1966 index of 183.3. Greater

production of grain crops in 1969, particularly in Saskatchewan, was the main contribut to the increase over 1968, which also reflected lesser gains in output of poultry meat, eg and dairy products.

Increased over-all production was limited to four provinces—Prince Edward Islan Nova Scotia, Quebec and Saskatchewan—most of it occurring in Saskatchewan as a res of larger grain crops and some gain in output of poultry products. In the two Mariti Provinces, production was up for livestock, poultry meat and dairy products, and e production was also higher in Nova Scotia. The gain in Quebec was attributable to creased output of poultry meat and dairy products.

The greatest percentage decline in total production took place in Manitoba where almost 10-p.c. drop resulted from lower production of wheat and oats; this decline v offset to some extent by an increase in the output of livestock and poultry products. British Columbia, output was down about 5 p.c.; in that province, there were some increa in output of poultry meat, eggs and potatoes but declines for grains, livestock and fru Production in New Brunswick was down 3 p.c. because reduced output of potatoes a livestock more than offset higher production of poultry meat. In Ontario, the over- decline was 1.5 p.c.; there, production was up for hogs, poultry meat, eggs and fruits l down for grain, potatoes and cattle. Farmers in Alberta produced about 1 p.c. less in 19 than in 1968; lower production of grains and dairy products slightly more than offset ga in potatoes, poultry meat and eggs.

The index has been developed as an index of unduplicated gross farm production a in its construction, provision was made to avoid double-counting of farm output. Witl a province, such double-counting could occur when feed grains, credited to field crop p duction, are fed to livestock and appear later as livestock and livestock products. Int provincially, this duplication could occur when feed grains produced in one province fed in another, and when feeder cattle raised in one section of the country are shipped another for finishing.

10.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1960

(1949=100. Exclusive of Newfoundland)

NOTE.—For a description of the index, methods and coverage, see DBS publication *Index of Farm Produc 1966* (Catalogue No. 21-203).

Subsection 3.—Field Crops*

The 1969 index of field crop production for Canada (1949=100) was 196.7, the sec highest level on record. It was substantially above the 1968 index of 181.4 but remai below the record of 203.0 achieved in 1966. In Manitoba, the estimated field crop prod tion resulted in an index of 160. 6, down from the record 183. 6 obtained in 1968; the Saskat ewan production index, at 259.1, was well above the 1968 level of 196.4 but short of

* The supply and disposition of the major Canadian grains is dealt with in Chapter XXI, Pt. I, Sect. 2, u the heading of "The Grain Trade, 1968-69 and 1969-70".

cord 274.2 set in 1966; and the index for Alberta was 239.8 compared with 229.8 in 1968 d the record of 252.1 set in 1966. The 1969 field crop production indexes for the eastern ovinces compared quite closely with those of 1968. The Ontario index was 160.5 com- red with the 1968 record figure of 167.1; the Quebec index at 128.4 was slightly below the 68 index of 128.7 and a little more below the 1967 record of 132.0; and in Prince Edward land, Nova Scotia and New Brunswick the 1969 indexes were 114.1, 55.7 and 86.3, respec- vely, compared with 116.6, 55.7 and 97.4, respectively, in the preceding year.

Canada's 1969 wheat crop, estimated at 684,300,000 bu., was some 5 p.c. above the 68 crop of 649,800,000 bu. The average yield at 27.4 bu. per acre was 24 p.c. above the 68 yield of 22.1 bu. and 31 p.c. above the 10-year (1958-67) average of 20.9 bu. The erage protein content of the 1969 crop of hard red spring wheat was 13.9 p.c., unchanged om the level of the previous year but above the 13.6 p.c. average for the wheat crops of e past 20 years.

Supplies of Canadian feed grains (corn, oats, barley, rye, mixed grains and buckwheat) the crop year 1969-70 amounted to 1,301,500,000 bu., some 16 p.c. above the 1968-69 tal of 1,122,500,000 bu. All feed grains except corn contributed to the increase, as well higher opening stocks of oats, barley, rye and corn. Supplies of oats (Aug. 1, 1969 rryover of 128,700,000 bu. plus a crop of 371,400,000 bu.) totalled 500,100,000 bu., 14 c. higher than the previous year's total of 439,500,000 bu.; supplies of barley, at a record 7,800,000 bu. (carryover of 199,400,000 bu. plus a crop of 378,400,000 bu.), were 27 p.c. ove the 1968-69 total of 456,300,000 bu.; supplies of rye at 25,200,000 bu. were 22 p.c. ove the 1968-69 total of 20,500,000; and the 1969 crops of mixed grains reached an esti- ated 87,300,000 bu. Production of grain corn, on the other hand, was 73,400,000 bu., 10 c. below the 1968 record of 81,200,000 bu.

Acreages, yields and prices of the principal field crops in the three years 1967-69, with erages for 1962-66, are shown in Table **11**; acreages, yields and values of field crops by ovince for 1968 and 1969, with averages for 1963-67, in Table **12**; and acreages and pro- iction of grain in the Prairie Provinces for the years 1964-69 in Table **13**.

Subsection 4.—Livestock and Poultry

Livestock.—The downward trend in the number of livestock on farms and the upwar trend in value per head, in evidence over the past few years, continued in 1969 as indicate in Table **15**. The only increase in that year over 1968 was in the number of hogs on farm which moved upward in all provinces except Quebec, Alberta and British Columbi Quebec reported some increase in number of milk cows in both 1968 and 1969, and Nov Scotia, Ontario and Saskatchewan showed slight increases in numbers of sheep.

Cattle marketings through commercial channels in 1969 decreased 4.2 p.c. from 196 calf marketings 10.4 p.c. and hog marketings 8.2 p.c. Sheep and lamb production conti ued downward, the decline in 1969 amounting to 19.6 p.c. However, offsetting the ove all reduction in production of livestock were the sharp rises in prices for all classes, regar less of grade, which produced an increase of 10 p.c. in sales revenue and brought the tot value of commercial marketings to $1,422,000,000, an all-time record. Most classes livestock were marketed at heavier weights and at somewhat better quality than in 196 Despite a very limited export trade throughout the year, the strength of the domest demand was such that supplies were never burdensome and good weekly clearances we generally the rule.

The all-markets average price received in 1969 for all classes and grades of cattle was 26.65, an amount $3.45 per cwt. higher than in 1968. Good feeder steers averaged $31.20, n increase of $4.50 over 1968, and good stock steer calves averaged $37.55, or $7.55 above 968. Hog carcasses averaged $57.40 against $46.35 in 1968; despite the reduction in narketings, the heavier weights at which hogs were slaughtered and the sharp increase in alue per head brought about $53,000,000 more than in the preceding year. The total alue of commercial marketings approximated $423,100,000, an all-time record. The eighted average price of good lambs for all Canada was $30.45 compared with $26.85 the previous year, an increase fairly representative of all trading centres.

The Canada Department of Agriculture inspects all livestock in plants designated as spected establishments under the Meat and Canned Foods Act. A record is kept of ese inspections and figures from 1960 are given in Table **16**. Local wholesale butcherings nd slaughterings carried out by retail butchers and by farmers for their own use are not cluded. Actually, the slaughtering and meat packing industry is concentrated in a mparatively small number of large establishments to facilitate greater efficiency and ilization of products; thus, the figures of Table **16** are fairly inclusive.

Additional information on livestock marketings is given in Chapter XXI, Pt. I, Sect. 2, nder the heading of "Livestock Marketings".

Subsection 5.—Dairying

The numbers of dairy cattle on farms have generally been declining gradually fo many years; Quebec is the exception among the provinces in this respect, having increase its stock of milk cows by nearly 50,000 in the 1966-69 period. Despite the over-all decreas in numbers, the total milk production in Canada has been kept at a fairly static level by a increased output per cow. Production is concentrated in Central Canada, the province of Quebec and Ontario accounting for about 74 p.c. of the total quantity. Of the tota output in 1969, 65 p.c. was used for factory-made dairy products, 27 p.c. was sold in flui form and 8 p.c. was used for all purposes on farms.

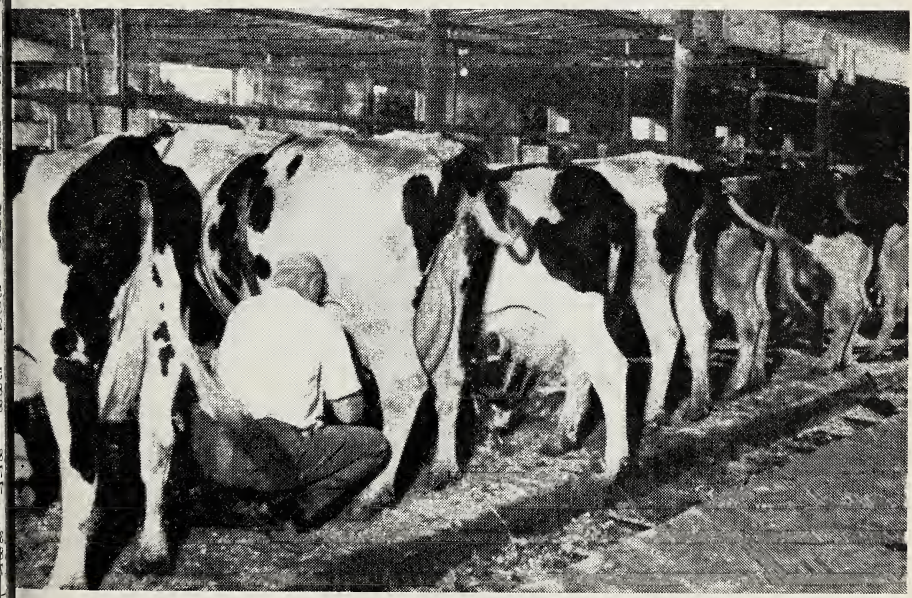
[1] Used in farm butter only.

The farm value of milk production in Canada for 1969 was $742,631,000, 4.5 p.c. gher than in 1968. The value of milk used in factories in 1969 was $374,153,000 (65 p.c. the total milk production) and fluid sales, $302,679,000 (27 p.c. of the total).

The 350,000,000 lb. of creamery butter produced in 1969 accounted for 43.8 p.c. of the tional milk output, and was 4.2 p.c. higher than in 1968. Per capita consumption was 5.28 lb., three quarters of a pound lower than in 1968. Quebec is the largest producer of eamery butter, having accounted for nearly half of the total output in 1969; Ontario llowed with 28 p.c.

Both output and consumption of cheese have been gradually increasing during the st few years. The total production of factory cheese (Table **21**) for 1969 was 207,000,000 . compared with 199,000,000 lb. for 1968, and per capita consumption of all varieties of eese, excluding cottage cheese, was 11.19 lb., compared with 10.34 lb. for 1968. Exports all cheese, mostly cheddar, amounted to 35,958,000 lb. in 1969, compared with 44,261,000 . in 1968. Of the total output of factory cheese in 1969, Ontario accounted for 52 p.c. d Quebec for 41 p.c.

There has been a generally decreasing trend in the output of concentrated whole milk oducts, including condensed milk, evaporated milk, whole milk powder, partly skimmed aporated milk and others, but the production of concentrated milk byproducts has oved upward during the past few years. The latter category comprises condensed skim ilk, evaporated skim milk, skim milk powder, powdered buttermilk, whey powder, casein d other milk byproducts, but by far the major component is skim milk powder which counts for over 80 p.c. of the total production. Thus, the recent rise in output of con- ntrated milk byproducts was mainly attributed to this commodity, production of which creased from 222,155,000 lb. in 1965 to 394,558,000 lb. in 1969.



Milking time for Holstein-Friesians on a dairy farm. Since 1881, Canadian breeders have been improving the already excellent characteristics of the Holstein-Friesian. The average performance of the breed in Canada is 12,243 lb. of milk and 457 lb. of butterfat in 305 days. In health and productive efficiency, Canadian dairy cattle form one of the major world sources of breeding stock.

As indicated in Table 24, the estimated total consumption of fluid milk and crean on a milk basis, has decreased slightly over the past three years and the per capita con sumption has continued the slow decline in evidence over the past two decades. In fact total and per capita domestic disappearance of all dairy products, as shown in Table 25 is also gradually decreasing.

[1] Includes Newfoundland for all manufactured dairy products. [2] Includes, in addition to the items listed malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26-p.c. fat, formul milks, evaporated milk of 2-p.c. fat, and concentrated liquid milk. [3] Includes, in addition to the items listed condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim mil products, lactalbumin and concentrated liquid skim milk. Since the quantities used for human consumption an livestock feeding cannot be separated, per capita figures include both. [4] Includes ice cream mix in terms o milk.

Subsection 6.—Fruits, Vegetables and Other Farm Products

Fruits.—Commercial fruit growing in Canada is confined almost exclusively to rather nited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British olumbia. Nova Scotia production is centred mainly in the Annapolis Valley and New runswick production in the St. John River Valley and Westmorland County. In Quebec e fruit growing districts are the Montreal area, the North Shore area, the Eastern Town-ips and the Quebec City district. Ontario fruit is grown in all the counties adjacent to e St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara strict being the most productive. In British Columbia the four well-defined fruit areas e the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and ancouver Island. The climate elsewhere in Canada is not generally suitable for commer-al tree-fruit culture. Apples and small fruits are produced commercially in the provinces amed but tender tree fruits and commercial vineyards are largely limited to Ontario and ritish Columbia.

By far the most valuable fruit crop produced in Canada is apples and in 1968 the farm alue for this crop was $39,947,000. The main outlet for Canadian apples is the fresh arket which absorbs about 70 p.c. of the production each year and the volume of apples for rocessing is about 30 p.c. of production. In Nova Scotia nearly 70 p.c. of the crop is rocessed; lesser quantities are processed in other producing provinces.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are epared, as well as in Prince Edward Island, but are produced over a somewhat wider area an are tree fruits. Raspberries are grown commercially in Nova Scotia, New Brunswick d Quebec but the bulk of the crop is produced in Ontario and British Columbia. The raser Valley of British Columbia is the most important producing area. Wild blueberries

Some 300 high school students from a nearby city help with the strawberry harvest on an Ontario farm. Many berries are sold as fresh fruit but much of the crop goes to commercial processors to be frozen, canned or made into jams and jellies. In 1969, 22,959 tons of strawberries were harvested across the country.

are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scoti New Brunswick and Quebec. This crop is indigenous to certain areas in these provinc and a large percentage of the crop is frozen and exported. There is also some productic of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specializ production areas to all parts of the country and a large proportion of the deciduous fru consumed in Canada is grown domestically. Considerable quantities of apples, straw berries and blueberries are exported. Canning and processing industries have develope in the fruit growing districts and, although the importance of the processing market vari with different fruits, it provides a valuable outlet for substantial proportions of mo Canadian-grown fruit crops.

Tables 26 and 27 show the estimated commercial production of fruit, by provin and by kind, for 1967-69.

26.—Value of Commercial Fruit Produced, by Province, 1967-69, with Average for 1962-66

Vegetables.—Estimates of acreage and production of commercial vegetables in anada are prepared for all provinces except Newfoundland and Saskatchewan. Ontario the largest producer, followed by Quebec and British Columbia. A wide variety of crops grown in these three provinces and a somewhat smaller range in the Maritimes and in the rairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important produc- g areas. The estimates in the following tables cover output of commercial growers for rocessing and for sale on the fresh market but do not include averages or production of egetables grown for home use on farms and elsewhere.

Tobacco.—Canada produces several types of leaf tobacco but by far the most im- ortant is the flue-cured or Bright Virginia type. This is grown mainly in Ontario, along ith considerable quantities of burley and smaller amounts of dark (air-cured and fire-

cured) tobacco. Quebec produces smaller quantities of these types as well as some cig and pipe tobacco and small flue-cured acreages are also harvested in Prince Edward Islan Nova Scotia and New Brunswick. Although acreages planted were lower in 1969 than 1968, yields per acre in all producing areas were higher, resulting in an increase in producti from 218,807,000 lb. to 247,465,000 lb. The average value per pound decreased in 19 to 65.8 cents from 70.3 cents.

Data on the production of cigarettes for domestic consumption are no longer availab However, on the basis of domestic sales reported to DBS by manufacturers, the consumpti of cigarettes increased to 46,582,210,000 in 1969 from the 46,270,233,000 sold in 1968.

[1] Total laid less loss.

Wool.—Table 33 gives the estimated production and apparent consumption of wool in Canada for the years 1965 to 1969. It should be noted that the estimates for 1967, 1968 and 1969 are not strictly comparable with those of previous years because they exclude the output of pulled wool which is now produced by fewer firms and, according to the provisions of the Statistics Act, cannot be shown. Canada produces only between 7 p.c. and 8 p.c. of domestic wool requirements.

33.—Production and Apparent Consumption of Wool, 1965-69

Item		1965	1966	1967	1968	1969

[1] Includes Agricultural Stabilization Act payments of 16.3 cents per lb. in 1965, 18.3 cents per lb. in 1966, 27.9 cents per lb. in 1967, 29.4 cents per lb. in 1968 and 29.0 cents per lb. on the 1969 clip for qualifying grades of wool. [2] See text above.

Honey.—As shown in Table 34, honey production in 1969 increased 60 p.c. over 1968. Average production per colony was 127 lb. compared with 81 lb. in 1968.

Honey is produced commercially in all provinces except Newfoundland and yield vary considerably from year to year. In 1969, Alberta was the largest producer, surpassing Manitoba, the next largest producer, by 11,030,000 lb. Honey bees are kept in some fruit growing districts for pollination purposes and are also used for pollination of certain seed crops.

To facilitate storage, shipment and uniformity of quality, large quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. In 1969, Canada exported 4,795,426 lb. of honey valued at $1,036,000, mainly to Britain, France, the United States and West Germany.

Sugar Beets and Beet Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

Maple Sugar and Maple Syrup.—Maple syrup is produced commercially in the ovinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop nes from the Eastern Townships of Quebec, a district famous both in Canada and in the ited States as the centre of the maple products industry. Virtually all of the maple oducts exported go to the United States with the larger proportion moving as sugar, hough substantial quantities of syrup are also shipped. Much of the syrup sold in nada is marketed in one-gallon cans direct to the consumer from the producer but a siderable amount of both sugar and syrup is sold each year to processing firms.

Greenhouse Operations.—Annual surveys are made of greenhouse operatio Resulting figures are based on data reported by firms and individuals returning questi naires, with the exception of that for cucumbers and tomatoes grown in Essex County Ontario (the most important producing area), which are based on information obtai from the local co-operative marketing agency. Only greenhouses used for the producti of items for sale are included in the survey.

[1] Fewer than three firms reporting. [2] Excludes Newfoundland and Prince Edward Island.

Subsection 7.—Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to meas changes occurring in the average prices farmers receive at the farm from the sale of fa products. In comparing current index numbers with those prior to August 1969, following points should be considered. Prices of all western grains used in the construct of the index prior to that date are final prices; all later figures are initial prices only wheat, oats and barley. Any subsequent participation payments will be added to prices currently used and the index revised upward accordingly.

—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1963-69, and Monthly Indexes for 1968 and 1969

(1961=100)

NOTE.—A description of this index, its coverage and the methods used will be found in DBS *Quarterly Bulletin Agricultural Statistics* (Catalogue No. 21-003) for July-September 1969.

Subsection 8.—Food Consumption

Food consumption figures represent available supplies, including production a imports, adjusted for change of stocks, exports, marketing losses and industrial uses. calculations are made at the retail stage of distribution, except for meats for which t figures are worked out at the wholesale stage. The amount of food actually eaten wou be somewhat lower than indicated because of losses and waste occurring after the produ reach the hands of the consumer.

All basic foods are classified under 12 main commodity groups. The total for ea group is computed using a common denominator for the group, for example: milk sol (dry weight) for the dairy products group; fat content for fats and oils; and fresh equival for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, e rather than in more highly manufactured forms.

The series in Table 42 represents the official estimates of yearly supplies of food mov- into consumption, expressed in pounds per capita, for the years 1963-67 as an average comparison with the years 1968 and 1969.

[1] Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inve tories in all positions. [2] Information on processed potatoes is not available. [3] Tomatoes canned, toma juice, tomato pulp, paste and purée, and ketchup. [4] Includes process cheese. [5] Cream powder, includ with whole milk powder, too small to be expressed. [6] Includes cream expressed as milk. [7] Includ evaporated and condensed skim milk, condensed buttermilk, sugar of milk, formula skim milk products, conce trated liquid skim milk and lactalbumin.

Disappearance of Meats and Lard.—Production of meats from slaughter in Canad total supply, distribution and per capita disappearance of meats and lard are shown i Table 43. All estimates are on a cold carcass-weight basis except canned meats, whic are in terms of product.

43.—Supply, Distribution and Disappearance of Meats and Lard, 1965-69

[1] Quantity small; included with beef. [2] Trimmed of larding fat and excluding offal. [3] Includes mercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected ughter. [4] Due to changes in lard source data, comparable 1969 information is not available.

Section 5.—Agricultural Statistics of the Census

Changes occurring in the agricultural industry are revealed by the results of th Census of Agriculture taken every five years. Details of the latest census are publishe in Volumes III, IV and V of the 1966 Census of Agriculture. For certain analyses of th census results, reference may be made to the 1968 and 1969 Canada Year Books; summar information relating to use of agricultural land, farm capital, farm tenure, farm mecha ization and labour, and types of farms is given at pp. 516-523 of the 1969 edition an additional information on types of commercial farms, economic classification of farm tenure and age of farm operators and farm electrification is given in the 1968 edition a pp. 528-533. Only data on number and area of farms and on size of census-farms a carried in this Section.

The term *census-farm*, which is used in the following paragraphs, refers to an agr cultural holding of one acre or more in size with sales of agricultural products during the months preceding the census date of $50 or more. Census-farms having sales of $2,5 or more during the preceding year are described as *commercial* farms.

Number and Area of Farms.—There were fewer census-farms in Canada in 19 than in 1961, the number dropping 10.5 p.c. from 480,903 to 430,522. A decrease w shown in each province, the highest proportionate drop being 26.1 p.c. in New Brunswi and the lowest 2.5 p.c. in Newfoundland. On a regional basis, the trend was most pr nounced in the Atlantic region where the decrease was 21.0 p.c. and least pronounced in th Prairie region where it was 7.4 p.c.

Although farm numbers were lower, the total area of census-farms was almost 1 p. higher, increases in the Prairie region and British Columbia more than offsetting decreas in the Atlantic and Central regions. Thus, while the number of census-farms in the Prair region decreased 7.4 p.c., the farm area increased 2.8 p.c. Similarly, in British Columb the number of farms decreased 4.3 p.c. but farm area increased 17.4 p.c.

44.—Number and Area of Census-Farms and Commercial Farms, by Province, Censuses 1961 and 1966

Province or Territory	Census-Farms				Commercial Farms			
	1961		1966		1961		1966

Alberta	73,212	47,228,653	69,411	48,982,875	45,203	37,241,021	48,971	40,986,6
British Columbia	19,934	4,506,552	19,085	5,292,310	8,150	3,174,572	8,407	4,061,3
Yukon and Northwest Territories	26	8,590	19	4,268	2	1,142	4	1,2
Canada	**480,903**	**172,551,051**	**430,522**	**174,124,828**	**259,037**	**126,094,097**	**276,835**	**141,844,0**

Of the 430,522 census-farms in 1966, 276,835 were classed as commercial, representi an increase over 1961 of nearly 7 p.c. There were more commercial farms in every provin except Nova Scotia and New Brunswick but 75 p.c. of the increased number were located the Prairie region. Commercial farms comprised 64.3 p.c. of all census-farms in 1966 b accounted for 81.5 p.c. of the agricultural land; in 1961 the proportions were 53.9 p.c. an

1 p.c., respectively. The total area of all commercial farms was 12.5 p.c. higher in 1966 n in 1961, an increase to which every province contributed. The largest percentage rease in area occurred in British Columbia and the largest increase in acreage occurred Saskatchewan.

Size of Census-Farms.—During the 1961-66 period the average size of census-farms tinued the previously observed rising trend, increasing by 45 acres from 359 to 404 acres; average size over the 1951-66 period increased by 125 acres. On a provincial basis, the 1-66 change varied from a decrease of two acres in Newfoundland to an increase of acres in Saskatchewan. On a regional basis, the Prairies had the largest increase, from to 685 acres, contrasted with the Central region where the increase was only from 151 61 acres.

The number of census-farms of 760 acres or more increased between 1961 and 1966 but se of under 760 acres declined. The pattern is generally similar in all provinces—the nber of smaller holdings tends to decrease while the number of larger ones increases, ough there is considerable variation among various size groups between provinces. nitoba, Saskatchewan and Alberta, where the trend toward larger farms is more pro- nced than in other provinces, also show slight increases in number of census-farms falling the two smaller size groups—under nine acres and 10-to-69 acres.

For Prince Edward Island, Nova Scotia, New Brunswick, Quebec and Ontario the dominant size group is still the 70-to-239-acre group, even though there has been a drop he number of census-farms in this category. The 240-to-399-acre group is the predomi- t one in the Prairie Provinces, but in Saskatchewan almost as many census-farms fall the 400-to-559, 560-to-759 and 760-to-1,119-acre groupings as in the 240-to-399-acre gory. In British Columbia the largest number of census-farms is in the 10-to-69-acre up. More than half of the census-farms in Newfoundland are under nine acres in size.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Canada's extensive forests have been an invaluable asset to the country and its people nce the earliest days of settlement. The productive portion of these forests has poured creasing wealth into the stream of national income, contributing to the economy of the untry as the producer of raw materials for industry and as the source of livelihood for undreds of thousands of persons. Perhaps in no other country is the national wealth so pendent upon its forest resources and the success of its forest industries as in Canada.

The present annual forest harvest of some 3,900,000,000 cu. feet of roundwood supports a highly complex and diversified domestic and export industry. The forest industries which include the logging industry, the wood industries and the paper and allied industries) rovide about 300,000 man-years of employment and pay out more than $1,700,000,000 nnually in salaries and wages. In addition, a considerable number of people derive part f their income from farm woodlot operations, etc. The forests support a large number of awmills and wood-using plants which in many cases are located in small towns and villages nd contribute appreciably to the local economies. The sale of forest products abroad epresents about one fifth of the value of Canada's export trade.

The predominant part played by the pulp and paper, lumber, and other forest products ndustries in the development of the country has, in the past, resulted in a widespread endency to evaluate the forest in terms of timber alone. There is now a growing realization of the value of the forest in assuring an adequate supply of good-quality water, in roviding for sport and recreation, in guarding against erosion, and in maintaining a abitat for wildlife. The increasing recognition of these forest values is fostering a broader nd more realistic concept of forestry.

The Canadian forest industry as a whole recorded a substantial increase in productivity ver the years 1961-68 inclusive, the total estimated "value added" (value of shipments ss cost of materials and fuel) advancing from $2,000,000,000 to $3,200,000,000; in 1967, he value added by the forest industry, which was $3,166,000,000, comprised 11 p.c. of the otal for all goods-producing industries.

* Sections of this Chapter that deal with forest resources and depletion and the federal forestry program were vised by the Canadian Forestry Service of the Department of Fisheries and Forestry, Ottawa. Provincial forestry ograms were prepared by the forestry officials of the respective provincial governments. Sections dealing with rest and allied industries, except as otherwise noted, were revised in the Forestry Section, Manufacturing and Primary Industries Division, Dominion Bureau of Statistics.

During this period, roundwood production moved up 25 p.c. from 3,175,000,000 t 3,970,000,000 cu. feet. The increase was more than accounted for by roundwood produce for industrial purposes, since that produced for non-industrial purposes, such as fuelwoo and wood for charcoal, declined. Lumber shipments rose from about 8,216,000 to 11,000,00 M ft. b.m. At the present time, British Columbia sawmills account for about two thir of all shipments of lumber in Canada and more than 60 p.c. of it is exported, mainly to th United States. The production of wood pulp also rose substantially, increasing 42 p.c to nearly 17,000,000 tons in 1968. Although the most important component of this tota continued to be groundwood pulp, 7,100,000 tons of which were produced primarily i Ontario, Quebec and the Atlantic Provinces, output of sulphate pulp increased by 124 p.c over the period to 6,100,000 tons. British Columbia produced most of the sulphate pul and it was in British Columbia, too, that the largest part of the increase in pulp outpu occurred. Pulp exports over the period increased from 24 p.c. to almost 30 p.c. of tota production. At present, about two thirds of these exports go to the United States.

Production of basic paper and paperboard also rose over the 1961-68 period, increasin 30 p.c. to reach 11,183,000 tons. About 71 p.c. of the 1968 total came from Ontario an Quebec and 15 p.c. from British Columbia. Newsprint, made chiefly in Ontario and Quebec is the most important paper commodity manufactured in Canada, followed in order b paperboard and book and writing papers. In 1968, pulp and paper exports made up 13 p.c of the value of all Canadian exports and, once again, the United States was the principa market for these commodities.

The value of factory shipments from veneer and plywood mills was 100 p.c. higher i 1968 than in 1961. In the earlier year, about 60 p.c. of the value of output ($129,300,000 was accounted for by British Columbia Douglas-fir veneer and plywood but by 1967 thi proportion had dropped to 56 p.c. On the other hand, plywood manufactured from othe British Columbia softwoods increased. Hardwood veneer and plywood made primarily i Ontario and Quebec from poplar, birch and maple accounted for 36 p.c. of the value of a factory shipments in 1961 and for 33 p.c. in 1968. Of the total value of exports of veneer an plywood, amounting to $86,000,000 in 1968, Douglas-fir plywood accounted for ove $45,000,000, about 71 p.c. of it going to Britain.

Section 1.—Forest Resources

Forest Regions.*—The forests of Canada cover a vast area in the north temperat climatic zone but wide variations in physiographic, soil and climatic conditions caus marked differences in their character; hence, eight fairly well-defined forest regions ma be recognized. These regions and their relative sizes are as follows:—

Region	Percentage of Forest Area	Region	Percentage of Forest Area
Boreal	82.1	Acadian	2.0
Great Lakes-St. Lawrence	6.5	Columbia	0.8
Subalpine	3.7	Deciduous	0.4
Montane	2.3		
Coast	2.2	Total	100.0

Boreal Forest Region.—This Region comprises the greater part of the forested area Canada. It forms a continuous belt from Newfoundland and the Labrador coast westwar to the Rocky Mountains and northwestward to Alaska. White Spruce and Black Spruc are characteristic species; other prominent conifers are Tamarack which generally range throughout, Balsam Fir and Jack Pine in the eastern and central portions, and Alpine F and Lodgepole Pine in the western and northwestern parts. Although the Boreal fores are primarily coniferous, there is a general admixture of deciduous trees such as White Birc

* A more detailed discussion of forest regions is given in Bulletin 123, *Forest Regions of Canada*, published by th Canadian Forestry Service of the Department of Fisheries and Forestry, Ottawa.

poplar; these are important in the central and south-central portions, particularly ng the edge of the prairie. In turn, the proportion of spruce and larch increases to the th and, with the more rigorous climate, the close forest gives way to an open lichen-odland which finally changes into tundra. In the eastern section, along the southern der of the Region, there is a considerable intermixture of species from the Great Lakes–Lawrence forest, such as Eastern White Pine, Red Pine, Yellow Birch, Sugar Maple, ck Ash and Eastern White Cedar.

Great Lakes–St. Lawrence Forest Region.—Extending inland from the edges of the Great es and the St. Lawrence River lies a forest of a very mixed nature which is characterized Eastern White Pine, Red Pine, Eastern Hemlock and Yellow Birch. With these are ociated certain dominant broadleaved species common to the Deciduous Forest Region, uding Sugar Maple, Red Maple, Red Oak, Basswood and White Elm. Other species n wide ranges are the Eastern White Cedar and Largetooth Aspen and, to a lesser extent, ch, White Oak, Butternut and White Ash. Boreal species such as White Spruce, ck Spruce, Balsam Fir, Jack Pine, poplars, and White Birch are intermixed, and Red uce is abundant in certain central and eastern portions. This Region extends in a west-rd direction into southeastern Manitoba but does not include the area north of Lake erior.

Subalpine Forest Region.—This is a coniferous forest located on the mountain uplands Alberta and British Columbia, from the Rocky Mountain range through the interior of tish Columbia to the Pacific Coast inlets. The characteristic species are Engelmann uce, Alpine Fir and Lodgepole Pine. There is a close relationship between the Subalpine est Region and the Boreal Forest Region, which also shares Black Spruce, White Spruce Trembling Aspen. There is also some penetration of Interior Douglas-fir from the ntane forest, and Western Hemlock, Western Red Cedar and Amabilis Fir from the stal forests. Other species are Western Larch, Whitebark Pine, Limber Pine and, on Coast Mountains, Yellow Cypress and Mountain Hemlock.

Montane Forest Region.—The Region occupies a large part of the interior uplands of tish Columbia, as well as a part of the Kootenay Valley and a small area on the east side he Rocky Mountains. It is a northern extension of the typical forest of much of the tern mountain system in the United States, and comes in contact with the Coast, umbia, and Subalpine Forest Regions. Ponderosa Pine is a characteristic species of the thern portions. Interior Douglas-fir is found throughout, but more particularly in central and southern parts; Lodgepole Pine and Trembling Aspen are generally present, latter being particularly well represented in the north-central portions. Engelmann uce and Alpine Fir from the Subalpine Forest Region, together with White Birch, are portant constituents in the northern parts. White Spruce, although primarily Boreal affinity, also grows here. Extensive prairie communities of bunch-grasses and herbs found in many of the river valleys.

Coast Forest Region.—This Region is part of the Pacific Coast forest of North America. entially coniferous, it consists principally of Western Red Cedar and Western Hemlock, h Sitka Spruce abundant in the north and Douglas-fir in the south. Amabilis Fir and low Cypress are represented throughout the Region and, together with Mountain Hem-k and Alpine Fir, are common at the higher altitudes. Western White Pine is found in southern parts, while Western Yew is in widely scattered groups. Deciduous trees, h as Black Cottonwood, Red Alder and Bigleaf Maple, have a limited distribution. butus and Garry Oak grow only on the southeast coast of Vancouver Island, the adjacent nds and mainland. The Arbutus is a broadleaved evergreen. Both are species whose tres of population lie southward in the United States.

Acadian Forest Region.—Over the greater part of the Maritime Provinces (excludi Newfoundland) there is a forest closely related to the Great Lakes–St. Lawrence forest a to a lesser extent, to the Boreal forest. Red Spruce is a characteristic though not exclus species, and associated with it are Balsam Fir, Yellow Birch and Sugar Maple, with so Red Pine, Eastern White Pine and Eastern Hemlock. Beech was formerly a more i portant forest constituent than at present, but beech bark disease has drastically redu Beech representation in Nova Scotia, Prince Edward Island and southern New Brunswi Other species of wide distribution are White Spruce, Black Spruce, Red Oak, White El Black Ash, Red Maple, White Birch, Grey Birch and poplars. Eastern White Ced although present in New Brunswick, is extremely rare elsewhere and Jack Pine is apparen absent from the upper St. John Valley and the western half of Nova Scotia.

Columbia Forest Region.—A large part of the Kootenay Valley, the upper valleys of Thompson and Fraser Rivers and the Quesnel Lake area of British Columbia contai coniferous forest, called the Columbia Forest Region, which closely resembles the Co Forest Region. Western Red Cedar and Western Hemlock are the characteristic spec in this interior "wet belt". Associated trees are the Interior Douglas-fir which has gene distribution and, in the southern parts, Western White Pine, Western Larch, Grand and Western Yew. Engelmann Spruce from the Subalpine Forest Region is important the upper Fraser Valley and is found to some extent at the upper levels of the forest in remainder of the Region. At lower elevations in the west and in parts of the Kooten Valley, the forest merges into the Montane Forest Region and in a few places into prai grasslands.

Deciduous Forest Region.—A small portion of the deciduous forest, which is widespre in the United States, extends into southwestern Ontario between Lakes Huron, Erie a Ontario. Here, with the deciduous trees common to the Great Lakes–St. Lawrence For Region, such as Sugar Maple, Beech, White Elm, Basswood, Red Ash, White Oak a Butternut, are scattered a number of other deciduous species which have their north limits in this locality. Among these are the Tulip-tree, Cucumber-tree, Pawpaw, R Mulberry, Kentucky Coffee-tree, Redbud, Black Gum, Blue Ash, Sassafras, Mockern Hickory, Pignut Hickory, Black Oak and Pin Oak. In addition, Black Walnut, Sycam and Swamp White Oak are confined largely to this Region. Conifers are few but there scattered distribution of Eastern White Pine, Tamarack, Eastern Red Cedar and East Hemlock.

The Grasslands.—Although not a forest region, the prairies of Manitoba, Saskatchew and Alberta support several species of trees in great numbers. Trembling Aspen for groves or "bluffs" around wet depressions, and continuous dense stands along the north boundary. Several other species of poplar are usually found along rivers and in mo locations, along with willows and some White Spruce. There are sporadic stands of Wh Birch, Manitoba Maple, Bur Oak and ash. In British Columbia, where the grasslands confined to deep valleys and low areas of the interior, there are scattered representatio of Ponderosa Pine, birches, poplars, spruce and Mountain Alder.

Forest Land.*—The forest area of Canada is estimated at 1,710,788 sq. miles, abo 56 p.c. of which is "productive" in the sense that it is capable of producing merchanta timber; the remainder is incapable of producing merchantable timber because of adve climatic, soil or moisture conditions or is reserve forest land for which no inventories available. Table 1 shows the areas of productive and non-productive forest land in ea province and territory; forest land in each province classified by type of growth is given Chapter X at p. 544.

* The figures given in this section will be affected by the results of more recent forest inventories that have b conducted by the provinces; later data will be available from the Canadian Forestry Service by mid-1971.

Canada	**959,849**	**750,939**	**1,710,788**

Inventories of the forest resources are made periodically by provincial forest authorities nd, with their co-operation, the Canadian Forestry Service of the Department of Fisheries nd Forestry compiles national statistics. The latest estimates of the total stand of mer-nantable timber, by province and region, appear in Table **2**. These estimates are subject o constant revision as more accurate and complete inventories are compiled.

[1] Ten inches D.B.H. (diameter at breast height) or over (suitable for saw timber). [2] Four to nine inches nits of 85 cu. ft.).

Tenure of Forest Land.—Corporations and private individuals own 9 p.c. of the pro ductive forest land of Canada and 91 p.c. is in the possession of the Crown in the righ of the federal or the provincial governments. Rights to cut Crown timber under lease o licence have been granted on 23 p.c. of the productive forest land; the remainder comprise unalienated productive forest areas and federal lands such as Indian reserves, militar reserves, etc.

Woodlots on the 430,522 farms (1966) across the country comprise about 3 p.c. of th total productive forest. These small wooded tracts, ranging in size from three or four acre to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlot of Eastern Canada are, in general, highly productive because they lie in the southern par of the country and frequently occupy soils that are considerably higher in quality tha those typical of the northern forests.

3.—Tenure of Occupied Productive Forest Land, by Province

(Net area in sq. miles)

[1] Includes 16 sq. miles of "other" provincial Crown land. [2] Of this total, 320 sq. miles are under lease licence—293 sq. miles in Alberta, the 25 sq. miles in the Yukon Territory and the 2 sq. miles in the Northwe Territories.

Canada's Forest Trees.—There are approximately 140 recognized tree species i Canada,* excluding the various subspecies and varieties. Of this number, 31 species ar conifers or 'softwoods', about two thirds of which are of commercial value; less than on fifth of the native broadleaved trees or 'hardwoods' can be considered as commerciall significant.

The most abundant forest trees in Canada, in terms of standing timber, are the spruce pines, true firs, poplars, hemlocks, birches, cedars, Douglas-fir, maples and larches. How ever, the economic importance of these species, except for the spruces, does not necessaril correspond to their abundance.

About one third of Canada's timber volume is spruce. White Spruce and Black Spruc range from the Atlantic Coast almost to the Pacific and northward into Alaska. Sitk Spruce, the largest of the native spruces, is found in the Pacific Coast area; Engelman Spruce is established farther inland, extending to the foothills of the Rockies in southwester Alberta; and Red Spruce is found only in Eastern Canada. Spruce wood is used extensivel for pulpwood, lumber and plywood.

Among the pines two species—Jack Pine and Lodgepole Pine—comprise 11 p.c. Canada's standing timber. Jack Pine grows from Nova Scotia to northern Alberta and th

* See *Native Trees of Canada*—7th Edition, Information Canada, Ottawa, 1969.

rthwest Territories and Lodgepole Pine is found in western Alberta, British Columbia l Yukon Territory. Eastern White Pine, which grows from the Atlantic to the eastern e of the prairies, and Western White Pine produce valuable softwood lumber. Pon- osa Pine, found in the drier areas of southern British Columbia, and Red Pine, found in stern Canada, are important commercial species.

The four native firs are all commercial species, although Balsam Fir far outranks the er species in this regard. It is the only fir found in Eastern Canada and ranges from wfoundland through all the provinces except British Columbia. Alpine Fir, essentially igh altitude tree, is found over a wide area in British Columbia and its range extends l into the western half of central Alberta and the Yukon. Amabilis Fir is a West Coast cies, while Grand Fir is found both in the Pacific coastal areas and in the interior of tish Columbia. Fir is commonly cut as pulpwood and, to a lesser extent, as sawlogs.

Douglas-fir, one of Canada's best known commercial trees, is not a true fir. The tree ponsible more than any other for British Columbia's world-wide reputation for timber he coastal form of Douglas-fir which is dominant in the forests of the province's lower astal areas. An interior form, known as Blue Douglas-fir, is used on a large scale for nber, plywood, construction timbers, piling and kraft pulp.

The poplars are the most abundant of the native broadleaved trees. They include embling and Largetooth Aspen, Balsam Poplar, and the three cottonwoods. The most dely distributed is Trembling Aspen, followed by Balsam Poplar; both species occur m Newfoundland to Alaska. The largest of the native poplars is Black Cottonwood; range covers the lower two thirds of British Columbia and extends well into Alberta to east in a pattern that follows the natural drainage basins. It also reaches as far north he Yukon along the coast. This species is in demand for veneer stock. Other cotton- ods—Eastern Cottonwood and its western form known as Plains Cottonwood, and rrowleaf Cottonwood—have a much narrower distribution.

Hemlocks, ranking fifth in volume of standing timber, have considerable commercial portance. Western Hemlock grows plentifully along the Pacific Coast and west of the ckies in the interior wet belt of British Columbia. It is one of the principal timber- ducing species in Western Canada and is also an important source of pulpwood. Eastern mlock is found from the Atlantic to western Ontario, although not in a wide or continuous tern. It is used to produce a number of products including pulpwood, plywood and nber. Mountain Hemlock is found in British Columbia in parts of the coastal forest d in the heavier rainfall areas of the interior.

Of the six native birches, only two are of commercial importance—Yellow Birch and hite Birch. Most abundant is White Birch which grows over a vast part of Canada from e Atlantic to the Pacific and extends up to the northern tree limit. One variety, Western per Birch, reaches heights of 100 feet and diameters of three feet or more. Yellow Birch a valuable hardwood species used extensively for flooring, veneer and plywood. Its nge reaches from the Atlantic to Lake Superior.

The native trees commonly known as 'cedars' include the Arbor-Vitae (Eastern White dar and Western Red Cedar), Yellow Cypress (Yellow Cedar) and a juniper (Eastern d Cedar). Together they make up an important group of commercial species. Eastern hite Cedar is found from Nova Scotia to Manitoba and as far north as James Bay in ebec and Ontario. Its wood, which is light and resistant to decay, is used for posts, es, boats and other purposes where timber is exposed to situations favourable to decay. stern Red Cedar is of major importance in British Columbia where it ranges from the cific Coast to the Rocky Mountains. It is used for lumber, exterior siding, shingles, es and posts, doors, window sashes and other purposes where resistance to decay is quired. Yellow Cypress—commonly called Yellow Cedar or Alaska Cedar—is found inly in the Pacific Coast region where it grows down to sea level in the more northerly tions. As it extends farther south, it seeks higher elevations. Its wood, like that of e other cedars, is valued in situations where resistance to decay is needed.

There are ten native species of maple, six of which are of commercial value. Only t species are known as hard maples, producing wood that is both hard and strong—Su Maple and the closely related Black Maple. Sugar Maple ranges from the Atlantic Lake Superior, while Black Maple is found mainly in southern Ontario. Hard maple co stitutes one of the most valuable commercial hardwoods in Canada. It is used for furnitu flooring, veneer, quality plywood, turnery and other specialized purposes where streng and hardness are needed. Sugar Maple and, to a lesser degree, Black Maple are tapped f the maple sugar industry. Bigleaf Maple is found on the lower Pacific Coast mainla and on Vancouver Island. The wood is only moderately hard and lacks strength b owing to the limited local supply of hardwoods, this tree is of some importance for furnitu and other specialized uses in the immediate area. Red Maple and Silver Maple are easte species. Red Maple ranges from Newfoundland to western Ontario, while Silver Maple concentrated mainly in southern Ontario and southwestern Quebec. Their wood is weak and softer than that of the hard maples and these trees are not important timber produce The Manitoba Maple, ranging from Ontario across the southern parts of Manitoba, S katchewan and southeastern Alberta, produces a soft, moderately light wood that is low strength. It is better known as a shelterbelt tree.

There are three species of larch in Canada. Two of them—Eastern Larch, bet known as Tamarack, and Western Larch—have commercial value. Tamarack is wid distributed from Newfoundland to the British Columbia–Yukon border and reaches f into the Northwest Territories. The wood is used for poles, posts, piling, boxes, cra and pulp. Western Larch, found mainly in southeastern British Columbia, is one of t important timber-producing trees of Western Canada. The wood, being hard and stro is used mainly in construction but is also made into flooring, interior and exterior furnishin and pulp.

Other trees of less commercial significance include oak, ash, beech, elm and basswo Valuable as the wood of these species may be, it is usually obtainable in limited quantit only. However, the species may have considerable local importance and they also co tribute greatly to the forest landscape.

Canada's total forest wealth is measured by the diversity as well as by the abundan of its trees. The better known species are the commercially exploited trees, but in t forest all species have a role to play in maintaining the ecological balance, controlling wa run-off and preventing soil erosion, and also in providing a habitat for native fauna a recreational facilities for all who wish to enjoy them.

Section 2.—Forest Depletion

General information on forest depletion and increment as well as statistics on for fires and fire losses are presented in this Section. The scientific control of the influen that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section

Table 4 shows only the depletion of the forests caused by utilization and by fi Information on the extent of damage caused by agencies other than fire, such as insec disease and natural mortality, is not available. Losses from insects and diseases alo are estimated to be in excess of 1,000,000 M cu. ft. of merchantable timber annually.

The productive forests of Canada covering an area of 959,849 sq. miles constitute t reserve from which forest production will be obtained in the immediate future. T supply of merchantable timber on this area is estimated at 748,982,000 M cu. ft. and t average annual utilization in 1957-66 of 3,384,000 M cu. ft. therefore represented l than one half of one percent of the supply. However, it should be noted that utilizati does not occur evenly throughout the productive forest area but is concentrated on t relatively small area of occupied forest land (land under lease, licence or private own ship). Thus, overcutting may occur on many of these occupied areas, emphasizing t need for orderly management of all commercial forests if the forest industries are to mai tain their important position in the Canadian economy. Also, efficient utilization of c timber is an important factor related to forest depletion.

4.—Forest Utilization and Depletion by Fire, Ten-Year Average 1957-66

Forest Fire Statistics.—The number of forest fires reported in Canada during 1968 s substantially lower than that in the previous year—7,301 compared with 8,650. How- er, despite the lower fire incidence, most categories of forest fire statistics exceeded the responding ten-year averages. The 2,211,605 acres burned in 1968 were slightly below e ten-year average of 2,473,346 but the value of the forests destroyed, at $21,604,794, s 47 p.c. higher. Similarly, the cost of fire fighting, which amounted to $11,896,326 in 68, was 50 p.c. higher than the 1958-67 average of $7,938,772.

A regional breakdown of 1968 forest fire statistics indicates that, of all regions, Alberta perienced the most severe fire season. Although only 8.5 p.c. of the fires occurred in that ovince, it accounted for 45 p.c. of the area burned and 59 p.c. of the fire fighting costs and mages. It is significant to note that only 1,384 fires, or 19 p.c. of the 7,301 reported, were ributed to lightning compared with 2,055 or 27 p.c. of the 1961-67 average of 7,558.

Section 3.—Statistics of Forest and Allied Industries

This Section is concerned with the many industries engaged in the felling of timber ar its transformation into a great variety of products required in modern living. The e tensive forests of Canada provide raw materials for several large and growing prima industries, i.e., the sawmills and planing mills, the shingle mills, the veneer and plywoo mills, the particle board plants and the pulp and paper mills, which in their turn provi raw materials for a wide range of secondary industries that convert the products of t primary industries into more highly manufactured goods such as sash, doors, millwor wooden boxes, furniture, converted papers and paper goods, etc. However, much of t output of the primary forest industries is exported: the sawmill industry and the pulp an

aper industry, especially, contribute substantially to the value of the export trade of anada and thereby provide an important part of the foreign exchange necessary to pay r the imports from other countries.

Statistics of manufacturing activity and total activity of the wood industries and the aper and allied industries may be found in a number of tables in Chapter XVI on Manuactures.

Subsection 1.—Logging Industry

The forests of Canada provide the raw materials for its sawmills and planing mills, ingle mills, veneer and plywood mills, particle board plants and pulp and paper mills s well as roundwood for export in unmanufactured state and other products such as elwood, poles and piling, fence posts, mining timber, Christmas trees, etc. Tables 8 nd 9 give the estimated quantities of wood cut in Canada, by province and by type of roduct. In estimating the annual cut, certain factors have been used to convert comercial units to cubic feet. These are as follows (British Columbia estimates are supplied y the British Columbia Forest Service):—

Product		Equivalent Volume in Cubic Feet		
		British Columbia		
		Coast	Interior	Other
Logs and bolts	M ft.b.m.	166.6	173.9	200
Pulpwood	cord	80	80	85

Subsection 2.—Wood Industries

The standard industrial classification subdivides the wood industries group into the following industries: sawmills and planing mills, shingle mills, veneer and plywood mills, sash, door and other millwork plants, hardwood flooring mills, wooden box factories, the coffin and casket industry and miscellaneous wood industries. The latter item is further subdivided into the wood preservation industry, the wood handles and turning industry and miscellaneous wood industries, *n.e.s.*

The sawmills and planing mills, the shingle mills, the veneer and plywood mills and the particle board plants (the latter are included in the miscellaneous wood industries, *n.e.s.* group) mainly use roundwood as a raw material and sometimes are called primary wood industries and are dealt with separately below. The other industries, which constitute the secondary wood industries, further manufacture part of the production of the primary wood industries into a great variety of products. However, most of the production of the primary wood industries is not further processed.

Sawmill and Planing Mill Industry.—Lumber is by far the most important single product of this industry and, as shown in Table **10**, British Columbia is the most important province in this field. It should also be noted that the shipment figures of Tables **10** and **11** contain a certain element of duplication because sales of lumber from one sawmill to another will be reported as shipments by both establishments. Similar situations occur in most industries to a greater or lesser extent.

In addition to the lumber produced by the sawmill and planing mill industry, a small amount is produced by establishments classified to other industries, bringing total lumber production in Canada in 1968 to 11,351,000 M ft. b.m. compared with 10,329,425 M ft. b.m. in 1967.

Shingle Mill Industry.—Most of the shingles and shakes produced in Canada a from British Columbia mills. All establishments classified to this industry reported, f the year 1968, shipments of 2,492,309 squares of shingles and shakes valued at $43,225,72 of which British Columbia accounted for 2,393,736 squares valued at $42,231,745. Ho ever, it should be mentioned that considerable quantities are produced by establishmen classified to other industries and by individuals intermittently operating one or two shing machines or producing by hand; although no adequate measure of this production is ava able, it is known to contribute significantly to the total. Of the total production in 196 2,666,178 squares were exported, 2,619,323 squares going to the United States.

Veneer and Plywood Industry.—The production of hardwood veneer and plywo in Canada is confined largely to the eastern provinces and the production of softwood vene and plywood almost entirely to British Columbia. For the latter, Douglas-fir is most co monly utilized because of the availability of large-diameter logs of this species from whic large sheets of clear veneer can be obtained. Of the hardwoods, Yellow Birch is by far t most important species. Although most of the raw materials for this industry are Canadian origin, some decorative woods are imported, particularly walnut.

About 46 p.c. of the shipments of veneer, shown in Table **12**, are softwood veneer most of these are further manufactured into plywood by Canadian mills, thus contributi to the shipments of plywood shown in the same table. Some of the hardwood veneers a also shipped to other veneer and plywood mills for further manufacture or to other indu tries such as the furniture industry for veneering purposes, but a significant portion exported. Total exports in 1968 amounted to 1,051,269 M sq. ft. valued at $33,142,000, which 983,578 M sq.ft. valued at $28,780,000 went to the United States.

Most of the plywood is consumed in Canada, although exports are not unimportan in 1968 these amounted to 36,609 M sq. ft. of hardwood plywood valued at $6,818,000 a 690,263 M sq. ft. of softwood plywood valued at $46,122,000. The greater part of the e ports of hardwood plywood went to the United States (33,466 M sq. ft. valued at $6,085,00 but most of the softwood plywood exports went to Britain (489,301 M sq. ft. valued $32,401,000).

12.—Veneer and Plywood Shipments, by Type, 1966-68

Type	1966		1967		1968	
	Quantity	Value	Quantity	Value	Quantity	Value
	M sq. ft.	$'000	M sq. ft.	$'000	M sq. ft.	$'000

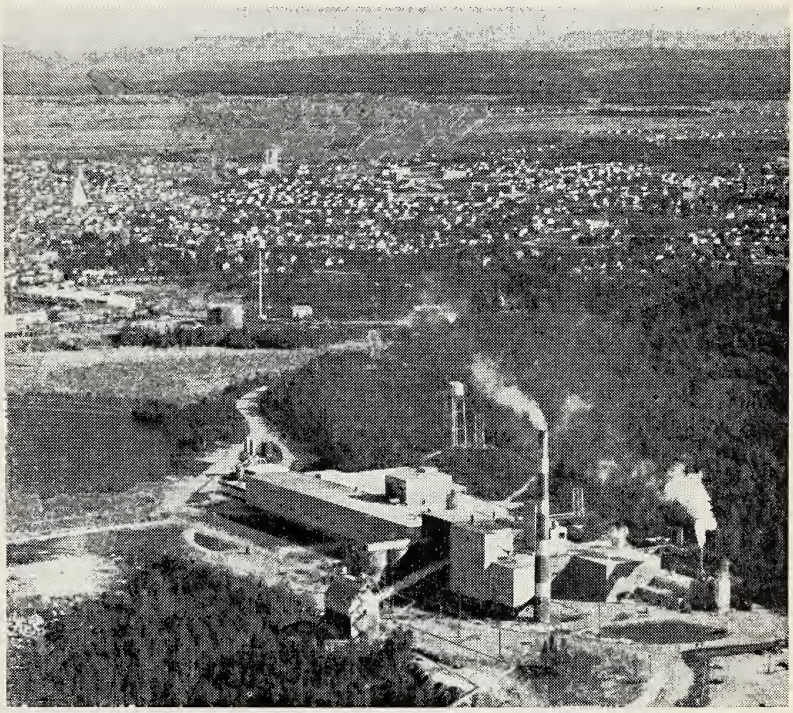
Subsection 3.—Paper and Allied Industries

The standard industrial classification subdivides the paper and allied industries grou into the following industries: the pulp and paper industry, the asphalt roofing manufa turers, the paper box and bag manufacturers, and other paper converters. Statistics manufacturing activity and total activity of the paper and allied industries group a given in Chapter XVI on Manufactures .

Pulp and Paper Industry.—This industry is by far the most important of the group. fact, it has been for many years the leading industry in Canada, contributing about .c. of the total gross national product and over 13 p.c. (1968) of the total value of the ntry's exports. There were 137 pulp and paper mills in operation in 1968.

These mills consume enormous quantities of roundwood, 18,371,821 rough cords with ost value of $523,343,000 being so used in 1968. In that year, 115,000 cords of pulpwood e imported and 1,059,000 cords were exported. In addition, the pulp and paper mills wood residues of the sawmill and other industries for pulping, such as cores of peeler , slabs and edgings or wood chips made thereof, shavings, etc., and recently even saw- t has been used successfully for this purpose. The total of such wood residues used by industry in 1968 amounted to the equivalent of 6,907,744 rough cords of pulpwood, ued at $143,322,000. The industry also consumes large amounts of electric power, micals and other goods and services and requires great quantities of clean water.



paperboard nquière, Que. mills ac- more than f the world pulp, paper rboard which 40,000,000 70. The ben- this export felt in every the country.

Some of the production of the pulp and paper industry is consumed in Canada or ves as a raw material for the paper-using or secondary paper and allied industries and tain other industries, but a great part of it is exported, particularly newsprint and various es of pulp (see Table **15**), most of it to the United States. Some plants included in the p and paper industry classification also convert basic paper and paperboard into more hly manufactured papers, paper goods and boards but their output represents only a all part of Canada's total production of converted papers and boards. Tables **13** and give shipment and production figures for pulp and shipment figures for basic paper and perboards for 1964-68 and Table **15** shows exports of pulp and of newsprint to Britain, ited States and all countries for 1965-69.

13.—Pulp Shipments and Production, 1964-68

Item		1964	1965	1966[r]	1967	1968

Asphalt Roofing Manufacturers.—These establishments produce composition ofing and sheathing, consisting of paper felt saturated with asphalt or tar and, in some ses, coated with a mineral surfacing. They also produce asphalt, vinyl-asbestos and re vinyl floor tiles. Their total shipments in 1968 were valued at $58,567,000 compared th $59,533,000 in 1967.

Paper Box and Bag Industries.—These industries include manufacturers of folding rtons and set-up boxes, manufacturers of corrugated boxes and manufacturers of paper gs. Their total shipments in 1968 amounted, respectively, to $166,486,000, $240,045,000 d $170,083,000, compared with $161,546,000, $229,438,000 and $157,006,000, respectively, 1967.

Other Paper Converters.—This group produces a host of paper products such as velopes, waxed paper, clay-coated and enamelled paper and board, aluminum foil lami-ted with paper or board, paper cups and food trays, facial tissues, sanitary napkins, paper welling and napkins, toilet tissue, etc. The total value of manufacturing shipments this industry in 1968 amounted to $339,960,000 compared with $322,608,000 in 1967.

Section 4.—Forest Administration, Research and Conservation

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible through several depa ments and agencies for the protection and administration of the forest resources in t Yukon and Northwest Territories and on other federal lands such as the national par Indian reserves, military areas and forest experiment stations.

The primary federal organization concerned with forestry is the Canadian Forest Service of the Department of Fisheries and Forestry. The Canadian Forestry Servi was formerly the Forestry Branch of the same department, the change in name becomi effective in 1969. The main functions of the Service under the Forestry Developme and Research Act include: (1) conducting research relating to the protection, manageme and utilization of the forest resources of Canada and the better utilization of forest product (2) undertaking, promoting and recommending measures for the encouragement of publ co-operation in the protection and wise use of the forest resources of Canada; (3) enteri into agreements with provincial governments and individuals relative to forest managemer protection or utilization, for the conduct of research relating thereto, or for forest publici or education; (4) providing forest surveys and advice on protection and management federally administered forest lands; and (5) assuming responsibility for forest protecti and management on federal lands at the request of the department or agency concerne

Heading the Canadian Forestry Service is an Assistant Deputy Minister responsib to the Deputy Minister of the Department. Reporting to the Assistant Deputy Minist are the Directors of Coordination, Operations, and Forestry Relations. The three Directo are responsible respectively for program development, co-ordination and control; the contr and co-ordination of management resources (including personnel, finances and facilities and forestry matters involving other federal and provincial government departments well as national and international agencies and organizations. Within the Service the are seven research institutes undertaking work which, for the most part, has broad nation applications. This research supports and complements the activities of six regional fore research laboratories serving Newfoundland, the Maritimes, Quebec, Ontario, the Prairi and British Columbia. In 1969, the former Alberta–Northwest Territories–Yukon Regi and the Manitoba–Saskatchewan Region were combined to form the new Prairies Regi with headquarters in Edmonton, Alta. Forest products research is conducted at two fore products laboratories—one located at Vancouver, B.C., and the other at Ottawa, On

The forestry program of the Canadian Forestry Service falls within three categories– forest resource research and services, forest products research and services, and support university research.

Forest Resource Research and Services.—The work undertaken in this categor covers research, surveys and related services pertaining to forest land and forest soil forest inventory and mensuration; silviculture and tree biology; timber harvesting; prote tion against fire, insects and diseases; and forest economics.

Research in forest land is directed largely toward establishing practical land classific tion systems for forestry purposes. This work is an integral part of the Canada Land I ventory and the Bio-physical Land Classification System. In forest-soils research, progra dealt with include soil chemistry, soil biology and the hydrologic characteristics of wate sheds but, currently, considerable emphasis is being given to forest fertilization and relate mineral-nutrition studies.

Considerable attention is devoted to improvement of forest inventory technique large-scale aerial photography, combined with a radar altimeter, has been developed t the point where it is in operational use in a forest inventory of Labrador. Research in ne techniques of remote sensing for forestry purposes is accelerating, and the possibility c

ra-small-scale, high-altitude aerial photography and satellite photography is being vestigated. Studies of growth and yield, the evaluation of site potential, and the develop- nt of mathematical models for trees and forests are continuing.

A substantial portion of the research program in silviculture involves the study of tors responsible for the success or failure of natural regeneration following various thods of cutting and treatment of seedbeds; the development of improved methods of generating forest stands following logging or fire; and the establishment of forests on andoned farmland, heathland or bogland. Different methods of seeding and planting e being compared, and increased emphasis is being given to problems associated with ntainer planting. The effects of mechanization of logging on reproduction and on slash d soil conditions are being investigated. Studies of different methods of stand-tending ch as pruning, cleaning and thinning are under way to determine means of increasing th quantity and quality of wood production. Investigations of successional changes are progress in most of the important forest types, and the relation of forest growth to site being studied with a view to the assessment of long-term productivity. The light, mperature and moisture conditions required to produce optimum growth and development various tree seedlings are being determined to provide guidelines for improved forestry actices. In tree breeding, superior strains are selected or developed, and there is con- nual improvement in propagation and breeding techniques.

Research on timber harvesting has been intensified by work conducted within the newly tablished logging development program of the Forest Management Institute. The jective of this work is to improve logging productivity and reduce the cost of wood deli- red from the standing forest to the consuming mills.

Adequate protection of forests against fire is of vital importance in Canada. The rvice works in full co-operation with provincial forest services in almost all phases of rest fire control and has made major contributions in the fields of forest fire danger easurement and forecasting and in fire control planning. Investigations are being made forest fire behaviour, of the use of prescribed fire for hazard reduction and seedbed eparation, of better methods of reporting forest fires, and of fire damage appraisal and lated factors in forest protection standards. Studies are being continued in the use of emicals for fire suppression and pre-suppression, of fire fighting equipment and techniques, d of the use of aircraft in forest fire control. Another important field of endeavour is the udy of fire hazard created by slash from various kinds of logging practices for different ecies.

Research on forest insects and diseases is conducted at Service regional laboratories d field stations throughout Canada. A Canada-wide survey is undertaken in co-opera- n with the provincial forest services and forest industries to maintain an annual census forest insect and disease conditions and to detect and predict the occurrence of outbreaks. rvey results are made available to owners and operators of forest lands for use in planning lvage programs and directing control measures to reduce damage.

Laboratory research programs are designed to lead to comprehensive understanding the biology and ecology of the more destructive forest insects and fungi, and the causes fluctuations in abundance or severity of damage in time and place. Problems under tensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, em cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring sects, and diseases of tree seedlings in forest nurseries. Research on development, ysiology, nutrition and taxonomy complements the field ecological studies of insects and ngi. Problems of national importance in insect pathology, cytology and genetics, bio- matology and chemical control are investigated.

Experiments are also carried out in insect and disease control, utilizing cultural tech- ques, chemicals and biological control agents including parasites, predators and insect thogens. Technical advisory services are provided in evaluating quarantine programs, ssibilities of eradication or control, or other applications of research results. Examples clude recommendations for reduction of seedling losses in forest tree nurseries through

A technician mounti specimens for the inse tary collection at t Forestry Research La oratory, Victoria, B. C

cultural techniques and chemical applications; the co-operative organization of cull survey to improve forest inventories; consultation and advisory services for local authorities c the Dutch elm disease problem; and technical co-operation with provincial governmen and industrial agencies in the organization of spraying operations against the spruce bu worm in New Brunswick, the ambrosia beetle in British Columbia, and the red-headed pi sawfly in Ontario and Quebec.

Current research in the economics of forest resources includes compilation and asses ment (on a national basis) of provincial forest inventories, an investigation concerning th size and seasonal distribution of a mobile airtanker fleet, studies of supply and deman prospects for Canada's timber, assistance in multiple use land planning, work on the us of linear programming as a macro management tool, and an assessment of the birch resour in Canada. In the field of communication and service, other studies are proceeding o economic indicators in forestry and forest-based industries, on short-term lumber pric predictions, and on lumber consumption forecasts.

Forest Products Research and Services.—This work is directed toward obtainin background data on the properties of Canadian woods, developing new and better uses fo wood products, improving methods of processing, and effecting more complete utilizatio of wood substances. Activities cover all major aspects of forest products and includ the determination of the physical, mechanical, chemical and anatomical properties c wood and their relation to adaptability in use; studies of factors affecting quality of woo and of manufactured wood products; determination of factors that cause wood waste i logging and manufacturing; investigation into fire retardant treatments, the preservativ treatment and painting of wood and the use of wood for the manufacture of a variety c products by chemical or mechanical means; and studies to determine possible new economi and more valuable uses for woods and to determine methods for the economical utilizatio of all wood substances available from the annual timber harvest.

The program is conducted mainly at two laboratories—Ottawa and Vancouver—wit research units covering timber engineering, containers, glues and gluing, veneer and ply

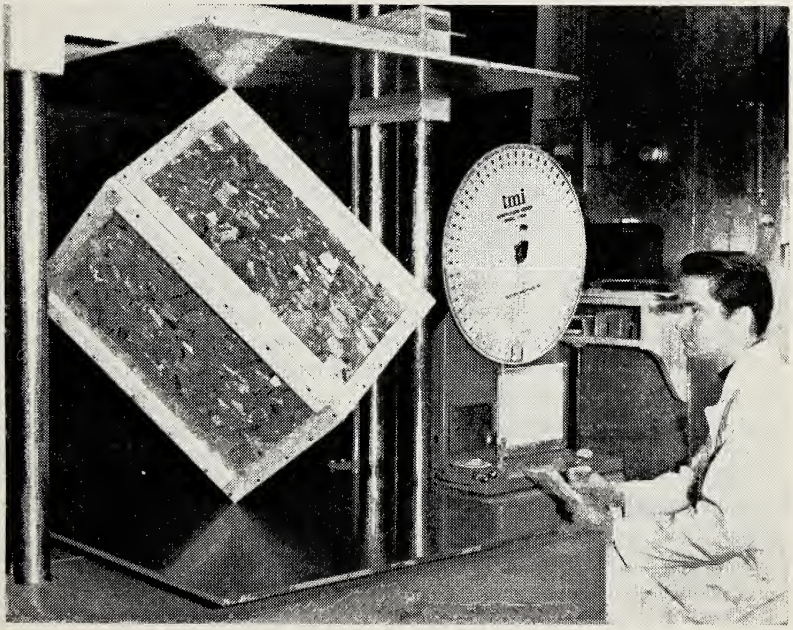
od, timber physics, wood chemistry, pulping, wood preservation, paints and coatings, od pathology, products entomology, wood anatomy, logging, lumber manufacture and ıber seasoning. Research results are made available to the thousands of plants com-sing Canada's timber-manufacturing and wood-using industries. Liaison is maintained h these industries to ensure that the research being conducted is of optimum national ıefit. There is also constant co-operation with various government units in conducting ny investigations concerned with wood use. Research into the use of wood in housing ıstruction and as an engineered material continues in co-operation with the National search Council and the Central Mortgage and Housing Corporation.

A number of regional establishments have forest products liaison officers who visit ymills and other wood-working plants to keep industry aware of research developments l technical advances and to ensure that the Service is informed of field problems on ich research would be of value.

Continuing research on the economics of forest products covers a survey of lumber and od-based panel products utilized in residential dwellings, together with a study of possible ure markets for lumber and plywood.

Service personnel serve on many national and international technical committees ıcerned with forestry problems, and continuous collaboration is maintained with forest oducts laboratories in other countries for the dual purpose of exchanging information and oiding duplication of research.

Support of University Research.—Operating grants are made available to the four nadian forestry schools to assist their development through support of research conducted faculty members and post-graduate students.



Testing the durability of a packing box constructed of particle board in the Forest Products Laboratory at Ottawa, where new uses for wood in many forms are under constant study.

Subsection 2.—Provincial Forestry Programs

All forest land in provincial territory, with the exception of the minor portions national parks, federal forest experiment stations, military areas and Indian reserv is administered by the respective provincial governments. The forestry program of ea province is outlined below.

Newfoundland and Labrador.—Geographically, the Province of Newfoundla has two separate regions—the Island and Labrador on the mainland. The producti forest land is estimated at approximately 30,000 sq. miles about equally divided betwe the Island and Labrador. Most of Labrador's forests are leased but are as yet virtual untouched.

A large part of the forest land of the Island is leased, licensed or owned by pap companies, but a three-mile-wide belt along most of the coastline is retained as unoccupi Crown land for the purpose of providing firewood, construction material, fencing materi etc., for the local populations. Within this coastal forest belt, every form of cutting generally without intense control or restriction but a policy is being introduced wherel cutting in certain 'management areas' is controlled by Forest Service Officers. Appro mately one half of the Crown forests are at present under management. Commerc timber-cutting on unoccupied Crown lands has been by permit since 1952; permits f amounts up to 120 cords per person are issued by the field staff but permits for larg quantities must be approved by the government.

The Island is divided into three forest regions, each of which is subdivided into fi districts. Each region is under the control of a regional forester and each district is head by a district ranger with a staff of rangers and assistant rangers. Twenty-four we equipped forest fire depots and nine lookout towers, connected by radiotelephone to distri and regional offices, are operated by the Newfoundland and Labrador Forest Servic others are operated by the two paper companies which maintain their own forest fi protection organizations.

Forestry operations in Labrador are under the supervision of a regional ranger locat at Happy Valley (Goose Airport). Forest fire protection bases are located near Goo Airport and at Labrador City, Churchill Falls, Cartwright and Makkovik.

The Forest Service operates 10 fixed-wing aircraft for forest fire detection and su pression and three helicopters for transporting men and equipment. The permane Forest Service staff of approximately 130 persons is enlarged during the fire season with t addition of about 70 seasonal employees.

Prince Edward Island.—Roughly one third of Prince Edward Island's 2,184 s miles of land is tree-covered. The wooded areas consist of scattered patches througho the province, the greatest concentration being in the eastern section. All of the woodla is privately owned except some nine square miles of federal Crown land.

The Forestry Branch of the Department of Agriculture administers all forestry matte in the province—reforestation, protection and woodlot improvement. The reforestati program has been increasing year by year, as many as 500,000 trees being planted in o year on provincially owned and privately owned land. The Forest Nursery is being e panded and by 1975 will be providing some 6,000,000 trees annually.

The forest management programs include the provision of access roads into Crov land areas and woodlot improvement; improvement cuts act as demonstration areas for t public and for 4-H Forestry Clubs and Boy Scout and Girl Guide groups. Fire protecti is not too serious a problem in this province as wooded areas are relatively small and sca tered and are all accessible by road so that equipment can be rushed to the scene of a fi quickly and easily.

Nova Scotia.—Of Nova Scotia's land area of 20,402 sq. miles, 16,274 sq. miles are sed as forested and 93 p.c. of the latter is regarded as productive. Although 91 p.c. he forest land in Canada is held by the Crown in the right of the federal and provincial ernments, only 22 p.c. is so held in Nova Scotia. To promote education and dialogue ong various forest users, representative county Forest Practices Improvement Boards being set up.

The provincial Crown lands are administered by the Department of Lands and Forests ough a staff of foresters and rangers. Trained provincial personnel are also employed h some of the forest industries in the administration of privately owned forest lands. e Department administers the Lands and Forests Act as it pertains to all lands, and is onsible for forest fire suppression. Forest fire detection is facilitated through 35 ervation towers and an aerial patrol service. In 1969, 623 forest fires burned 2,812 es. Three fires exceeded 50 acres, and 36 p.c. were under $\frac{1}{4}$ acre. Fire suppression ws and rangers with equipment are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia, contributing ctly or indirectly over $100,000,000 to the gross provincial product annually. There are peration some 350 sawmills of various types and sizes, one hardboard mill, two ground- d pulp mills, and two chemical pulp mills. These mills processed 230,000 M ft. b.m. awn materials and 910,000 cords of round products in 1969, including 120,000 cords- ivalent of pulp chips from sawmill residues. In addition, 90,000 cords of pulpwood e exported.

The reforestation program, active since the 1930s, is being expanded. Experimental k on bullet planting, direct seeding, soil capability and site preparation continues. dbeds have been laid for a threefold increase to 3,000,000 seedlings by 1973.

Timber, pulpwood and Christmas trees are sold through public tender, and cutting on wn lands is done under recommendation of district foresters of the Department of Lands Forests. Management cruises, regeneration studies and experimental cuttings are ducted on Crown lands, and a program of operating these lands under sustained-yield nagement plans is under way. Silvicultural techniques, including thinning, conversion ing, aerial and ground fertilization, bog-ploughing and the use of silvicides, were applied 2,500 acres of Crown lands in 1969.

A new provincial forest inventory, which is a continuous system designed to operate a seven-year cycle, was in its third year in 1969. Concurrently, a system of 1,750 manent sample plots, due for completion in 1970, will provide continuing data on growth drain. Aerial colour photographing of Cape Breton Island was done in 1969.

Forest research is carried on by Federal Government agencies and the Nova Scotia earch Foundation. Investigations cover stand improvement, tree nutrition, cutting hods, and insect and disease activities. Extension projects include fire prevention, a program for schools, distribution of information on forest and wildlife conservation, motion of the Christmas tree industry, woodlot improvement, preparation of material the mass media, and technical assistance to sawmill operators.

New Brunswick.—Of the total land area of New Brunswick (27,835 sq. miles), roximately 86 p.c. is classed as productive forest, of which the Crown, in right of the vince, owns about one half. About 2 p.c. is owned by the Federal Government and remainder is privately owned. The results of a provincial forest inventory, part of national forest inventory, were published in 1958. The total volume of standing ber in the province is estimated at 16,871,000 M cu. ft.; coniferous species make up 71 and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly responsibility of the Department of Natural Resources which also carries out duties connection with game management and protection, provincial parks, mines, water, rism and the administration of provincial Crown lands. A large-scale aerial spraying

program to protect balsam fir and spruce from the spruce budworm has been carried since 1952 by a Crown company sponsored by the federal and provincial governments a by representatives of the forest products industries. Forest Management Licen authorize operators to cut and remove forest products in accordance with forest mana ment plans and cutting permits. Royalty is paid to the province when products are by the licensees.

New Brunswick does not maintain a forest research organization but co-opera with the Canadian Forestry Service in that field. The University of New Brunswick l also undertaken a small number of forest research projects in co-operation with the Natio Research Council, the provincial government and other interested organizations.

In the field of education, the University of New Brunswick offers undergraduate a graduate courses in forestry leading to B.Sc.F. and M.Sc.F. degrees. It is also responsi for the administration of the Maritime Forest Ranger School in conjunction with Governments of New Brunswick and Nova Scotia and with private industry. The for extension services of the University assist both government and private agencies in direction and planning of various forestry extension programs. The provincial Departm of Agriculture also provides an expanding extension service to the owners of farm woodl

Quebec.—Well over half of Quebec's area of 594,860 sq. miles is under forest, stretch from the southern border northward to an irregular line roughly following the 54th paral and from the Ontario border in the west to the Atlantic coast in the east. Of the to forested area, about 93 p.c. is publicly owned and the remainder privately owned. Ab 64 p.c. of the publicly owned forest is "open forest", 26 p.c. is under timber lease and 10 is set aside for particular use. All forests serve to feed the province's large pulp and pa mills and numerous sawmills but, at present, about 25 p.c. of the annual cut comes fr privately owned land. A preliminary inventory has recently been completed of the publi owned forests and operations there are now under way in the accessible regions of north Quebec; these forests are subject to a general management plan of cutting and conservat under which they will be able to supply the ever-increasing demand for forest produ

The management of the publicly owned forests, their development, control and su vision, is the function of the Woodlands and Forestry Branch of the Department of La and Forests, which also, in certain circumstances and when it is in the public interest do so, manages privately owned forests. The Branch administers a number of tree nurs operations which provide some 100,000,000 seedlings annually for reforesting areas throu out the province where natural regeneration is inadequate. The Conservation Bran either directly or through various organizations, looks after fire protection and insect disease control.

Since Quebec's forests provide some 25 p.c. of the gross value of production in the pr ince, their importance is such that their management merits intensive consideration a study. Thus, the Department of Lands and Forests considers that periodic review of program is essential to keep abreast of progress in the various sectors of the forest indust to bring about a maximum output from its forest capital, and to enable the industry to m the constantly changing and increasing demands of the world market.

Ontario.—The boundaries of Ontario enclose an area of 412,582 sq. miles—83 land and 17 p.c. water. Forest lands comprise 75 p.c. of all the land, of which 164,600 miles are classified as productive. The Crown owns 90 p.c. of the productive forest la Although 84 tree species (exclusive of the hawthorns) occur within Ontario, four spe (Black Spruce 29 p.c., poplars 19 p.c., Jack Pine 13 p.c., and White Birch 11 p.c.) acco for almost three quarters of the total volume of standing trees. The total volume of m chantable standing timber is estimated at 111,000,000 M cu. ft.—60 p.c. softwoods a 40 p.c. hardwoods.

Crown forests are administered and managed through the Department of La and Forests, which has 10 Branches at Head Office and 21 forest districts (grouped wit

regions). The Branches may be classified as service (Accounts, Law, Operations, nnel, and Research) and operating (Fish and Wildlife, Forest Protection, Lands Surveys, Parks and Timber). The list of operating Branches indicates that a multi-oncept of forests is practised but only the programs that foster the growth and use mber as a crop are discussed here.

Management.—The original function of the Timber Branch was to arrange for the rly sale of timber and this important function is still carried out along traditional —operators are granted a licence to cut specified timber for which they pay stumpage ntractual rates on the measurement (scale) of products removed. However, the ils and techniques of utilization are undergoing constant improvement. Although ario's forest-based industries have long been a Canadian leader in terms of diversity roducts and value of shipments, there is still a surplus of timber over actual cutting ie province. To ensure the continuing supply of timber of the type required by indus- an effective management policy has been conceived. Continuing forest inventories, g aerial photographic methods in which the province pioneered, provide an up-to-date rd of the forest wealth, showing the species and other characteristics of stands and geographical distribution. Inventory data are then applied to management planning; province has been divided into 205 management units, each homogeneous with respect orest and use patterns. Long-term plans set out regulations on the volume and location uttings and include programs for regeneration and tending that will sustain yields. f 1969, 197 plans (79 Crown Units, 57 Company Units and 61 Agreement Forests) were er completed or in process of completion for approximately 197,000 sq. miles.

The Timber Branch is also responsible for the regeneration, tending and improvement ie forests on Crown lands. It operates 10 forest tree nurseries (with supporting tree collection, treatment and storage plant) currently geared for an annual output of ut 100,000,000 units.

While the Department, directly or indirectly, supervises all planting projects on wn lands, regeneration agreements have been signed with all major licensees whereby assume the direct responsibility for the conduct of planting projects, receiving pay- t at an agreed rate for work completed. Similarly, other projects, such as site prepara- for the planting, may be performed by the companies under the same agreement.

During 1969, 47,650,000 nursery-produced trees were planted on about 66,100 acres Crown lands. The tubed seedling program continued in 1969 and a total of 12,350,000 ed seedlings were planted on about 13,000 acres. Other silvicultural treatments in- ed the direct seeding of 11,150 acres, treatment for natural regeneration on 43,300 acres stand improvement (cleaning, spraying, thinning, pruning, etc.) on 63,000 acres. ll, 196,600 acres of Crown land were silviculturally treated in 1969 to promote regenera- or to improve the forests.

For half a century, Ontario has had enabling legislation that permits municipalities conservation authorities to place abandoned and submarginal agricultural lands, to ch they have acquired title, under agreement with the Department of Lands and sts, which undertakes to plant and manage the properties for a specified period of e—usually 50 years. Nearly 230,000 acres currently under such agreements have n managed intensively, the plantations receiving regular thinnings. The trees removed in demand for pulpwood, posts, poles and sawlogs, making the undertakings financially active. In addition, the properties that are close to centres of population are acquiring nendous value as recreational areas.

Owners of private land may purchase planting stock for forestry purposes from ernment nurseries at nominal prices and may also receive free professional advice any forestry matter, including silviculture, harvesting and marketing. Under the odlands Improvement Act, 1966, it is possible to have planting and improvement k carried out completely under government direction and mainly at its expense. In

return, the owner is required to meet a few modest demands that ensure his good fai This program has, in three years, planted nearly 10,000 acres of idle land, and upda forest management on 16,000 acres of privately owned land.

In Ontario, the utilization of timber crops, the processing of forest products and t distribution of commodities of wood to markets are functions of private enterprise. P mary mills licensed in 1969 and supplied principally from provincial forests include pulp and paper mills, 30 veneer and plywood mills and 815 sawmills of all types. Althou the consumption trend for wood is upward, the costs of wood at the mills have also b increasing and this has led to increased mechanization and, in turn, to entirely new te nologies of logging and product transfers. These changes have put pressure on the tra tional methods of wood measurement, and the Department has adopted or is furth testing alternative practices including (1) tree-length scaling, (2) weight scaling, (3) sam scaling, (4) measurement of log diameters to the full inch, and (5) log grading. In additi the data and the invoicing of licensees are being computerized.

Certain parts of the Crown forests remain under-developed. For such areas, t Economics Unit has undertaken feasibility studies and has had a principal role in getti new firms to establish. Other functions of the Unit include co-operation in expandi the available statistical information for the forestry sector, development of econor guides for timber management, analysis of current manufacturing costs and market pric evaluation of the impact of policy decision and economic service to other Branches.

Protection.—The area under organized forest protection in Ontario totals 180,2 sq. miles and includes the main central band of accessible forests. This area is organiz into 20 fire districts and further subdivided into 54 chief ranger divisions for the purp of forest protection. South of this area, in the highly developed agricultural counties southern Ontario, the municipalities are responsible for fire control. The vast inaccessil areas to the north of the fire districts, totalling over 134,000 sq. miles, do not support sign cant stands of merchantable timber and, except for communities or other special valu are not protected. Within the fire districts, agreements were in effect in 1969 with 2 municipalities for the prevention and control of forest fires. An agreement was also effect with the Federal Government for the protection by the Ontario Department of Lan and Forests of 958,000 acres of Indian lands in the province. The average annual numb of fires for the 1960-69 period was 1,422 and the average annual burn was 142,759 acres.

Forest fire detection is accomplished through a combined aerial patrol and looko tower system as well as through reports from the public. Based on the results of continui study and analysis programs, selected towers in some areas are being phased out in favo of aircraft. Work with long-term fire retardant chemicals indicates that they can useful in fire control operations in Ontario; operational adoption, phased over the next t to three years, is planned. Prescribed burning as a silvicultural and hazard reduction t was continued in 1969 with 19 burns covering 5,933 acres.

The integral float tank water-bombing system installed on Department aircraft w employed in the control of fires. The aircraft fleet as of Jan. 1, 1970, comprised 26 Tur Beavers, 10 Otters, three Twin Otters and one Beechcraft Duke; five Bell G-4 helicopt were leased during the fire season. The communications system included 186 grou stations, 277 lookout tower radios, 20 patrol vessel radiotelephones, 674 mobile radiote phones, 1,344 portable fireline radios, 41 aircraft radio installations and 74 portable aircr radiotelephones.

Forest pest control in 1969 was again highlighted by the spruce budworm spraying northwestern Ontario, where 25,000 acres were treated. Small acreages on Crown-own and Crown-managed areas were also treated in 1969 for White Pine weevil, European Pi sawfly, Jack Pine budworm, White Pine blister rust and fomes root rot.

Manitoba.—The administration of Manitoba forests is controlled by the Resour Planning Branch of the Department of Mines and Natural Resources. The province divided into four regions, each under a Regional Director who is responsible for the fie

ministration of forests in his region. The Regional Director works under policy guide-
es established by the Resources Planning Branch, relating to timber disposal, reforesta-
n and fire protection.

The Resources Planning Branch co-ordinates control measures for the propagation,
provement and management of the forests, the harvest of forest products, and forest
ventory surveys. A nursery station is maintained to supply stock for reforestation of
uded Crown land and some natural seed areas have been established for nursery stock.
edlings are supplied to farmers for shelterbelts and woodlots and to commercial Christmas
e producers and an average of more than 4,000,000 are planted each year in reforestation
jects on Crown lands. The program of forest stand improvement comprises thinning,
aring and chemical spraying to remove undesirable species and encourage growth of
eferred trees. Forest inventories cover about 5,500 sq. miles annually and, on the basis
these inventories, working plans with annual allowable cuts on a management unit basis
e in operation.

Timber-cutting rights are awarded by Forest Management Licences, Timber Sales
d, in certain cases (particularly for salvage operations), by Timber Permits. Forest
anagement Licences may be granted for periods of up to 20 years and are renewable;
mber Sales may be for varying periods from one year upward and Timber Permits for
riods of up to one year. At present, one long-term Pulpwood Berth with an area of
745 sq. miles and 10 long-term Timber Berths, all granted prior to 1930, are in force.
second Pulpwood Berth agreement was signed in 1966, covering the construction of a
lp mill and sawmill at The Pas in northern Manitoba.

The area of the province under forest fire protection is 128,370 sq. miles with zones of
iority established in the less accessible areas. Fires are detected through a comprehensive
twork of lookout towers and supporting air and ground patrols, all in communication by
dio and Departmental or public telephones. Two Canso water-bombers and two heli-
pters are rented for the worst of the fire season to supplement the 10 aircraft of the
anitoba Government Air Service.

Manitoba co-operates with several federal services which maintain two research areas
the province, and works closely with federal authorities in investigating and controlling
rest damage resulting from insects and diseases. Public education in the fields of fire
evention and forest conservation is carried out and use is made of radio, television,
ewspapers, pamphlets, signs, film tours and talks.

Saskatchewan.—The forests of Saskatchewan are located in the northern half of the
rovince and cover 117,738 sq. miles, or 53 p.c. of the total land area. Provincial forests
nstitute approximately 92 p.c. of all forest land in the province and are managed and
eveloped by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of four divisions—Fire Control, Forest Management,
ventory and Silviculture—is responsible for developing and evaluating forest policies
d management programs. The responsibility for carrying out such policies and programs
borne by the various regional administrative authorities. For purposes of resource
dministration, the province, with the exception of the most northern portion, is divided
to three regions, each under the supervision of a regional superintendent. The regions
re subdivided into conservation officer districts which vary in size according to resource
ase and population to be served. In the most northerly part of the province, because of
arious special programs with northern residents, resource administration is the respon-
bility of the Northern Affairs Branch of the same Department. Close liaison is main-
ained between the Forestry Branch and the various regional authorities.

A major responsibility of the Forestry Branch is the development of techniques in the
revention, detection and suppression of forest fires. A network of 75 lookout towers
quipped with two-way radios is maintained throughout the province and is supplemented
y three aircraft on regular patrol duty during the high-hazard periods. Northern Saskat-
hewan's communication system, with more than 1,300 two-way radio sets in operation in

towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppressio of forest fires. These activities are assisted by the use of two helicopters and seven aircra equipped for water-dropping.

Alberta.—The 157,595 sq. miles of provincial forests in Alberta are administered b the Alberta Forest Service of the Department of Lands and Forests with Head Office Edmonton. The Service, headed by the Director of Forestry, is composed of six Branches— Administration, Timber Management, Forest Protection, Construction and Maintenanc Land Use and Training. The forest area is divided into 11 Forests, each responsible fo the forest within its boundaries and under the jurisdiction of a superintendent supporte by a number of specialists in areas of timber management, fire, land use, constructio communications, clerical and a complement of casual employees. These Forests are furth subdivided into Ranger Districts, each supervised by a district forest officer responsible t the superintendent. A district forest officer may have several assistant rangers and othe staff under his charge.

The Administration Branch supervises all Branches in maintaining general contr over revenue and expenditure, equipment inventory and personnel. The general admini strative policies of the Service are formulated by this Branch.

The function of the Timber Management Branch includes implementation and super vision of the timber quota system, acceptance and approval of management and annua operating plans prepared for leased and licensed Crown lands, preparation and execution o forest management plans, and disposal of Crown timber. The Branch also carries o silvicultural programs, processes applications, takes inventories of forest resources, inspect cutting areas to ensure proper logging and utilization practices and collects dues and fees

The Forest Protection Branch is in charge of all phases of protection including pre vention, detection and suppression of wild fires. This Branch includes a number of spe cialists such as a meteorologist, a communications officer and a special Aircraft Dispatc Section to assist in the over-all protection program.

The Construction and Maintenance Branch constructs and maintains all road, airstri and building facilities within the area of the Service's jurisdiction.

The Forest Land Use Branch is responsible for the planning and supervision of the proper land-use practices in the forested area, including grazing, recreation and watershe management, particularly on the east slopes of the Rocky Mountains containing the tw Saskatchewan Rivers. The Forestry Training Branch provides facilities and instruction for the second year of a two-year forest technology course given by the Northern Alberta Institute of Technology. It also conducts in-service training programs for all the Branches in the Forest Service.

Basic research in all phases of the forestry program is generally carried out by the Canadian Forestry Service. A new federal research laboratory is being completed in Edmonton to increase the research service that is provided.

British Columbia.—Of the 366,255 sq. miles in British Columbia, somewhat over 200,000 sq. miles are inventoried as productive forest land.* This includes close to 100,000 sq. miles of mature timber containing over 261,312,000 M cu. ft. of conifers and about 7,322,000 M cu. ft. of broadleaf species.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision into Ranger Districts, of which there are approximately 22 in each Forest District. Twelve directional, servicing or policy-forming Divisions constitute the Head Office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization

* See footnote, p. 612.

their raw materials. The problem is urgent despite the fact that, with a present annual ıle of approximately 1,890,000 M cu. ft., the total inventory would appear sufficient to pport current needs in perpetuity. One of the more spectacular results of sustained-ld administration has been the swinging of a greater proportion of the annual forest rvest to the interior of the province. In 1969, the over-cut coast (wet belt) forests counted for about 52.6 p.c. of the total forest cut and the interior for 47.4 p.c. For all actical purposes, the entire interior forest is publicly owned; a large proportion of the ivately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The Tree Farm Licence is a contract tween the government and a company or individual whereby the latter agrees to manage, otect and harvest an area of forest land, including any privately held forest land, on a stained-yield basis. Tree Farm Licences are subject to re-examination for renewal every years. Public Sustained-Yield Units are areas within which the Forest Service manages e Crown timber on a sustained-yield basis. Within the Public Sustained-Yield Units, cognized established logging operators can apply for Timber Sale Licences or Timber le Harvesting Licences which entitle them to log at a given rate per year, based on a mber of factors including the operator's average rate of production at the time the unit is established.

Forest fire prevention techniques and organization for effective forest fire suppression e vital aspects of planned sustained-yield management. A greatly expanded pulp in-stry, added to the long-established logging and sawmill industries, has increased the cessity for more adequate fire control. Extensive use is made of aircraft under various rms of contract. Air tankers and fire-spotter aircraft are employed during the fire season d helicopters and other aircraft are employed under contract for patrol duties and for e transport of fire suppression crews. The rugged topography and the many remote and arsely populated areas of the province demand the availability of a variety of transporta-on methods to tie in with early discovery of and attack on forest fires.

Close liaison with the Forestry Branch of the federal Department of Fisheries and restry through facilities at Victoria provides detailed information on insect and fungal emies of the forest and on fire research.

Subsection 3.—The Pulp and Paper Research Institute of Canada

The Pulp and Paper Research Institute of Canada is a centre of research and learning ncerned with virtually every aspect of the production and use of pulp and paper products. was established in 1913 as a branch of the Dominion Forest Products Laboratories and 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper ssociation, the Federal Government and McGill University. The Institute staff carries t fundamental research and some applied research in the fields of woodland operations d pulp and paper mill operations. In addition, in co-operation with McGill University, trains postgraduate students who are working toward master's and doctorate degrees in ysical chemistry, wood chemistry, or chemical and mechanical engineering, and whose eses subjects lie in fields of interest to the pulp and paper industry.

The Institute's head office and main laboratories are located in Pointe Claire on the estern outskirts of Montreal in a recently enlarged building constructed by the Govern-ent of Canada. Space provided by the University is also occupied on the campus of cGill University by Institute staff and students involved in the graduate education rogram. The Institute's facilities include: organic and physical chemistry, physics and gineering laboratories; pilot plants for chemical pulping, pulp and chip refining and aste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive brary; shops and special facilities for pulp and paper testing and for photographic and icroscopic (both light and electron) studies of wood, pulp and paper. It has a staff of out 200.

The Institute's research activities comprise a basic program in pulp and paper researc and in woodlands research, contract research, and technical services. The basic pulp a paper research program is supported by assessments from the Maintaining Membersh (some 40 companies, representing more than 100 mills and about 95 p.c. of the total pr duction of the Canadian industry). The woodlands research program is supported b assessments on all member companies of the Canadian Pulp and Paper Association east the Rockies that use pulpwood. Both programs comprise research of interest to the i dustry broadly, as distinct from that which is the concern of a single company only.

The projects in the research program range from studies of the growing seedling in t forest to the converted pulp and paper product, and are directed at seven broad researc goals: reduction of wood cost, reduction of fibre cost, reduction in capital and operati costs, testing and process control, products research, reduction of environmental pollutio and basic knowledge. The Institute is regarded as a centre for broad, long-range a uninterrupted studies of basic principles and for major engineering research and develo ment projects which individual pulp and paper companies would find difficult to justify the costs were not shared. Moreove., the Institute is a centre of highly specialized equi ment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill Universit has some 45 graduate students working on fundamental projects in the background of pu and paper technology, which also serve as their theses topics. The E. B. Eddy Profess of Industrial and Cellulose Chemistry at McGill, who is also a staff member of the Institut directs graduate student work on such subjects as the behaviour of the materials of whi wood is made—cellulose, lignin and hemicelluloses. The Director of the Institute's A plied Chemistry Division, also a Professor in the McGill Chemistry Department, supervis graduate student work in polymer, surface and colloid chemistry with particular reference those aspects that pertain to the physics and chemistry of pulp and paper. An Associa Professor of Chemical Engineering at McGill, who is a consultant to the Institute, direc graduate students in a variety of chemical studies. In addition, the Director of t Institute's Applied Physics Division, who holds a teaching appointment in McGill's Depar ment of Mechanical Engineering, supervises graduate student investigations on su subjects as supercalendering of paper and frictional processes in polymeric systems. Oth staff members who hold concurrent honorary positions at McGill as Research Associat assist in this student program.

The Institute undertakes contract research projects on a cost-reimbursement basis f individual companies or groups of companies in the pulp and paper or allied fields. T larger of these co-operative contracts have been concerned with problems of particul segments of the Canadian pulp and paper industry. The Institute also provides a bro range of technical information services to the industry and, to some extent, to other i dustries and the public. It maintains a specialized library for this purpose which stoc bibliographies, abstracts, translations and critical reviews for the use of the scientific st and the industry.

PART I.—FISHERIES*

Fishing is Canada's oldest primary industry but even though commercial fishing is now mited importance to the national economy as a whole, it is still of paramount conse- nce to the coastal provinces and to inland areas adjacent to waters where commercial ing is pursued.

Canada's main fishing effort is centred in the northwest Atlantic and the northwest ific waters, within range of home ports. The northwest Atlantic fishing grounds are richest in the world. The offshore banks cover about 200,000 sq. miles and are ex- ted by the fishing fleets of more than a dozen nations. The harvest of cod and allied ies alone, which includes haddock, cusk, pollock, hake, etc., is immense and other im- tant species yielded by this vast fishing area include halibut and other flatfishes (in- ling turbot), and herring, mackerel, salmon, swordfish and tuna. Crustacea include sters and crabs, and scallops comprise the bulk of molluscs landings. Oysters and clams harvested in inshore waters.

Salmon, halibut and herring are the principal species harvested in the Pacific Coast eries, although a variety of other fish and shellfish are also taken. The catches of the Pacific salmon—sockeye, chinook, coho, chum and pink—are regulated for conservation poses, and extensive biological and engineering facilities are maintained to safeguard develop these important stocks. Halibut, which are fished in the Gulf of Alaska and Bering Sea, are also closely protected by regulations to maintain stocks at optimum els. Herring are plentiful and are landed in quantity for reduction into fish meal and oil.

Adding to the total production is a fairly large inland fishery based on the country's nsive bodies of fresh water. The Great Lakes, which have an area of about 61,000 sq. es, yield a number of species, including whitefish, lake trout, pickerel, sauger, northern e, yellow perch, white bass, sturgeon, smelt, carp and various species of chub. The 300

* Section 1 and part of Subsection 1 of Section 3 were prepared by the Information and Consumer Service of the eries Branch, Department of Fisheries and Forestry, Ottawa.

fishing lakes lying in an area of about 35,000 sq. miles in the Prairie Provinces yield harvests of whitefish, lake trout, pickerel, pike and other species and the 10,000-sq. Great Slave Lake as well as smaller lakes in the Northwest Territories also produce qua ties of lake trout and whitefish.

Altogether, more than 150 species of fish and shellfish are harvested by Cana fishermen.

Section 1.—Commercial Fishing and Marketing

Canada's commercial fisheries produce a bountiful variety of fish and shellfish for h and world markets. Harvesting ocean and inland waters unusually rich in aquatic the nation's fishing industry ranks among the world's major producers of consumer fis products. Canada, in terms of quantity, is among the dozen or so countries that har more than 1,000,000 metric tons (2,204,600,000 lb.) of fish annually and, in terms of va consistently places among the world's top three fish-exporting countries.

Output of Canada's commercial fisheries increased substantially during the 19 This was a period of transition for the industry, highlighted by the introduction of the s trawler and the development of new or expanded fisheries for certain species, not herring, and also by the introduction of new harvesting techniques and improvement processing capability which resulted from intensified modernization programs initiated industry in collaboration with federal and provincial government agencies. A decade the fish catch fluctuated around 2,200,000,000 lb., producing gross earnings for the fisher of about $110,000,000. However, beginning in 1962, catches rose in both quantity value, reaching peak levels in 1968 of 2,929,223,000 lb. valued at $181,379,000. marketed value of all Canadian fish production soared from $199,300,000 in 196 $388,213,000 in 1968. Marginal declines from those records occurred in 1969.

Although the output of Canada's fishing industry is on a generally upward trend, t has been a definite decline in the number of fishermen. In 1969, some 68,000 fisherm compared with 80,000 a decade ago—manned a fleet of over 5,000 vessels of more t 10 gross tons and 36,000 smaller craft, and fish processing plants across the country emplo more than 18,000 workers. Investment in fishing craft and gear exceeded $300,000,00

The dawning 1970s could herald new and expanded horizons for the Canadian fish provided that the emerging problems of resource supply and quality are successfully o come. The steadily mounting pressures on fish stocks from domestic and internati exploitation and the increasingly serious effects of pollution on coastal and inland wa are major hazards threatening the continued growth of the industry.

Commercial Landings.—In 1969 the commercial fisheries catch of 2,715,000,00 had a landed value of $181,200,000. Nova Scotia was the top money-earning fish province with a catch value of $56,000,000. British Columbia was second with a v of $47,347,000 and Newfoundland third with $30,735,000, followed by the other co provinces of New Brunswick with $16,000,000 and Quebec and Prince Edward Island $9,000,000 each. Total landings for the year were down by 214,000,000 lb. and the v of landings by $4,700,000 from the records set in 1968. The total "marketed" value of year's output was estimated at $375,000,000, an amount $10,600,000 lower than that of previous season.

Atlantic Coast fishermen landed 2,426,000,000 lb. of fish and shellfish in 1969 although this was about 100,000,000 lb. less than in 1968, it brought in a gross revenu $121,000,000, a 4-p.c. gain. Each of the five East Coast provinces shared in the value g even though the quantity of landings increased only in Newfoundland and Prince Edw Island. Newfoundland, which leads the provinces in quantity of fish landings, boo its production above the 1,000,000,000-lb. mark for the first time in 1969 and Pr

vard Island's output increased by 2,000,000 lb. to 49,000,000 lb. On the other hand, a Scotia's landings of 671,000,000 lb. showed a sharp drop from the previous year and e of New Brunswick and Quebec were also down.

British Columbia, although slipping behind all other sea coast provinces except Prince vard Island in catch volume, recorded landings of 175,000,000 lb. in 1969. The landed e of this catch, at $47,500,000, accounted for more than 25 p.c. of the Canadian total. province's total catch was down by 92,000,000 lb. from 1968 and was little more than the quantity taken in 1967. The salmon catch of 79,000,000 lb. was down almost ,000,000 lb. from the previous season and was British Columbia's lowest since 1960. hough prices to fishermen averaged 35 cents a pound, 10 cents higher than the year re, the total value of Pacific salmon landings at $27,800,000 was $17,100,000 less than 968. Nearly half of the salmon catch was landed by gillnetters, 32 p.c. by trawlers 19 p.c. by seiners.

West Coast halibut landings by Canadian fishermen reached a six-year high in 1969. s catch of 33,800,000 lb., combined with record halibut prices averaging 42.6 cents a nd, gave a return of $14,400,000 to the fishermen. The continued ban on Pacific Coast ring fishing for reduction purposes, a necessary conservation measure, resulted in a catch nly 4,000,000 lb. worth $221,000; this may be compared with an average catch during years 1960 to 1968 of 337,000,000 lb. Landings of most other Pacific Coast fish were ut average in 1969.

Canada's freshwater fishing industry recorded a total catch in 1969 of about 121,000,000 which had a landed value of $14,000,000 and a marketed value of about $20,000,000. s quantity was about 6,000,000 lb. greater than in 1968 and returned to the fishermen additional $1,100,000.

Marketing.—The total marketed value of Canadian fishery products in 1969 is mated to have reached $375,000,000. As in other years, exports constituted almost ee quarters of the total production, accounting for a record $279,000,000, an increase of ,000,000 over the previous season. Two thirds of all fisheries products shipped by nada were sold in the United States, another 22 p.c. went to Europe and 7 p.c. to the ribbean. Imports of fishery products into Canada in 1969 were valued at $42,300,000, main species imported being shrimp and tuna.

As a consequence of reduced groundfish landings on the Atlantic Coast, the production groundfish fillets and blocks was about 2 p.c. lower in 1969 than in 1968. Weak prices ring the first nine months of the year were reflected in a lower production of cod blocks d of hake, cusk and pollock fillets and blocks, but a strong rising market for flatfish oducts induced a 20-p.c. increase (to 63,000,000 lb.) in the production of flounder fillets d blocks.

Fish meal production continued its upward trend. Output of East Coast herring meal e to 92,000 tons from 87,000 tons the year before and output of groundfish meal was tually unchanged at 47,000 tons. Of the total fish meal produced, 80,000 tons were orted, about 77 p.c. of it to the United States.

In 1969 only 622,000 cases of salmon were packed, 1,100,000 fewer than in 1968. most all salmon species except sockeye experienced the lowest production levels in five ars and this lower volume was accompanied by higher export prices for sockeye and pinks. e prices for other salmon species remained close to 1968 levels.

About 80 p.c. of the 1969 lobster catch was exported. Of exports valued at $37,000,000, p.c. went to the United States and 8 p.c. to Europe. More than half of the lobster orts were shipped in the shell, 40 p.c. as meat and 6 p.c. canned. About 95 p.c. of the llop exports, totalling 13,000,000 lb. valued at $14,000,000, also went to the United States. cause of reduced market prices, the returns were $1,000,000 below those of the previous ar.

Close to 260,000,000 lb. of Atlantic groundfish were put to salt in 1969, about 2 p more than in the previous year; 72,500,000 lb. of salted and dried groundfish were exporte nearly two thirds of it to the United States, Jamaica and Puerto Rico.

Section 2.—Fishery Statistics

The review of commercial fishing and marketing given in the preceding Section cov the situation in 1969 and contains estimated figures for that year. At the time of t preparation of this Chapter, however, the latest statistics available in detail for both t primary production and fish products were those for 1968 contained in the followi Subsections.

Subsection 1.—Primary Production

Canadian fishing waters yielded a record harvest of fish and shellfish in 1968. Landi of all species, both inland and sea (including such non-fish items as whales, seaweed, sea bait worms, etc.), totalled more than 2,900,000,000 lb., representing a landed value $181,400,000.

The value of the catch on the Atlantic Coast amounted to $115,700,000, an incre of 11.7 p.c. over the 1967 value of $103,600,000. The lobster catch was the most valua at $24,500,000 followed closely by cod at $24,300,000. Scallops moved to third place $13,400,000, reflecting a substantial increase in the price of that species. Two highlig of the Atlantic Coast fishery in 1968 involved the sensational growth of the queen cr fishery which paralleled a spectacular increase in the off-shore herring fishery.

The value of the Newfoundland catch was down slightly from the 1967 high $29,000,000 to $28,800,000. Herring and lobster were the only species to show increas landings. Cod landings valued at $13,600,000 represented 47.3 p.c. of the total.

Nova Scotia catch reached a new high in 1968 at $54,600,000. Scallops, valued $11,800,000 were, for the first time, the most important species from the standpoint income to the fishermen. Lobsters at $10,900,000 were second, followed by cod, haddo swordfish, herring, flounders, and sole.

New Brunswick fishermen enjoyed a record catch valued at $15,600,000, 43 p.c. hig than the 1967 value of $10,900,000. Herring, increasing steadily from a low of $900,000 1961, made a spectacular gain from $3,100,000 in 1967 to $4,900,000 in 1968 to become t major source of income to the fishermen. Lobster was next at $4,000,000 and the tu fishery made its first substantial contribution in the province with a landed value $900,000.

Returns to Prince Edward Island fishermen were also at a record high. Lobster $5,300,000 made up 62 p.c. of the total landed value of $8,600,000. The Irish moss fishe was second at $1,200,000 followed by scallops, oysters, cod and redfish.

Quebec landings increased in value to $8,600,000 from $7,900,000 in 1967. The ma species were cod $2,100,000, redfish $1,900,000, and lobster $1,700,000. The inland fishe in Quebec contributed $500,000 to the total landed value.

The landings of fish from the inland waters of Ontario, the Prairie Provinces, Yuk Territory and the Northwest Territories added to a surprising total of $12,300,000, increase of 9.5 p.c. over the $11,200,000 of 1967.

British Columbia landings, at $57,300,000 in 1968, were down slightly from the a time high of $60,700,000 reached in 1966. The main cause of the decrease was the d appearance of herring from British Columbia waters; the value of herring landings, whi was $5,100,000 in 1966, was only $200,000 in 1968. Salmon landings valued at $44,900,0 were up from the previous high of $38,700,000 reached in 1966, and the catch of tuna $500,000 was also a record, being more than double the previous high of $200,000 reach in 1967.

Subsection 2.—Fish Products

According to commodity surveys conducted by the Dominion Bureau of Statistics, value of sea and inland fish products produced at all industrial levels, including the ue to fishermen, amounted to $388,213,000 in 1968; this was an increase of 17.7 p.c. r 1967 and the highest amount on record. Much of the increase over 1967 took place he salmon fishery of British Columbia and the herring fishery of New Brunswick.

4.—Value of All Products of the Fisheries, by Province, 1964-68

[1] Includes value of livers and liver products. [2] Includes landings by Canadian fishermen in United States rts.

The annual output of canned salmon fluctuates considerably with the extent of the tch, as is shown in Table 6. This product has traditionally been the most important the industry, but the demand for Atlantic Coast frozen groundfish fillets and blocks has sen very rapidly in recent years and the value of these Atlantic products was higher than iat of canned salmon every year from 1963 to 1966 and only slightly lower in 1967 and 1968.

Section 3.—Governments and the Fisheries

The Federal Government has full legislative jurisdiction over the coastal and inlan fisheries of Canada, and all laws for the protection, conservation and development of thes fisheries resources are enacted by the Parliament of Canada. The management of fisherie is, however, shared with provincial governments to which certain administrative responsi bilities have been delegated.

The federal Department of Fisheries and Forestry exercises responsibility for th management of all fisheries, both marine and freshwater, in four East Coast provinces— Nova Scotia, New Brunswick, Newfoundland and Prince Edward Island—and in th Yukon and Northwest Territories. In four inland provinces—Ontario, Manitoba Saskatchewan and Alberta—the management of all fisheries is conducted by the provincia governments. In Quebec, the provincial government manages both marine and freshwate fisheries, but the inspection of fish and fishery products produced for sale outside th province is carried out by the federal Department of Fisheries and Forestry, as it is in a other provinces. In British Columbia, the fisheries for marine and anadromous (i.e., fis that migrate to the sea from fresh water) species are managed by the Department of Fish eries and Forestry, but the provincial government manages its freshwater fisheries. In th national parks across the country, the fisheries are managed by the Canadian Wildlif Service, Department of Indian Affairs and Northern Development.

Licences for sport fishing in all provinces are distributed by the respective provincia government which retains all revenues so collected. Sport fishing licences in the Yuko and Northwest Territories are distributed by the federal Department of Fisheries an Forestry.

Federal-Provincial Relations.—The mutual interest of federal and provincial governments in fisheries problems is recognized in the undertaking of joint studies and programs, frequently on a regional basis. Regional committees established in recent years have brought together representatives of all governments concerned for periodic discussion. Four groups have evolved: the Federal-Provincial Atlantic Fisheries Committee consisting of representatives of the Federal Government and of the Governments of New Brunswick, Newfoundland, Nova Scotia, Prince Edward Island and Quebec; the Federal-Provincial Committee for Ontario Fisheries; the Federal-Provincial Prairie Fisheries Committee comprising representatives of the Federal Government and of the Governments of Alberta, Manitoba and Saskatchewan; and the Federal-Provincial British Columbia Fisheries Committee.

Members of the Committees are the Deputy Minister of Fisheries and Forestry of Canada and the Deputy Ministers of provincial departments responsible for fisheries. Sub-committees make recommendations for industrial development, research and marketing problems. The main committee in each case co-ordinates, where practicable, all activities in the respective fields of responsibility of its members and suggests to the respective government means of carrying out fisheries programs and projects of common concern. These include the development of methods and techniques in the catching of fish and of shore and plant facilities, and studies of the economics of fisheries to ensure that any proposed program of development is soundly based.

Subsection 1.—The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries and Forestry:—

(1) The Fisheries Service of the Department of Fisheries and Forestry with headquarters at Ottawa, Ont., and regional offices under Regional Directors at Vancouver, B.C., Winnipeg, Man., Quebec, Que., Halifax, N.S., and St. John's, Nfld.

(2) The Fisheries Research Board of Canada with headquarters at Ottawa and biological, technological and oceanographic stations across Canada.

(3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of each of these agencies is given in this Subsection.

The Fisheries Service of the Department of Fisheries and Forestry.—Canada's fisheries service began with Confederation and functioned as a branch of other departments until being designated as the Department of Fisheries in 1930. Under the Government Organization Act of 1969, responsibilities of the Department of Fisheries and the Canadian Forestry Service (formerly the Forestry Branch of the Department of Forestry and Rural Development) were combined to form the Department of Fisheries and Forestry.

The Fisheries Service of the Department is responsible for all aspects of fisheries management except fundamental research, including advice on the formulation of fisheries policy and responsibility for its implementation. Programs to give effect to these objectives are conducted through eight functional branches and five administrative regions.

The Conservation and Protection Branch is responsible for the conservation of stocks of fish, shellfish and marine mammals through the establishment and enforcement of regulations. The Resource Development Branch applies scientific and technical means to expand existing fisheries resources and to maintain their physical and biological environment. Programs include water pollution abatement and control, hatchery and artificial spawning channel propagation of anadromous species, sea lamprey control in the Great Lakes, etc.

The Industrial Development Branch conducts programs of exploratory fishing, fishing vessel and gear development and technical assistance with the aim of improving the income of fishermen and the efficiency of the fishing industry. It also administers a fishing vessel insurance plan and programs providing financial assistance for fishery enterprises.

An experimental fishing technique, successfully demonstrated by Fisheries Service personnel to East Coast fishermen, involves the use of small boats working in pairs and co-ordinating their operations by radiotelephone.

The Inspection Branch is responsible for the inspection of fish processing and handlin facilities and of fish products entering interprovincial and export trade; also for the inspec tion of imported fish products and the provision of technical advice to the fish processin and fish handling industries. The Economics Branch assembles and interprets statistica data on the fisheries, and conducts studies and investigations in the primary fisherie and the processing and distribution of fishery products. The International Fisherie Branch is concerned with international consultation and co-operation in fisheries an also with jurisdictional matters, particularly in reference to territorial waters and fishin zones.

The Regional Operations Branch is responsible for the co-ordination and presentatio of regional contributions to policy formulation and for the co-ordination of regional leve operations. Regional Directors responsible for the implementation of Fisheries Servic programs are located in St. John's, Nfld., Halifax, N.S., Quebec, Que., Winnipeg, Man. and Vancouver, B.C.

The Marketing Branch was established in 1970 to assist industry and Crown agencie in the orderly marketing of fisheries products and to conduct marketing studies and assess ments. Activities also include the co-ordination of marketing programs of the Freshwate Fish Marketing Corporation and the Canadian Saltfish Corporation with those of th Department. The Branch shares its staff with the Fisheries Prices Support Board.

International Fisheries.—Recognizing the necessity for the orderly regulation of eries in international waters, Canada has long been a leading participant in inter- ional conferences, conventions and treaties upholding conservation principles. The heries Service of the Department of Fisheries and Forestry assumes a major responsi- ty for the negotiation, revision and implementation of international fisheries treaties on alf of the Government of Canada. The Branch is represented by one of its senior officers each of nine international commissions and one international council established under following conventions to which Canada is a party:—

(1) the Convention between Canada and the United States for the preservation of the halibut fishery of the northern Pacific Ocean and Bering Sea;
(2) the Convention between Canada and the United States for the protection, preservation and extension of the sockeye and pink salmon fisheries in the Fraser River system;
(3) the International Convention for the High Seas Fisheries of the North Pacific Ocean between Canada, Japan and the United States;
(4) the Interim Convention on Conservation of North Pacific Fur Seals between Canada, Japan, the Soviet Union and the United States;
(5) the International Convention for the Northwest Atlantic Fisheries;
(6) the Convention on Great Lakes Fisheries between Canada and the United States;
(7) the International Convention for the Regulation of Whaling;
(8) the Convention for the Establishment of an Inter-American Tropical Tuna Commission;
(9) the International Council for the Exploration of the Seas; and
(10) the International Convention for the Conservation of Atlantic Tunas.

The first international agreement contracted by Canada as an independent nation s a treaty negotiated with the United States in 1923 for the protection of halibut stocks the Pacific Ocean. An international commission established under that treaty was en broader regulatory powers in subsequent conventions, most recently in 1953 when name was changed to the International Pacific Halibut Commission.

The International Pacific Salmon Fisheries Commission has achieved much success ward rehabilitation of depleted salmon stocks in the Fraser River of British Columbia. scussions were held in 1965 and 1966 between representatives of Canada and the United tes to consider revision of the 1956 protocol which brought pink salmon of the conven- n area within the scope of the Commission's activities. Negotiations also took place ring the same period and through 1967 in an endeavour to reach agreement on problems sing from the intermingling of salmon bound for rivers of northern British Columbia l southeastern Alaska.

Protection of the high seas fisheries of the North Pacific Ocean is the objective of the ternational North Pacific Fisheries Commission established under a convention ratified 1953 by Canada, Japan and the United States. The Commission conducts co-ordinated ntific research programs and recommends conservation measures to be undertaken the contracting parties.

Fur seal stocks of the North Pacific and its adjacent seas are protected by the Interim nvention on Conservation of North Pacific Fur Seals which was ratified in 1957 by nada, Japan, the Soviet Union and the United States, and amended by a protocol in 64. This convention was preceded by an international treaty signed in 1911 which hibited the killing of fur seals at sea—a measure which, aided by careful management grams, made possible the restoration of depleted seal herds. At the present time, der the terms of the convention, Canada and Japan each receives annually 15 p.c. of the l skins taken on the United States-controlled Pribilof Islands, and 1,500 skins from the rvest of the Soviet-controlled Commander and Robben Islands.

The International Commission for the Northwest Atlantic Fisheries (ICNAF) conducts dies and makes recommendations for measures to conserve and develop the fish stocks off nada's East Coast. The convention establishing the Commission was signed in 1949

and has since been ratified by 14 nations: Britain, Canada, Denmark, the Federal Repub of Germany, France, Iceland, Italy, Norway, Poland, Portugal, Romania, Spain, the Sov Union and the United States. Major conservation regulations adopted by the Commissi have been related to minimum mesh sizes for trawl nets. In 1969, additional regulatio were proposed for certain heavily fished stocks, including closed seasons and over-all ca limits. These are now in effect for all member nations. In 1970, a scheme of internatio enforcement was proposed whereby protection officers would be empowered to enfo conservation regulations adopted by the Commission not only for their own flag vessels b also for fishing vessels of other member countries.

The Great Lakes Fishery Commission, set up under the 1955 Great Lakes Fisher Convention, provides a channel for joint action by Canada and the United States research into Great Lakes fish stocks and a program to control the parasitic sea lampr responsible for depleting lake trout stocks.

As a member of the International Whaling Commission, Canada is obligated to subm statistical data on whales caught by Canadian vessels and to conduct scientific studies whale stocks of special interest to Canada.

In 1967, Canada approved adherence to the Inter-American Tropical Tuna Commissi This Commission was established in 1950 by a convention between the Republic of Co Rica and the United States with the aim of studying relationships between the populatio of yellowfin and skipjack tunas and other kinds of fish taken by tuna vessels in the east Pacific. Because of increasing Canadian interest in the tuna fishery, Canada became signatory to the convention. Panama and Mexico are also Commission members.

Canada in 1967 became identified as a member of the International Council for t Exploration of the Seas. First established in Copenhagen in 1902, when it was entrust with co-ordination of international investigations of the seas, particularly those in t eastern North Atlantic Ocean, ICES has in recent years provided considerable scienti support to the Research and Statistics Committee of ICNAF. There are 16 other memb states: Belgium, Britain, Denmark, Finland, France, Germany, Holland, Iceland, Irelan Italy, Norway, Poland, Portugal, the Soviet Union, Spain and Sweden.

The International Commission for the Conservation of Atlantic Tunas held its fi meeting in 1969 with representatives attending from Brazil, Canada, France, Ghana, Japa Morocco, Portugal, South Africa, Spain and the United States. Madrid has been select as the headquarters for this newly formed Commission, which will undertake studies stocks of tuna and tuna-like fishes in the Atlantic Ocean and its adjacent seas. It w recommend to the contracting parties measures for maintaining stocks of these fishes levels that would permit the maximum sustainable catch yields for the various species.

In 1967, Canada was one of 18 nations represented at a Fisheries Policing Conferen held in London, England, to consider regulations designed for safety at sea for vessels countries fishing the North Atlantic. The conference endorsed a Convention on the Co duct of Fishing Operations in the North Atlantic and North Sea which was referred f ratification by the respective governments.

While co-operating with other nations to conserve high seas fisheries resources throu international agreement, Canada acted in 1964 to protect inshore fisheries by establishi a 12-mile exclusive fishing zone on all coasts. The Territorial Sea and Fishing Zones A proclaimed in that year has since been enforced against all countries except those havi traditional fishing rights. Negotiations have been conducted with these latter countri with regard to the application of the fishing zones and to the location of base lines fr which they are measured.

As evidence of its support for international consultation and co-operation in fisheri Canada maintains active membership in the Fisheries Department of the Food and Agric ture Organization of the United Nations and in the Codex Alimentarius Commission whi is concerned with world food quality standards.

The Biological Station of the Fisheries Research Board at Nanaimo, B.C., has recently been enlarged to permit extension of the Board's efforts to solve urgent problems in the management of the fisheries and in the protection of the aquatic environment.

Fed on a diet of dogfish chunks, this blackcod weighs 4½ lb. (half commercial size) after one year in the Station's culture tank.

The Fisheries Research Board of Canada.—The Fisheries Research Board is a rch organization established by Act of Parliament (RSC 1952, c. 121) for the purpose nducting basic and applied research on Canada's living aquatic resources, their environ-

ment and their utilization. Its antecedents go back to 1898 and it is thus the lineal d scendant of one of the oldest scientific organizations in Canada and one of the oldest gover ment-supported research organizations under the supervision of an independent scienti board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries a Forestry. The Board proper consists of a permanent chairman, who is appointed by t Governor in Council and who is a member of the Public Service of Canada, and "not mo than eighteen other members" holding honorary appointments from the Minister of Fis eries for five-year terms; the Act requires that "a majority of the members of the Boa not including the chairman, shall be scientists, and the remaining members of the Boa shall be representative of the Department (of Fisheries and Forestry) and the fishi industry". The scientific members are drawn principally from universities and resear foundations across Canada, to include specialists in disciplines related to the Board's wo The industry members are selected from among Canada's leading businessmen with intimate knowledge of fishing and the fishing industry, and the Fisheries Service of t Department of Fisheries and Forestry representative is usually a senior staff member Ottawa. Board members have both advisory and executive functions. The adviso functions are delegated in the first instance to regional Advisory Committees who condu on-the-spot regional reviews and report to the Board on the operations and scienti programs with a view to their improvement. The executive functions are delegated to Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small admi strative supervisory and publications staff in Ottawa. The responsibilities of the Otta office include planning and program co-ordination, and administration of a grant progra to encourage university research in the fields of marine and aquatic science. The Boa employs approximately 800 persons, of whom about 250 are scientists.

Commercial and Recreational Fisheries.—This program area is designed to add fundamental knowledge concerning Canada's vast living marine and freshwater resourc Included are life history, population and behaviour studies leading to a sound scienti basis for the conservation and management of the commercially important fisheries includi those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other w known economically important aquatic species of animals, such as salmon, cod, herring a halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also inclu are studies in fish and shellfish diseases, fish predators and such basic studies as fish geneti physiology and behaviour, the latter with a view to improving fish cultural and farmi methods and also to improving fish farm and hatchery stocks. Besides these basic studi new fishing grounds and new species for exploitation are sought and experiments in impr ing fishing methods are undertaken.

On the Atlantic Coast this work is conducted out of research stations located St. Andrews, N.B., and St. John's, Nfld.; work on Arctic fisheries and on sea mammals directed from a laboratory situated in Ste. Anne de Bellevue, Que.; freshwater work carried out from a station in Winnipeg, Man.; and work on the Pacific Coast is direc from research laboratories situated in Nanaimo, B.C. The Board operates 16 resea vessels for its biological studies varying from small inshore and lake craft to specially b seagoing ships. The Board acts as Canada's research agent for three international fishe commissions and two international sea-mammal commissions to which Canada is party.

Aquatic Environment.—This program emphasizes the study of the marine and fre water environment in which aquatic organisms live. This is under continuing study further knowledge in primary and secondary productivity and the occurrence of ocean freshwater life of importance to man. Considerable importance is placed upon increa research efforts associated with pollution prediction, abatement and elimination, includ the effects of freshwater and marine eutrophication. Encompassed here also are investi tions into the distribution and physical and chemical characteristics of major ocean curre

d the physical and biological structures of large ocean areas including the ocean bottom ıere concentrations of fish and other aquatic life occur. Ocean climate and ocean weather they affect the distribution of fish and other living organisms as well as the vertical and rizontal distribution of nutrient matter and the cycle of energy and life in the seas are gularly observed and correlated. These studies, as well as special studies of interest to e Armed Forces, the Ministry of Transport and the international fishery commissions, e carried out by groups operating from Dartmouth, N.S., and Nanaimo, B.C., with strong p support from the Armed Forces and the Ministry of Transport, and with co-operation m the Department of Energy, Mines and Resources.

Products and Processing.—Investigations are conducted toward improving methods preserving, processing, storing and distributing fish products, as well as of utilizing all rts of the fish. These include developments in refrigeration and the use of antibiotics as n preservatives, improvements in canning, smoking and salting of fish as well as the velopment of new products for the utilization of abundant species that are not now used food. Fundamental studies of the structure and composition of fish proteins, marine s, hormones from aquatic organisms and other products from the sea are under way.

These investigations are carried out on the Atlantic Coast at research laboratories uated in Halifax, N.S., and at St. John's, Nfld. For inland products and processing, earch is centred at Winnipeg, Man., and a research laboratory in Vancouver, B.C., dertakes investigation of Pacific Coast problems.

The Fisheries Prices Support Board.—Established under the Fisheries Prices pport Act of 1944 (RSC 1952, c. 120), the Fisheries Prices Support Board is responsible investigating and, where appropriate, recommending government action to support ces of fishery products where declines are experienced. The basic principle of the islation is to protect fishermen against sharp declines in prices and consequent loss of ome due to causes beyond the control of the fishermen. The Board is responsible to e Minister of Fisheries and Forestry and consists of a chairman, who is a senior officer the Fisheries Service of the Department of Fisheries and Forestry and five members osen from the fishing industry in the various fishing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions d to dispose of them by sale or otherwise, or to pay to producers the difference between price prescribed by the Board and the average price the product actually commands. e Board has no power to control prices other than its purchase policy nor has it any risdiction over operations in the fishing industry or the fish trade. Money necessary dealings in fishery products is available to the Board from the Consolidated Revenue nd to a maximum amount of $25,000,000 annually on recommendation of the federal easury Board and authorization of the Governor in Council.

In May 1969, the Board initiated a frozen groundfish stabilization program with the jective of forestalling distress selling in normal markets and to raise the market price of ected groundfish products to a point where basic costs were recovered. Purchases by e Board of 17,500,000 lb. of cod blocks and fillets represented 26 p.c. of the total produc- n. Before the end of the 1969-70 fiscal year, the entire supply purchased was returned, cost, to the industry. The market price for cod blocks, which had been approximately cents a pound, rose to the 26-27-cent level at year-end.

To assist salted codfish fishermen who had experienced severe price declines as the ult of over-supply and currency devaluation in some traditional markets, a deficiency yment program was introduced for the 1969 production season. The deficiency payment eived by fishermen amounted to one half the difference between the price actually eived for each particular size and grade and a target price which was based upon the urns to fishermen during the 1967 season.

During the 1969-70 fiscal year, a total of 5,403 individual payments were made to hermen or groups of fishermen.

Since 1966 the Fisheries Prices Support Board has operated yellow perch price stabiliza tion programs. Losses resulted on the 1967 and 1968 programs but the 1969 program wa operated without loss to the Government of Canada. Under the 1969 program, yello perch fillets were purchased from processors at 40 cents a pound, provided fishermen receive 10 cents a pound for spring perch used in the production of fillets and a minimum of fiv cents for all spring perch purchased in excess of the prevailing filleting capacity. Durin the spring season, the price to fishermen was actually blended, with the result that fisherme received 8.6 cents a pound during the spring season and an average of 11.4 cents during th remainder of the year. Despite the record 30,000,000 lb. Lake Erie yellow perch catch these were the highest average prices received by fishermen since 1965.

To assist in meeting the Canadian requirements for the World Food Programme and t assist in providing additional employment in those areas capable of producing canne mackerel, the Board has been purchasing, since 1966, canned mackerel for shipment t developing nations. Board purchases, under this program, averaged 17,493 cases durin the 1966-68 period. During 1969 the original allocation to processors totalled 23,040 case World Food Programme requirements necessitated the purchase of an additional 4,000 case By the end of the 1969-70 fiscal year, the entire Board holdings had been shipped on orde received through the World Food Programme.

The Freshwater Fish Marketing Corporation.—This Corporation was establishe in 1969 (SC 1968-69, c. 21) for the purpose of marketing and trading in fish, fish product and fish byproducts in and out of Canada with the objective of ensuring more orderl marketing for the benefit of the whole fishery and achieving higher and more stable price for the catch. (See also p. 159.)

The Canadian Saltfish Corporation.—On Feb. 25, 1970, the House of Common passed legislation (SC 1969-70, c. 32) authorizing the establishment of a corporation, th objects of which are to improve the earnings of primary producers of cured saltfish b buying and curing fish and by regulating interprovincial and export trade in both cure fish and byproducts of fish-curing. The Corporation, whose head office is at St. John' Nfld., consists of a board of directors composed of a chairman, a president, one director fo each participating province and not more than five other directors, each of whom is ap pointed by the Governor in Council. It is assisted by an advisory committee of 15 membe at least half of whom are fishermen or representative of fishermen. The limit of th Corporation's financial obligations is placed at $10,000,000.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in con nection with administration of commercial and game fisheries is given in the followin paragraphs.

Newfoundland.—The provincial Department of Fisheries in conjunction with th Newfoundland Fisheries Development Authority, a Crown corporation established i 1953, is concerned mainly with the improvement and development of fishing and produc tion methods. It conducts experiments and demonstrations in new designs of fishin gear as well as the modification of existing types, the construction of multi-purpose fishin craft and the exploration of potential fishing grounds with a view to increasing catchin efficiency.

Loans are made to processors for the establishment and expansion of fish processin plants and for deepsea draggers. Aid to fishermen for the construction of modern vesse capable of a greater variety of fishing operations and larger production is provided b loans from the Newfoundland Fisheries Loan Board and bounty payments at the rate c $160 a ton for newly constructed vessels under the Fishing Ships (Bounties) Act, 195

* Prepared by the respective provincial departments responsible for fisheries administration.

e Fishing and Coasting Vessels Rebuilding and Repairs (Bounties) Act, 1958 authorizes ancial assistance in maintaining and prolonging the life of the existing fleet. An Inshore sheries Assistance Programme provides a maximum bounty of $10 a foot on boats easuring from 24 to 35 feet and bounties are also paid to fishermen on certain types of nthetic fibre fishing nets and lines. The Coasting Vessels (Bounties) Act, 1959 authorizes e granting, for locally built ships, of a maximum bounty of $250 a ton for vessels measur- from 15 to less than 100 gross tons, and $150 a ton for vessels of between 100 and 400 oss tons.

Other services include: advisory services to fishermen on gear and equipment, industrial esearch, plant construction, plant engineering and economics; assistance to fishermen's ions; weather and ice reports; and search and rescue. The Fisheries Salt Act, 1957 ovides for rigid control over the use of fisheries salt.

Sport Fisheries.—The inland waters of Newfoundland, although they provide excellent ort fishing, are not commercially exploited. The lakes and ponds actually remain under e authority of the Natural Resources Branch of the provincial Department of Mines, griculture and Resources but, under federal-provincial agreement, these waters, including vers and streams, are under federal control in matters of conservation and guardianship.

Prince Edward Island.—The sea and inland fisheries of Prince Edward Island are ministered by the Fisheries Service of the federal Department of Fisheries and Forestry. he provincial Department of Fisheries supplements federal activity in this area and is ncerned principally with quantifying and, within the terms of the provincial role in heries management, maximizing returns, both social and economic, to those engaged in e fisheries industry. The Department provides technical assistance and, in conjunction th the federal fisheries organizations, engages in experimental and developmental work such fields as fishing methods, resource inventories, statistical studies and management sistance.

Loans are made available to fishermen and the fishing industry through the Prince dward Island Lending Authority, a Crown corporation established in 1969 which is npowered to grant credit in the sectors of fisheries, industry, tourism and agriculture. he provincial responsibilities in the area of freshwater fisheries are discharged by the Fish d Wildlife Division of the Department of Tourism.

Nova Scotia.—Although the Federal Government has exclusive jurisdiction over the arine and inland fisheries of Nova Scotia and attends to all phases of administration lated thereto, the Nova Scotia Government operates in several fields where provincial itiative is found to be necessary and appropriate, having regard for the importance of e fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the ova Scotia Department of Fisheries. The Fishermen's Loan Board is administered by at Department and the Industrial Loan Board by the Nova Scotia Department of rade and Industry; the first makes loans to fishermen for the purchase of boats and gines and the second makes loans for the construction or improvement of fish processing ants. Fisheries engineers perform inspection and survey duties for the Loan Boards d provide technical assistance and advice to loan applicants and others in the fisheries d allied industries, notably the boatbuilding industry. Instructors conduct courses for hermen in the care and maintenance of marine engines, in basic navigation and in the sign, construction and maintenance of gear. The on-course instruction is supplemented equently by informal on-the-spot assistance to smaller groups who find themselves in ed of technical help with particular problems. The Nova Scotia Department of Fisheries, th the financial and/or technical assistance of the federal Department of Fisheries and restry, organizes and conducts explorations of fishing grounds for new resources and udies the adaptability of new, improved gear and methods.

Sport Fisheries.—In recent years, Nova Scotia, through the Wildlife Conservati Division of its Department of Lands and Forests, has spent a considerable amount of mon on management and research in certain lakes and streams in the province with a view aiding the Atlantic salmon and trout fishery. A continuing program of lake and strea investigations was begun in 1961 in order to obtain information useful in the formulati of a fish management program for the future. A system of rearing ponds, capable producing 100,000 yearling speckled trout annually, has been established on the Moser Riv in Halifax County. Several projects dealing with reclamation, farm ponds, rainbow tro and smallmouth bass are also being conducted. A full-time fisheries biologist is employ by the Division.

The Nova Scotia Travel Bureau, a division of the provincial Department of Tra and Industry, has been promoting saltwater sport fishing by conducting a series of cours for captains contemplating the establishment of charter services, awarding prizes sportsmen with the largest tuna and bass catches of the season, sponsoring the Inte national Tuna Cup Match and the Intercollegiate Game Fish Seminar and Fishing Matc and publishing a brochure listing charter boats available in the province.

New Brunswick.—Commercial fishing is one of the most important basic industri of New Brunswick, employing about 6,200 fishermen with annual earnings of $16,000,000 a 3,000 plant workers. The annual marketed value of fish products is about $65,000,000 which 90 p.c. is exported to the United States. New Brunswick's commercial fisherie both tidal and inland, are under the legislative jurisdiction of the federal Department Fisheries and Forestry; angling in Crown waters is the responsibility of the provinci Department of Natural Resources.

The New Brunswick Department of Fisheries, established in 1963, has four Branche The *General Administration Branch* is responsible for personnel, accounting and field sta and supervises the regional offices covering the three main fishing areas of the provinc It maintains close liaison with various government departments and agencies, both feder and provincial, to assist the fishing industry in the province.

The functions of the *Boatbuilding and Maintenance Branch,* with a personnel consistin of marine engineers, a naval architect and boat inspectors, include the study, modificatio and approval of plans and specifications of the numerous types and classes of fishing vesse employed in the fisheries of the province as well as the inspection of vessels financed by th Fishermen's Loan Board. New designs are being introduced and the trend to larger, mo modern vessels is becoming more prevalent. Combination multi-purpose vessels hav proved profitable to both inshore and offshore fishermen. Under the leadership of th experienced staff of this Branch, New Brunswick fishermen are now operating a fle geared for diversified operation, permitting the inexpensive and easy conversion from on fishery operation to more lucrative operations throughout the season. A new 600-to capacity marine railway dry dock was put into operation at Bas Caraquet in November 196 to service the expanding offshore fishing fleet of northeast New Brunswick. A 200-to transfer system adjacent to the dry dock provides storage facilities for smaller vessels t lay up for the winter or to undergo major repairs. Shipbuilding and repairing facilities, a present under construction on a site adjacent to the slip, will provide ready and adequat service to an expanding offshore fishing fleet.

The *Exploratory Fishing and Education Branch* continues the experimental and explora tory fishing and fish processing projects that have been carried on for many years in co operation with the Industrial Development Service of the federal Department of Fisherie and Forestry. Technical and financial assistance are made available to the New Brunswic Department of Fisheries for projects undertaken toward modernizing fishing and processin methods, experimenting with new types of fish-catching equipment and demonstrating it operation to fishermen, and exploring and developing hitherto unexploited or under exploited species of molluscs, crustaceans, fishes and seaweeds. Results of this extensiv experimental work and research studies include the establishment of queen crab, shrimp

a and eel fisheries in New Brunswick. During 1969-70, nine fisheries development ects were undertaken on a shared-cost basis with the federal Department of Fisheries and estry. Of particular interest was the queen crab development which included the de- ing and construction of special equipment. In 1969, 75 vessels fished this deepsea cacy and several million pounds were processed in 20 crab plants. Shrimp exploration started in the Gulf of St. Lawrence in 1966 with encouraging results; seven plants are processing shrimps from the Bay of Fundy and the Gulf of St. Lawrence. Other elopments such as Irish moss, eels, mackerel, scallops and smelts are also processing very sfactorily. The Branch operates a modern school of fisheries at Caraquet where, in 8-69, 151 fishermen took training in the various phases of their trade. The school gram includes navigation, administration, marine biology, oceanography, radiotelephone, al and woodworking, arithmetic and languages and other related subjects and graduates receive practical training aboard large modern fishing vessels under a joint federal-vincial program of technical upgrading. Following a few weeks of training, apprentices taken on as regular crew members.

The *Fish Inspection and Marketing Branch* is responsible for the administration of the w Brunswick Fish Inspection Act and Regulations. For greater effectiveness and to id duplication of personnel, 30 Fish Inspectors of the federal Department of Fisheries Forestry, Maritimes Area, carry out the application of the New Brunswick Fish Inspec- Act and Regulations. The Branch is active in promoting the expansion and moderniza- of existing plants as well as the establishment of additional fish processing plants in province. Its efforts are aimed at studying existing markets and developing new ones fishery products at home and abroad in collaboration with other government agencies, eral and provincial. The Branch is also responsible for publicity and information to the ustry and the general public.

The *Fishermen's Loan Board of New Brunswick* is a body corporate operating under jurisdiction of the Minister of Fisheries. It was established in 1946 and is now operating er the Fishermen's Loan Board Act of 1952 and the regulations of Nov. 1, 1963. Its ction is to improve and develop the fishing industry of the province by providing adequate ncial assistance to individual fishermen, groups, associations, processing firms and porations, at a moderate rate of interest to construct modern fishing vessels, make or repairs and purchase engines and equipment. Since its inception the Board has nted 2,076 loans to New Brunswick fishermen for a total of over $26,721,000; outstanding ns amounted to $11,000,000 in 1969.

Loans are repayable within a five-year period on small inshore fishing vessels; repay- nt schedules on large trawlers may extend to 15 years, based on the gross proceeds of the ch. Most of the new fishing vessels being built for fishermen and fish processing firms the province are financed by the Board. The Board acts as agent for the federal partment of Fisheries and Forestry financial assistance program granted to owners of fishing vessels, which are not eligible for the shipbuilding subsidy granted by the federal partment of Industry.

Sport Fisheries.—Sport fishing contributes substantially to the economy of the province. at Atlantic salmon rivers like the Miramichi, the Restigouche and the St. John are wn around the world for their prolific production of this majestic game fish and attract ny thousands of tourists to the province each year. Anglers catch as many as 50,000 non a year in the Miramichi system alone. Many other species are also sought after by h residents and non-residents in the hundreds of streams, rivers and lakes of the province.

Quebec.—The sea fisheries of Quebec are administered by the Fisheries Branch of Quebec Department of Industry and Commerce, which carries on its functions through ee Divisions—Research, Economics and Technical Services. The Research Division is olved in experimental work and study on the biological aspects of commercial fish species, the processing of seafoods for marketing, and on the testing of new types of fishing gear. e work of the Biological Service of the Division is facilitated by the availability of

extensive research equipment at the Marine Biology Station in Grande Rivière and the Aquarium in Quebec City. The latter also fulfils an information role through displays, in 60 large tanks, of many freshwater and saltwater species.

One of the main functions of the Economics Division is to administer the loan program which applies to construction and repair of boats, as well as to administer other forms government assistance. In 1969, the active offshore fishing fleet included three 166-fo and three 129-foot steel trawlers, one 100-foot dragger, 15 87-foot trawlers, 14 82-fo trawlers, 74 60-to-65-foot trawlers and 48 45-to-54-foot "gaspésiennes" and long-liners. at Mar. 31, 1970, owners of these fishing vessels held outstanding government loans, for bo construction and repair, totalling nearly $10,000,000. This represents an improvement some $2,000,000 over the situation of a year earlier. The Economics Division also carri out socio-economic analyses which are necessary to the government in planning action the field of fisheries and in ensuring the efficiency of development projects.

The Technical Services Division conducts regular inspections of fishing vessels, kee close supervision over the operations of maintenance and repair crews and also supervis the tenders submitted to fishermen by shipyards or other suppliers. Its protective servi issues fishing permits, conducts land and sea patrols and investigates infractions of reg lations. The Division includes an Engineering Service which draws up plans and spe fications related to improvements in fishing equipment and a Refrigeration Service whi administers Fisheries Branch equipment, including 39 cold storage warehouses with a dai freezing capacity of 500 tons and a storage capacity of 25,000,000 lb., 95 stations in sm fishing ports where fish is kept in good condition awaiting pickup by truck or boat, and number of other service or production establishments.

Fisheries Branch administration is centralized in Quebec City, with offices in the ma fishing centres. In co-operation with the Department of Education, it conducts a traini program for fishermen and producers for which it maintains a fisheries school and a traini vessel. The Department of Industry and Commerce works closely with the Queb Planning and Development Board and with the Eastern Quebec Regional Administrati Conference in the administration of various development programs, one of which is training program designed to advance the domestic use of seafoods.

Sport Fisheries.—Sport fishing in the inland waters of Quebec is under the jurisdicti of the Department of Tourism, Fish and Game, which employs 417 full-time wardens a issues the required sport-fishing licences. Four hatcheries are maintained by the Depa ment, where speckled trout, brown trout, rainbow trout, grey trout, ouananiche, maskinon and salmon are reared for the restocking of lakes and streams.

Excellent fishing may be found in all provincial parks and reserves. Gaspesian a Laurentide Parks are renowned for trout fishing, and the waters of Chibougamau Reser and La Vérendrye Park, situated on the height of land, abound in pickerel, pike, and gr and speckled trout. Eleven salmon streams are open to anglers—the Petit Saguenay Riv the Laval River, the Moisie River, the Matane River, the Cap Chat River, the Ste. An River, the St. Jean River, the Matapédia River, the Dartmouth River, the Port Dan River and the Petite Cascapédia.

A committee made up of directors of the Quebec Wildlife Federation makes reco mendations to the provincial government concerning legislation required for the mai tenance of satisfactory fishing and hunting conditions and other problems arising out of t ever-changing conditions of modern life and their effect on the wildlife of the province.

Ontario.—The fishery resources of Ontario are administered by the Fish and Wildl Branch, Department of Lands and Forests, under the authority of the federal Fisher Act, the Fishery Regulations for the Province of Ontario, the Ontario Game and Fi Act and the Regulations connected therewith.

Commercial Fisheries.—The commercial fishing industry in Ontario provides emplo ment for about 2,100 persons directly and for many more indirectly, and produces annual yield of from 45,000,000 lb. to 60,000,000 lb. of fish. The industry, althou

lely scattered throughout the province, is centred chiefly on the Great Lakes, particu-y Lake Erie. The principal species of fish taken commercially are perch, smelt, white-, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and lheads, sturgeon, eel, goldeye, rock bass, sunfish and suckers. Over one hundred aller inland lakes are commercially fished, principally those in the northwestern portion the province, and careful management of these lakes is essential to ensure continued duction.

The types of fishing boats in use vary from small craft to 70-foot tugs, and types of gear y from gillnets, pound-nets and trap-nets, seines, trawls and baited hooks to small hand-rated seines and dip-nets. Fishing methods and equipment have been modernized ensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-ven wooden tugs, such aids as depth-sounding devices, radar, ship-to-shore and ship-ship communications have been developed, and a better knowledge of the fish and their vements has been established from biological research findings. Modern icing facilities l transportation methods are in use as well as new types of fishing gear. Trawling has ved very efficient in harvesting smelt on a year-round basis in Lake Erie.

Most Ontario fishermen are organized into various local associations. Many of these ociations are, in turn, represented by the Ontario Council of Commercial Fisheries ich performs important services to the industry. The Ontario Fishermen's Co-operative l its member groups are of importance also in the organization of the fishery in the vince.

Sport Fisheries.—Angling in Ontario is rapidly becoming one of the major industries he province. With an estimated freshwater area of some 68,490 sq. miles, the province ne of the most attractive fishing areas on the Continent. Excellent angling oppor-ities are available for such prized fish as brook, rainbow, lake and brown trout, walleye, allmouth and largemouth bass, pike and maskinonge. It is difficult to measure the al value of the sport fishing industry to the province but the annual revenue from the e of angling licences alone is in the neighbourhood of $5,900,000. The management of s valuable resource is administered by a well-trained field staff of conservation officers and logists located in the 21 forest districts of the province.

Provincial Hatcheries.—Ontario operates 16 hatcheries and rearing stations, the main cies reared in these operations being brook trout, rainbow trout, lake trout, "splake", allmouth and largemouth bass, and maskinonge. A program of modernization of the chery system is being undertaken—the Normandale Hatchery in Norfolk County and North Bay Station have recently been completely renovated.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes and in inland ters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Sault Ste rie on Lake Superior, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake tario, fishery biological stations are operated for the investigation and study of the com-rcial and sport fisheries on the respective lakes. In Algonquin Park, detailed studies cerning lake trout, smallmouth bass and brook trout are in progress and management hniques are being tested against the background of a creel census which has been con-uous since 1936. Studies are also being conducted on walleye, parasitology and limno-y. A selective breeding experiment concerning the hybrid (splake) of lake trout and ok trout is progressing; the deep-swimming character of the lake trout and the character maturity at early age of the brook trout are those being selected for combination in hybrid. Investigations include the study of exotic species of fish for use in the Great es. Kokanee (sockeye salmon) plantings have been made in Lake Ontario and Lake ron.

Manitoba.—Manitoba's interior location belies the importance of its fisheries resources ch stem from an abundance of water comprising 40,000 sq. miles of lakes and streams ering 16 p.c. of the area of the province. These resources are utilized for commercial, rt and domestic purposes.

The commercial fishery in 1968-69 produced nearly 26,000,000 lb. of fish, an incre of 4,900,000 lb. over the previous year. Northern waters contributed 9,500,000 lb. (37 p. followed by Lake Winnipeg with 7,900,000 lb. (30 p.c.) and Lakes Winnipegosis Manitoba with 4,100,000 lb. (16 p.c.) and 3,800,000 lb. (15 p.c.), respectively. Ot southern lakes were responsible for the remainder of the commercial production. T commercial fishery utilizes an estimated 22,000 sq. miles of water. Most of the 145 wa bodies commercially fished in northern Manitoba are each less than 50 sq. miles but to 8,000 sq. miles. Lakes Winnipeg, Winnipegosis and Manitoba have a combined area 13,000 sq. miles and other commercially fished waters in southern Manitoba are 1,000 miles in extent.

Fifteen species or groups of species enter into the commercial catch. Six speci however, predominate. In 1968-69, pike contributed 5,350,000 lb. followed closely whitefish with 5,290,000 lb. Suckers, saugers and pickerel (walleye) contributed fr 3,000,000 to nearly 5,000,000 lb. each. The tullibee production was 1,000,000 lb. T value to the fishermen was $3,300,000. Most of the commercial catch is exported to t United States. Gillnets are the main fishing gear although there is a limited use of tr nets on Lake Winnipeg. About 2,300 persons were employed during the open-wa fishery and 1,700 took part in winter fishing. The value of equipment totalled $3,000,0

The sport fishery is increasing in importance, with walleye, pike, perch and seve kinds of trout being the principal sport fishes. The number of angling licences sold 1968-69 totalled 119,852 of which 98,896 were purchased by residents of Canada. estimated 13,000,000 lb. of fish are caught by anglers each year. A Master Angler Aw is given to fishermen who catch fish of trophy size. In 1968-69, 1,183 awards were iss for 16 species of fish, most of them (478) for pike. Fish is harvested by many native peo for local use. The quantity taken in this manner is unknown but probably is considera

Fisheries administration is under the control of the Department of Mines and Natu Resources. Field administration is divided into four regions. Conservation Offic enforce both the commercial and the angling regulations and carry out numerous other du in connection with fisheries management. Professionally trained biologists carry ou continuing program of studies which not only monitor the resource but also extend knowledge of it. Fish culture plays an important role in fisheries management. Pick hatcheries are located on Lakes Winnipegosis and Manitoba. Lake Winnipeg has t hatcheries, one at Dauphin River and the other at Grand Rapids. A trout hatchery located in the Whiteshell Provincial Park. Two temporary facilities for collection spawn are also used.

Saskatchewan.—Approximately 32,000 sq. miles of water, about one eighth Saskatchewan's area, provide the basis for a fishery resource that contributes much to economic and recreational activity of the province. The Fisheries Branch of the Dep ment of Natural Resources, with head office at Prince Albert, administers the fisher The Branch has three main Divisions—Management, Research and Fish Culture—wh are responsible for planning policies; developing programs to ensure the proper manage and utilization of the fishery resource; interpreting and explaining policies, programs a regulations; administering the Acts and Regulations (both federal and provincial); a adapting regulations to meet changing conditions. The objective is to encourage effici multi-use of the fishery, taking into consideration the interests of the various groups c cerned—commercial fishermen, mink ranchers, anglers and the public generally.

In 1968-69 the Saskatchewan commercial fishery harvested approximately 11,000,000 of fish, having a landed value to the fishermen of $1,400,000 and a market value of $2,800,0 In addition, a commercial harvest of 315,000 lb. of brine shrimp and brine shrimp eggs w taken from several saline lakes in southern Saskatchewan. These are processed for s to fish hobbyists. Although low fur prices continued to exert a depressing influence mink ranching in Saskatchewan, 31 ranches in 1968 harvested approximately 4,000,000 of fish to feed 6,600 mink.

Saskatchewan continues to produce some of the finest sport fishing in Canada, as enced by the increasing number of anglers licensed. In 1968 a record total of 130,442 ing licences were sold, representing a 14-p.c. increase in sales over 1967. As in previous s, outstanding numbers of northern pike, lake trout, walleye, brook trout, brown t and rainbow trout were taken.

A continuous program of inventory and examination of sport fishing stocks is main- ed by the Management Division of the Fisheries Branch. During 1968, 161 waters examined. The stocked game trout program continues to grow in popularity; to date, akes and 40 streams and rivers have been stocked with various species of trout and on.

The Fish Research Division conducts biological surveys on most of the large lakes and many smaller water bodies and streams in the province to provide information for the elopment of fisheries management policies and programs. The current program is gned to determine productivity of water bodies, secure information on abundance and tionship of fish species, investigate ecology and assess factors affecting environment of develop techniques to achieve maximum harvest of fish populations without prejudice ontinued production, and develop techniques to facilitate rehabilitation and stocking mall water bodies. Limnological and fisheries investigations are continuing on recently blished reservoirs on the South Saskatchewan River, including Lake Diefenbaker. long-term creel census on Lac la Ronge is being supplemented by an intensive investi- on of the life history and ecology of northern pike. Additional creel censuses are also er way on Nemeiben Lake, Puskwakau River and the Qu'Appelle Lakes.

The provincial hatchery at Fort Qu'Appelle reared over 12,600,000 fish in 1968 for king in 98 waters.

Alberta.—Commercial and sport fishing are administered by the Fish and Wildlife sion of the Department of Lands and Forests, under the authority of the Fisheries (Canada) and the Fish Marketing Act (Alberta). Production of commercial fish from rta's 6,485 sq. miles of fresh water for the year ended Mar. 31, 1969, was 11,986,639 lb. ded value of the catch was $932,940 and marketed value amounted to $1,466,370. e whitefish is the most valuable commercially caught fish; it accounted for 51 p.c. of total marketed value but represented only 17 p.c. of the total landings. Production of bee (cisco), primarily used for animal food, recovered to a level exceeding that of 1966- it remained in second place in value among the fish marketed. Other species taken, rder of marketed value, were pike, walleye (pickerel), burbot (ling), perch, lake trout suckers. Of the total quantity taken, 2,261,587 lb. were marketed outside the province of this amount, 1,526,746 lb. went to the United States.

Sport Fisheries.—A non-resident non-Canadian angling licence was introduced in 1969, initial sales of 1,621. Resident and non-resident Canadian licence sales increased 136,693 in the year ended Mar. 31, 1968 (including sales to non-resident non-Cana- s) to 139,253 in 1968-69. Fish hatchery facilities in Calgary and the rearing station aven produced 3,456,955 trout and kokanee for stocking in provincial waters. Rainbow t accounted for 85 p.c. of the total and lake trout, brown trout, kokanee and golden t made up the remainder. In addition, 1,161,200 walleye, perch and pike were stocked arious locations where winterkill had removed resident populations or where new oductions were required.

In 1969, headquarters biological staff moved into new laboratory facilities in the O.S. gman Building in Edmonton and a small pollution research section was established. rogram to develop a trained field staff of technicians was begun with the placement of hery technician in Lethbridge.

British Columbia.—A Fisheries Office, which was organized in 1901-02 and became active in fish culture work, building and operating fish hatcheries and instituting tific research into various fishery problems, was superseded in 1947 by the Department

of Fisheries which in turn was superseded in 1957 by the Department of Recreation a Conservation. Today, the Commercial Fisheries Branch of the Department of Recreat and Conservation is the provincial organization concerned with commercial fisher Broadly speaking, the administrative and regulative jurisdiction over the fisheries British Columbia rests with the federal authority. The ownership of the fisheries in non-tidal waters is vested in the Crown in the right of the province, as are the shell fishe such as oyster fishing and clam fishing in tidal waters. The province administers th fisheries although the regulations covering them are made under federal Order in Cou on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under c and property rights, for the regulation and control of the various fish processing pla under a system of licensing. The commercial harvesting of oysters and marine aqu plants is regulated by provincial permits and licences. Provision is also made for arbi tion of disputes regarding fish prices that may arise between the fishermen and operat of the various licensed plants. The administration of the Act involves the collection revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the provi including commercial fishing and authority for regulation of the game fisheries in non-t waters, is vested in the Fish and Wildlife Branch which operates a number of trout hatche and egg-taking stations for re-stocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. T biological research into those species of shellfish over which the province has cont principally oysters and clams as well as marine plants, is conducted by the Fishe Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under ag ment with the federal and provincial authorities. The object of this research is to encour the industry to produce better products more economically and to enable the Commer Fisheries Branch to regulate the various species so that maximum exploitation may obtained on a sustained-yield basis.

PART II.—FURS

Section 1.—The Fur Industry*

The value of raw furs produced in Canada in the 1968-69 season amounted $41,589,086, an increase of 13.8 p.c. over the 1967-68 output almost entirely due higher returns for wildlife pelts. The value of the pelts from fur farms was $22,925,9 largely unchanged from the previous season; farm production accounted for 55.1 p.c the total value.

Fur Trapping.—Although many changes have occurred in the fur industry since era when furs from the wilds dominated the market, the trapper is still an important fig In the 1968-69 season some 40,000 Canadians participated in fur trapping activities wh yielded returns totalling $18,663,153. Trapping is carried on in all the provinces territories, the principal producers in 1968-69, in order of importance, being Ontario (2 p.c.), Quebec (15.5 p.c.), Manitoba (13.8 p.c.) and Alberta (10.4 p.c.).

Although the task of tending the trapline and preparing the catch for the market altered little, the advent of the snowmobile has introduced a new dimension into the No In many areas the trappers have disposed of their dog teams and now use snowmobile make the rounds of their traplines. These machines take much of the drudgery out of long winter trips and eliminate the expense of feeding dogs through the summer mon Gains in this direction must, however, be balanced against some loss of reliability. possibility of mechanical failure, perhaps far out on the trapline, is accentuated by the

* Prepared by the Livestock Division, Production and Marketing Branch, Canada Department of Agricul Ottawa.

peratures encountered throughout the winter months. To obviate the serious conse-nces which may attend such failure, trappers operating on adjoining traplines often k together and arrange to meet regularly at specified locations.

Fur Farming.—Almost two thirds of Canada's fur production now comes from fur ns. Mink is by far the most important species raised and this animal accounts for .c. of the total value of pelts produced on farms. Other animals raised on fur farms chinchilla, fox and nutria.

Mink.—The rather brief history of mink farming records a steady growth in this stry from its beginnings in the early 1900s; the following figures depict the recent wth:—

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	$		No.	$
1930	3,284	10.52	1965	1,624,154	17.41
1940	229,202	9.64	1966	1,810,691	12.41
1950	589,352	17.08	1967	1,967,323	11.58
1960	1,203,853	14.03	1968	1,667,945	13.60

The development of mink farming in Canada was paralleled and in some instances eeded in a number of other countries, and by 1965 the world output amounted to around 00,000 pelts annually. Throughout this period consumer demand for mink kept pace h and sometimes surpassed the expanding production, and carry-overs of unsold mink s at the auction level, from one season to another, were virtually unknown. From 6 onwards the ability of the world market to absorb the increasing annual production me less assured and in the later 1960s, average realizations for most of the mutation s declined to the point where producers were unable to recover their costs. The weaker rket may be attributed to a number of factors the most important of which is that, after ny years of expansion, the demand for mink in present markets (notably North America continental Europe) appears to have levelled off. As a result of the unfavourable rns, a number of Canadian and American mink farmers have ceased operations in nt years. For the immediate future the resulting decline in the number of pelts avail-e might put fresh life in the market, but over the longer term there is a pressing need to elop new markets for this product.

Chinchilla.—British Columbia, Alberta, Ontario and Quebec account for most of the chilla pelts produced in Canada. The following figures show the production, average es and the number of farms in recent years:—

Year	Pelt Production	Average Realization	Farms at Dec. 31
	No.	$	No.
1955	1,742	27.50	669
1960	9,067	13.06	531
1965	17,109	13.18	556
1966	19,133	11.88	653
1967	17,368	11.11	937
1968	18,854	9.97	1,395

In recent years the number of chinchilla farms has increased sharply. Many of the breeders lack experience in the management of chinchillas and the lower average pelt es registered since 1966 reflect, to some extent, this inexperience.

Fox.—In 1968, foxes were raised on 40 Canadian farms, mainly in Eastern Canada, the breeding herd totalled 1,069 animals (male and female); production amounted to 82 pelts with an average value of $36.34. Higher returns realized since 1964 have en-raged raisers to hold over more breeding animals but this increase has been modest e there is some question as to whether present price levels will be sustained.

Fur Marketing.—The bulk of the Canadian fur crop is marketed, raw or undresse through seven fur auction firms located in Montreal, North Bay, Winnipeg, Regi Edmonton and Vancouver. The marketing season extends from December each ye through to the following June, or until the crop has been sold. The furs are sold throu competitive bidding, by the fur auction firms, which charge a commission of, generall around 5 p.c. of the gross realization for their services. These services include classifyi the pelts and readying them for sale in "lots" which are matched as to size, colour a fur quality. The fur auctions advertise their scheduled sales widely in Canada, the Unit States and overseas.

Canadian furs are highly prized in world markets and buyers from many countri attend the auctions, purchasing for their own accounts or on behalf of firms anywhere the world. In 1969 the value of exports of raw Canadian furs amounted to over $33,000,0 and the most important customers were the United States ($14,700,000), the Unit Kingdom ($9,600,000), Switzerland ($3,400,000), West Germany ($2,500,000) and Ita ($1,200,000). The principal species exported were ranched mink ($13,600,000), beav ($8,600,000), seal ($2,500,000), muskrat ($1,900,000) and wild mink ($1,600,000).

Section 2.—Fur Statistics

Subsection 1.—Fur Production and Trade*

Total Fur Production.—Annual figures of raw fur production, available since 192 are now based on figures of royalties, export taxes, etc., provided by the game departmen of all provinces except Prince Edward Island; those for Prince Edward Island are based returns by fur dealers in that province.

Table 1 shows the fluctuating trend of the fur industry over the past two decad It should be mentioned that, from 1964 on, the figures include hair and fur seal pelts, whi in 1969 had a value of $2,409,251. The proportion of the total value of pelts sold from f farms declined to 55 p.c. in 1969, the lowest since 1955.

1.—Pelts of Fur Bearing Animals Produced and Percentage Sold from Fur Farms, Years Ended June 30, 1950-69

Year Ended June 30—	Pelts		Percentage of Value Sold from Fur Farms	Year Ended June 30—	Pelts		Percentage of Value Sold from Fur Farms
	Number	Value			Number	Value

[1] Includes seal pelts.

Table 2 shows the provincial distribution of fur production. Ontario continues to lea the provinces and territories in this respect, accounting for 26.6 p.c. of the total value i the 1968-69 season compared with 22.3 p.c. in the previous season. Increased percentag were also shown by Newfoundland, Prince Edward Island, Nova Scotia, New Brunswic Quebec and Northwest Territories.

* Prepared by the Agriculture Division, Dominion Bureau of Statistics.

[1] Totals include pelts and values not allocated to a province or territory, mainly Alaska fur seal and Atlantic t hair seal.

Wild Fur Production.—The principal kinds of wild fur pelts taken, according to ue, in 1968-69 were beaver, seal, muskrat and mink. These four kinds accounted for p.c. of the total value of wild pelts produced, beaver alone accounting for 43 p.c. The nber of beaver pelts produced was somewhat higher than in the previous year and the rage value per pelt increased from $15.05 to $18.40. In fact, the average value of ry kind of pelt except fox (not specified), marten, rabbit, skunk and squirrel, was higher 968-69 than in 1967-68.

Fur Farm Production.—Mink accounts for about 99 p.c. of the total value of f farm production. In 1968 the number of mink pelts taken continued upward, reachi 1,668,000 with a value of $22,690,000. Mink farms decreased in number from 1,359 1,147 but the number of animals on those farms at year-end was 641,857 compared wi 650,929 a year earlier. Chinchilla farms increased in number from 937 to 1,395 and t number of animals from 72,952 to 83,033. In 1968, 26 farms raising nutria reported 1,0 animals and 40 farms raising fox had 1,069 animals.

Exports and Imports.—The Canadian fur trade, both export and import, is mostly ndressed furs, the value of dressed and manufactured furs going out of or coming into ada being a comparatively small proportion of the total. Canadian fur exports consist ely of those produced in greatest abundance, mink being by far the most valuable wed by beaver, seal, fox, and muskrat. Mink, Persian lamb, dressed seal, dressed p and lamb, fox, and raccoon make up a large part of the imports. Exports and im- s of furs, undressed, dressed and manufactured, to and from Britain, the United States all countries, are given for the years 1968 and 1969 in Table 6.

Subsection 2.—The Fur Processing Industry

The general term "fur processing" includes the fur dressing and dyeing industry a the fur goods industry. The former is concerned with the dressing or dyeing of pelts a custom basis and the latter is a manufacturing industry that makes up fur goods su as coats, scarves and gloves. Tables 7 and 8 give selected statistics for these industr on the "total activity" basis (see Chapter XVI on Manufactures) for 1964-68. In 19(the fur dressing and dyeing industry processed the following major types of pelts: mi (all types) 1,764,870, muskrat 942,443, raccoon 686,330 and fox 148,098. Comparat figures for 1967 were 1,771,111, 792,476, 531,844 and 108,470, respectively.

Section 3.—Provincial and Territorial Fur Resource Managemen

Most of the fur resources of the provinces and territories of Canada are under t administration of their respective governments. Exceptions include those resources with the boundaries of the national parks and the Indian reserves, which are under the admi stration of the Federal Government. The Canadian Wildlife Service of the Departme of Indian Affairs and Northern Development is responsible for all Federal Governme interests in wildlife resources except for those related to Indian affairs, which are admi stered by the Indian Affairs Branch of the same Department. The Canadian Wildl

* Prepared by the respective provincial and federal departments responsible for fur resource management.

h and vigorous approach ada's designers working any Canadian wild and ed furs is creating an new interest in fur fash- though fur craftsmanship da has always ranked with t. The centre coat—a midi with raccoon collar trim—is flanked on the a Canada Majestic violet h wide notched collar and nink hem, and on the right nada Majestic triple-pearl th waist trim and jewelled buttons.

vice co-operates with provincial governments and other agencies concerned and handles eral interests in relevant national and international problems (see pp. 56-58). Provincial resource management practices are discussed in the following paragraphs.

Newfoundland.—The wild fur industry in Newfoundland, as elsewhere, has been racterized by short-term instability and long-term decline. In general, the price of furs declined in the past decade and, since the supply of trappers is partially determined by profit motive, the number of trappers has also declined. As a result, the fur bearers of province are now considered to be under-harvested. Because trapping is no longer fitable for the casual trapper and only large harvests and excellent pelt preparation can y a trapper for his effort, the maintenance of trapping in Newfoundland requires that resource be divided among a select group of professional trappers.

Research and management of the Newfoundland wild fur industry is at present in gress in an effort to exploit this resource more fully. All beaver were harvested on the nd in the 1970 season under registered trapline management, which allows one beaver e taken from each active lodge; in Labrador the quota is 20 beaver per trapper. There o quota for other furbearers. More than $100,000 worth of wild fur was harvested in 9, about half of which was for beaver. Otter and fox were the next largest contributors, about $30,000 and $25,000, respectively. A harvest of about 3,000 beaver and 1,000 r has been stable for the past several years.

Nova Scotia.—Nova Scotia's wild furbearers include beaver, muskrat, mink, otter, dcat, lynx, fox, raccoon and weasel and the trapping of these animals provides supple- ntary income for some 3,500 persons who harvest from $100,000 to $200,000 worth of l furs each year. The value, of course, depends on the numbers of each fur species ilable and on fur prices, both of which are subject to marked variations.

The beaver, once almost extinct in the province, is now the most valuable fur bea taken. A $2 licence is required by residents to trap a limited number of beavers (five to 2 between Nov. 1 and Jan. 15. No licence is required to trap other fur bearers, althoug royalty must be paid to the province for each pelt of mink, otter, beaver, lynx and musk exported. These animals may be taken between Nov. 1 and Mar. 15 (depending species).

To increase knowledge of the beaver as a preparation for better management of population, behaviour, feeding, movement and reproduction, studies are being conduct in the Tobeatic Wildlife Management Area in western Nova Scotia and in Thomson Stati Sanctuary in Cumberland County (northeastern mainland Nova Scotia). In additi data on reproduction, size, age, parasites and disease are collected from beavers harvest by trappers in all parts of the province.

The Trappers' Association of Nova Scotia, including several county trappers' assoc tions as well as trappers from all parts of the province, has been organized so that the m closest to the fur resource may have a say in its wise use and management. One of the ai of the Association is to promote improved handling and marketing of the raw furs taken trappers so as to upgrade over-all fur quality and thus command more profitable mark prices for trappers.

New Brunswick.—In New Brunswick, the harvest of wild fur bearing animals carried out mainly by persons who trap only on a part-time basis. Between 3,000 a 4,000 residents of the province annually supplement their incomes by trapping for beav bobcat, fisher, fox, marten, mink, muskrat, otter, raccoon, skunk, snowshoe hare, squi and weasel. However, beaver and muskrat are the two most important species.

During the early 1900s, beavers became scarce in New Brunswick but, as a result protection, they rapidly increased in numbers. The first open season in over 20 years v declared in 1944 and there has been an open season on beaver every year since 1953, annual catch ranging from 7,000 to 10,000 pelts. There is no limit on beaver. In fa damage caused by these animals to farm land, woodlots, highways and railways is of c cern. The reproductive performance of the beaver is currently under investigation New Brunswick.

Investigations are also continuing into the ecology of the muskrat, about 24,000 which are harvested each year. The trapping of fisher and marten was permitted dur the 1964-65 trapping season for the first time since 1946 and up to 1969-70 about 150 fis and 200 marten have been taken each year. These animals, found mainly in the north part of the province, appear to be increasing in number and their range is extending sou ward. During the winters of 1966, 1967 and 1968, a number of fisher were live-trapped released in the Fundy Mountains in the southeastern part of the province in an attempt re-establish them there. Mink and otter are not abundant in New Brunswick but dur the fall trapping season the catches range from 1,000 to 1,800 for mink and from 200 350 for otter.

Provincial legislation allows for changes in the trapping seasons to be made on sh notice. Thus, the seasons may be manipulated to allow for the most efficient and practi utilization of the fur resources of the province.

Quebec.—The fur trade has been of considerable importance to Quebec since earliest days of New France and the province still ranks among Canada's prime fur p ducers. At present, the most important native species, in order of value, are beav Arctic fox, muskrat, mink, lynx, seal, otter and marten.

Wild fur management began in 1932 when a Hudson's Bay Company factor lease private reserve at Rupert House. The Company took over administration of this rese and a second, at Nottoway House, was leased by the Company in 1938. Strict conservat measures were enforced within the two reserves and proved so successful that the provin government took over their administration and later set aside other Crown lands for

clusive use of Indian trappers. Ten reserves are now under conservation: Rupert House, 375 sq. miles; Nottoway, 11,700 sq. miles; Vieux Comptoir, 19,525 sq. miles; Fort Georges, ,150 sq. miles; Abitibi, 30,475 sq. miles; Great Victoria Lake, 7,825 sq. miles; Mistassini, ,300 sq. miles; Roberval, 26,925 sq. miles; Bersimis, 31,925 sq. miles; and Saguenay, ,600 sq. miles.

A separate system of registered lands for white trappers is in force in the area of Abitibi ast, Abitibi West, Rouyn–Noranda, Témiscamingue, Pontiac and part of Saguenay unty. Each leaseholder has exclusive trapping rights on his lands and is subject to very ict regulation. Trapping of fur bearing animals other than beaver is not restricted either the reserves or on registered lands, except that the general regulations dealing with otection of animals or limits on catches must be complied with. Biological studies have en undertaken recently to evaluate the results of this system.

In 1968-69, the value of wild furs to the trapper was close to $3,000,000 which, of urse, was only a fraction of the value of the finished product.

Ontario.—Legislation for the management of wild fur bearers had its beginning in ntario with the setting of seasons in 1860 by an Act of Upper Canada. However, 32 ars passed before there was any field staff to enforce the regulations and then began an of restrictive legislation to protect species threatened by the earlier exploitation. ogress beyond the restrictive enforcement of open and closed seasons has come about ly in the past 20 or 30 years. The first steps in this direction involved the setting aside special Indian hunting areas in which non-Indians were not allowed to trap.

The registered trapline system was introduced in 1935 on a very small scale. This stem is based on government recognition of the desirability of full utilization of the source and the more efficient management that results when one individual enjoys the clusive right to trap on such an area. In its early stages, surveyed townships were as- gned as trapline areas but more explicit trapline boundaries, established in 1947-48, now ver the province and mostly follow natural physiographical features. At the same time, sident traplines were established in areas of patented land, which means most of southern ntario; these are blocks of land on which trappers are licensed to trap, providing they ake their own written agreements with the landowners. Trapline licences are renewable nually as long as the trapper meets the conditions of the regulations and continues to ap. Trappers may sell the equipment and improvements they have made on their lines d thus have a vested interest in their traplines.

In full realization that fur is a natural resource that cannot in nature be stockpiled, d is harvested on a commercial basis only, the Ontario Department of Lands and Forests s assisted the Ontario Trappers' Association to establish their fur auction at North Bay. his allows the trappers to sell furs on a competitive market and realize their full value.

Beaver continue to provide the greater part of the earnings from wild furs for Ontario's 00 trappers. During the 1968-69 season, 162,000 beaver pelts at an estimated value of ,866,000 were marketed by trappers; the total estimated value of all wild furs harvested the province was $4,906,000.

Manitoba.—Trapping and trading in furs is Manitoba's oldest industry and the ovince still produces some of the finest wild pelts in the world, the annual value of which erages about $1,900,000. The industry continues to be of particular economic importance the full-time white and native trappers in the northern areas and also for many part-time ppers in the southern part of the province.

When registered traplines were established nearly 30 years ago, indiscriminate trapping s all but eliminated and illegal trapping was sharply reduced, thus giving protection to th the animals and the trapline operators. The Department of Mines and Natural sources, which administers the fur resources of the province, has been striving by area organization to enlarge traplines so that the trappers may earn more money to compen- te for the rising cost of living. The use of snowmobiles has made it possible for them to

cover lines more thoroughly and in less time, permitting them to handle larger territor
The once-scarce beaver has been rehabilitated through years of controlled and mana
harvest and is now the most valuable fur bearer taken but during the past decade new r
ords in the production of muskrat, mink, lynx, fisher and otter have been establish
A live-transplant project has been undertaken to re-stock areas where the marten has beco
depleted.

A trapper education program was started by the Department in 1958 to improve
general handling of furs and to achieve a certain measure of standardization in pelt ca
This program has shown gratifying results and has been expanded to include improv
trapping methods and the use of humane traps. A booklet, *The Manitoba Trappers' Gu*
is available from the Conservation Education Branch of the Department.

Manitoba works in close co-operation with federal and other provincial agencies in
promotion of quality furs by exhibiting collections of representative wild furs at Europe
fairs. A Winnipeg fur auction company, one of the largest in Western Canada, serves
an important fur selling and exporting agency for Manitoba trappers and fur dealers, w
buyers attending from a number of European fur centres, from the United States and fr
Eastern Canada.

Saskatchewan.—Before 1945, little was done to control the trapping of beaver a
muskrat in Saskatchewan, other than to establish closed seasons when the fur bear
became depleted from over-trapping, and the lack of a conservation and managem
policy had a disastrous effect on both the fur resources and the livelihood of trapp
In 1944, the provincial government set up a committee to study trapping problems a
the following year the South Saskatchewan Muskrat Trapping Program was institut
Under this plan, individuals received exclusive rights to trap on definite land locatio
Owners and occupants received first consideration, with special priority given to Indi
and metis on Crown lands. Muskrat quotas were established to assure continuing popu
tions, and marketing of pelts under government supervision was instituted.

In 1946, under federal-provincial agreement, all Crown lands north of the 53rd para
were set up as the Northern Fur Conservation Block. Up to $50,000 a year was to
expended over the following ten years to establish and administer conservation are
purchase equipment, pay salaries of personnel, transplant live beaver and build dar
the Federal Government agreed to assume 60 p.c. of the cost and the province the
mainder. A Fur Advisory Committee, with representation from the provincial Depa
ment of Natural Resources and the federal Indian Affairs Branch, was set up to superv
the program. Organization of conservation areas was left to the trappers. Five-m
councils were elected in all districts, with Indian, metis and white trappers sharing pri
leges, obligations and responsibilities on an equal basis. Conservation measures a
licensing regulations were initiated. In 1956, the agreement was extended for another
years with minor changes and in 1962 a co-ordinating body was set up by the Fur Advis
Committee to promote better communications and understanding of the fur progra
In 1966, the agreement was again extended until 1972 and the sharable amount was la
raised to $120,000. The northern fur conservation program in Saskatchewan has serv
as an important vehicle to encourage these people to plan and carry out other progra
vital to their own well-being.

During the two decades of the province's fur program, security of trappers has be
strengthened; fur bearer population has reached a higher general level, particularly
beaver; quotas have put trapping on a sustained-yield basis; poaching has been alm
eliminated; higher water levels resulting from the comeback of beaver have improved
habitat for other wildlife; and Indian, metis and white trappers are sharing alike in
self-government of trapping areas and in fur management programs.

Alberta.—Plans have been formulated for the reorganization of the Fish and Wild
Division of the provincial Department of Lands and Forests. Under the new set-up, a
management section will be established to work strictly on the fur resources of the provin

More meetings will be held with registered trappers to increase the exchange of information between them and the Division's officers and a more intensive program is being initiated to eliminate as far as possible the misuse of trapping areas by certain trappers and, by amalgamation, to form trapping areas into better economic units. The Alberta Government submits pelts to the main fur exhibits in Canada and Europe, a policy that has increased the interest of foreign and Canadian buyers in Alberta furs.

British Columbia.—The British Columbia wild fur resource is administered by the Fish and Wildlife Branch of the Department of Recreation and Conservation. Regulations are derived under authority of the Wildlife Act and resource use is controlled under the registered trapline system, in effect since 1926. Registered traplines are areas of Crown land allotted, for the purpose of trapping wild fur, to trappers who are resident in the province. Registration of a specific trapline is renewable on an annual basis by the trapper, subject to certain requirements of tenure aimed at conservation and sustained yield of fur species. Approximately 3,000 trappers are involved in provincial wild fur production, of whom one half are Indians. The market value of wild fur produced during the fur harvest of 1968-69 was $649,969, with beaver, marten, squirrel and mink together comprising about 78 p.c. of the total value.

Section 1.—Canada's Mineral Industry*

The Canadian mineral industry experienced a very successful and progressive year 1969 notwithstanding a pause in the average increase of production value recorded fr 1960 to 1968 of over 8 p.c. a year. Exploration for new deposits of base metals, uraniu coal, oil and gas continued unabated in widespread areas, as did the further exploration mineral occurrences previously recorded. Development of properties for production 1970 and in succeeding years continued at a high rate and future development of ma others was apparent as a result of a large number of production and marketing apprais undertaken. Despite the pause in the high growth rate of Canada's value of mineral o put in 1969, which was primarily the result of labour disputes in the iron ore and nick copper industries, the mineral and mineral processing industries remained strong a buoyant and continued to successfully compete for markets in the world's major consum areas.

The value of Canada's mineral production in 1969, according to preliminary statist was $4,690,642,200, down slightly from the all-time record of $4,725,341,147 in 1968. H not long strikes occurred in some major mineral commodity industries, the year's mine production growth rate would have reached the average of nearly 8.4 p.c. a year fr 1960-68 and exceeded it because of increased prices for most commodities and the continu high rate of industrial activity in Canada's main marketing areas.

Canada produces about 60 different minerals from domestic deposits. The 10 lead minerals in 1969 contributed 79.1 p.c. of the total value of mineral output and were wo $3,708,600,000. The 20 leading minerals of the 60 produced in Canada regularly c tribute nearly 95 p.c. of the total value; in 1969 they contributed 95.1 p.c. The lead minerals were, with 1968 output shown in brackets: petroleum, $1,010,200,0 ($937,300,000); copper, $574,200,000 ($607,900,000); nickel, $482,400,000 ($528,200,0

* Prepared under the direction of J. Austin, Deputy Minister of the Department of Energy, Mines and Resou Ottawa, in the Minerals and Metals Division, Mineral Resources Branch. The statistics in the tables throug the Chapter were compiled in the Industry Division of the Dominion Bureau of Statistics.

The Brenda copper-molybdenum mine, not far from Kelowna, is the largest of three new British Columbia copper mines to come into production in 1970. The crushing and concentrating plant is equipped to handle 24,000 tons of open-pit ore a day.

George Hunter

Indusmin's new silica processing plant at Midland, Ont., began operations in 1970. Feed for the mill comes from an extensive deposit of high-grade silica some 120 miles north of the plant and its output of 500,000 tons of product a year will be used in the glass, ceramics and chemicals industry.

on ore, $431,900,000 ($532,700,000); zinc, $364,400,000 ($326,900,000); natural gas, 63,600,000 ($225,300,000); asbestos, $196,800,000 ($185,000,000); cement, $171,300,000 152,000,000); sand and gravel, $130,600,000 ($129,500,000); and silver, $83,200,000 104,100,000).

There is varied distribution of mineral production in most regions of Canada. Except r a few mineral commodity requirements, such as manganese, chromium, bauxite and tin, nada produces nearly all of its mineral requirements and has substantial reserves to meet e ever-increasing domestic demand and to maintain its high rate of mineral and mineral-sed exports. It leads the world in the production of asbestos, nickel, zinc and silver, is cond in molybdenum, titanium concentrates, gypsum, uranium and potash, and stands gh in the production of many other major minerals including copper, lead, iron ore, gold, atinum metals and cobalt.

The mineral industry has always been dependent, in large measure, for its well-being d growth on exports, about 60 p.c. of its output to the prime processing stage being ex-orted. It is the country's leading resource-based industry and exports of minerals and bricated mineral products have led all export sectors for many years. Exports of minerals d fabricated mineral products in 1969 were valued at $3,913,078,000 compared with ,992,878,000 in 1968 and $3,348,708,000 in 1967; they accounted for 27 p.c. of Canada's tal commodity exports. About 60 p.c. went to the United States, 12 p.c. to Britain, 8 p.c. Japan, and 9 p.c. to countries of the European Common Market; the remainder was ipped to many countries throughout the world as this category of exports goes to some countries in all.

As a result of a continuing high rate of industrial production in the major markets of e world, the demand for higher amounts of minerals and metals remained strong and owing in 1969, with prices generally firmer. Industrial growth was particularly strong Japan and West Germany and at moderately good rates in the United States and Canada; e same general trends are expected to continue in 1970. Britain, in recent years, has ot experienced the same high rates of industrial activity as have the aforementioned arket areas for Canada's minerals and mineral products but an improvement was apparent 1969 that will probably continue. From 60 to 65 p.c. of Canadian production of crude inerals is exported, most of it to the United States, Britain, Japan and West Germany. herefore, the well-being of the country's mineral industry is dependent largely on Canada's mpetitive position in those markets relative to the position of other export-oriented ineral-producing countries.

Prices of minerals and metals in 1969 were generally higher with only a few exceptions, otably elemental sulphur, silver and potash, each of which was lower because of oversupply. he supplies of most major non-ferrous metals were tight throughout the year and there ere increased prices for copper, nickel, lead, zinc, aluminum, tin and platinum, the largest ercentage increase being for copper. Iron ore prices remained the same, generally, roughout the year, the level having remained stable for several years, particularly in orth American markets. Iron ore has been in an oversupply situation for some time but the last quarter of 1969 there was evidence of a firming in prices that may indicate the nergence of a seller's market. Substantial price advances occurred for many of the alloy-g, additive, reactive and less common metals in 1969. Notable price advances took place r columbium, cobalt, chromium, molybdenum, titanium, vanadium, tungsten and rconium and for many metals recovered as byproducts of base metal smelting and refining, ich as selenium, tellurium, bismuth and the platinum group metals. The unit value of anium production in Canada was again lower, even though there was a modest increase in oduction.

Of the industrial minerals group, both potash and sulphur continued in oversupply and rices tended to be lower, although the volume of production of each was higher in 1969. sbestos remained in strong demand and prices were steady with further increases imminent s the year closed.

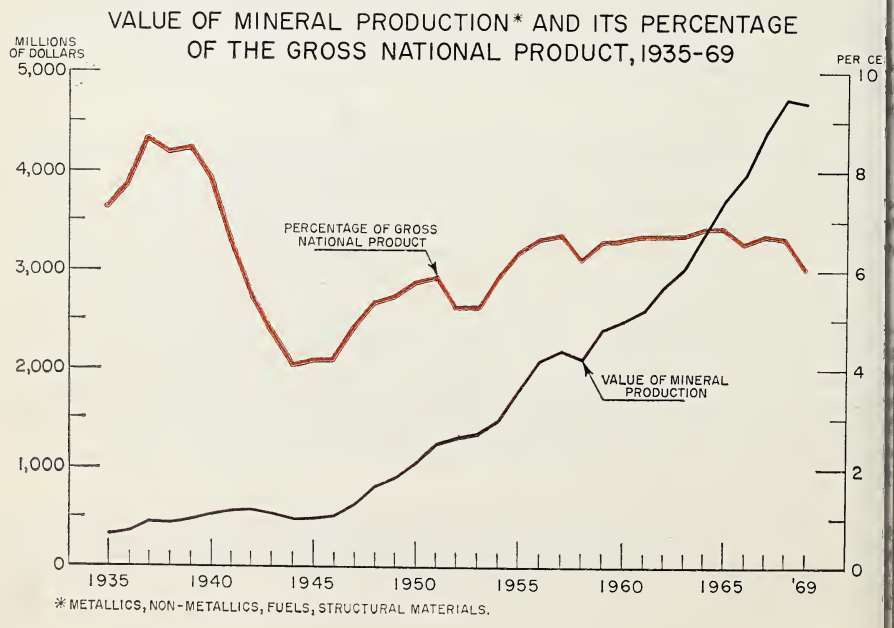
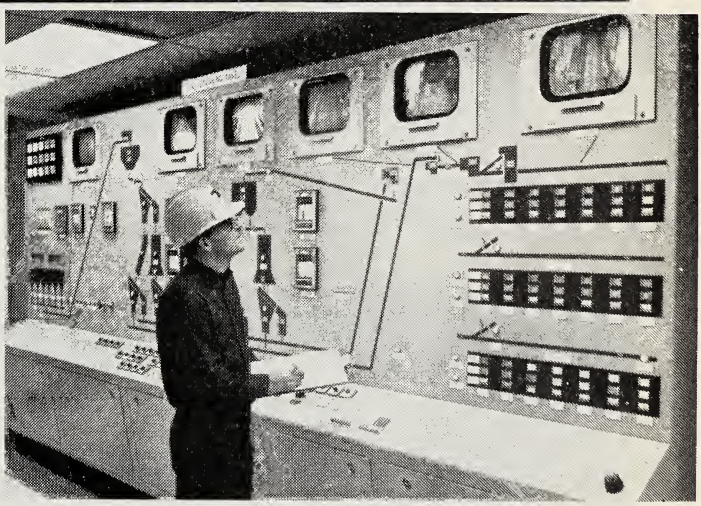
[1] Value of Newfoundland production included from 1949.

Following the United States and the Soviet Union, Canada is the world's larg producer of diversified mineral products and leads the world in mineral exports. Miner have always had a prominent role in the country's total economic growth and developme both economically and geographically. This has been particularly so since World War and especially so since 1950 when the value of mineral production was 5.8 p.c. of the gr national product (GNP) compared with 6.7 p.c. of $65,700,000,000 1967; it declined to 6.6 p.c. of $71,400,000,000 in 1968 and to about 6.0 p.c. of $78,500,000,0 in 1969 largely because of lost production due to strike action at major mining and mine processing operations.

Copper was again the leading mineral of the metallics group in 1969 although its produ tion, both mined and refined, was lower than in 1968 because of losses incurred throu labour stoppages. Mines were brought to production in several countries and many we being explored and developed for production at widely scattered locations throughout t world. The rate of discovery and development of copper deposits in Canada exceeds t



nt technical revolution in d associated industries has the concept and size of as well as management techniques.



ore-loading facilities, the the world, are in operation s, Que., where ore from the abrador iron mines is loaded e of 15,000 tons an hour.

anel of a modern concen- ant where the computer is placing the slide rule.

sses incurred through mine closures and new production is scheduled from five provinces d the Yukon Territory. The outstanding feature of the Canadian copper industry in cent years has been the development to production and the continuing discovery of large, w-grade copper and copper-molybdenum deposits in British Columbia and the possibility a similar pattern in the Yukon Territory. Also, substantial tonnages are being found in ng-established mining areas and in the more remote and unexplored areas of Ontario, uebec and Manitoba.

Nickel production was curtailed in 1969 because of the prolonged strikes at the Ontario erations of The International Nickel Company of Canada, Limited (Inco) and Falcon- idge Nickel Mines Limited, that shut off nearly 77 p.c. of Canada's production capacity. was, however, second in value to copper among the metallics, replacing iron ore which so suffered severe production losses because of long strikes in Quebec, Labrador and

Ontario mines. Iron ore production declined from 47,400,000 tons in 1968 to 40,000,0 tons and in value from $532,700,000 to $431,900,000, declines of 15.6 p.c. and 18.9 p. respectively. There was evidence late in the year of a firming trend in iron ore prices North American and European markets, particularly for good grade ores and especially f pellets and high grade concentrates with special properties. The iron ore situation appea to be changing from the one of abundance and oversupply that has been prevalent for sever years to one of balanced supply and demand or perhaps one of shortage for preferred typ

Zinc recorded new highs in 1969 in quantity produced and value and Canada was aga the world's leading mine producer. Production was 1,196,291 tons valued at $364,400,0 compared with 1,159,392 tons valued at $326,900,000 in 1968, the previous record f Canadian mine production of zinc. The value of lead production at $95,400,000, compar with $91,400,000 in 1968, was higher although production was lower at 315,032 tons co pared with 340,171 tons. The value of production in 1969 was higher for bismuth, ca mium, columbium, magnesium, mercury, molybdenum, and tellurium; value was lower f antimony, cobalt, the platinum group, silver, uranium and yttrium.

The production value of industrial minerals increased to $908,300,000 in 1969 fro $890,200,000 in the previous year; non-metallics declined slightly in value to $447,100,0 and structural materials increased to $461,200,000 from $443,300,000. The industri minerals sector is an important part of Canada's total mineral economy with output near doubling since 1960 and rising at about 8 p.c. a year since 1950. The five leading no metallics in 1969 were asbestos, potash, elemental sulphur, salt and titanium-dioxide; oth leading non-metallics included gypsum, sulphur in smelter gases, peat moss and sodiu sulphate. Potash and elemental sulphur, recovered in the processing of sour natural g each increased production capacities in Saskatchewan and Alberta, respectively, but ea suffered severely by conditions of oversupply and consequent lower prices in export marke It will probably be well into the 1970s before conditions begin to improve for either co modity. Asbestos and titanium-dioxide for pigments are also primarily export-oriented f their continued well-being but their markets remained strong at improved prices. Mo of the other non-metallics are dependent mainly on the domestic market and most of the recorded slightly increased production. Structural materials, consisting of clay produc cement, lime, sand and gravel, and crushed stone, are used almost entirely by the domes construction industry and their output is therefore related directly to the rate of activi in that industry.

High school and u versity students wo as miner-trainees bel ground at Elliot Lak Ont. Efficient oper tion of today's compl mining equipment r quires highly skill personnel.

The value of production of mineral fuels—coal, natural gas, natural gas byproducts, d crude petroleum—attained another record of $1,461,400,000 from the previous year's ord of $1,342,500,000. Crude petroleum output, at $1,010,200,000, exceeded the ,000,000,000-mark for the first time. Natural gas output increased substantially and at of natural gas byproducts (liquids) rose moderately; coal production declined slightly th in tonnage and value. Many significant developments occurred in the energy minerals ctor of the industry that will have long-lasting influences on future production. They re varied in nature and related to both industrial and governmental matters on national d international questions including the method by which the mineral commodities can be st economically moved to markets. In 1969, Western Canada was on its way to be- ming a substantial supplier of metallurgical coal to Japanese markets from large deposits ing developed for production in 1970 and in subsequent years.

2.—Value of Mineral Production, by Class, 1960-69

Year	Metallics	Non-metallics	Fuels	Structural Materials	Total
	$	$	$	$	$
60	1,406,558,061	197,505,783	565,851,829	322,594,308	2,492,509,981
61	1,387,159,036	210,467,786	673,794,892 r	331,345,763	2,602,767,477 r
62	1,496,433,950	217,453,009	770,245,507 r	356,166,833	2,840,299,299 r
63	1,509,536,931	253,452,413	884,879,853 r	379,011,116	3,026,880,313 r
64	1,701,648,538	287,497,000	972,725,417 r	403,058,324	3,364,929,279 r
65	1,907,575,899	327,238,901	1,045,490,867 r	434,161,904	3,714,467,571 r
66	1,984,672,572	363,387,717	1,151,594,654 r	480,649,622 r	3,980,304,565 r
67	2,285,279,477	406,269,252	1,260,147,793	454,660,361	4,406,356,883
68	2,492,599,647	446,922,191	1,342,549,863	443,269,446	4,725,341,147
69p	2,320,947,545	447,088,679	1,461,399,937	461,206,039	4,690,642,200

Capital and repair expenditure for the mining industry was $1,448,000,000, up slightly om that of $1,411,000,000 in 1968; the forecast expenditure for 1970 is $1,562,000,000.

The volume of mineral production index, which measures the mining industry's solute growth (1961=100), declined 1.8 p.c. in 1969 to 149.9 from 152.7 in 1968; the 960-69 average annual rate of growth was 4.8 p.c. In comparison, the volume index of tal industrial production increased 5 p.c. to 167.9 from 159.8 in 1968 and the average nnual rate of growth in the period 1960-69 was 6.3 p.c.

rovincial and Territorial Mineral Production in 1969

Ontario has long been the leading mineral-producing province in Canada and was gain the leader in 1969, although the gap between that province and Alberta, the second rgest producer, closed appreciably; Ontario's proportion of the total Canadian value of ineral production declined from 28.7 p.c. in 1968 to 25.9 p.c. in 1969 while Alberta's rose om 23.1 p.c. to 25.4 p.c. The narrowing of the gap was the result of steadily higher itput of petroleum and natural gas in Alberta and of production losses in Ontario caused y labour disputes in the country's two largest nickel-producing plants, both of which also oduce many byproducts of their nickel-copper operations that were discontinued for a ngthy period. Following the two leading provinces were: Quebec with 15.4 p.c. of the alue of output, British Columbia with 9.0 p.c., Saskatchewan 7.4 p.c., Manitoba 5.2 p.c., ewfoundland 5.1 p.c. and the other provinces and the territories ranging downward from 5 p.c. to 0.02 p.c.

Newfoundland.—In 1969, the value of mineral production in Newfoundland de-ased by 23 p.c. to $239,100,000 because of prolonged strikes that closed the iron-mining -rations of Iron Ore Company of Canada Limited and Wabush Mines in Labrador. As onsequence, output of iron ore declined from 19,700,000 tons to 14,700,000 tons and its ue from $246,500,000 to $179,000,000. All metallic minerals produced in the province l a value of $217,800,000 in 1969 and made up over 91 p.c. of the total mineral value; put of copper, zinc and lead followed iron ore, in that order. Copper was produced at r mines in the Island of Newfoundland and zinc and lead were the main products at the chans Unit of American Smelting and Refining Company. Asbestos, the major indus-l mineral produced, declined in value by $1,700,000 because of a two-month strike in l-year at Advocate Mines Ltd.'s open-pit operation at Baie Verte. Fluorspar value was her at over $3,000,000 and the value of structural materials was slightly below the 8 figure.

Prince Edward Island.—Mineral output in this province is confined to structural terials valued at about $1,000,000 a year, of which sand and gravel contributed 85.7 p.c. l stone 14.3 p.c. in 1969.

Nova Scotia.—The total value of mineral output in Nova Scotia was down slightly 1969 to $54,200,000 from $56,900,000 in 1968. Coal, which is still the province's leading neral in terms of value, continued its declining trend in both quantity and value, produc-n dropping to 2,600,000 tons valued at $21,600,000 from 3,100,000 tons valued at 5,100,000 in the previous year. Coal was produced from nine mines and development s begun of the Lingan mine which will produce relatively low sulphur coal from a seam t dips below the ocean. Four inclined shafts will be driven and the mine will be highly chanized, using the longwall system for extraction. Cape Breton Development Corpora-n, a federal government agency that took over the coal mines and related interests of minion Steel and Coal Corporation, Limited, completed its first full year of operation 1969. The Corporation offered voluntary pre-retirement to 1,000 older men of the 00 employees in coal operations and started to lower the scale of operations to about 00,000 tons a year. No. 20 Colliery at Glace Bay was closed and the work force trans-red to other collieries.

In 1969, the value of industrial minerals produced in the province was higher than that mineral fuels (coal), non-metallics having a value of $15,400,000 and structural materials 5,800,000. The non-metallics industry is comprised almost entirely of gypsum, salt and rite production, oriented largely to the United States market.

New Brunswick.—New Brunswick's mineral production value increased in 1969 to 3,400,000 from $88,500,000 in the previous year; $81,300,000 or about 83 p.c. of the total s comprised of metallics. Zinc and lead output increased appreciably but copper and ver were down slightly. Brunswick Mining and Smelting Corporation Limited, a bsidiary of Noranda Mines Limited, is by far the major base metal mining operation in e province and continued to operate two zinc-lead-copper mines and two mills near thurst; a zinc-lead smelter at Belledune, about 20 miles north of Bathurst, was operated East Coast Smelting and Chemical Company Limited, also a Noranda subsidiary. vo other companies—Heath Steele Mines Limited and Nigadoo River Mines Limited—erated zinc-lead-copper mines in the Bathurst area. Heath Steele was installing equip-nt at year-end to expand its mill capacity from 1,600 to 3,000 tons a day.

Industrial minerals accounted for an output value of $11,100,000 in 1969 and mineral els for $5,900,000, both being lower than their 1968 values. There were no significant anges in value or development of any minerals except for coal, which contributed almost of the output value of the mineral fuels. Following agreement between the federal and ovincial governments, New Brunswick assumed management in 1968 of the coal mines Minto so that a gradual phasing-out of the uneconomic coal industry could be under-ken. Purchase of the four remaining coal mining operations was made as a follow-up to

the Grand Lake Development Act passed by the provincial legislature in 1968. A ne provincial company, N.B. Coal Limited, was incorporated to take over and manage tl Minto coal operations.

Quebec.—The mineral output of Quebec in 1969 was worth $720,100,000, which ma be compared with the previous year's $728,800,000. The loss in value of iron ore produ tion, which declined about $28,000,000 to $109,400,000 due to strikes, was the main co tributing factor in the decline of $25,700,000 in metallic output to $407,200,000. Oth metallics recorded little change in value. Copper production, second to Ontario in Canad was about the same as in 1968 notwithstanding the long shutdown from May 13 to August of the 11,000-ton-a-day plant and associated smelter of Gaspé Copper Mines Limite Several new mines began production in 1969 and other plants were being enlarged, develop or planned for the years ahead. Iron ore announcements added considerable encourag ment to increased production. Sept Îles and Pointe Noire are both being enlarged so th 150,000-ton iron ore carriers, and eventually 200,000-ton carriers, can be loaded. Al of importance was the signing of contracts for the sale of iron ore concentrates to Jap and the announcement that Quebec Cartier Mining Company was studying the developme of its Mount Wright iron ore property, 75 miles north of Lac Jeannine, for initial develo ment at 5,000,000 tons a year, to be later increased to 10,000,000 tons a year.

Asbestos production from 10 mines, one of which closed in January 1969, totall 1,336,000 tons of fibre valued at $154,400,000 and was second to copper in terms of valu Asbestos, together with titanium dioxide output valued at $29,100,000, comprised ab 93 p.c. of total non-metallics output value. Asbestos producers in the Eastern Townshi continued to expand their mine and mill capacities and to improve recovery of fibre fr material milled.

Quebec, like Ontario, has a relatively mature mineral industry that is large and we diversified with the exception of the mineral fuels—coal, crude petroleum and natural g However, there still remain large areas of unexplored and relatively little explored ground the province that are favourable for mineral deposition.

Ontario.—Mineral output value in Ontario declined from the record high $1,355,600,000 in 1968 to $1,214,500,000 as a result mainly of losses incurred in the metall sector because of plant shutdowns for prolonged periods that resulted in substantial los in nickel, copper and byproduct metals production. Labour strife at some iron ore produ tion plants in the province resulting in closures at various periods during the year a affected production. Nickel output was down 18.3 p.c. from the previous year's rec of $405,200,000 and copper declined 15.4 p.c. in value to $235,500,000. Metallics in 19 represented 83 p.c. of the total value of the provincial mineral output; in 1969 they rep sented 81 p.c. of the total.

Inco and Falconbridge, the main nickel-copper producers in Ontario, are each engag in large-scale expansion programs that together will increase Canada's nickel producti capacity from the 600,000,000 lb. a year at the beginning of 1969 to about 800,000,000 a year in 1972 (see p. 694). There are many Ontario mines other than those of Inco a Falconbridge that produced copper in 1969, often as a co-product of other base me production. The two largest were the Kidd Creek mine of Ecstall Mining Limited n Timmins and the Geco Division of Noranda Mines Limited at Manitouwadge. Six n copper mines are being developed for production by 1972.

Ontario produces by far the most mineral commodities of any of the provinces a territories and, in one sense, might be termed as having the most mature mineral econo but it is by no means even close to being fully explored and developed in either mine resources or their maximum degree of processing or marketing. Large, important mine deposits are being discovered each year both in long-established mining areas and at so distance from those centres, so that the future for mineral growth in the province is ind promising.

Manitoba.—The province's value of mineral production advanced to $245,600,000 1969 from $209,600,000 in 1968. The largest gains were made by nickel, copper and c. Metallics output accounted for $205,800,000 of the total.

Inco operated two nickel mines, a smelter and a refinery in the Thompson area and s developing two other mines in the same area for production in 1970. Sherritt Gordon nes Limited operated its Lynn Lake nickel mine and continued development of its Fox ke copper-zinc deposit scheduled for production in 1970 at 3,000 tons of ore a day. mbarton Mines Limited began production of 700 tons of nickel-copper ore a day at its d River location. Hudson Bay Mining and Smelting Co. Limited operated five mines Manitoba (one in Saskatchewan) and processed its own and custom ores at the company's n Flon mill and copper-zinc smelter. The company is developing two additional mines Manitoba for 1971 production. Exploration continued at high levels in the northern cambrian areas of the province, particularly in the Thompson nickel area, where pre- inary exploration had previously indicated favourable conditions.

Saskatchewan.—The value of mineral production in Saskatchewan declined from 7,200,000 in 1968 to $347,700,000 in 1969; values of uranium, copper and zinc registered largest percentage declines of 16.8 p.c., 12.8 p.c. and 8.3 p.c., respectively. Production s slightly higher for the industrial minerals group but lower for both metallics and mineral ls.

Eldorado Nuclear Limited, one of Canada's four remaining uranium producers, nounced in May that it would reduce the milling rate at Beaverlodge to about 50 p.c. of pacity from the then operating rate of about 85 p.c. The mill rate adjustment to 900 tons ay was based on sales commitments. Exploration for uranium in the Beaverlodge area tinued strong but considerably more attention was paid to the Wollaston Lake area in thern Saskatchewan where Gulf Minerals Company discovered uranium in 1968 and which it announced preliminary results in July 1969. Copper was produced at three nes in the province, two of which also produced zinc. One of the latter—Western clear Mines Limited—closed its mine in July when ore reserves were exhausted. Potash duction was higher both in quantity and value but the industry continued to experience rketing problems, since an oversupply situation existed throughout the world and prices re at their lowest point in history. Canada remained the world's leading potash exporter l was second only to the Soviet Union in production.

Alberta.—Of Alberta's total value of mineral production in 1969 of $1,193,300,000, mineral fuels accounted for $1,093,700,000. Crude petroleum alone contributed 61.3 p.c. the total of all minerals, natural gas 18.3 p.c. and natural gas byproducts 10.9 p.c.

The Prudhoe Bay oil discovery and subsequent developments there and in Canada's North have already had a significant impact on oil development and marketing plans Western Canada, particularly in Alberta where the mineral economy is closely linked to and gas production and markets. Governments and regulatory boards are making ppraisals of many development, production and marketing situations that are at present gely problematical but nevertheless must be considered in the total appraisal. Late in 9, authorization was given for the construction by Syncrude Canada Limited of a ond and larger plant (80,000 bbl. daily) for the extraction of oil at its Athabasca River sands site. Meanwhile much of the province's oil production capacity remains in- erative because of markets, even though reserves of both oil and gas register yearly reases.

Elemental sulphur recovered from the processing of natural gas was by far the most portant non-metallic produced in 1969 and comprised $60,716,000 of the total $63,400,000 ue of non-metallics. Production will rise with the continuing growth of the natural gas ustry as markets develop but it is expected that, well into the 1970s, prices will remain relatively low levels throughout the world as conditions of oversupply prevail. Produc- n of structural materials continues to keep pace with the requirements of the total pro- cial economy, particularly those of the construction industry.

It is expected that output will rise substantially in the decade ahead from the 4,422,03 tons produced in 1969, as bituminous mines are developed to fill the steadily rising cokin coal requirements of Japan, the export markets developing at other overseas locations, an the recently appearing needs of steel centres in Ontario. Subbituminous output shoul also increase as the need for domestic and possibly United States thermal-generated electri power rises. Subbituminous coal production in 1969 amounted to 3,188,000 tons.

British Columbia.—The value of British Columbia's mineral output in 1969 wa $422,800,000 compared with $389,100,000 in 1968, a gain of 8.7 p.c. Copper continued to b the leading mineral in terms of value, contributing nearly 20 p.c. of the total, followed b crude petroleum with 13.7 p.c. Molybdenum experienced the largest percentage gain i value of output over 1968; it rose nearly 45 p.c. to reach $47,100,000.

Ten companies operating mines in the province reported production of copper in 196 and another six properties were under development for 1970-72 production. Four min produced molybdenum, two of them as a co-product of copper. Extensive exploration f copper-molybdenum properties continued unabated and several are scheduled for large-sca production within the next two years. Cominco Ltd. operated its two lead-zinc mines an metallurgical plants in the southeastern part of British Columbia, producing refined zin lead and silver and recovering as byproducts other metals (antimony, bismuth, cadmiu tin and iron). Cominco also produces, using effluent stock gases and industrial mineral several types of industrial chemicals and fertilizers.

Production of crude petroleum was 15.1 p.c. and natural gas 18.6 p.c. higher than 1968. The quantity of coal produced increased only 6,300 tons over 1968 but its valu increased nearly $1,900,000 to reach almost $7,110,000. Most of the coal was exported Japan. The continuing development of extensive metallurgical coal deposits in Britis Columbia (and in Alberta) to meet commitments for shipments to Japan beginning in 197 and continuing far into the future is, of course, one of the major developments of th Canadian mining scene. Their development and the building of handling and transport tion facilities have wide implications for the economies of the two western provinces, f other mineral commodities, and for the total Canadian economy.

Yukon Territory and Northwest Territories.—The value of minerals produced the Yukon Territory increased from $21,400,000 in 1968 to $37,700,000 in 1969, the metalli sector increasing from $12,700,000 to nearly $25,000,000. The large increase was the resu of mill start-up by Anvil Mining Corporation Limited's 5,500-ton-a-day zinc-lead operatio at Ross River with shipments to Japan beginning later in the year. Plans were alrea under way to increase mill capacity to 6,700 tons a day. Copper and silver producti also increased appreciably in value. Asbestos fibre production from Canada's mo northerly open-pit mine—Cassiar Asbestos Corporation Limited's mine at Clinton Creek increased from almost 63,600 tons in 1968 to 88,000 tons valued at $12,700,000 in 1969.

Mineral output in the Northwest Territories in 1969 increased only slightly $116,500,000 from $115,600,000 in the previous year. Metallics production was wor $115,400,000, most of which was accounted for by lead, zinc and byproduct producti from the Pine Point mine on the south shore of Great Slave Lake. The mine and 8,000-to a-day mill of Pine Point Mines Limited, a subsidiary of Cominco Ltd., now operat entirely on concentrating-grade ore that averaged, in 1968, 3.75 p.c. zinc, 3.06 p.c. lead, a 4.30 oz. of silver a ton; initially, the company shipped considerable open-pit high-grade o with no mill treatment but sales of direct-shipping ore ended in 1968 when 353,000 to were shipped, averaging 25 p.c. zinc and 19 p.c. lead. Gold from Yellowknife area mir was valued at $12,900,000 in 1969, down slightly from $13,300,000 in the previous ye Exploration for oil continued near the Arctic Coast and on the Arctic islands and drilli was undertaken at several promising locations. The program is probably only the beginni of a long period of extensive exploration of promising areas that was sparked by the maj oil discovery at Prudhoe Bay, Alaska, in 1967.

MINERAL REFERENCES

Locations of mines and mining areas mentioned in the Mines and Minerals Chapter of this volume.

Department of Energy, Mines and Resources Map 900A, revised annually, shows names and locations of all producing mines and the principal oil and gas fields in Canada.

68. Werner Lake—nickel-copper mine
69. Dumbarton Mine—nickel-copper
70. Wabowden—nickel-copper mine
71. Thompson Area—nickel-copper mines, smelter and refinery
72. Snow Lake Area—copper-lead-zinc mines
73. Flin Flon Area—copper-zinc-lead mines and smelter
74. Fox Lake Mine—copper-zinc
75. Lynn Lake—nickel-copper mine
76. Uranium City—uranium mine
77. Gulf Minerals—uranium discovery
78. La Ronge—copper mine
79. Flexar Mine—copper
80. Hanson Lake Mine—copper
81. Saskatoon Area—potash
82. Belle Plaine—potash mine
83. Esterhazy—potash mine
84. Estevan—coal mines
85. Ellef Ringnes Island—petroleum and natural gas exploratory drilling
86. Drake Point—natural gas discovery
87. 10E Atkinson H25—petroleum discovery
88. Echo Bay Mine—silver
89. Yellowknife—gold mine
90. Pine Point—lead-zinc mines
91. Rainbow Lake Field—oil
92. McMurray—oil sands (petroleum)
93. Fort Saskatchewan—nickel refinery
94. Clover Bar—gypsum plant
95. Star-Key Mines—coal
96. Wabamun—coal
97. McIntyre—coal
98. Cardinal River—coal
99. Strahan-Ricinus Area—petroleum and natural gas exploratory drilling
100. Halkirk-Forestburg Area—coal
101. Sheerness—coal
102. Drumheller—coal
103. Cascade Area—coal
104. Coleman—coal
105. Crowsnest Pass Area—coal
106. Fording—coal
107. Kimberley—lead-zinc mine
108. Bluebell Mine—lead-zinc
109. Reeves-MacDonald Mine—zinc-lead
110. Trail—refinery
111. Rossland—molybdenum mine
112. Brenda Mine—copper-molybdenum
113. Highland Valley Area—copper mines
114. Giant Mascot Mine—nickel
115. Britannia Mine—copper
116. Texada Mine—iron-copper
117. Brynnor Mine—iron
118. Buttle Lake—zinc-copper mine
119. Zeballos—iron mine
120. Utah Construction—copper discovery
121. Boss Mountain—molybdenum mine
122. Endako—molybdenum mine
123. Wesfrob Mine—iron
124. Alice Arm Area—molybdenum mine
125. Granduc—copper
126. Bowser Basin—petroleum and natural gas exploratory drilling
127. Churchill Copper—mine
128. Cassiar—asbestos mine
129. Arctic Gold and Silver—mine (gold-silver)
130. Whitehorse Area—copper mines
131. Carmacks—coal mine
132. Anvil Mine—zinc-lead
133. Keno Hill—silver-lead
134. Clinton Creek—asbestos mine
135. Hecate Strait-Queen Charlotte Sound—petroleum and natural gas exploratory drilling
136. Vancouver Island Coast—petroleum and natural gas exploratory drilling

[1] Includes 770,000 tons of sand and gravel valued at $900,000 produced in Prince Edward Island. [2] Includes 150,000 tons of stone valued at $150,000 produced in Prince Edward Island. [3] See footnotes[1] and [2]. [4] Includes stone, sand and gravel valued at $976,742 produced in Prince Edward Island.

Subsection 1.—Metals

The metallic minerals of greatest dollar value to Canada in 1969 were, in order: copp nickel, iron ore, zinc, lead, gold, silver, molybdenum, uranium and platinum group met These 10 metals, which accounted for 96 p.c. of the total value of metal production in 19 and several other metals of importance are dealt with separately below.

Copper.—Interruptions of operations at various mines and smelters due to lab strikes caused a decline in mine output of copper in 1969 to 558,200 tons valued $574,193,000, a decrease of 75,100 tons and $33,750,000 from 1968. Production of refi copper decreased to 450,650 tons from 524,950 tons in the previous year and consumpt declined 12,940 tons to 240,250 tons in 1969. Exports of copper in concentrates decrea by 4,000 tons to 157,800 tons and exports of refined copper decreased by 66,600 tons 210,000 tons.

Six smelters for the reduction of copper and nickel-copper ores and concentrates operated in Canada. In the Sudbury district of Ontario, The International Nickel Co pany of Canada, Limited (Inco) operates smelters at Copper Cliff and Coniston, a Falconbridge Nickel Mines Limited produces nickel-copper matte at its Falconbri smelter. Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man., smelts o and concentrates from its mines in Manitoba and Saskatchewan and custom ores and c centrates from mines in these provinces. Ores and concentrates from most of the cop mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Nora Mines Limited and the Murdochville smelter of Gaspé Copper Mines Limited, both Quebec. Electrolytic copper refineries are operated by Inco at Copper Cliff, Ont., and Canadian Copper Refiners Limited, a subsidiary of Noranda Mines, at Montreal East, Q

Copper production in Newfoundland in 1969 was 19,390 tons valued at $19,944,0 from four producing mines. New Brunswick's copper output decreased to 7,062 tons valu at $7,264,000 from 8,265 tons valued at $7,950,000 in 1968. Production of copper in Que was 157,960 tons valued at $162,476,000, a decrease of 9,642 tons from 1968 but an incre in value of $1,245,000, accounted for by higher copper prices. More than 25 mines w in operation during 1969, the main centres of production being at or near Rouyn–Noran Val d'Or, Matagami, Chibougamau, Murdochville, and Stratford Centre. The Grandi mine near Chibougamau, the Lorraine mine at Belleterre, and the Marbridge mine Malartic were closed, while production commenced at mines owned by Delbridge Mi Limited near Noranda, Madeleine Mines Ltd. in Gaspé Provincial Park, and Renzy Mi Limited in Hainault township. Future producing mines were being developed n Stratford Centre and Val d'Or.

Copper was produced at more than 35 mines in Ontario in 1969, the main operati being the 21 nickel-copper mines of the Sudbury district, five copper-zinc and copper mi near Timmins, and three copper-zinc mines near Manitouwadge. Strikes at the Sudb area mines of Inco and Falconbridge accounted for most of the 61,674-ton decline in Ontari production to 228,944 tons in 1969. The value decreased by $42,820,000 to $235,490,0 Two new small mines were opened during the year and two were closed. Six mines being developed for production by 1972.

Most of Manitoba's production of 37,042 tons of copper valued at $38,101,000 ca from the mines of Hudson Bay Mining and Smelting Co., Limited at Flin Flon and Sn Lake and, to a smaller extent, from the Lynn Lake nickel-copper mine of Sherritt Gord Mines Limited. Hudson Bay operated six mines and continued development of Anderson Lake and Dickstone mines for production in 1971. Sherritt Gordon planned start production from its Fox Lake copper-zinc mine in 1970 at a rate of 3,000 tons of daily. Copper rejects from the Inco refinery at Thompson were shipped to Copper Cl Ont., for refining.

Copper production in Saskatchewan was from the mine of Anglo-Rouyn Mines Limit near La Ronge, that of Western Nuclear Mines, Ltd. at Hanson Lake, and from Huds Bay's Flexar mine and that portion of the Flin Flon orebody that lies on the Saskatchew

e of the provincial boundary. Production in 1969 was 18,011 tons, 4,070 tons less than 1968; the value was $18,525,000 or $2,716,000 less. Western Nuclear closed its Hanson ke mine in 1969 but continued exploration of other properties in the area.

Production of copper in British Columbia increased by 1 p.c. in 1969 to 81,344 tons lued at $83,670,000. No new properties started production in 1969 but Brenda Mines nited, near Peachland, Granduc Mines, Limited, near Stewart, and Churchill Copper rporation Ltd., near Magnum Creek, planned to start operations in 1970 at rates of 000, 7,000 and 750 tons a day, respectively. Utah Construction & Mining Co. plans start a 33,000-ton-a-day operation on Vancouver Island late in 1971. Lornex Mining rporation Ltd. and Valley Copper Mines Limited were negotiating for long-term sales ntracts for their huge Highland Valley deposits.

Production of copper in the Yukon Territory, all by New Imperial Mines Ltd. at hitehorse, increased by 2,560 tons in 1969 to 7,859 tons valued at $8,084,000. Copper oduced in the Northwest Territories is obtained as a byproduct of mining high-grade ver ores.

Nickel.—Canadian production of nickel in 1969 amounted to 213,325 tons valued at 32,400,000, a 19-p.c. decrease in quantity and a 9-p.c. decrease in value from 1968. ikes at the Sudbury-area mines of Inco and Falconbridge accounted for the decline. nada's position as the world's leading producer (58 p.c. of the non-communist world's kel in 1969) remained intact but Canada's proportion will decline in the mid-1970s as w deposits are opened in New Caledonia, Australia, the Philippines, the Dominican public, Guatemala, Venezuela and Colombia.

In Ontario, where 69 p.c. of Canada's nickel was produced, Inco operated 10 underound mines, two open-pit mines, four mills, two smelters, a copper refinery and an iron recovery plant in the Sudbury area, and a nickel refinery at Port Colborne. The

company continued development of four new mines in the Sudbury area and explored a carried out development on an orebody near Shebandowan. Falconbridge operated eig mines, four mills and a smelter, and continued the development of one new mine. Werner Lake in northwestern Ontario, Consolidated Canadian Faraday Limited (of whi Metal Mines Limited, the former operator at Werner Lake, is now a part) continued prod tion at about 600 tons of ore a day and sold a bulk nickel-copper concentrate to Inco.

In Manitoba, where over 30 p.c. of Canada's nickel was produced, Inco operated integrated nickel mining-concentrating-smelting-refining facility at Thompson and co tinued development of two new mines (see p. 687). Sherritt Gordon Mines Limited Lynn Lake produced nickel concentrates for shipment to the company's chemical refine at Fort Saskatchewan, Alta. Supplementary feed for the refinery was obtained by impo ing nickel-sulphide concentrates from Australia and New Caledonia. Dumbarton Mi Limited at Bird River started production, trucking ore to the Faraday mill. Falconbri continued development of the Manibridge mine at Wabowden with production plann for 1971.

Only one mine produced nickel in Quebec in 1969—the Renzy Mines Limited Hainault township which started an open-pit operation. In British Columbia, Giant Mas Mines Limited, near Hope, produced a bulk nickel-copper concentrate for export to Jap

[1] Includes 15 tons of producers' shipments in Saskatchewan. [2] Includes 162 tons of producers' shipm in Saskatchewan. [3] Includes 144 tons of producers' shipments in Saskatchewan.

Iron Ore.*—Iron ore shipments amounted to 35,715,000 tons valued at $431,930,(in 1969, compared with shipments of 42,360,000 tons valued at $532,694,000 in 1968. B exports, at 27,900,000 tons, and domestic shipments, at 7,800,000 tons, were down shar from 1968. The inability to produce and deliver as a result of widespread iron ore indus strikes was mainly responsible for the losses. Strikes at Canada's two largest integra steelworks resulted in a production loss of about 1,300,000 short tons. Some of this tonn was made up in the last few months of the year but total steel production at 10,307,(short tons was 944,000 short tons lower than in 1968. Domestic consumption of iron ore iron and steel plants was 9,303,000 tons, of which some 7,400,000 tons came from Canad mines and about 1,900,000 tons from outside the country. Total receipts at iron and st plants, comprising 7,461,000 tons of domestic iron ore and 2,260,000 tons of imported i ore, exceeded consumption by 400,000 tons, and iron ore stocks at the plants went accordingly.

The Canadian iron ore industry began a period of slow growth in 1969; no new capac was added, only 420,000 tons is likely to be added in 1970, and none is expected in 19 The anticipated 1970 increase will include a 300,000-ton-a-year reduced iron ore plant

* Quantities of iron ore given in this Section are in long tons of 2,240 lb.

nbridge and a 120,000-ton expansion of the Sherman mine at Temagami. Inco's ex-on of 250,000 tons has been deferred to 1972. Zeballos Iron Mines Limited in British nbia was closed in 1969.

Production in 1969 came from mines of 17 companies of which eight had mines in rio, five in British Columbia, two in Quebec and two in Newfoundland (Labrador). of the latter also had mines in Quebec–Labrador.

Newfoundland and Quebec were the most seriously affected by the labour strike, nents from Newfoundland being down from 17,600,000 tons in 1968 to 13,200,000 tons, those from Quebec by 1,700,000 tons to 11,500,000 tons. Iron Ore Company of da, with direct-shipping ore from deposits on both sides of the Labrador–Quebec border hefferville and concentrating-grade deposits near Labrador City, is the largest shipper n ore in Canada, accounting for 35 p.c. of 1969 shipments. Other shippers were ec Cartier Mining Company and Hilton Mines Ltd., both in Quebec, and Wabush in Labrador.

Ontario shipments, at 9,300,000 tons, were down only slightly from 1968 despite labour s at four mines—Algoma Ore Division of The Algoma Steel Corporation, Limited; nd Ore Company Limited; and Falconbridge and Inco, both byproduct producers. eased shipments from these mines were largely offset by increased shipments from two tario's new pellet producers—Steep Rock Iron Mines Limited and the Sherman mine—of which operated at about rated capacity for the first time. The Griffith mine, which ncreased shipments, is not expected to attain rated production until 1970. Another izing factor was capacity production at the other Ontario mines—Adams mine of & Laughlin Mining Co.; Moose Mountain mine of National Steel Corporation of da Limited; and Marmoraton Mining Company, Ltd.

British Columbia shipments, at 1,700,000 tons, were down slightly from the 1968 total 00,000 tons. Shipments increased from Wesfrob Mines Limited, Texada Mines Ltd., Coast Copper Company Limited but decreased from Zeballos Iron Mines Limited n was closed in mid-year, and from Brynnor Mines Limited which continued to ship stockpile but at a reduced rate. All British Columbia shipments were consigned to n.

Exports of iron ore fell from a record 36,000,000 tons in 1968 to 27,900,000 tons in 1969, eakness being caused, of course, by inability to produce and deliver iron ore because e strikes that took place during the spring and summer when operations reach their st production rates. Exports to the United States, Britain, Italy, West Germany, Belgium and Luxembourg were all lower than in 1968, although those to the Netherlands Finland were higher. Exports to the United States, at 18,200,000 tons, accounted for c. of total shipments, and those to Britain were 2,900,000 tons, or 10 p.c. Japan and etherlands each took 2,200,000 tons, West Germany 1,200,000 tons, and Italy 1,000,000 Small tonnages went to Belgium and Luxembourg, Finland, France and the Bahamas. rend toward lower imports continued in 1969 as they declined 400,000 tons from 1968 to ,000 tons. Of the total imports, the United States provided 2,000,000 tons, or 87 p.c., ved by Brazil with 200,000 tons. Chile, Venezuela and Mauritania shipped small ges to Canada; Mauritania was a supplier for the first time.

Lead and Zinc.—Production of lead in 1969 was almost 7 p.c. less than the record of 340,200 tons in 1968, and equivalent to 12 p.c. of the non-communist world total. ary refined lead production of 187,100 tons was derived from two plants, one operated minco Ltd. at Trail, B.C., where annual capacity is 190,000 tons, and the other oper-by East Coast Smelting and Chemical Company Limited, a subsidiary of Brunswick g and Smelting Corporation Limited, at Belledune, N.B., where capacity is 33,000 tons ally. Exports of lead in ores and concentrates totalled 140,200 tons of contained lead, ared with 143,900 tons in 1968, and went mainly to the United States, Japan, West any and Belgium. Exports of refined lead amounted to 107,090 tons, 23 p.c. less than

in 1968, and went mainly to the United States and Britain. The lead price, f.o.b. To and Montreal, increased from 13.5 cents a pound at the beginning of 1969 to 16.5 ce mid-December.

Zinc production rose in 1969 to a new record of 1,196,291 tons, 3.2 p.c. more than in and equivalent to 25 p.c. of the non-communist world total. Canada has been the w largest mine producer since 1964. Refined zinc output rose from 426,700 tons in 19 466,400 tons in 1969 in response to good demand and rising zinc prices, although produ was still below capacity at three of Canada's four primary zinc plants; output at the f plant was slightly above rated capacity. Exports of zinc in ores and concentrates, tot 804,700 tons, went mainly to the United States, Belgium, West Germany and J Refined exports amounted to 307,400 tons and went mainly to the United States and Br The domestic producers' price of zinc rose by two cents a pound between January September and remained at 15.5 cents a pound for the remainder of the year.

Production of lead and zinc in the Northwest Territories, amounting to 102,50 220,000 tons, respectively, came from Pine Point Mines Limited. Pine Point c production of direct-shipping ore in December 1968 and in January 1969 its nearby S mine and 3,000-ton-a-day mill addition began operations. In the Yukon Territory, Mining Corporation Limited began tune-up operations, in September 1969, at the ton-a-day concentrator at its zinc-lead-silver property near Ross River. An incre the mill capacity of 6,600 tons daily was scheduled for early 1970.

Lead and zinc production in British Columbia was mainly from Cominco's Su mine and 10,000-ton concentrator at Kimberley. The company also operated the Bl mine and 700-ton mill in the Slocan district. Among other lead-zinc producers Western Mines Limited at Buttle Lake on Vancouver Island, and Canadian Explor Limited and Reeves MacDonald Mines Limited in southeastern British Columbia. conda Britannia Mines Ltd. produced copper and zinc concentrates at Britannia Be

Hudson Bay Mining and Smelting Co., Limited recovered lead and zinc from metal ores of three mines at or near Flin Flon on the Saskatchewan–Manitoba borde three mines near Snow Lake, Man. Its Flexar copper-zinc mine southwest of Flin began operations in April 1969, and two new mines were under development in the Lake area. Sherritt Gordon Mines, Limited planned to bring its Fox copper-zinc mi mill, 28 miles southwest of Lynn Lake, Man., into production in mid-1970 at 3,000 tons

In Ontario, Ecstall Mining Limited operated a zinc-copper-lead mine and 9,00 a-day mill near Timmins and remained Canada's largest mine producer of zinc as w Ontario's leading producer of lead. Ecstall, a subsidiary of Texas Gulf Sulphur Com is constructing, near Timmins, two plants which will initially produce about 120,00 of slab zinc metal and 230,000 tons of sulphuric acid annually. Other Timmins-d mine producers were Kam-Kotia Mines Limited and Canadian Jamieson Mines Li which operated copper-zinc mines and mills, and Jameland Mines Limited whi November 1969, began mining zinc-copper ore for custom treatment at a nearby The remainder of Ontario's lead and zinc output came principally from copper-zin mines at Manitouwadge operated by Noranda Mines Limited (Geco Division), Wi Mines Limited and Willroy Mines Limited. Selco Exploration Company Limited pl to bring into production by 1971 its copper-zinc property in the Uchi Lake area of western Ontario. Late in 1969, Mattagami Lake Mines Limited discovered a subst zinc-copper-silver-lead deposit on the south side of Sturgeon Lake in Ontario and pl to bring the property into production in 1972.

In Quebec, relatively small amounts of lead, as well as some zinc, were produced Cupra and Solbec Divisions of Sullivan Mining Group Ltd. in the Eastern Town

ining companies associated with Noranda Mines Limited accounted for about 85 p.c. ıc output in Quebec, most of the remainder coming from three mines—near Noranda, l'Or and Matagami—which operated copper-zinc mines. Late in 1969, Delbridge s Limited brought a zinc-copper mine in the Noranda area into production and trie Mining Company Ltd. was considering bringing into production in 1970 a copper-lead property adjacent to the Cupra mine.

In New Brunswick, the largest lead-zinc producer was Brunswick Mining and Smelting oration Limited, which operated mines and concentrators in the Bathurst district. r producers were Heath Steele Mines Limited, which almost doubled capacity to ,000 tons of zinc-copper-lead ores annually at its Newcastle area property, and Nigadoo Mines Limited which operated a 1,000-ton lead-zinc-copper mill in the Bathurst ct. The Anaconda Company (Canada) Ltd. and Cominco Ltd. announced that their y owned Caribou zinc-lead-copper property, about 30 miles northwest of Bathurst, d be brought into production. A 1,000-ton-a-day concentrator, to treat a relatively deposit of copper ore, was under construction with production scheduled for 1970. ond ore zone contains a much larger tonnage of lead-zinc-silver sulphides, and the bility of bringing it into production was under investigation. In Newfoundland, both and zinc concentrates were produced at the zinc-lead-copper mine of the American ting and Refining Company at Buchans.

Canada's mine production of lead and zinc in 1970 is forecast to be about 19 p.c. and , respectively, higher than 1969.

Gold.—Canadian gold production in 1969 amounted to 2,502,169 oz. t. valued $94,331,773, a decline of 8.8 p.c. from 1968. The average price for gold paid by the R Canadian Mint in 1969 was $37.69 per oz. t. (Cdn.), down from $37.71 in the previous y From 1962 through 1969, the range in value for the Canadian dollar was $0.916 to $0.93 relation to the United States dollar and the corresponding Royal Canadian Mint gold p between $37.46 and $38.22 per oz. t. Canadian lode and placer gold mines continue experience serious economic difficulties with costs of recovery maintaining an upward tr Of the 34 lode gold mines operating in Canada in 1969 there was only one that did not rec assistance under the terms of the Emergency Gold Mining Assistance Act (see p. 7 Three of the 34 lode gold mines closed in 1969.

Gold produced from lode gold mines, from base metal ores and from placer m dropped 8.2 p.c., 11.1 p.c. and 17.0 p.c., respectively, below 1968 levels. The propor of gold derived from lode gold mines was 81.0 p.c. of the total output, from base m mines 18.7 p.c. and from placer mines 0.3 p.c. compared with 80.5 p.c., 19.2 p.c. and 0.3 in 1968. Ontario remained the principal producing province, accounting for 48.2 p.c the total compared with 50.3 p.c. in 1968; Quebec, the Northwest Territories and Bri Columbia accounted for 29.5 p.c., 13.7 p.c. and 4.5 p.c., respectively, compared 28.0 p.c., 12.8 p.c. and 4.5 p.c. in 1968.

In Ontario, production declined 12.6 p.c. to 1,206,110 oz. t. from 1,379,779 oz. 1968; 17 lode gold mines operated during the year compared with 20 in 1968. Gold covered as a byproduct from base metal ores was 4.7 p.c. of the provincial total. Qu production declined by 4.0 p.c. to 737,554 oz. t. from 768,068 in 1968; lode gold out was 4.5 p.c. lower. Ten gold mines operated in the province in 1969; two were clo Gold recovered as a byproduct from base metal ores represented 34.2 p.c. of the provi total compared with 33.8 p.c. in 1968.

In the Northwest Territories, production declined by 2.6 p.c. to 343,116 oz. t. f 352,306 oz. t. in 1968. Discovery Mines Limited, north of Yellowknife, closed in 1 Production is all from lode gold mines. British Columbia production amounted

,821 oz. t. compared with 124,422 oz. t. in 1968. A minor amount of gold was produced n placer deposits. Gold recovered as a byproduct from base metal ores represented 3 p.c. of the provincial total compared with 57.5 p.c. in 1968. Combined production n Manitoba and Saskatchewan amounted to 67,143 oz. t. compared with 84,125 oz. t. 1968. All gold recovered in 1969 was a byproduct of base metal production. In the kon Territory, production increased from 24,167 oz. t. in 1968 to 26,305 oz. t. in 1969. tic Gold and Silver Mines Limited contributed to production in 1969 but the mine closed he latter part of the year. Placer deposits accounted for 7,940 oz. t. of the gold produced. Newfoundland and New Brunswick, all gold was recovered as a byproduct of base metal duction.

Silver.—Canada's mine production of silver in 1969, at 43,093,000 oz. t., was about 00,000 oz. t. lower than the all-time high of 1968. The decrease was due mainly to ver byproduct output at several base metal mines in British Columbia, and at the silver-pper property of Echo Bay Mines Ltd. near Port Radium in the Northwest Territories. hough its output of 22,033,000 oz. t. was only slightly higher than in 1968, Ontario was ain the leading silver-producing province, primarily because of the substantial byproduct ver produced at the Kidd Creek base metal mine of Ecstall Mining Limited near Timmins. se metal ores continued to be the main source of Canadian output, accounting for almost p.c. of total mine production. Close to 10 p.c. came from silver-cobalt ores mined in rthern Ontario and the remainder was byproduct recovery from lode and placer gold ores.

Canadian production was valued at $83,169,443 in 1969. The $20,945,156 reduction m 1968 resulted partly from decreased output but more particularly from lower silver ices. The price of silver in Canada fluctuated in 1969 between a high of $2.178 an oz. t. d a low of $1.670. Reported consumption of silver in 1969 was 5,747,068 oz. t., some 51,290 oz. t. less than in 1968. The reduction was almost entirely accounted for by the t that no silver was used in the production of Canadian coinage; in the second half of 68, the Royal Canadian Mint changed over to pure nickel from silver alloy in the Canadian llar, 50-cent, 25-cent and 10-cent coins.

The silver refinery of Kam-Kotia Mines Limited, Refinery Division, at Cobalt, On was Canada's largest producer of refined silver. It recovered a total of 19,971,000 oz. t. the processing of silver-cobalt ores and concentrates and in the toll refining of silver bulli and coins imported from the United States. Canadian Copper Refiners Limited, Montreal East, Que., was the second largest producer, recovering 12,360,000 oz. t. refining anode and blister copper. Other producers of refined silver were Cominco Trail, B.C., (from lead and zinc ores and concentrates); Inco at Copper Cliff, Ont., (fro nickel-copper concentrates); and the Royal Canadian Mint at Ottawa, Ont., (from go bullion). At Belledune, N.B., East Coast Smelting and Chemical Company Limited r covered byproduct silver from lead-zinc concentrates treated in an Imperial Smelti Process blast furnace.

The three largest primary sources of silver in Canada in 1969 were the Kidd Cre zinc-copper-silver mine near Timmins, Ont., operated by Ecstall, the Sullivan lead-zin silver mine at Kimberley, B.C., operated by Cominco, and the silver-lead-zinc mines in t Yukon Territory, about 200 miles north of Whitehorse, operated by United Keno H Mines. Expressed as the silver content of concentrates produced, Ecstall recover 13,822,000 oz. t., Cominco 3,039,430 oz. t., and United Keno 2,405,615 oz. t. Oth important mine producers of byproduct silver, in declining order of output, included: Ec Bay Mines Ltd. near Port Radium, N.W.T.; Noranda Mines Limited (Geco Division) Manitouwadge, Ont.; Brunswick Mining and Smelting Corporation Limited near Bathur N.B.; American Smelting and Refining Company (Buchans Unit) in Newfoundland; a Inco at Copper Cliff, Ont.

Some 4,165,500 oz.t. of silver were derived from silver-cobalt ores mined in the Coba Gowganda area of northern Ontario; the largest producer was again Silverfields Mini Corporation Limited with an output of 1,143,018 oz.t.

[1] Includes relatively small quantities produced in Alberta.

Uranium.—Although the long-term outlook for the Canadian uranium industry ıained bright in 1969, continued efforts on the part of uranium producers to negotiate litional long-term sales met with very limited success. Moreover, it became apparent t present producers were faced with difficulties over the next two or three years due to ecline in near-term demand, a situation that resulted primarily from delays in nuclear nt construction, improvements in reactor and fuel design, and the consequent build-up nventories by reactor manufacturers and utilities. The situation was further aggra-ed by the continued restriction on United States uranium imports and by increased ıpetition in overseas markets.

Also of concern to Canadian producers was the possible United States Atomic Energy nmission's (USAEC) disposal procedure for its surplus uranium stocks and the proposed ıoval of the restriction on enrichment of foreign uranium in USAEC enrichment plants, ıouncements of which were expected to be made in 1970. However, at the end of 1969 possibility of negotiations developing between the United States and Canada concerning future exchange of other energy fuels had clouded the outcome of these issues.

Canadian uranium production in 1969 continued to come from the Elliot Lake area Ontario and the Uranium City area in northern Saskatchewan, production being shared p.c. and 20 p.c., respectively. At Elliot Lake, Denison Mines Limited operated at ›roximately two-thirds capacity and Stanrock Uranium Mines Limited continued to duce limited quantities of uranium through its leaching process. The Quirke mill, rated by Rio Algom Mines Limited, was the only production operation to work at acity in 1969. At Uranium City, Eldorado Nuclear Limited was operating at about p.c. capacity at year-end. Production from all four operations totalled 4,450 tons of nium oxide (U_3O_8) of which only 3,855 tons valued at $49,665,506 were shipped.

Sales of uranium made in 1969 were limited to three small contracts; Eldorado and Algom each reported a small contract with a Japanese utility and Rio Algom also tracted the sale of 55,500 lb. of U_3O_8 to fuel the first Japanese nuclear ship. Of some ouragement, however, was Denison's confirmation, in early 1970, of an extension to its 7 long-term contract with the Tokyo Electric Power Co. calling for an additional 16,750 s of U_3O_8 over a ten-year period commencing in 1974. In June 1969, Canada reaffirmed policy of supplying uranium for peaceful purposes only.

Despite the poor short-term demand, developments among Canadian producers tinued to reflect faith in the future of the uranium industry. In 1969, Denison continued make changes in equipment and mining methods aimed at increasing the efficiency of its derground operations; Rio Algom completed a series of tests preparatory to increasing nificantly the capacity of its Quirke mill; Eldorado prepared to sink a new internal duction shaft to develop downward extensions of its Fay orebody; development contin-l on Agnew Lake Mines Limited's deposit, 30 miles west of Sudbury, Ont.; and, finally, lorado reached a record production figure in the refining of ceramic UO_2 powder and pared to begin production of UF_6 in mid-1970, thus putting Canada in a position to ply a full range of refined uranium products.

The tempo of uranium exploration remained high in 1969 and several new areas of erest were identified. Ontario's Elliot Lake and Agnew Lake areas were again the scenes a major portion of the drilling activity in 1969. Activity was also of interest in the e Forestier–Ste Anne du Lac and Grindstone Lake areas in Quebec and the Kaipokok y and Michelin–McLean Lake areas of Labrador. Perhaps the most significant activity, wever, was in northern Saskatchewan where a uranium discovery, made by Gulf Minerals mpany in late 1968, precipitated a land acquisition rush early in 1969 involving dozens companies and millions of acres of mineral rights. By year-end, Gulf had completed 000 feet of drilling and had indicated that the deposit would likely be developed to isfy internal demands for uranium from Gulf General Atomic Inc. Despite the heavy loration activity in 1969, a decline was predicted for 1970 due largely to the temporary in the uranium market.

The uranium industry can look forward to a growing market for its product beginni in the mid-1970s. Although, at present, there is a large surplus of production capabili in the non-communist world, projected requirements exceed present capability after 197 and reach an estimated 72,000 tons of U_3O_8 a year by 1980. This will require a threefo increase in production, much of which will come from yet undiscovered deposits. Canad with only 20 p.c. of its known, low-cost, reasonably assured reserves committed, and signi cant additional potential, is in a good position to share in this growing world market.

15.—Quantity and Value of Producers' Shipments of Uranium (U_3O_8), by Province, 1960-

Molybdenum.—Production of molybdenum in Canada in 1969 was 30,300,000 l valued at $52,600,000 compared with 22,500,000 lb. valued at $37,300,000 in 1968. Cana was second only to the United States among world producers of molybdenum and suppli approximately 21 p.c. of the estimated non-communist world production of 142,100,000 l About 90 p.c. of the Canadian production came from British Columbia and the remaind from Quebec.

Brenda Mines Ltd., under Noranda Mines Limited management, started initial oper tions in December 1969 on its copper-molybdenum property some 24 miles west of Kelown B.C. The new crushing and concentrating plant is equipped to handle 24,000 tons open-pit ore a day. The orebody is estimated at 177,000,000 tons averaging 0.183 p. copper and 0.049 p.c. molybdenum. British Columbia Molybdenum Limited complet a second full year of operation at its 6,000-ton-a-day mine and concentrator near Alice Ar and produced 5,567,700 lb. of molybdenite (MoS_2) concentrates. Boss Mountain Divisi of Brynnor Mines Limited in the Cariboo District of central British Columbia produc 2,342,000 lb.; ore extraction was 547,500 tons averaging 0.23 p.c. molybdenum and r covery was 92.7 p.c.

Endako Mines Ltd. produced 12,962,224 lb. of molybdenite (MoS_2) concentrates a 5,842,495 lb. of the roasted product, molybdic oxide (MoO_3). Average grade of ore mill was 0.189 p.c. molybdenite concentrates and recovery was 85.96 p.c. Concentrat throughput was 26,600 tons a day and an average of 35,400 tons of ore and waste we mined per operating day. A new larger roaster was operating at an annual capacity 9,000,000 lb. of contained molybdenum at the end of 1969. Briquette production at plant rate of 1,200 lb. an hour was expected to start in mid-1970. Proven and probable o reserves at the end of the year were 214,000,000 tons averaging 0.146 p.c. MoS_2. R Mountain Mines Limited, near Rossland in south-central British Columbia, produc 738,810 lb. of molybdenite concentrates in 1969.

Lornex Mining Corporation Ltd., managed by Rio Algom Mines Limited, proceed with construction and development, for late 1971 production, of a large copper-molybdenu

erty some 33 miles south of Ashcroft in the Highland Valley of British Columbia. orebody is estimated to contain 293,000,000 tons averaging 0.427 p.c. copper and p.c. molybdenum, and annual production is expected to be about 54,000 tons of er and 2,500,000 lb. of molybdenum. Utah Construction & Mining Co. began pre- g, for production in late 1971, a 33,000-ton-a-day copper-molybdenum mining and ng project in the northern part of Vancouver Island. Ore reserves there are estimated 30,000,000 tons averaging 0.52 p.c. copper and 0.029 p.c. molybdenum, and annual ut is expected to be about 53,000 tons of copper and 1,900,000 lb. of molybdenum. mont Mining Corp. Ltd. proceeded with development and testing on its 34-claim cop- nolybdenum property in the Highland Valley adjoining and east of Lornex. In ion, there were a number of other molybdenum and copper-molybdenum properties itish Columbia being explored and studied for production possibilities.

Molybdenum producers in Quebec produced nearly 3,000,000 lb. in 1969. They were: bdenite Corporation of Canada Limited at Lacorne; Preissac Molybdenite Mines ted and Cadillac Moly Mines in the Lake Preissac area near Val d'Or; and Gaspé Copper s, Limited, which produces byproduct molybdenum from its copper operations at lochville. Beattie-Duquesne Mines Limited converted molybdenite concentrates various producers to molybdic oxide at a roasting plant at Duparquet, and Masterloy ucts Limited produced ferro-molybdenum at its ferro-alloy plant near Ottawa, Ont.

Platinum Metals.—Production of the platinum metals in 1969, which amounted to 00 oz.t. valued at $26,449,000, was 219,791 oz.t. and $19,750,000 lower than in 1968 as ult of decreased nickel production. Canadian nickel ores contain about 0.025 oz.t. atinum metals a ton. When nickel matte is electrolytically refined, the platinoids— ium, palladium, rhodium, ruthenium, iridium and osmium—are precipitated in the olytic tanks as a sludge. The sludge is purified and sent to refineries in Britain and United States for recovery of the platinum metals.

Half of the world's output of platinum metals is from the Soviet Union and most of the inder is produced in Canada and the Republic of South Africa. World demand ined strong in 1969 and consumption in the non-communist countries exceeded mine uction. The deficit was made up by purchases from the Soviet Union.

Cadmium.—Cadmium output in 1969, expressed as the sum of refined metal and the erable cadmium content of exported zinc concentrates, was 4,368,405 lb. valued at 10,000; corresponding figures for 1968 were 5,014,965 lb. and $14,292,000. The ase of nearly 13 p.c. in the volume of output was due to the treatment of lower grade Cadmium is recovered as a byproduct during the smelting and refining of zinc ores concentrates. Most of the zinc ores in Canada carry minor quantities of the metal, in the order of ½ lb. of cadmium in each ton of ore on average, but varying from to 1½ lb. The largest production comes from the Kidd Creek mine near Timmins, followed by Pine Point Mines Limited in the Northwest Territories, Cominco in sh Columbia, Hudson Bay Mining and Smelting in Saskatchewan and Manitoba, and Noranda group of companies in Ontario, Quebec and New Brunswick. Refined cad- n is produced at the electrolytic zinc plants of Cominco at Trail, B.C., Hudson Bay ng and Smelting at Flin Flon, Man., and Canadian Electrolytic Zinc Limited at yfield, Que. East Coast Smelting and Chemical Company Limited at Belledune, which started zinc-lead smelting and byproduct recovery of cadmium in 1967, recovers ium as a zinc-cadmium sponge which is refined at Valleyfield.

Cobalt.—Canadian cobalt production in 1969 was 3,200,000 lb. valued at $6,900,000 ared with 4,030,000 lb. valued at $8,700,000 in 1968. Production was reduced by s at the Sudbury, Ont., operation of Inco, which lasted from July 10 to Nov. 17, and lconbridge operations at Sudbury from Aug. 21 to Nov. 23. Currently one of the major cobalt producing countries, Canada obtains nearly 90 p.c. of its cobalt as a by- uct of nickel-copper ores with the remainder, also a byproduct, from silver-cobalt ores.

Magnesium.—Dominion Magnesium Limited, with mine and smelter at H Station, Ont., is the only producer in Canada; smelting capacity is 12,000 tons annu Production increased to 10,485 tons in 1969 valued at $7,094,000 from 9,929 tons va at $6,182,000 in 1968 and exports of primary magnesium increased to $4,726,000 f $4,261,000. Imports of magnesium metal and alloys totalled $2,650,000. Cana consumption in 1968 was 5,654 tons, including 1,699 tons of imported metal. W production, excluding communist countries, was estimated at 216,100 tons in 1969.

Selenium and Tellurium.—Selenium production in 1969 was 710,618 lb. value $4,375,563, and was 11.8 p.c. higher than in 1968. Tellurium output was 103,777 lb. va at $671,588, 46.2 p.c. higher. These metals are recovered from the anode muds resul from electrolytic refining of copper anodes at the plants of Canadian Copper Refi Limited at Montreal East, Que., and Inco at Copper Cliff, Ont.

Columbium (Niobium) and Tantalum.—St. Lawrence Columbium and Me Corporation produced 3,059,052 lb. of columbium pentoxide (Cb_2O_5) in the year en Sept. 30, 1969, compared with 2,005,989 lb. in the corresponding period ended in 1 Production during the 1969 calendar year was 3,495,440 lb. St. Lawrence Columbiu the only Canadian producer of columbium and operates one of only two mines in the w that produce columbium in pyrochlore concentrates as a primary product; the other, la operation is near Araxa, Brazil. The demand for columbium continued to increase in 1 and St. Lawrence planned to produce 4,500,000 lb. in 1970. Published spot prices Canadian pyrochlore concentrates, f.o.b. mine site, after declining to 90–93 cents (U a pound of contained Cb_2O_5 in April 1968 and recovering to 92–98 cents (U.S.) in Decen 1968, increased to $1.00–$1.05 (U.S.) in the latter part of 1969.

Canada's first commercial production of tantalum began in 1969 at the Bernic L Man., mine of Tantalum Mining Corporation of Canada Limited. Annual production expected to be 500,000, or more, pounds of tantalum pentoxide (Ta_2O_5) with the new p operating at its rated capacity of 500 tons of ore a day. Concentrates were shipped in second half of 1969 and in September the company announced a price of $7 (U.S.) a po of Ta_2O_5 in 50 p.c. concentrates, f.o.b. mine site, for the remainder of the sales contra for delivery to the end of 1970.

Subsection 2.—Industrial Minerals

The value of industrial minerals produced in 1969, at $908,295,000, was about 2 higher than in the previous year. A pronounced drop in the value of shipments of eleme sulphur was offset by increases in structural materials and in most other non-met minerals. Developments in a number of industrial minerals during 1969 are revie below.

Asbestos.—Asbestos production in 1969 at 1,596,450 tons was only 499 tons more t in 1968 but the value of production rose about 6 p.c. to $196,759,000. Quebec accou for about 84 p.c. of Canada's total asbestos output and Newfoundland, Ontario, Bri Columbia and the Yukon Territory for the remainder. Most of the Canadian product is exported as milled fibre and shorts, providing about 70 to 75 p.c. of world exports 35 p.c. of world production. The principal markets for Canadian fibre include the Un States, West Germany, Britain and Japan.

The world outlook for asbestos consumption is favourable. A 4-p.c.-a-year incre in use is forecast and Canadian companies have been modernizing and expanding produc facilities to ensure their share of that increase. In Quebec, Canadian Johns-Manv Company, the largest company with the largest mine, continued mill expansion that sh lead to an increase in production of 100,000 tons of fibre a year; at Thetford Mines, Asbe Corporation Limited continued development of the Penhale deposit adjacent to the N mandie mine and announced plans to put its Asbestos Hill deposit in the Ungava dist

uebec into production by 1972; and Bell Asbestos Mines, Ltd., proceeded with its new t at Thetford Mines. One producer, Nicolet Asbestos Mines Ltd., closed at the end anuary 1969 because of exhaustion of ore reserves. McAdam Mining Corporation ited at Chibougamau and Abitibi Asbestos Mining Company Limited north of Amos inued exploration and diamond drilling of their respective properties.

In British Columbia, Cassiar Asbestos Corporation Limited continued expansion of ill from 75,000 to 110,000 tons of fibre a year, to be ready by 1970. The company inued production at Clinton Creek mine in the Yukon Territory and was adding mill pment there to increase output to 100,000 tons of fibre a year. Newfoundland's sole ucer, Advocate Mines Limited, had lower output in 1969 because of a strike that lasted May 22 to July 31. Ontario's asbestos production should increase in 1970 with a year's production from the Reeves mine of Johns-Manville Mining and Trading Limited from the Matheson mine of Hedman Mines Limited.

Potash.—Potash mining is a comparatively new development in Canada, the entire stry being centred in Saskatchewan. Significant production began in 1962 with a e of $3,000,000 and development of the industry mushroomed to the extent that, in , Canada became the world's leading producer with an output valued at $67,120,000. ut 95 p.c. of the world's potash output is for fertilizers; Canada's potash consumption is ly 8 p.c. of its output so that most of it must be exported. From 1967 to 1969, the ed States took about two thirds of Canada's potash exports, the remainder going to seas markets, chiefly Japan and Britain.

At the end of 1969, nine mines—eight using conventional mining methods and one loying solution methods—with an installed annual productive capacity of 12,000,000 of potash product (potassium chloride) were operating in Saskatchewan and a tenth was under construction for completion in 1971. The rapid growth of this industry been accompanied by serious marketing problems. For example, in 1969, the industry ated well below its productive capability, with output amounting to 6,100,000 tons of ssium chloride and sales totalling 5,700,000 tons. The marketing difficulties, involving supply, low prices and some uncertainty as to whether Canadian producers would have access to the United States market, prompted the Province of Saskatchewan to prom- te the Potash Conservation Regulations, effective Jan. 1, 1970, whereby it controls sh production and influences marketing.

Salt.—Salt production in Canada in 1969 was 4,247,000 tons, about three fourths of h was mined rock salt used primarily for snow and ice control on streets and highways for chemical manufacture, and the remainder fine vacuum salt and salt as brine for use roducing caustic soda and chlorine. There are three rock salt mines, one in Nova a and two in southwestern Ontario; fine salt evaporator plants and brining operations located in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta. Most of sh Columbia's salt needs are met by imports of solar salt from Mexico and the San cisco Bay area.

Sulphur.—Canadian production of elemental sulphur in 1969 was 2,985,000 valued at $62,986,000; sulphur production in all forms including sulphur recovered smelter gases and contained in pyrites amounted to 3,646,000 tons valued at $73,319 Most of the sulphur produced is extracted as elemental sulphur from sour natural g Western Canada. Canada is now the world's largest producer of sulphur from hydroca sources and is the world's largest exporter. Exports in 1969 increased 7 p.c. over 19 reach a record 2,264,000 tons valued at $62,742,000. However, reflecting a world supply situation and an extremely competitive marketing environment, value of ex shipments decreased some 18 p.c.

For the second consecutive year, world sulphur production exceeded demand producers' stockpiles continued to build up throughout the year. This oversupply s tion may be attributed to a combination of increased output, notably in Canada and Po and slackening demand in the major sulphur-consuming industries, in particular the ferti industry which accounts for almost half of all sulphur utilized.

[1] Recovered from sour natural gas and nickel sulphide ores. [2] Includes sulphur in acid made from ro zinc sulphide concentrates at Arvida and Port Maitland. [3] From 1961, excludes pyrite and pyrrhotite to produce iron residues or sinter.

Gypsum.—Gypsum production in Canada was 6,872,000 tons in 1969. Opera in five of the six producing provinces increased over the previous year reflecting a favou situation in the building construction industry in Canada and the United States. A 70 p.c. of Canada's gypsum output is exported to the United States, most of it from N Scotia quarries, which account for 75 p.c. of total Canadian production of crude gyp

During 1969, three companies signified intentions to build gypsum products plants in e Edmonton area of Alberta and construction began on one plant at Clover Bar destined r start-up in 1970. Canadian Gypsum Company, Limited increased the production pacity of its gypsum products plant at Hagersville, Ont., by doubling the output potential one wallboard line.

Nepheline Syenite.—Nepheline syenite was first produced in 1936 and, until recently hen Norway started production, remained a uniquely Canadian mineral commodity. Nepheline syenite" is a rock name that applies to a mixture of minerals, essentially the ldspars and nepheline. The presence of nepheline provides the mixture with a higher ntent of alumina (Al_2O_3) than has either soda or potash feldspar and makes nepheline enite more desirable than feldspar in certain applications, especially in the manufacture glass, for which about 75 p.c. of the output is used. However, markets for finely ground aterial, used in the manufacture of whitewares, such as bathroom fixtures, china, oven-are, electrical porcelain and ceramic artware, are growing rapidly. Very finely ground aterial is being increasingly used as a filler material in plastics, foam rubber, and paints. ow-grade material is sold in bulk for use in the manufacture of fibreglass and for glazing brick and tile.

Production originates from two mines in Canada, both located in Ontario on Blue ountain, some 25 miles northeast of Peterborough. The deposit is pear-shaped, approxi-ately five miles in length and up to one and a half miles in width. Reserves are very large. 1969, production reached an all-time high of 502,893 tons valued at $5,882,000, represent-g an increase in tonnage of 18 p.c. over the previous year. Some 80 p.c. is exported, most it going to the United States for use in glass manufacture. In 1969, exports increased out 22 p.c. to reach 395,613 tons valued at $5,120,000.

Structural Materials

The value of all construction undertaken in Canada in 1969 was estimated to $13,000,000,000, and that of the production of structural materials, including cement, sa and gravel, stone, clay products and lime, was estimated at $461,206,000. The latter w about 10 p.c. of the total value of all mineral production and represented an increase 4.0 p.c. over the 1968 total.

Cement.—There were 8,543,622 tons of cement produced in Canada in 1969, rep senting an increase of 5 p.c. over 1968. Although this quantity was slightly under t peak output attained in 1966, its value, at $171,258,000, was the highest on record a constituted 3.6 p.c. of the value of all mineral production in Canada. Cement is produc in all provinces except Prince Edward Island but, of the total 1969 quantity, 66.2 p.c. w produced in Ontario and Quebec. The productive capacity of the Canadian cem industry in 1969 was 14,800,000 tons a year, which included the output of the new Bowma ville plant of St. Mary's Cement Co. Limited whose first shipments were made in Janua Quebec's capacity will be increased in 1970 by the addition, by Independent Cement In at Joliette, of two new kilns, each capable of providing 220,000 tons a year.

21.—Producers' Shipments and Value, Imports, Exports and Apparent Consumption of Cement, 1960-69

NOTE.—Many of these figures from 1960 to 1967 have been revised since the publication of the 1969 Year Book

[1] Standard portland cement. [2] Shipments plus imports less exports.

Sand and Gravel.—The principal uses for sand and gravel are as aggregate in concre for building and engineering construction and as fill in road construction. Gravel in bould sizes is used for rip-rap fill and sometimes for armour-stone construction; the normal scalpe over-size material is crushed to provide gravel and crusher-run fines. Lithologically, sa and gravel deposits are usually composed of material similar to the rock types in which t deposits are found; infrequently, deposits are composed of materials that have been tran ported some distance from their origin. Exploitation of these low-value-per-ton materia is greatly influenced by the physical characteristics of the sand or gravel, by the locatio of the deposit with respect to suitable markets and, of great importance, by the specific tions established to differentiate quality products.

Stone.—The stone industry includes those companies producing dimension stone, namental stone, crushed stone, whiting, and stone for metallurgical and chemical use. imension stone products account for less than 1 p.c. of the total volume of stone production d over 11 p.c. of the total value. Crushed stone products, consisting of materials used r concrete aggregate, railway ballast, road metal, rubble and rip-rap, terrazzo, stucco and tificial stone, etc., account for about 80 p.c. of the total volume; the remainder is used the chemical and allied industries.

[1] Excludes limestone used to make lime or cement.

Clay Products.—Common clays and shales occur in most regions of Canada and a the principal raw materials used for brick and tile manufacture. Deposits of high-qual argillaceous materials used for such products as papers, refractories, high-quality whi wares and stoneware products are relatively scarce in Canada. Consequently, china cl (kaolin), fire clay, ball clay and stoneware clay are mostly imported. The value of produ tion of clay products from domestic clays reached a record $50,995,000 in 1969.

Table **24** refers to production of such products as brick and tile made from domes clays. Imports of these products, mainly from the United States, have a low total val Other clay products such as floor and wall tile, sanitary ware, pottery and dinnerware, a electrical porcelain contain a large proportion of china clay and ball clay. The value whiteware products produced in Canada from such materials approached $40,000,0 in 1968.

Subsection 3.—Petroleum and Natural Gas

The Canadian petroleum industry in 1969 was highlighted by the widespread distribution of drilling operations and record production levels. Exploratory drilling was not only maintained at a high level in the traditional inland areas but was accelerated in Canada's frontier regions as Northern Canada continued to dominate the exploration picture. Panarctic Oils Limited, the government-industry syndicate, was rewarded with an initial success when the third well of their comprehensive drilling program in the arctic islands encountered an extensive condensate-bearing gas reservoir on Melville Island. The epic voyage of the United States tanker S.S. *Manhattan* through the arctic seas to Alaska in 1969 proved that it is physically possible for large tankers to operate in arctic waters. The successful adaptation of this method of transport or of the pipeline method to northern regions will undoubtedly have a critical bearing on the development of potential oil resources in Canada's arctic islands.

Strong demand for Canadian oil and gas in United States markets contributed significantly to the production gains of 1969. Total production of all liquid hydrocarbons—crude oil plus natural gas liquids—increased by almost 9 p.c. to 1,306,000 bbl. daily. Net production of crude oil averaged 1,119,000 bbl. a day and field and gas-plant production of natural gas liquids reached 187,000 bbl. a day. Alberta production, at 793,000 bbl. a day, accounted for 71 p.c. of the total Canadian crude oil output, 3 p.c. greater than in 1968. Production also increased in British Columbia, Manitoba, Ontario and the Northwest Territories but declined appreciably in Saskatchewan.

[1] Gross production, less field flared and waste, injected and stored.

Total liquid hydrocarbon reserves increased by 498,000,000 bbl. to 10,500,000,000 bbl., comprised of 8,620,000,000 bbl. of crude oil and 1,896,000,000 bbl. of natural gas liquids. The bulk of the reserve growth was attributable to the introduction of secondary recovery schemes and a large increase in natural gas liquid reserves rather than to the discovery of new oil fields. As in previous years, Alberta contributed the major additions to reserves and in 1969 had more than 89 p.c. of the total proved hydrocarbon reserves in Canada.

Net new production of natural gas rose 16.9 p.c. to 5,430,000 Mcf. daily in 1969 in response to the buoyant demand in domestic and export markets. Proved remaining marketable reserves rose 8.9 p.c. to 51,950,995,000 Mcf. in 1969, the second largest increase since 1955.

Exports of crude oil and products to the United States increased to 595,000 bbl. a day in 1969 with an estimated well-head value of $579,179,000. Although exports reached record proportions, imports of crude oil and products still exceeded exports by 136,000 bbl. a day, for a daily average of 731,000 bbl.

Alberta.—Although exploratory drilling was maintained at a high level in Alberta during 1969, there were no significant oil discoveries made in the province. There has not been a major oil find in Alberta since the Rainbow Lake field was discovered in 1965; nevertheless, oil-field development remained at about the same level in most areas of the province in 1969 as in the previous year.

Encouraged by a rapidly rising export demand for natural gas, the search for gas reserves accelerated during 1969. Most of the activity was concentrated in the Rocky Mountain foothills of Alberta where major gas discoveries were made in isolated Devonian Leduc reefs near Strachan and Ricinus in 1967 and 1968. Further exploratory drilling in this area in 1969 resulted in the discovery of at least two more thick, "wet" gas-bearing Leduc reefs. Although the primary objective in the Strachan–Ricinus trend has been Devonian reefs, several of these deep tests have encountered commercial thicknesses of oil- and gas-bearing Cardium sandstone at shallower depths. The results of this drilling have not only added substantially to provincial reserves of gas and oil but have also focused the industry's attention on the potential of the relatively unexplored foothill belt.

In 1969, the Alberta Government granted Syncrude Canada Ltd. permission to proceed with construction of its proposed Athabasca tar-sand extraction plant near Fort McMurray, to cost $190,000,000. Syncrude is owned jointly by Atlantic Richfield Company, Cities Service Athabasca Inc., Imperial Oil Limited and Royalite Oil Co. Ltd. Syncrude's application called for a daily production of 50,000 bbl. of synthetic crude oil, 25,000 bbl. of specialty oils and 5,000 bbl. of naphtha. In its application, Syncrude agreed to delay start-up time until 1976 from an initial target of 1972-73 in order to gain time in assessing the potential impact that future Prudhoe Bay production would have on prospective markets in the United States.

The total number of wells drilled in 1969 was 1,843, five fewer than in 1968. Total footage drilled was 8,596,021 feet, development footage 3,737,169 and exploratory drilling 4,858,852 feet, little changed from the preceding year.

Saskatchewan.—Saskatchewan experienced an upsurge in both exploratory and development drilling in 1969 but the results in terms of additions to reserves were disappointing. Exploratory drilling at 624 wells and 1,923,654 feet increased 10 p.c. and development footage at 538 wells and 1,728,425 feet was up 12 p.c. The exploratory venture undertaken by Pheasant Exploration Ltd. to assess the unexplored subsurface areas of the Middle Devonian Winnipegosis formation was abandoned after 48 dry holes had been drilled. Other deep-hole drilling projects also proved unsuccessful.

British Columbia.—Total footage drilled in British Columbia decreased from 1968 by 19 p.c. to 847,883 feet as a slight increase in development drilling was more than offset by a sharp reduction in exploratory drilling. The lack of significant oil finds in recent years apparently has begun to have a detrimental effect on exploration effort. In the offshore areas, Shell completed its drilling program off the West Coast after drilling 14 wells. Drilling extended from off Pachena Point, Vancouver Island, to the northeastern coast of Queen Charlotte Island and although traces of oil and gas were encountered, commercial production was not indicated. A test-well drilled in the Bowser Basin of the northwestern interior of British Columbia was suspended after encountering gas shows at a depth of about 3,000 feet. Further production-testing was contemplated for this well in 1970.

Manitoba.—Aggregate drilling footage declined 9 p.c. in Manitoba during 1969 to 146,000 feet. Exploratory drilling footage increased 31 p.c. to 82,629 feet and although there was a notable increase in the number of wells drilled during the year, all were unsuccessful. Development drilling declined 37 p.c. to 63,318 feet, reflecting not only the lack of new discoveries but also pointing up the fact that the established fields have very nearly reached their maximum development.

Yukon Territory, Northwest Territories and Arctic Islands.—Exploration activity continued to increase in Canada's Arctic in 1969 and drilling results have confirmed both industry's and government's assessment of the potential of Northern Canada. Panarctic Oils Limited, the industry–government combine which is exploring for oil in Canada's arctic islands, has committed a minimum of $30,000,000 toward the drilling of 17-20 exploratory wells. By the end of 1969, three wells in this program had been drilled, one of which dis-

covered very large potential reserves of natural gas at Drake Point on Melville Island. Panarctic plans on drilling at least one more well on Melville Island in the future. By the end of the year a third rig had been brought in to commence drilling on Ellef Ringnes Island to test a very large salt dome structure.

Exploration activity was also accelerated in the Mackenzie Delta region of Northern Canada and early in 1970 exploratory drilling was rewarded by a discovery made by the well I.O.E. Atkinson H-25 in the Northwest Territories, 50 miles northeast of Tuktoyaktuk. Preliminary indications are that the discovery is a substantial one and when the limited amount of drilling that has been done in the Mackenzie River Delta is taken into consideration, it is apparent that the discovery has major implications for future prospects.

Total footage drilled, all exploratory, more than doubled in 1969 to 56 wells (274,401 feet) from 33 wells (118,774 feet) in 1968.

Eastern Canada.—In Ontario, a sharp decrease in development drilling was more than offset by a major gain in exploratory drilling with the result that over-all drilling footage increased by 37 p.c. in 1969. The advance in exploratory drilling was due primarily to an increase in drilling operations in Lake Erie combined with an increased emphasis on Silurian reef exploration in Lambton County. A well drilled near the Kimball–Colinville field encountered oil in a Silurian reef and was the most significant discovery made in Eastern Canada during the year.

In the offshore areas, Shell Canada Limited has embarked on a two-year drilling program off the coast of Nova Scotia and by year-end had completed one well south of Sable Island and had commenced drilling a second well farther south; the first well was abandoned at a depth of 13,085 feet after encountering several minor indications of oil and gas. The first well in Hudson Bay was drilled in 1969 from a specially reinforced drilling vessel located about 250 miles east of Churchill, Man. Because of potentially hazardous ice conditions, the well was terminated at a depth of 3,926 feet, considerably short of a projected depth of 6,000 feet, after encountering indications of oil and gas in separate horizons.

Petroleum Refining and Marketing.—Daily crude oil refining capacity continues to increase year by year, the total in 1969 reaching 1,297,850 bbl. Canada ranks ninth in the world in terms of crude treating capacity and is unquestionably one of the most advanced countries in terms of down-stream refinery units such as catalytic cracking and catalytic reforming.

27.—Crude Oil Refining Capacity, by Region, as at Jan. 1, 1967-69

Region	1967		1968		1969	
	bbl./day	p.c.	bbl./day	p.c.	bbl./day	p.c.
Atlantic Provinces	128,500	10.6	128,100	10.5	132,600	10.2
Quebec	401,200	33.2	400,400	32.8	449,600	34.6
Ontario	352,400	29.1	359,100	29.4	367,000	28.3
Prairie Provinces and Northwest Territories	217,450	18.0	222,150	18.1	236,950	18.3
British Columbia	109,900	9.1	112,400	9.2	111,700	8.6
Canada	**1,209,450**	**100.0**	**1,222,150**	**100.0**	**1,297,850**	**100.0**

In 1969, Canadian refineries received 1,185,000 bbl. of crude oil, of which amount domestic oil accounted for 56 p.c. Imported crude, on an average daily basis, amounted to 522,000 bbl. with 346,000 bbl. coming from Venezuela, 45,000 from Iran, 33,000 from Saudi Arabia, 26,000 from the Trucial States, 22,000 from Nigeria, 14,000 from Iraq, 12,000 from Kuwait, 11,000 from Libya, 7,000 from Trinidad, 5,000 from Colombia, and 1,000 from the United States. Imports of refined products decreased to 203,000 bbl. daily, a loss of 1,000 bbl. daily over the 204,000 bbl. for 1968. Light and heavy fuel oil and diesel oil were the major categories of imports.

28.—Domestic and Foreign Crude Oil Received at Canadian Refineries, by Region, 1967-69

Region	1967		1968		1969

Canada	**614,689**	**446,823**	**646,319**	**488,748**	**662,953**	**521,844**

Domestic demand in 1969 was made up of 1,314,000 bbl. daily of sales to consumers and 000 bbl. daily used in the petroleum industry, a total of 1,404,000 bbl. daily compared h the 1968 level of 1,347,000 bbl. Exports of crude oil, all to the United States, averaged ,000 bbl. daily and refinery product exports amounted to 11,298 bbl. daily.

Natural Gas Processing and Marketing.—Natural gas consumers and gas pipeline mpanies require gas that contains relatively little non-flammable content and is free of xious components. Since a large proportion of gas produced in Canada does not meet rket specifications, there is a major gas processing industry located mainly in Alberta ich extracts ingredients that, in themselves, are valuable. These byproducts include opane, butanes, pentanes plus and elemental sulphur. At the end of 1969 there were 137 s plants operating in Canada—122 in Alberta, four in British Columbia, seven in Saskat- ewan and four in Ontario. The addition in 1969 of 619,000 Mcf. daily of raw gas treating pacity raised the total to 8,896,000 Mcf. daily.

Of the 2,202,000,000 Mcf. of Canadian gas plus imports of 34,900,000 Mcf. available consumption in 1969, 680,100,000 Mcf. went to the United States, 844,700,000 Mcf. was d to residential, commercial and industrial consumers in Canada, and the remainder was ed by the industry in pipeline, field or plant use. In total, 1,027,200,000 Mcf. of gas s consumed in Canada compared with 917,100,000 Mcf. in 1968.

Table **29** shows sales of natural gas in Canada as well as the number of customers. ring 1969, natural gas supplied roughly 22 p.c. of Canada's energy requirements.

Subsection 4.—Coal

The Canadian coal industry in 1969 was marked by expansion of the mining ventur in Western Canada and contraction of the established producers in the eastern provinc A dramatic revival of the western Canadian coal industry commenced in April 197 when the first large-scale shipments of coking coal moved from Alberta and British Columb mines to West Coast shipping terminals and on to Japan. In early 1970, three coal co panies—Kaiser Resources Ltd., Cardinal River Coals Ltd. and McIntyre Coal Mines Ltd. began full-scale production. Six Western Canada coal companies have so far contracted supply the Japanese steel industry by 1990 with over 180,000,000 long tons of coking co having an established f.o.b. West Coast value of $2,500,000,000. Thus far, all the expa sion in Western Canada is based on the demand by the Japanese iron and steel indust for high-quality coking coal of which Canada has large resources, but Canada is in a positio in view of the present world shortage of coking coal, to supply not only Japan but oth domestic and world markets as well.

As summarized in Tables **30, 31** and **32**, coal production in 1969 was below that 1968 as a result of decreases in Nova Scotia, New Brunswick and Saskatchewan. Sma increases were again reported for production of subbituminous coal in Alberta and bitu minous coal in both Alberta and British Columbia. Exports, principally to Japan, we about 1,380,000 tons, slightly below 1968 exports due to labour disputes on the West Coas About 17,300,000 tons of bituminous coal were imported from the eastern United Stat for Ontario and Quebec consumers. Approximately 12,000,000 tons or 45 p.c. of t 26,300,000 tons of coal consumed in Canada in 1969 were used to generate electricity. F the same period, 6,900,000 tons of bituminous coal were carbonized to produce 5,000,0 tons of coke. The thermal-electric power industry and the iron and steel industries a the two largest groups of industrial consumers of coal in Canada. The average number employees in the Canadian coal industry continued to decrease to 7,436; output per man-da from surface mines was 46.5 tons and from underground mines 3.5 tons.

A large face-loading shovel filling a 200-ton off-highway mining truck at a coal mining operation in British Columbia. Four to six passes of the huge shovel will load the truck, the size of which is indicated by the man in the foreground.

30.—Coal Production, by Province, and Total Value, 1960-69

Year	Nova Scotia	New Brunswick	Saskatchewan	Alberta	British Columbia	Yukon Territory	Canada[1]	
							Quantity	Value

[1] Prior to 1964, figures include coal ex-warehoused for ships' stores. [2] Includes foreign coal re-exported n Canada. [3] Coal and coke. [4] Excludes briquettes.

Provincial Production and Mine Developments

British Columbia.—In 1969, most of British Columbia's coal came from the Crow nest Pass area; a small amount was recovered in the Smithers area as part of a salva operation. In the Crowsnest Pass area the coal mining scene was dominated by t rapidly progressing developments of Kaiser Resources Ltd. Although Kaiser's producti from its Michel Colliery remained below 1,000,000 tons, production will rise sharply in 19 when coal is strip-mined from the 50-foot, No. 10 Balmer seam on Harmer Ridge. Annu production initially will be 7,000,000 tons, of which 5,000,000 tons will be exported.

In 1969, Fording Coal Limited announced the signing of a contract with Japane interests for 45,000,000 tons of medium volatile coking coal to be delivered over a 15-y period. The mine, situated 35 miles north of Kaiser's mine along the Fording River Valle is expected to be in production by early 1972. In December 1969, Cascade Pipe Line Lt another wholly owned Canadian Pacific subsidiary, applied for a permit to build a $200,00 000 pipeline to carry coal 460 miles from southeastern British Columbia to the Robe Bank port. This company is at present doing feasibility studies.

Alberta.—Alberta is Canada's leading coal-producing province and has the larg number of coal mines, although many are small mines with production of less than 25,0 tons a year. In 1969, Alberta coal production reached 4,400,000 tons, the highest 14 years.

On the Alberta side of the Crowsnest Pass, Coleman Collieries Limited produc coking coal from its Vicary Creek underground mine with supplemental production fr some small strip pits, to supply coal mainly to Japanese steel mills under the terms of contract signed in 1967. To the north of the Crowsnest Pass in the Cascade coal ar Canmore Mines, Limited produced coal mainly from its underground mine with supp mentary output from small strip operations. Canmore has an export contract to Jap for 3,800,000 long tons over 10 years and is planning to implement auger mining on steeply pitching seams in 1970. At year-end, Cardinal River Coals Ltd. in the Coalsp area at Luscar had nearly completed the construction of a modern coal preparation pla and the pre-production stripping of overburden from the strip sites, and expected to beg shipping coking coal to Japan in 1970. For many years the coal resources of the Smo River area, because of the absence of roads or railways, were not developed but, wh construction started on the Alberta resources railway, McIntyre Coal Mines Limited beg to look to an early utilization of their coal resources and obtained a contract in 1969 f coking coal. The railway was officially opened in May 1969. A new town, Grande Cach was developed to accommodate the families of the anticipated 1,000 employees for t 2,000,000-ton-per-year mine.

In the plains area of Alberta, the shallow flat-lying subbituminous coal is produc primarily to supply thermal-electric power plants. Alberta Coal Ltd., which mines co for Calgary Power Ltd. at Wabamun near Edmonton, has the largest subbituminous min Calgary Power is constructing an additional 300,000-kw. thermal power plant across La Wabamun from its other plant and Alberta Coal is preparing a new strip mine adjacent this plant. Alberta Coal also operates mines through subsidiaries at Sheerness and Halkirk in the Castor area. Forestburg Collieries Limited, a Luscar Ltd. subsidiary, h a large mine at Forestburg just north of Halkirk. Both these surface mines supply c to the Canadian Utilities Battle River power plant situated between the two mines. Tw moderate-sized underground mines still produce subbituminous coal in central Alberta Century Coals Limited in Drumheller and Star-Key Mines Ltd. in the Edmonton distric

Saskatchewan.—In the Estevan area of southeastern Saskatchewan, lignite co is strip-mined by highly productive mining operations owned by Alberta Coal Ltd., Mar toba and Saskatchewan Coal Company Limited and Utility Coals Ltd. The Saskatchewa coal mines have ideal mining conditions consisting of shallow overburden and fairly thic

al seams that are mined by large dragline and shovel operations. This is reflected by the .3-ton output per man-day for Saskatchewan strip mines compared with the Canadian verage of 46.5 for surface mines.

Yukon Territory.—In the Yukon Territory, the Carmacks coal mine was reopened Anvil Mining Corporation Limited in 1969. Production from the mine will not be rge and will be used at the Anvil silver-lead-zinc mine at Vangorda Creek to supply fuel r a coal-fired drying plant for concentrates.

New Brunswick.—New Brunswick coal production decreased about 12 p.c. to 702,000 ns in 1969 in line with the gradual phasing-out of the uneconomic coal industry at Minto. n Sept. 1, the New Brunswick Government formally took over all the surface and under- ound mines in the Minto-Chipman coalfields. A new provincial company—N.B. Coal imited, a wholly owned subsidiary of the Grand Lake Development Corporation—was corporated to take over and manage the New Brunswick coal mines.

Nova Scotia.—In 1969, Nova Scotia coal production was 2,600,000 tons from 10 perating mines. Of this amount the Cape Breton Development Corporation (DEVCO) roduced 2,200,000 tons, all by underground methods from Cape Breton Island coal seams at dip under the sea. DEVCO took over the coal mines and related interests of the ominion Steel and Coal Corporation, Limited, in March 1968 and, in line with a plan to duce costly operations, lowered production by 18 p.c. and offered voluntary pre-retirement about 1,000 older men of the total working force of 5,800. In June 1969, work began in EVCO's new Lingan mine. This mine, which will produce relatively low sulphur coal r carbonization at DEVCO's coke oven plants, should be in full production in 1974. ras d'Or Coal Company Limited shut down its Four Star Colliery in Broughton in late ecember.

Section 2.—Government Aid to the Mineral Industry

Subsection 1.—Federal Government Aid

Federal assistance to the mining industry takes the form of the provision of detailed ological, geophysical, topographical, geodetic, geographical and marine data which are basic importance to the discovery and development of the mineral resources of Canada; e provision, through laboratory and pilot-plant research, of technical information con- rning the processing of ores, industrial minerals and fuels on a commercial scale; financial nd technical assistance to the gold-mining industry under the Emergency Gold Mining ssistance Act, and certain tax incentives.

The Department of Energy, Mines and Resources.—The federal Department Energy, Mines and Resources came into being on Oct. 1, 1966. It embraces all of the nctions of the former Department of Mines and Technical Surveys, and new functions rtaining to water and energy resources. Apart from its administrative establishments, e Department is made up of four Groups—Mines and Geosciences, Mineral Develop- ent, Water, and Energy Development—each headed by an assistant deputy minister nd each aiding the Canadian mineral industry in some way.

The *Mines and Geosciences Group* contains four branches—the Mines Branch, the eological Survey of Canada, the Observatories Branch and the Surveys and Mapping ranch. The Mines Branch is a large laboratory and pilot-plant complex carrying out ap- lied and basic research to discover new and better methods of ensuring mine safety, extract- g and refining ores and other minerals, and using metals and minerals in industry and de- nce. Gratifying results have been achieved in the extraction of metals from ores and in e refining of low-grade crude oil, in the automation of grinding circuits and cyanide aching processes in gold mills and in the leaching of ground or crushed uranium ores by

bacteria; an example of work that has resulted in direct economic benefit has been th development of a process to produce metallurgical coke from western Canadian coal, mad possible by a long-term contract to export coke to Japan. In pyrometallurgy—the extrac tion of metals by heat—applied research is concentrated principally on the combination o shaft and electric furnaces for smelting iron ore. In petroleum refining, research concern hydrogenation, catalytic cracking, and catalyst development. This work is highly signi ficant because of the opening-up of unconventional sources such as the Athabasca tar sand and the so-called Colorado oil shales, whose economic importance has been recognized b the Mines Branch for many years. A close tie-in with producers is maintained in minera processing in which the emphasis is on the concentration of metallic ores and on the pro cessing and improvement of industrial minerals. In the field of mineral sciences, the physi cal, chemical, crystallographic and magnetic studies being undertaken on sulphide mineral are of fundamental interest. In physical metallurgy, experiments on new alloy combina tions continue to yield valuable practical benefits for Canadian industry.

The Mines Branch, on the advice of experts from industry and the universities, also awards an annual series of research grants in mining sciences to Canadian universities In 1969, the total amount distributed was $112,000.

The Geological Survey of Canada maps and studies the geology of Canada and carries out specialized research to enable its geologists to explain the geology of Canada more effectively. It is the major organization engaged in this work in Canada and its studies extend to all provinces and territories. The Survey maintains a close co-operation with provincial agencies. In the provinces, it endeavours, after prior consultation with the provincial government concerned, to fill in the province's geological framework and thus provide a basis for more detailed mapping by provincial geologists and commercial exploration companies. In areas under development, the Survey does more detailed mapping to supply industry with the geological key to the structures of the orebodies. Each year, the Geological Survey sends about 100 parties into many parts of Canada. They conduct broad regional investigations in the Canadian Shield, the Appalachian and the Cordilleran geosynclinal belts, the sedimentary basins of the mainland and the Arctic Archipelago, and in unconsolidated sediments. As the first systematic reconnaissance of Canada is approaching completion, the country's major geological features are reasonably well known and the Survey is giving increasing attention to fundamental research into field and laboratory problems, identified in the reconnaissance phase, to understand the geological evolution of the country. It publishes the results of its research in memoirs, bulletins, papers and maps, and in numerous scientific technical journals.

The headquarters of the Geological Survey is at Ottawa but it has several regional offices including the Institute of Sedimentary and Petroleum Geology in Calgary which serves the special needs of the western provinces. The Survey each year awards a large number of grants in support of geological research in Canadian universities; in 1969 these totalled $275,242.

The Earth Physics Branch carries out much geophysical work of interest to the mineral industry. It studies, collects and publishes, in the form of maps and charts, information on the geomagnetic field in Canada. Most of the information published is obtained from airborne geomagnetic surveys, which have ranged over the whole of Canada and across the Atlantic to Scandinavia. In addition, the Branch has a network of nine permanent geomagnetic observatories, as well as temporary observatories in summer at many widely distributed sites. It also operates a network of 28 seismic stations to assist in the study of the earth's interior and to obtain data for its quantitative assessment of seismic risk throughout Canada. In gravity research, another means of studying the composition of the earth's crust, the Branch is systematically mapping variations in the earth's gravity on a regional basis throughout Canada, including the Arctic and the floors of the Gulf of St. Lawrence and Hudson Bay. The results of all gravity measurements to the end of 1966 are available in a new Gravity Map of Canada on a scale of 1:5,000,000, or about 80 miles to the inch, for easy comparison with the new Geological and Tectonic maps of Canada on a similar scale.

No mineral development is possible without accurate, large-scale topographical maps. The Surveys and Mapping Branch, in conjunction with the Mapping and Charting Establishment of the Department of National Defence, has completed the topographical mapping of the country at the medium scale of 1:250,000, or about four miles to the inch. About 35 p.c. of the larger-scale mapping at 1:50,000 has been completed in the more settled areas and areas of greater economic importance. (See also pp. 23-25.)

The *Mineral Development Group* is composed of the Mineral Resources Branch, the Explosives Division and the Quebec Regional Office. The Explosives Division is responsible for the administration of the federal Explosives Act which is primarily an Act of public safety to control the manufacture, authorization, storage, sale, importation and transportation by road of explosives.

The Mineral Resources Branch is responsible for resource-economic research, program development and policy formulation in the field of non-renewable resources. It conducts fundamental and applied resource-engineering-economic research and field investigations into non-renewable resource problems, policies and programs on a commodity or total industry basis, in a regional, national and international context. The work covers all aspects of the mineral industry from resources through exploration, development, production, processing, transportation and consumption. On the basis of this work, the Branch publishes resource-engineering-economic reports and advises government departments and agencies on non-renewable resource policy matters. Current activities include regional studies of the mineral economy of a number of areas in Canada; assessment of mineral projects in various parts of Canada for which federal support has been requested, mineral resource and mineral reserve studies in a number of mineral commodities, including the mineral fuels, uranium and coal; and the safeguarding of Canadian mineral interests through participation in international agencies such as the United Nations Lead-Zinc Study Group, the United Nations Steel Committee, the Organization for Economic Co-operation and Development, and the International Tin Council. The Branch administers the Emergency Gold Mining Assistance Act (see p. 722) as a means of aiding a number of mining communities largely dependent upon the gold mines. In collaboration with the Canadian International Development Agency and with the support of industry, the Branch is setting up training courses for mineral scientists, technologists and economists brought to Canada under the various aid programs, and is advising on mineral projects undertaken by Canada as an aid to developing countries. The Branch publishes an extensive series of reports and other material, and maintains the Mineral Occurrence Index, which is a listing of about 10,000 mineral showings and deposits in Canada that may be consulted by anyone interested.

The *Water Group* is charged with the Department's responsibility for advising on federal water policies and for co-ordinating the work of federal agencies in water resource management and water pollution. In addition to broad programs of hydrometric, oceanographic and hydrographic work, the Group undertakes and co-ordinates water studies at regional levels, conducts research on the relationships of water and renewable resources and maintains a continuing review of national and regional water policies and programs. The Group is composed of the Marine Sciences Branch, the Inland Waters Branch and the Policy and Planning Branch. Of particular interest to the mining industry are (*a*) the work being done by geophysicists of the Atlantic Oceanographic Group of the Marine Sciences Branch on the continental shelf off the Atlantic Coast and in the Gulf of St. Lawrence and (*b*) the study of pollution problems in mining areas, such as in northeastern New Brunswick and on the headwaters of the Saskatchewan River system, by the Inland Waters Branch.

The *Energy Development Group* has broad responsibilities relating to the development of plans and policies for all forms of energy; the development of programs, legislation and agreements to implement those policies; the direction of studies relating to energy sources and requirements; and the co-ordination of policy advice. The Assistant Deputy Minister serves as adviser on over-all plans and policies relating to energy sources and requirements.

Tax Incentives to the Mineral Industry.*—Although mineral industry enterprise are subject to federal income tax, there are certain benefits granted to such enterprises unde the Income Tax Act which serve as incentives to exploration and development of minerals

New mining operations based on metallic mineral deposits and most industrial minera deposits are exempt from income tax for the first three years of operation. The three-yea exemption does not apply to oil and gas wells, but does apply to the mining of oil shale and bituminous sand.

The operators of oil or gas wells or mines may claim, during the full life of the operation a depletion allowance which is equal to one third of the taxable income. In general, th effect of the percentage depletion allowance is to reduce the tax otherwise payable by on third.

There are special depletion allowances for gold and coal mines. The operator of a gold mine may elect to apply a percentage depletion allowance rate of 40 p.c. or an amoun of $4 per ounce of gold produced as a deduction from taxable income. The deduction fo coal is 10 cents for each ton of coal mined in the year.

Non-operators are entitled to a depletion allowance of 25 p.c. of their gross income from wells or most mines.

The right of a mining or petroleum company to claim costs of exploration and develop- ment incurred in the search for oil, gas or minerals in Canada as immediate deductions from income from all sources is generally regarded as an important tax benefit.

Prospectors and their financial backers are exempt from income tax on receipts from the sale of a mining property acquired as a result of the prospector's efforts, other than rents, royalties or similar payments.

Emergency Gold Mining Assistance Act.—Under this Act, which came into force in 1948 (RSC 1952, c. 95), financial assistance is provided to marginal gold mines to counter- act the effects of increasing costs of production and a fixed price for gold. By enabling gold mines to extend their productive life, the subventions help communities dependent on gold mining to adjust gradually to diminishing support. The application of the Act was extended to Dec. 31, 1970 by an amendment passed on Nov. 28, 1967. The Act is admini- stered by the Department of Energy, Mines and Resources.

An amendment to the Act in 1963, which extended provisions of the Act to Dec. 31, 1967, also introduced a restriction which affects lode gold mines coming into production after June 30, 1965; such mines are eligible for assistance only if the mine provides direct economic support to an existing community, that is, if the majority of the persons employed at the mine reside in one or more of the established communities that are specified in a schedule to the Act. The restriction does not apply to lode mines in production before July 1, 1965 nor to placer gold mines.

The amount of assistance payable to an operator is determined by a formula and is based on the average cost of production per ounce and the number of ounces produced; it ranges from zero to $10.27 per ounce produced. Gold mines having a cost of production of $26.50 or less per ounce receive no assistance and those having a cost of production of $45 or more per ounce receive the maximum rate of $10.27 per ounce.

Under the current formula, the assistance payable to the operator of a gold mine is computed by adding 25 p.c. to the product of two factors—the "rate of assistance" and the number of "assistance ounces". The number of assistance ounces is two thirds of the total ounces produced and sold to the Royal Canadian Mint by a mine in a calendar year. The rate-of-assistance factor is two thirds of the amount by which the average cost of production exceeds $26.50. The rate-of-assistance factor is limited to a maximum of $12.33 which is reached when the average cost of production rises to $45 per ounce of gold produced. The average cost of production is determined by dividing the total allowable costs by the total number of ounces produced in the form of bullion from the mine in a calendar year.

* As at June 1970.

y those ounces of gold that have been sold to the Royal Canadian Mint are eligible for usion in the assistance-ounces factor. The cost of production includes mining, milling, elting, refining, transportation and administration costs. Allowances are made for reciation, pre-production costs and expenditures on exploration and development on the e property in accordance with the Regulations.

The amounts paid to operators of gold mines to Mar. 31, 1969 for the years 1948-68, usive, totalled $261,293,250 on a production of 57,155,705 oz. t. of gold produced and in accordance with requirements of the Act. The assistance payable for gold produced sold under the Act in the calendar year 1969 was estimated to be $13,502,000.

In March 1968, the governors of the central banks of seven nations introduced a -price system for gold which separated transactions in gold among the central banks n private open-market operations. The governors agreed that the existing official erves would be used only in transfers among monetary authorities at the established e of $35(U.S.) an ounce, and that the central banks would neither purchase nor sell d in private gold markets. The Minister of Finance stated that Canada would support y the agreements reached by the central bankers. He also stated that there would be change in the practices applicable to gold producers under the Emergency Gold Mining istance Act.

Operators of gold mines were thus offered the alternatives of selling their production the Royal Canadian Mint at the fixed price of $35 an ounce in United States funds in er to qualify for assistance payments under the Emergency Gold Mining Assistance Act f selling on the open market at the price determined by supply and demand. It may be ed that the amount of assistance payable is determined on the basis of the cost of produc- n and is not related to the selling price of the gold.

EDERAL RESEARCH ADVANCES CANADIAN MINERAL DEVELOPMENT*

Mineral deposits are unique to a country—they are part of a country's 'patronymy', o speak; methods of mining have to be designed to suit particular deposits and to ensure t the minerals are extracted safely and efficiently to the economic advantage of the ntry. Thus, Canada's great diversity of mineral resources, its own needs for mineral ducts and the maintenance of its large mineral export industry, which now accounts for ut 60 p.c. of the value of all mineral output, together justify a strong research and devel- nent effort by government as well as by industry, universities and equipment manu- turers.

The Mines Branch of the Department of Energy, Mines and Resources is the Federal vernment's agency dedicated to assisting in achieving Canada's goals of a continuously sperous and competitive mineral industry which, deriving its wealth from a rich endow- nt, has traditionally contributed greatly to the high standard of living of Canadians. e Branch is a multi-discipline institution organized to provide knowledge and to conduct own research or co-operate with Canadian industry and universities in research in the ctrum of non-renewable resources—metallic or non-metallic ores, fuels, structural terials and metals. It must maintain both flexibility and versatility in its attitudes and grams; it must contribute to the development of new or scarce minerals, like ores of sium, tantalum or tin and manganese, and, at the same time, not overlook any mineral t may currently be regarded as uneconomical or even passé, like coal. In other words, efforts of the Mines Branch, through its complex of laboratories and pilot plants and its ntific staff, are directed toward assisting the Canadian mineral industry in the more cient extraction and elaboration of mineral wealth of all types and toward improving broadening the uses of metals and minerals.

The following paragraphs give examples of the types of programs now under way in Mineral Science Division and in the Fuels Research, Mining Research and Metals

* Prepared under the direction of Dr. John Convey, Director of the Mines Branch, Department of Energy, es and Resources, Ottawa.

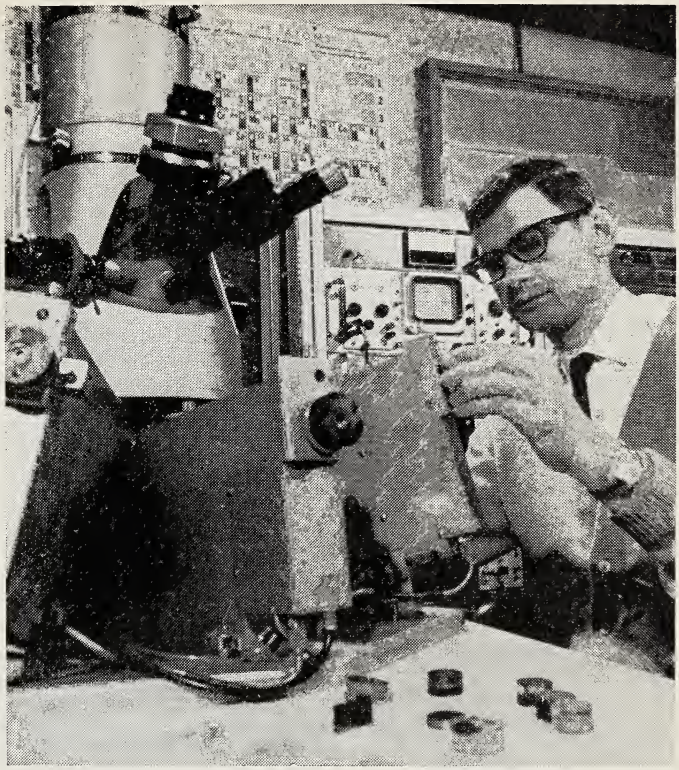
Reduction and Energy Centres. In addition, a wide variety of projects are undertaken the Mineral Processing Division to develop new and improved processing procedures the economic recovery of minerals from specific Canadian ores; continuing research metallurgical processing, pollution control and metal corrosion is carried out by the Extr tion Metallurgy Division; and Physical Metallurgy Division programs consist essentia of applied research and development related to the conservation, processing, properties a utilization of Canadian metals. The Branch identifies and predicts problem areas in operation with the Canadian mineral industry through the National Advisory Commit on Mining and Metallurgical Research.

The work of the *Mineral Sciences Division* in the R and D support of the min and metallurgical industries of Canada is characterized by the application of increasin sophisticated techniques of science and technology, some of which, until recently, wo have been regarded as being relevant only in a highly academic area of study. Examp of this trend are in the use of Mössbauer spectroscopy, neutron-activation analysis a electron microprobe analysis.

Extensive studies have been conducted of mineral occurrences in certain areas Canada where rich mineralization occurs but where complications are encountered in identi ing and characterizing the mineral assemblages. Areas in which such studies are be conducted include the silver deposits of the Cobalt–Gowganda area of Ontario, the c seminated copper-molybdenum deposits of the Highland Valley area of British Columb the base metal deposits of the Red Lake area of northwestern Ontario and, most recent the tin deposits of the Mount Pleasant area of New Brunswick. In addition to the c ventional tools of the mineralogist and the petrographer, such as the optical microsco the use of the electron micro-beam probe has been of great value in solving the proble of the composition and structure of the complex intergrowths of a multitude of miner many of them uncommon and some completely new, that have been encountered in th deposits. The information made available is of assistance to the ore-dressing engineer in devising appropriate methods of extraction and beneficiation of the mineral values the deposit.

One of the problems in ore treatment is to be able to monitor and control the proc of beneficiation and to be able to do this continuously and without the need for delays a stock-piling while analyses are performed by conventional means at various stages. Wh X-ray fluorescence analysis has been used for this purpose for several years in some be ficiation plants, difficulties of monitoring and control have been experienced. The Mine Sciences Division is attempting to refine the method and to eliminate these difficulti For example, the on-stream analysis of ore-slurries applied to the copper-zinc ores fr northern Manitoba is under study to characterize such parameters of the slurry as dens and particle size, as well as composition, and to use these parameters to control the wh flow of the slurries through the beneficiation plant. In addition, consideration is be given to the use of more novel methods of the radiation-monitoring of mineral slurr employing radioactive isotopes and related procedures as the sensing and control devi These techniques have the advantage that, if they can be brought to a successful completi the method will be continuous, non-destructive and self-controlling.

Standards have characterized trade in metals, minerals and chemicals for the p twenty years. Canada, as an important trading nation, particularly in the minera metals field, participates in standardization programs on a national and international ba The contribution of the Mineral Sciences Division to this work comprises the developm of internationally accepted methods of analysis of ores, minerals and metals for a wi range of metallic and non-metallic elements. Standard methods are, of course, vital the field of commerce so that both vendor and customer shall be equitably treated. F many years, the Mineral Sciences has participated in programs for the development standard analytical procedures, largely by conventional chemical and instrumental metho More recently, the techniques of atomic-absorption spectrometry and of neutron-activati analysis have played an important role. Most recently, this type of work has been



ents of the earth's may be quantitatively lysed very rapidly by electron microprobe in in the Mineral Sciences sion. This facility is an ntial time-saving tool modern mineral tech- gy, particularly in pre- ary assessments as it ifies the form in h the valuable element rs and indicates the ibility of its recovery.

led to an attempt to provide standard reference ore minerals. An example of this k is in the development of a standard Mo/Bi ore from Quebec. The analyses were ormed by X-ray fluorescence and then statistical procedures were used to assess the dity of the sampling procedures and the reliability of the analytical method itself. ilar statistical methods are being applied to noble-metal analyses in order to establish rnationally acceptable standard procedures.

The *Fuels Research Centre* is concerned with the development of new engineering scientific approaches to encourage the efficient utilization and conservation of Canada's , petroleum and natural resources. As the utilization of these resources inevitably s rise to the pollution of the environment, the Fuels Research Centre has shared public rest in and concern for their effective use and development. This recent public aware- of the magnitude and seriousness of the pollution problems has led to a rather abrupt nge in attitude which is now being expressed in terms of legislation.

However, the enactment of legislation and the establishment of limits and penalties ne thing, but overcoming the technical difficulties to achieve these desired limits is her. It is in this area that the Fuels Research Centre is attempting to assist industry nding practical solutions to some of the atmospheric pollution problems. A continuous rt is required because advances in technology will be offset by two factors that will tend ncrease atmospheric pollution—the growth in population and the migration of people he larger urban centres in search of employment. It is evident that balance must be ntained between regional planning and the rate at which industry can apply new tech- gy to achieve atmospheric-quality standards.

In 1969, the Fuels Research Centre regrouped its research activities into progra associated with the major national needs, permitting better financial support and cont Three basic programs now function—air pollution and combustion research, the evaluat of the quality of Canadian fossil fuel resources, and research associated with the certifi tion of electrical equipment for use in coal mines or industrial locations where combust gases are present. At the same time, the activities of the Metallurgical Fuel Engineer Section were enlarged and combined with a portion of the Extraction Division to forn new research organization called the Metals Reduction and Energy Centre.

The air pollution and combustion research program includes projects concerned w the improvement of the combustion process and elimination of pollutants, from combusti by chemical reaction and subsequent dispersion into the atmosphere, and with the elimi tion of sulphur from the fuel and the improvement of fuel quality before combusti In the former, the emphasis is on the mechanism of combustion and the study of fla aerodynamics to reduce pollution, and also on the dispersion of smoke plumes from stacks of large thermal power plants.

The elimination of sulphur from oils prior to combustion falls into two categorie the elimination of sulphur from residual oil obtained after the distillation of a normal cr oil and the removal of sulphur from low-grade heavy crude oils, such as the Athaba bitumen. With the development of increasingly stringent air pollution regulations, markets available for both types of oil will become more restricted. Since the econo can be sustained only by an abundant supply of cheap energy from these sources, the c of the high-pressure hydrogenation research is directed to the elimination of sulphur fr these fuels at reasonable cost and to the encouragement of their efficient use.

Much of the pollution that arises from the combustion of low-grade petroleum is c to the sulphur and a significant advance has been made in the development of super chromatographic columns for the separation of sulphur compounds, on a preparative sc into major classes. The development of analytic capability is an important segment research because the benefits are felt in a wide variety of problems extending from resource evaluation program to the identification of oil in major oil spills such as h occurred in recent months.

The continuing tension in the Middle East and the shortage of natural gas and of ch sources of petroleum in the United States have spurred interest in developing Arctic sour of petroleum and in reviewing North American fossil fuel resources. The Fuels Resea Centre is particularly concerned with the evaluation of the quality of the Canadian port of these reserves and with the development of improved techniques for obtaining sulph free petroleum from low-grade oil sands.

A directory of Canadian oil analysis and reservoir data has been prepared which inclu most of the oil analysis conducted over several years at the Fuels Research Centre an representative of all significant Canadian oil fields.

The *Metals Reduction and Energy Centre* studies the energy requirements of Canadian metals and minerals industries and assesses the technical and transportat problems encountered in supplying energy needs of these industries. The technology the application of energy to metallurgical processes is developed through study of proces for the reduction of metal ores and the carbonization (and other conversion process applied to fossil fuel resources to enhance their usefulness and value. Although Canad generally thought to be a mineral-rich country, in fact, the only fossil fuel available in entire central and eastern part of the country is the reserve in Nova Scotia. Not only fuels not in good supply, but new economical hydro-power sites, although once numero are now very scarce. Atomic energy may represent the ultimate solution but energy fr this type of generating station is at present neither available in quantity nor at attract cost. It is expected that the transition period may last as long as 20 years so that, current the industrial centres of Canada are more dependent than ever before upon distant external energy resource minerals to accommodate constantly growing energy-using

tries. In terms of both volume and value, iron is by far the most important metallic processed and, since the iron ore industry developed at a later date than the steel industry and produced largely for export, it has a distinctly separate "industrial fabric" from steel industry. It is now apparent that new methods of converting iron oxide to the tallic state are reaching industrial maturity but it is not yet clear whether this new and portant processing step will be part of the steel or of the iron ore industry. Since energy ts make up as much as 70 p.c. of the operating costs of iron reduction processes, the ation of the processing plants and the type of reducant to be used will have a profound ct on the future development of this important branch of the metals industry. The ntre carries out research and development into new methods of iron reduction, follows development processes elsewhere, and takes special interest in the technical factors erning their energy requirements and the savings inherent in new methods of interecting iron and steel-making processes.

With respect to the conventional iron-producing process, the Centre is concerned with provision of coke for the iron blast furnace. This work involves the evaluation of new ls becoming available in Western Canada for both export and domestic use, coals from United States being used by the Ontario steel industry, new methods of upgrading fine l to produce low-ash and low-sulphur coals, new methods of dewatering coal using oilisted drying methods, and improvements to the coking process itself. Entirely new thods of coking are also being investigated, particularly the type of process known as rm-coking", which embraces special methods of upgrading and agglomerating coal as l as the novel coking step itself.

nuclear magnetic onance spectrometer used in the Fuels earch Centre to dy heavy oils, thereassisting in the deopment of new reng strategies needed achieve more effit methods of proing commercial products.

The Centre is involved in several aspects of transporting coal from mine to mark Of particular importance is the study of the hydraulic transport (by pipeline) of coal slur to be used for coking; in this connection, a solution to the problem of dewatering and sizi to meet coking requirements is in process of development. Also under study is the proble of transporting coke where its low-bulk density is a major disadvantage. The applicati of carbonization technique to the treatment of low-rank coals to allow their econon transport for use as a reducant in some direct reduction iron processes, and even for co bustion purposes, is being investigated.

The Metallurgical Fuels Engineering group of the Centre serves the technologi requirements of the coal and coke industries of Canada. It is seeking ways and means assisting the coal industry by assessing the coking properties of Canadian coals in aspe related to exploration, mining, beneficiation, transportation, utilization, and quality contr and of assisting the coke industry in the improvement of coke quality, the selection of co for the manufacture of coke, the development of new techniques, and the modification existing processes for the production of high-carbon products for specific markets.

The *Mining Research Centre* carries out research in those phases of mining up mineral processing, including blasting, rock breakage, ground control, mining systems a environmental control. Personnel and research facilities are located at four laboratories Canadian Explosives Research Laboratory, Ottawa; Rock Mechanics Laboratory, Ottaw Elliot Lake Laboratory; and the Western Office, Calgary.

The Canadian mining industry is large by world standards and produces almost complete range of metals and industrial minerals. Mining conditions vary from the "so yielding ground of the potash mines in Saskatchewan to the "hard" rock mines of t Canadian Shield. Although some orebodies will continue to be found near the surfa future trends will be toward deeper mining, both underground and in open pits. Proble encountered at depth will be more severe than those now existing and the present basis engineering experience and trial and error procedures may not be sufficient to deal effectiv with them. Consequently, a scientific base is required to aid judgement on what shou be done once they occur. At present, research is not at a stage of providing compl solutions to mining problems; rather, it provides relevant information to mine operat which assists them in making decisions.

Both basic and applied research is carried out at the Centre. Basic research is aim at providing a scientific basis for all phases of mining; applied research involves the prese day problems in mines using the knowledge and experience already available. About h of the research work is done in the mines in active participation with the mining compani Co-operative research is also carried out with other federal and provincial departmen Canadian universities and research foundations.

The *blasting research* program is concerned with increasing safety and reducing t cost of drilling and blasting. During 1970, about 600,000,000 tons of ore and waste ro were excavated at a cost of about $130,000,000 for drilling and blasting. A modest i provement in design criteria, based on the rock and explosive properties and their influe on blasting, could lead to considerable financial savings.

The imposed stresses have been evaluated for column charges, using analytical te niques, laboratory-testing and field trials and there is reasonable agreement with fi measurements. The zone of fragmentation can be predicted, knowing the stress dis bution in conjunction with a fracture criterion for the rock. In this way, borehole spac and amount of charge required for optimum blasting can be evaluated. Another part the blasting program is evaluating the effectiveness of pre-splitting as a means of reduc structural damage to open-pit walls due to explosive action. This is done by measur accelerations produced by various blasting configurations.

The Canadian Explosives Research Laboratory provides technical assistance Canadian regulatory agencies responsible for the establishment of standards for transpor tion, storage and use of explosives and dangerous goods. During the past few years th

s been a considerable expansion in the variety and amount of blasting agents and danger- s goods. There is a continuous need to update regulations and to improve methods of sting these materials.

The objective of *rock breakage* research is to investigate the mechanics of breakage, her than explosives, at the rock face and in grinding processes. Research on the thermal/ echanical breakage of rock particles on laboratory-size samples showed that pre-heating sults in easier grinding. Greatest benefit was obtained with silica-bearing ores, whereas lcareous ores were hardly affected.

A large number of variables are involved in mill circuits, and it is difficult to evaluate e importance of any one variable. With the advent of computers, large volumes of mill ta can be analysed to develop mathematical models describing mill behaviour. Com- ter simulation should then be a means of optimizing operating conditions. The expected nefits would be reduced cost and/or increased mineral recovery.

In recent years, increased use has been made of tunnelling and raise-boring machines mines and civil engineering projects. Within this concept of new methods of breaking ck, wedging tools for tunnelling machines and the feasibility of automating raise-boring achines are being investigated.

The *ground control* program deals with the stability of the rock around mining cavations. Basic research is concerned with developing mathematical models for pre- cting stresses and deformations of rock structures using finite element techniques. The m is to provide a theoretical basis similar to that which has existed in other branches of gineering for many years. It has always been realized that structural geology plays an portant part in the stability of a structure, without knowing how important. Present vestigations are clarifying the picture by measuring the effect of geological weakness anes on stress distribution and strength of the rock mass. Research in mines essentially volves taking measurements of stress and deformation, which in turn requires adequate strumentation. In North America the Mining Research Centre has pioneered the strain ll overcoring technique of stress measurement, and multi-wire borehole extensometers. oth systems are now in common use in Canadian mines.

Applied research is conducted almost exclusively in the mines throughout Canada. rtly as a result of in-situ measurements, two room-and-pillar mines have been able to crease their extraction. Considerable work has been done on rock bolts as a means of tificial support. The testing of individual bolts to define anchorage capacity, and the onitoring of bolt loads and deformation of the roof strata have been used to define the lequacy of these support systems. Measurements of fill pressure and movement of the rrounding strata are being taken to define the stabilizing effect of rock/sand/cement fill.

Open-pit mines account for approximately 60 p.c. of the excavated tonnage in Canada, d any, even slight, increase of slope angle results in enormous savings in reduced waste moval or increased ore recovery. A small field trial, using cable bolts to artificially support slope, indicated that this method was technically and economically feasible. There s been a resurgence in the coal mining industry of Canada, and a new Western Office in algary is at present investigating mining conditions in these mines.

Miners, because of their working environment, are susceptible to lung diseases. The bjective of the *environmental control* program is to improve the quality of mine air. ther industrial countries as well as Canada are reviewing the standards for mine air. To sure that these standards are realistic for Canadian conditions, a comprehensive know- dge of the dust and radiation hazard is necessary. In close co-operation with the Mines ccident Prevention Associations of Ontario and Quebec, and the McIntyre Research oundation, work is proceeding on developing standard methods for measuring dust and diation. Various dust sampling instruments from many countries have been calibrated nder controlled conditions in the laboratory. There is considerable variation in the sults from each instrument. The problem is compounded by not knowing whether mass, olume or size is the important parameter with regard to health hazard. Present work is ncerned with the compositional analysis of airborne dust using X-ray techniques.

In some mines, vast quantities of air are required to keep the dust and radiation co centrations down to acceptable levels. Considerable savings may be possible if part the air can be passed through filters and then recirculated. In co-operation with o mining company, 24 commercial filters were tested underground. Efficiency ranged fr 20 p.c. to 100 p.c., with the better filters tending to be relatively expensive and having short life. Where ventilation costs are an appreciable part of the total operating cost, t initial capital and replacement costs of filters are low enough to result in appreciab savings.

The cost and performance figures of typical mining operations are being investigat in the *mining systems* program. With the use of computers, optimization analyses a carried out on the various factors involved.

One study has investigated the costs of longhole drilling with regard to borehole di meter, length and inclination, by conducting a comprehensive field test. Briefly, it w found that costs increase with borehole diameter, and rise significantly with boreh depth. Holes that are horizontal to +60° cost less to drill than downholes. Anoth project is concerned with the optimum combination of primary and secondary breaka and loading at an open-pit mine.

Besides the research activity, the Centre provides a technology service to the mini industry. The Mining Information Centre assists industry and universities in findi research information on any phase of mining. In addition, the presence of a multi-di cipline group of engineers and scientists in Canada provides an opportunity for mini personnel to discuss their problems and have a "sounding board" for their new ideas c improving mining. This facility is increasingly recognized and used by the industry.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through the Mines Branch the Department of Mines, Agriculture and Resources, provides several valuable servic to those interested or involved in exploration and mining, including: the conduct of continuing program of mineral assessment designed to encourage development of the miner resources of the province; the inspection of exploration work carried out on concession are and the examination of mining operations; the administration of beaches (control of remov of sand and gravel as a conservation measure) and the collection of data relevant to th control of sand removal; the identification of mineral rock specimens submitted by th public and the examination of corresponding occurrences where such is warranted; the di pensing of technical advice, in so far as possible, to those who seek such service (i.e., i hydrological problems and on the availability of quarriable peat moss to be removed permit); co-operation with the Geological Survey of Canada and other Federal Gover ment agencies; and the preparation and publication of data useful for educational an general informational purposes, including the preparation of mineral and rock sample set Geological reports, geophysical maps and compilations of general data pertaining specific areas are procurable at nominal cost and other information from unclassified fil is made available to interested parties. Prospector's or miner's permits are issued by th Mines Branch and mining claims are recorded.

Nova Scotia.—Under the provisions of the Mines Act (RSNS 1967, c. 185), th Government of Nova Scotia may assist a mining company or operator in the sinking c shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises an levels. This assistance may take the form of work performed under contract, the paymen of bills for materials and labour, or the guarantee of bank loans. Any such work must b approved by the Department of Mines. Mining machinery and equipment to be used i searching for or testing and mining minerals may be made available through the Govern ment. Such equipment is under the direct supervision of the Chief Mining Engineer.

* Compiled from material supplied by the respective provincial governments.

essary for increasing the output of coal. Such regulations cover the appropriation, on rment, of unworked coal lands, the operation of coal mines, and loans or guarantees loans. Close co-operation is maintained with the Federal Government in carrying federal regulations made to secure increased production and economical distribution coal from the mines of the province.

New Brunswick.—The Mines Division of the Department of Natural Resources has ee Branches. The *Mineral Resources Branch* administers the disposition of Crown neral rights including the issuing of prospecting licences, recording of mining claims, uing of mining licences and leases and other matters pertaining thereto. Detailed and ex claim maps are prepared for distribution. The Branch is responsible for general l detailed geological mapping and investigations. Maps and reports are prepared for tribution, mineral and rock specimens are examined for prospectors and preliminary minations of mineral prospects are made when requested and circumstances warrant. e *Mines Branch* administers the safety regulations governing operations under the ning Act. All mines are regularly inspected, laboratory facilities are maintained and tain equipment used in mines must be approved. The Branch is responsible also for collection of mining taxes and royalties and the preparation of statistics on mineral duction. The *Water Branch* administers the Water Act, is responsible for the use and cation of all surface, ground and shore waters and for pollution control measures and plements policy matters as determined by the New Brunswick Water Authority. A gional Office located at Bathurst, staffed by geologists and inspectors, serves as a record- office for northeastern New Brunswick and another at St. George, staffed by a senior logist, conducts regional work and assists exploration companies and prospectors work- in the southwestern area. Claim maps and topographical, geological and aeromagnetic ps are available for perusal and distribution.

Quebec.—Through its Director-General of Mines, the Department of Natural sources is responsible for implementing the Mining Act (SQ 1965, c. 34) and the Mining ties Act (SQ 1965, c. 35). The directorate includes the following three branches: ological Services, Mining Services and the Mining Research Centre, as well as the xation, Mining Conflicts and Registry Divisions.

The Geological Services Branch is concerned with geological exploration, mineral posits, mapping and hydrogeology. It conducts studies on the geological composition Quebec territory for the development of mineral resources; following yearly expeditions, ailed reports of the findings and geological maps of different regions are made available the use of interested persons. The Hydrogeology Section conducts studies on and intains an inventory of underground water. The Gas and Oil Section collects and com- es technical information for the use of private companies seeking hydrocarbons.

The Mining Services Branch, consisting of a Mines Service, an Inspection Service and Engineering Service, controls mining concession grants on Crown lands, including claims istrations, developmental work permits and special permits for the sale or rental of lands mining development. It ensures that holders of mining rights live up to the conditions their agreements and inspectors ensure that work in mines, in quarries and in treatment nts is carried out in accordance with safety law and regulations. The Branch undertakes engineering studies required prior to opening up a new mining district or operation, luding the construction of access roads, the building of mining camps or townsites and regulations pertaining to the use of the land in question.

The function of the Mining Research Centre is to assist those interested in prospecting, ning operations or ore treatment by providing technical and scientific services. In lition to chemical, physical, mineralogical and petrographic analyses, the Centre conducts plied research, principally mineralogical, to promote the development of new deposits in ebec and to assist in the technological advancement of mines and quarries already in eration.

The Taxation Division levies duties on mining operations as stipulated in the Mir Duties Act and the Mining Conflicts Division verifies the existence or the validity of cla as provided for in Part VI of the Mining Act.

To provide for the future development of the mining industry, scholarships are gran to students wishing to follow a career in geology, mining and metallurgical engineering well as to students in hydrology or other relevant fields of science (hydro-electricity, hydr lics or meteorology). The Department makes a conscious effort to initiate young stude at the secondary or junior college levels into the mining and geological sciences by second staff members to camps for young scientists to interest them in these disciplines.

Ontario.—The Ontario Department of Mines renders a multiplicity of services direct assistance to the mining industry within the province. The *Geological Branch* car on a continuing program of geological mapping and investigations and prepares, for the of the public, detailed reports and maps of the areas studied. In many active areas of province, resident geologists gather and make available to the public information concern geological conditions, exploration and development within their respective districts. geologist specializing in industrial minerals investigates methods of treatment and recov of such minerals and compiles data on the uses, specifications and markets for such produ During the winter months, courses of instruction for prospectors are held in various cent throughout the province.

The *Laboratory Branch* provides assay and analytical services and conducts mine ogical investigations to aid in the discovery and development of mineral deposits. services are available to the mining industry and the public at large. The Temiskam Testing Laboratory, situated at Cobalt, operates a bulk sampling plant and assay laborat to assist the producers of the area in marketing their silver-cobalt ores.

The *Mining Lands Branch* handles all matters dealing with the recording of min claims, assessment work, etc., and the preparation of title to mining lands. As a service the mining public, individual township maps are prepared and kept up to date, show lands open for staking and recorded and patented claims therein. District Mining I corders maintain offices at strategic locations throughout the province.

The *Inspection Branch* administers the operating rules of the Mining Act which c for the regular examination of all operating mines, quarries, sand and gravel pits and cert metallurgical works with a view to ensuring proper conditions of health and safety to t men employed. District offices to serve the local areas are maintained in the major mini centres of the province. Mine rescue stations in the principal mining sections are opera under the supervision of the Branch and all hoisting ropes in use at mines are periodica tested by a Branch-operated cable-testing laboratory.

The *Finance and Administration Branch* includes an Information Section which carr out a regular publicity and information program and maintains a library of films on mini subjects which are available for free loan to the public. Each year, displays pertaining mining are prepared and presented at exhibitions throughout the province. A new secti has recently been set up within the Branch consisting of two economists and a statisticia the function of which is to provide projections of Ontario's mineral economy for the industr The Publications Office of the Branch is responsible for distribution of all departmen literature and maps.

Since 1951 the Department has been engaged in a road-building program to give acc to mineralized areas and open them for full development. In 1955 this became an int departmental project with other interested departments participating through an interd partmental committee of Ministers which decides on priorities and locations. Actu construction is carried out by the Department of Highways.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natur Resources offers four main services of assistance to the mining industry: maintenance, l the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the gran

and retention of titles to every mineral location in Manitoba; compilation, by the ogical staff of the Branch, of historical and current information pertinent to mineral rrences of interest and expansion of this information by a continuing program of ogical mapping; enforcement of mine safety regulations and, by collaboration with stry, introduction of new practices such as those concerned with mine ventilation the training of mine rescue crews which contribute to the health and welfare of mine kers; and maintenance of a chemical and assay laboratory to assist the prospector the professional man in the classification of rocks and minerals and the evaluation of eral occurrences.

To encourage the exploration for minerals in Manitoba, the Mineral Exploration Assist- Act was passed in April 1966. This Act provides for the payment of advances to indi- als to assist in defraying the cost of exploration within designated areas. If assisted oration results in the discovery of a deposit, the grant is repayable from the profits of mine; a grant for exploration that proves unsuccessful is not repayable.

Saskatchewan.—The *Mineral Lands Branch* of the Department is responsible for ing disposition of all Crown minerals and maintains records respecting areas let out by , permit or claim. Recording offices, located at Regina, La Ronge, Uranium City and ghton, assist the public in determining the lands available and accept applications.

Officers of the *Mines Inspection Branch*, under the authority of the Mines Regulation make regular examinations of all mines to ensure proper conditions for the health and y of the men employed. Safety education, particularly in the form of first aid and rescue instruction, is also a part of the work of this Branch. All Branch officers are oned at the Regina headquarters.

The Precambrian Geology Division of the *Geological Sciences Branch* conducts geological eys in the shield areas of the province and publishes maps and reports for the informa- and guidance of the industry. Resident geologists are maintained at Uranium City La Ronge and at the latter centre a laboratory provides for the storage and examination ore and samples. The Division processes exploration data and assessment work to be e available for inspection by the industry.

Alberta.—Alberta Government assistance to the mining industry is diversified in acter. The Mines Division of the Department of Mines and Minerals regulates coal s and quarries and maintains standards of safety by inspection and certification of kers. The Workmen's Compensation Board also maintains safety standards and the cost of training mine rescue crews. The oil and gas industries are served in a lar way by the Oil and Gas Conservation Board. Its regulatory measures, however, lso concerned with preventing the waste of oil and gas resources and with giving each er of oil and gas rights the opportunity of obtaining a fair share of production. This rd compiles periodic reports and annual records which are of invaluable assistance in oil lopment in Alberta. The mining industry is also served by the Research Council of rta which has made geological surveys of most of the province and has carried forward ects concerned with the uses and development of minerals. The Council has studied occurrence, uses and analyses of Alberta coals and their particular chemical and physical erties, the use of coals in the generation of power, and the upgrading and cleaning of and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, alt binders and dust-proofing of coal. Studies have been made of glass sands, salt, lizers, cement manufacture and brick and tile manufacture. (See also p. 496.)

The province from time to time has had commissions examine various aspects of the ng industry when it has considered that their findings would be of assistance in develop- such industries. The province, together with the Canadian Association of Oil Well ing Contractors and the Canadian Petroleum Association, maintains a detailed super- y and safety training program concerned with the drilling of oil and gas wells. Of

assistance also to mining companies and oil companies are the special reductions vided for in the Alberta Income Tax Act. These follow the parallel provisions in federal Income Tax Act.

British Columbia.—The Department of Mines and Petroleum Resources of Bri Columbia provides the following services: detailed geological mapping as a supplemen the work of the Geological Survey of Canada; free assaying and analytical work for p pectors registered with the Department; assistance to the prospector in the field by dep mental engineers and geologists; grub-stakes, limited to a maximum of $800, for prospect assistance in the construction of mining roads and trails; and inspection of mines to en safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—As of Jan. 1, 1968, the mineral ri vested in the Crown in right of Canada are those situated in the Yukon Territory and Northwest Territories, those in the islands of Hudson Bay and under Hudson Bay Hudson Strait, and those under Canada's continental shelves. The Supreme Court Canada in a recent decision made it clear that, as between Canada and the Provinc British Columbia, the Crown in right of Canada owns and has legislative jurisdiction o "lands, including mines and minerals and other natural resources, of the sea bed and s soil seaward from the ordinary low-water mark on the coast of the mainland and several islands of British Columbia, outside the harbours, bays, estuaries and other sim inland waters to the outer limits of the territorial sea of Canada, as defined in the Te torial Sea and Fishing Zones Act. . .". The Court also decided that the Federal Gov ment owns and has legislative jurisdiction "in respect of the mineral and other natu resources of the sea bed and subsoil beyond that part of the territorial sea of Canada to a depth of 200 meters or, beyond that limit, to where the depth of the superjacent wat admits of the exploitation of the minerals and other natural resources of the said are

In addition, the mineral rights of some small and usually isolated areas scatte throughout the provinces are vested in the Crown in the right of Canada. The Dep ment of Energy, Mines and Resources is responsible for the disposition of mineral rig and for the administration and enforcement of regulations relating to minerals in Canad offshore areas, other than those under Arctic coastal waters, in Hudson Bay, the islands Hudson Bay, Hudson Strait and the small parcels above mentioned. The Department Indian Affairs and Northern Development is similarly responsible in the Yukon Territo the Northwest Territories and the offshore rights under Arctic coastal waters; this Dep ment also acts as adviser to Indian bands in Indian reserves and is responsible for the ministration and enforcement of the relevant regulations.

Mineral rights of Indian reserves in the provinces are also vested in the Crown in right of Canada and are administered by the Indian Affairs Branch of the Department Indian Affairs and Northern Development. The minerals on an Indian reserve may developed under the Indian Oil and Gas Regulations or the Indian Mining Regulations the benefit of the band of Indians having rights to the reserve, only after the band has gi approval by referendum. Indian band councils are encouraged to take a share of resp sibility in the management of their mineral resources.

Mining exploration is carried out in the Yukon Territory in accordance with provisions of the Yukon Quartz Mining Act and the Yukon Placer Mining Act; in Northwest Territories, including Arctic coastal waters, operations are governed by Canada Mining Regulations 1961, as amended. There are also the Territorial Dredg Regulations, Territorial Coal Regulations and Territorial Quarrying Regulations comm to both territories. In the Yukon Territory, mining rights may be acquired by staki

ims under the appropriate Acts or Regulations. A one-year lease may be obtained to spect for the purposes of placer mining, renewable for two additional periods of one ar each; a 21-year lease, renewable for a like period, may be obtained under the Yukon artz Mining Act.

Under the Canada Mining Regulations, a prospector's licence is required. Staked ims must be converted to lease or relinquished within ten years. In certain areas, a tem of exploration by permit over large areas is allowed. Any individual over 18 years age or any joint-stock company incorporated or licensed to do business in Canada may d a prospector's licence. No lease will be granted to an individual unless the Minister the Department involved is satisfied that the applicant is a Canadian citizen and will be beneficial owner of any interest acquired under such lease; no lease will be granted to a poration unless such corporation is incorporated in Canada and registered under Part I of the Companies Ordinance (ONWT 1968, c. 1) and unless the Minister is satisfied t at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens that the shares of the corporation are listed on a recognized Canadian stock exchange and t Canadians will have the opportunity of participating in the financing and ownership the corporation. Any new mine beginning production after the Canada Mining Regulans came into force in 1961 will not be required to pay royalties for a period of 36 months, rting from the day the mine comes into production. Production date is established as date determined under the provisions of the Income Tax Act.

An exploration assistance fund for petroleum and other minerals in the Yukon and rthwest Territories was established by the Federal Government in 1966. Initially ited to $3,000,000 a year, the fund may provide 40 p.c. of the cost of approved explorn programs. Assistance is available only to Canadian citizens or companies incorated in Canada. Named the Northern Mineral Exploration Program, it is designed to ourage investment from additional Canadian sources previously not attracted to investnt in northern exploration operations.

Oil and Gas Legislation.—The Canada Oil and Gas Land Regulations and the Canada and Gas Drilling and Production Regulations, issued pursuant to the Territorial Lands and the Public Lands Grants Act, regulate the disposition of oil and gas rights and ulate exploration and development in the Yukon Territory, the Northwest Territories the offshore areas of the continental shelves, but not under lands within any provinces. y subsurface rights and those beneath the sea bed are granted. When required, surface hts are negotiated separately. An exploratory permit may be granted and such permit ed on or after Jan. 1, 1968, depending on the area covered thereby, is valid for a term of ee, four or six years; a permit is renewable for one-year periods up to six times by the ief of the Resources Management Division, Resource and Economic Group, Department Indian Affairs and Northern Development, and further renewals may be granted by the hister. Leases, which are renewable if oil or gas is still able to be produced, must conm to prescribed land patterns but must not exceed 50 p.c. of the area of an exploratory mit area.

An oil and gas exploratory permit may be issued to any individual over 21 years of or to any joint-stock company incorporated or licensed to do business in Canada, or rporated in any province of Canada. Extraterritorial companies applying for permits he Northwest Territories must be registered under Part VII of the Companies Ordinance. oil and gas lease granted to a permittee will be issued to an individual unless the Minister he Department involved is satisfied that the applicant is a Canadian citizen and will be beneficial owner of any interest acquired under such lease, or to a corporation unless the hister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneally owned by persons who are Canadian citizens or that the shares of the corporation are d on a recognized Canadian stock exchange, and that Canadians will have an opportuy of participating in the financing and ownership of the corporation.

The Oil and Gas Production and Conservation Act (SC 1969, c. 48), given Royal Asse on June 27, 1969, applied to lands in the Yukon and Northwest Territories; a 1970 amen ment (SC 1969-70, c. 43) extends the provisions of the Act to oil and gas in areas beyo the Territories that do not lie within the geographical or administrative control of any the provinces. An Oil and Gas Committee of five members appointed by the Governor Council is empowered to hold enquiries, to hear appeals, and to make orders in connecti therewith.

Provincial Mining Laws and Regulations.*—In general, all Crown mineral lan lying within the boundaries of the several provinces (with the exception of those with Indian reserves, national parks and other lands which are under the jurisdiction of t Federal Government) are administered by the respective provincial governments. T exception is Quebec where all mineral lands except those granted to individuals in the tow ships prior to 1880 are administered by the province; also, mining rights on federal lands Quebec are administered by the province.

The granting of land in any province except Ontario no longer automatically carri with it mining rights upon or under such land. In Ontario, mineral rights are express reserved if they are not to be included. In Nova Scotia, no mineral rights belong to t owner of the land except those pertaining to gypsum, agricultural limestone and buildi materials, and the Lieutenant-Governor in Council may declare deposits of either limesto or building materials to be minerals. Such declaration is to be based on economic value to serve the public interest. In such case, the initial privilege of acquiring the declar minerals lies with the owner of the surface rights who must then conform with the requir ments of the Mines Act. In Newfoundland, mineral and quarry rights are express reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitob New Brunswick, Quebec and Newfoundland also included certain mineral rights. Othe wise, mining rights must be obtained separately by lease or grant from the provinci authority administering the mining laws and regulations. Mining activities may be class fied as placer, general minerals (or veined minerals and bedded minerals), fuels (co petroleum and gas) and quarrying. Provincial mining regulations under these divisio are summarized in the following paragraphs.

Placer.—In most provinces in which placer deposits occur there are regulatio defining the size of placer holdings, the terms under which they may be acquired an held, and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minera in place. With the exception of British Columbia, the most elaborate laws and regulatio apply in this division. In all provinces except Alberta and Saskatchewan, a prospector or miner's licence, valid for one year, must be obtained to search for mineral deposits, t licence being general in some areas but limited in others; a claim of promising ground of specified size may then be staked. In Manitoba and British Columbia a licence is requir only for staking and any number of dispositions may be staked under one licence. claim must be recorded within a time limit and payment of recording fees made, except i Quebec where no fees are required. Work to a specified value per annum must be perform upon the claim for a period of up to ten years except in Quebec where a development licen may be renewed on a yearly basis; also in Manitoba and Saskatchewan there is no wor commitment in the first year of the claim. There is no time limit in British Columbi but $500 assessment work, of which a survey may represent two fifths, must be perform and recorded before a lease may be obtained. In Quebec, a specified number of man-hou of work must be performed and the excess may be carried forward for renewal of licen The taxation applied most frequently is a percentage of net profits of producing mines royalties. In Saskatchewan, subsurface mineral regulations covering non-metallics stipu

* Compiled from material supplied by the provincial governments.

e the size and type of dispositions that may be made in order to maintain the disposition good standing, provide for fees, rentals and royalties, and set out generally the rights and ligations of the disposition holder.

Fuels.—In provinces where coal occurs, the size of holdings is laid down together with e conditions of work and rental under which they may be held. In Quebec, the search and development of petroleum and natural gas may be carried out under a prospecting search permit followed by a working lease; the search permit covers a period of five years d an acreage of not over 60,000 acres, whereas the lease extends over a 20-year period and acreage not over half the acreage of the permit. In Nova Scotia, mining rights to rtain minerals, including petroleum, occurring under differing conditions may be held by fferent licensees. Provision is sometimes made for royalties. Acts or regulations govern ethods of production. In the search for petroleum and natural gas, an exploration permit reservation is usually required; however, in Manitoba, Saskatchewan, Alberta and itish Columbia leases usually follow the exploration reservation whether or not any scovery of oil or gas is made. In Alberta, exploration costs are applicable in part on the st year's lease rental, in Manitoba they may be applied to the lease rental for a period up to three years and, in British Columbia and Saskatchewan, credit is given for up to months' rental, having regard to the amount of excess credit established. In other ovinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a yalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms lease or grant. In Nova Scotia, sand deposits of a quality suitable for uses other than ilding purposes and limestone deposits of metallurgical grade belong to the Crown; psum quarries belong to the owner of the property. Under the New Brunswick Quar-ble Substances Act, 1968, quarriable substances (ordinary stone, building and construc-n stone, sand, gravel, peat and peat moss) are vested in the owner of the land in or on hich they lie; the Minister with the approval of the Lieutenant-Governor in Council may signate a shore area lying outside Crown land to be subject to the Act; and no person all take or remove or cause to be taken or removed more than one half cubic yard of a arriable substance from Crown land or a designated shore area without obtaining a rmit or lease. On Quebec public lands and on those granted to individuals after Jan. 1, 66, the stone, sand and gravel, like other building materials, belong to the Crown; quarries cated on land granted to individuals prior to 1966 remain in the possession of the owners the surface; the right to exploit all building materials except sand and gravel may be quired by ordinary staking-out and the right to work sand and gravel beds is set by regula-n. In Saskatchewan, sand and gravel on the surface and all sand and gravel obtainable stripping off the overburden or other surface operation belong to the owner of the surface the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the rface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained m the provincial authorities concerned.

Section 4.—World Production of Certain Metallic Minerals and Fuels

Table 33 shows the production of certain metallic minerals and fuels in the different untries of the world for the year 1968. These figures are taken from the *United Nations atistical Yearbook 1969* which presents production figures for a much more extensive list mining and quarrying industries.

33.—World Production of Certain Metallic Minerals and Fuels, 1968

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nati Statistical Yearbook* either because there was no production or because the quantity was not available.

Section 1.—Electric Power Development

Subsection 1.—Historical and Current Trends in Power Development

Electric power development in Canada has undergone remarkable and sustaine growth since the beginning of the century. From a modest 133,000 kilowatts of generatin capacity installed at the end of 1900, Canada's installed hydro capacity rose to 27,114,00 kw. by the end of 1969 and thermal capacity to almost 12,724,000 kw.

The facing chart shows the expansion in installed generating capacity in hydro an thermal stations that has taken place since 1920. Thermal-electric power developmer in Canada was not well documented early in the century but it is apparent that its growt was slow and of relatively minor importance until the late 1940s. The rate of develo ment of hydro facilities, on the other hand, tended to accelerate after the turn of the centur when improvements in electric power transmission techniques were introduced and increa ing emphasis began to be placed on the construction of large hydro-electric stations.

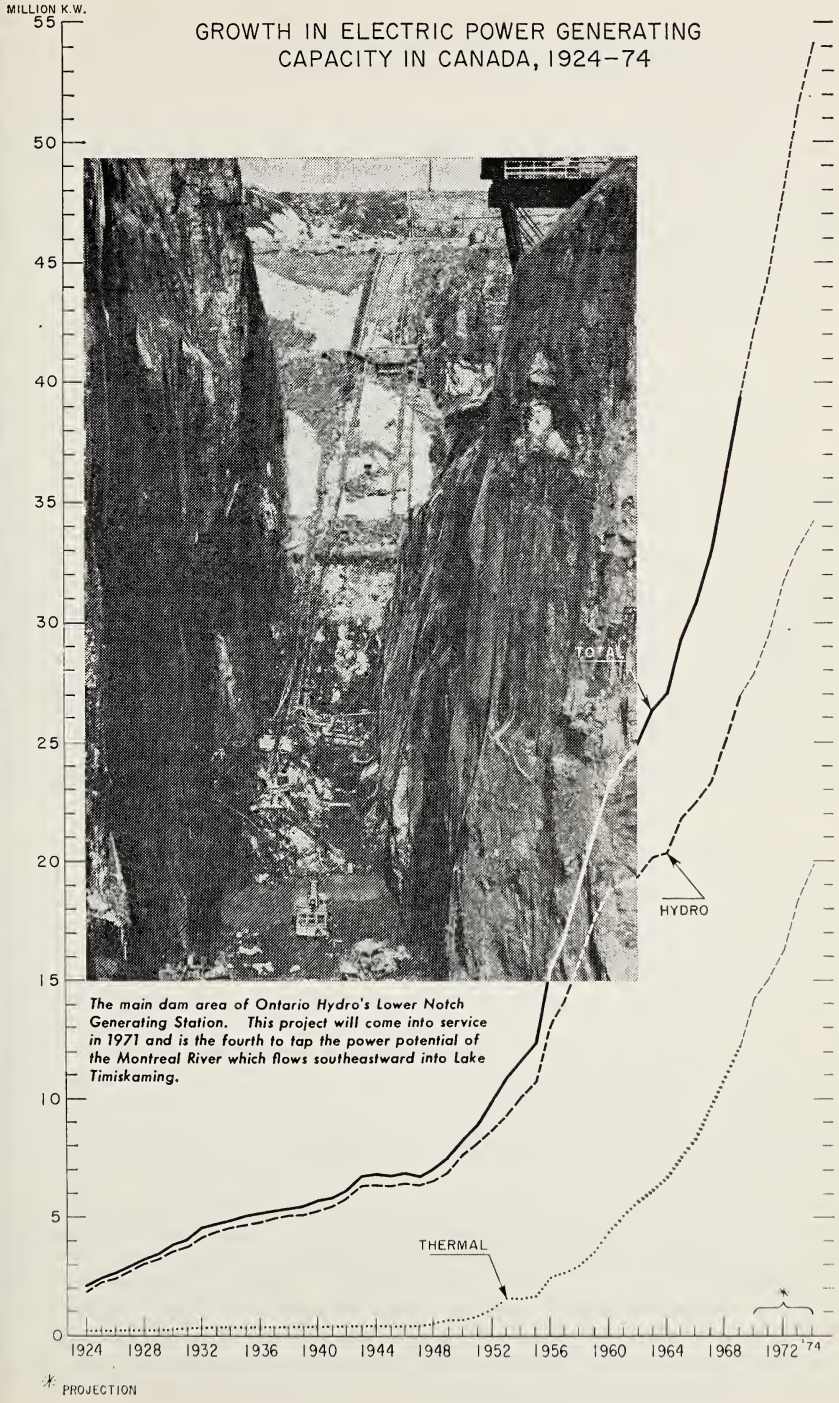
During the prosperous 1920s, demand for electricity became heavier and the rate c installation increased appreciably. Then, under the depressed conditions of the earl 1930s, power demand dropped off but did not show up immediately as a drop in the install tion rate because of the time lag inherent in hydro-electric power development. Th completion of hydro projects initiated prior to the depression period accounted for th continuation of a high rate of capacity installation up until 1935; thereafter, poor economi conditions in the 1935-39 period resulted in a reduced rate.

In the early war years, the tremendous demand for power to drive Canada's wa industries accounted for the sharp rise in installation of new generating facilities betwee 1940 and 1943, but in the later war years construction dropped off so that, from 1944 t 1947, a second flattening occurred in the growth curve. After the War, industrial ex pansion and rapidly growing residential and agricultural development placed extreme

* Sections 1 and 2 of this Chapter were prepared by the Department of Energy, Mines and Resources, Ottaw Sections 3 and 4 were revised by the Energy Statistics Section, Industry Division, Dominion Bureau of Statistic and Section 5 by the various provincial Commissions concerned.

GROWTH IN ELECTRIC POWER GENERATING CAPACITY IN CANADA, 1924–74

The main dam area of Ontario Hydro's Lower Notch Generating Station. This project will come into service in 1971 and is the fourth to tap the power potential of the Montreal River which flows southeastward into Lake Timiskaming.



heavy demands on power generating facilities. To stay abreast of these demands require the installation of new capacity at a rate higher than at any time in Canada's history These demands also led to the start of an extensive program of thermal plant constructio in the early 1950s, since they could not be satisfied from hydro sources alone. In 195(thermal generation represented 14 p.c. of installed capacity. Since then, the annual installe capacity has averaged 57 p.c. hydro-electric and the remainder in thermal generation wit the result that at the beginning of 1970 thermal generation accounted for 32 p.c. of Canada' installed capacity.

Table 1 shows the status of installed generating capacity in hydro and thermal station and the combined total for all stations as at Jan. 1, 1970.

1.—Installed Hydro- and Thermal-Electric Generating Capacity, by Province, as at Jan. 1, 1970

Province or Territory	Hydro	Thermal	Total
	kw.	kw.	kw.
Newfoundland	820,000	128,000	948,000
Prince Edward Island	—	77,000	77,000
Nova Scotia	163,000	773,000	936,000
New Brunswick	563,000	652,000	1,215,000
Quebec	12,499,000	764,000	13,263,000
Ontario	6,634,000	5,880,000	12,514,000
Manitoba	1,218,000	504,000	1,722,000
Saskatchewan	584,000	841,000	1,425,000
Alberta	616,000	1,593,000	2,209,000
British Columbia	3,956,000	1,464,000	5,420,000
Yukon Territory	26,000	17,000	43,000
Northwest Territories	35,000	31,000	66,000
Canada	**27,114,000**	**12,724,000**	**39,838,000**
Capacity as at Jan. 1, 1969	24,982,000	11,016,000	35,998,000
Percentage increase during 1969	8.5	15.5	10.7

Current Trends.—Although water power traditionally has been and still is the main source of electric energy in Canada, thermal sources some day will undoubtedly become the main supplier. The choice between development of a hydro-electric power site and construction of a thermal generating station must take into account a number of complex considerations, the most important of which are economic in nature. In the case of a hydro-electric project, the heavy capital costs involved in construction are offset by maintenance and operating costs considerably lower than those for a thermal plant. The long life of a hydro plant and the dependability and flexibility of operation in meeting varying loads are added advantages. Also important is the fact that water is a renewable resource. The thermal station, on the other hand, can be located close to the demand area, with a consequent saving in transmission costs. With the current trend to large steam stations, however, a certain amount of the flexibility of location of thermal stations is lost because such units require considerable quantities of water for cooling purposes, making it essential that they be sited close to an adequate water supply.

The marked trend to thermal development which became apparent in the 1950s can be explained in part by the fact that, by that time in many parts of Canada, most of the hydro-electric sites within economic transmission distance of load centres had been developed and planners had to turn to other sources of electric energy. More recently, however, advances in extra-high-voltage transmission techniques are providing a renewed impetus to the development of hydro power sites previously considered too remote.

Because of the relatively long starting-up time required by large thermal units, thermal stations tend to lack flexibility of operation and can be used most efficiently to meet con-

uous load conditions. Hydro stations, on the other hand, can put generating units on e with minimum delay and hence are admirably suited to supply power to meet the peak ds which may occur several times each day. By combining the advantages of both dro and thermal stations in integrated supply systems, power producers are now achieving ch greater flexibility of operation.

Thermal power generation may use fossil fuels or nuclear fuels as the sources of energy. e fossil fuels—coal, gas or oil—can be obtained economically from domestic sources in ne parts of Canada. In other regions the cost of transportation leads to the use of im- ted fossil fuels. Nuclear fuels are providing an increasingly important source of energy thermal power plants and will be especially attractive for those regions where fossil fuel ts are relatively high and where the power system permits the use of very large generat- units which show the best economic advantage for nuclear plants. The CANDU reactor tem, which is providing the heat source for Canadian nuclear plants, allows the use of ural uranium mined and processed in Canada.

Another trend in development designed to meet the problem of varying daily loads is use of pumped storage. An example is the Sir Adam Beck hydro development at agara Falls where water taken from the Niagara River above the Falls is carried by nel and power canal to penstocks which supply the main generating station on the nk of the Niagara River some distance below the Falls. In off-peak hours, power from main station is used to pump water from the power canal into a reservoir maintained a higher level; during peak-load hours, the pumps, which are dual-purpose units, operate generators and are driven by water released from the reservoir. The pumping-generating ts at this development make available an extra 176,700 kw. of generating capacity. pumping-generating station using the same general principle has been constructed on Brazeau River in Alberta as part of the 305,500-kw. Big Bend hydro development.

Perhaps the most promising application of the pumping-generating principle is its in conjunction with nuclear power stations. Nuclear units, in common with the larger ventional thermal units, can be used most efficiently under conditions of continuous ration. Off-peak nuclear power can be used to operate pump-turbine units and the dro-electric power derived from operating the units as generators is available for use ing periods of peak demand.

Subsection 2.—Utilization of Power

In 1969, Canada's generating facilities produced a total of 190,093,000,000 kilowatt- rs of electric energy, after allowing for the energy used in the power stations themselves. this total, 77.8 p.c. was produced in hydro-electric stations and the remainder in thermal tions. Electric energy exported to the United States exceeded imports by 1,364,000,000 h. during 1969, so that the total energy made available in Canada amounted to ,908,000,000 kwh.

Industry uses approximately 55 p.c. of the total electric energy made available in nada; residential and farm use accounts for 21 p.c. and commercial use 15 p.c. The naining 9 p.c. is listed under "losses and unaccounted for". Because many power producers not distinguish in their records between residential and farm customers, the amount of rgy used is combined. Energy used for street lighting represents less than 1 p.c. of total energy made available and is included in the "commercial category".

About 20 p.c. of the total energy made available is used in the mineral industry, uding smelting and refining, 16 p.c. by the pulp and paper industry and 19 p.c. by other ustries. Of the latter, the chemical industry and the primary iron and steel industry ether consume almost one half. Approximately 75 p.c. of the energy consumed by mineral industry is used in the smelting and refining of metals.

The incidence of large water power resources in those regions in which the more portant mineral deposits have been found has greatly facilitated mining development. cent examples are the nickel mining and refining complex at Thompson, Man., which

uses hydro-electric power generated in the Kelsey plant on the Nelson River, and the ir ore mining operations in Labrador, supplied by the Twin Falls plant on the Unknov River. Metal mining, a very important division of the Canadian mining industry, carried on mainly in two physiographic regions, the Western Cordillera and the Canadi Shield. In the Western Cordillera, the mountainous topography and the relatively hi amounts of precipitation favour the development of water power. In the Canadi Shield, which is a Precambrian formation stretching in a wide sweep around Hudson B from the Mackenzie River basin to the eastern tip of Labrador, heavy glaciation in rece geological times has formed river systems which are comparatively young and are cha acterized by large numbers of lakes connected by short river sections with numerous rapi and falls suitable for the development of hydro-electric power.

Canada has no known deposits of bauxite but the availability of low-cost hydr electric power has fostered the establishment of a large aluminum industry that produc one eighth of the world's supply of this metal, most of which is exported from Canad Further evidence of the value of water power to mining operations is provided by the fa that Canada's asbestos industry, which produces about 35 p.c. of the world's supply asbestos fibre, obtains the major part of its power supply from hydro-electric sources.

Canada's pulp and paper industry is one of the world's great industrial enterpris Total mill capacity for the production of newsprint paper is considerably greater than th of any other country in the world, and in total production of wood pulp Canada is secor only to the United States. The fact that about 90 p.c. of the manufactured newsprint exported gives some indication of the importance of the industry to the Canadian econom By far the larger portion of the energy used in the pulp and paper industry is derived fro water power.

Subsection 3.—Water Power Resources, Undeveloped and Developed

Table 2 presents a summary of developed water power in Canada and an estimate undeveloped water power potential, based on records maintained by the Inland Wate Branch of the Department of Energy, Mines and Resources. Estimates of available pow are shown for undeveloped sites only; for developed sites, the total generating capaci actually installed is indicated. It should be noted that the capacity installed at an existin hydro-electric development is frequently in excess of the continuous power available the site. The relationship between installation and available power is explained on p. 74

2.—Water Power Resources, by Province, as at Jan. 1, 1969

Province or Territory	Undeveloped Water Power			Developed Water Power
	Available Continuous Power at 88 p.c. Efficiency			Installed Generating Capacity
	at Q95[1]	at Q50[2]	at Qm[3]

Canada	**20,232,000**	**63,753,000**	**88,139,000**	**24,982,000**

[1] Power equivalent of flow available 95 p.c. of the time. [2] Power equivalent of flow available 50 p.c. the time. [3] Power equivalent of arithmetical mean flow.

Undeveloped Water Power Resources.—Table 2 gives estimates of undeveloped wer based on different rates of flow: the first column indicates continuous power ordin- ly available during periods of low discharge under existing conditions of river flow sed on Q95, which is the natural or modified flow available 95 p.c. of the time; the second umn shows dependable maximum power based on Q50, which is the natural or modified w available for at least 50 p.c. of the time; and the third column shows dependable ximum power based on Qm, the arithmetical mean flow. On rivers for which flow ords are sparse or non-existent, estimates of flow are made from available information ating to run-off in the same general area. The hydraulic head used in calculating un- veloped water power is based on the actual drop or the feasible concentration of head ich has been measured or carefully estimated. Preliminary figures for Quebec supplied the provincial Department of Natural Resources, however, reflect the net river power tential which would result from development of the entire head available on Quebec ers whose drainage areas exceed 3,000 sq. miles.

It should be emphasized that the figures of continuous power at Q95 represent only e minimum water power possibilities in Canada because estimates are based upon existing er flow and, for the most part, do not reflect the benefits of streamflow regulation that uld result from the development of storage potential. Partial regulation is required in st instances to obtain the continuous power available at Q50. On the other hand, the thmetical mean flow figures represent the power that would be obtainable if the entire w in the river could be regulated to provide a continuous flow of constant magnitude. can readily be seen that, because the latter condition assumes complete regulation, imates of potential based upon arithmetical mean flow will, if other pertinent factors e neglected, exceed the amount of capacity that might be expected to be installed at the e, particularly where little or no storage is available. However, recent experience in e development of water power sites has indicated that, in fact, the generating capacities stalled at many sites are very considerably in excess of what might be dictated by even e arithmetical mean flow. Several major river-diversion possibilities exist, particularly British Columbia. For this reason, the estimates of potential of British Columbia's developed hydro resources have recently been boosted substantially, mainly because of e inclusion of figures based upon the diversion of rivers which, if they are developed at , will almost certainly be developed on a combined-river basis.

Developed Water Power Resources.—The figures of installed generating capacity ven in Table 2 are based on the manufacturer's rating in kilowatts as shown on the gen- ator name-plate, or derived from the rating where it is indicated in kilovolt-amperes. ne maximum economic installation at a power site can be determined only by careful nsideration of all the conditions and circumstances pertinent to its individual develop- ent. It is usual practice, however, to install units having a combined capacity in excess the available continuous power at Q50, and frequently in excess of the power available Qm. There are a number of reasons for this. The excess capacity may be installed r use at peak-load periods, to take advantage of periods of high flow, or to facilitate ant or system maintenance. In some instances, storage dams have been built subsequent initial development to smooth out fluctuations in river flows. In other cases, deficiencies power output during periods of low flow have been offset by auxiliary power supplied m thermal plants, or by interconnection with other plants which operate under different ad conditions or are located on rivers with different flow characteristics.

Thus, the extent to which the installed capacity exceeds the available continuous wer at the various rates of flow is dependent upon the factors that govern the system of ant operation, and varies widely in different areas of the country. In some develop- ents, the difference may amount to several hundred per cent. For this reason, dis- etion should be used in comparing the figures in the last column with those in the pre- ding columns, as available continuous power and installed capacity are not directly

comparable. As a rough guide, however, it may be assumed that the power equivale of the flow at Q50 represents an approximate, if conservative, estimate of hydro generati capacity remaining to be installed in Canada.

Provincial and Territorial Distribution.—The provincial and territorial distrib tion of undeveloped water power resources and installed generating capacity, given Table 2, reveals that substantial amounts of water power have been developed in provinces except Prince Edward Island, where water power resources are meagre. natural resource development proceeds, the fortunate incidence of water power in proximi to mineral, forest and other resources becomes increasingly apparent. There is litt doubt that the existence of large amounts of potential hydro power on northern rivers w prove to be a factor of prime importance in the eventual realization of the natural weal of Canada's North.

The water power resources of *Newfoundland*, determined on the basis of the limite available streamflow data, are estimated to be of very considerable magnitude. On t Island, although the length of the rivers is generally not great, topography and run- are favourable for hydro-electric power development. Of the substantial capacity i stalled, a very large portion serves the pulp and paper industry. In Labrador, the Church River and its tributaries, now under development, constitute one of the largest potenti sources of water power in Canada.

In *Prince Edward Island* there are no large streams and water power plants are limite in size to those used to operate small mills. The water power resources of *Nova Scotia* a *New Brunswick*, although small in comparison with those of other provinces, are a valuab source of energy and make a substantial contribution to the economies of the two province Numerous rivers in both provinces provide moderate-sized power sites either withi economic transmission distance of the principal cities and towns or advantageously situate for use in development of the timber and mineral resources. These provinces are al favoured with abundant indigenous coal supplies.

Quebec is the richest of all the provinces in water power resources, possessing mo than 40 p.c. of the total recorded for Canada. Quebec also leads in developed water powe its installation of 12,499,000 kw. in 1970 representing about 46 p.c. of the national tota Notable developments are the Quebec Hydro-Electric Commission's 1,574,260-kw. Bea harnois development on the St. Lawrence River, the Commission's 1,015,200-kw. Manic development on the Manicouagan River, and its Bersimis I development on the Bersim River having an installed capacity of 912,000 kw.; the Aluminum Company of Cana Limited owns the 742,500-kw. Chute des Passes plant on the Peribonca River. Th Manic 2 development is part of a major power project which represents a significa advance in the development of Quebec's hydro-electric resources. This project, involvin the harnessing of the headwaters of the Manicouagan and Outardes Rivers, will permit th eventual installation of some 5,540,000 kw. on the two rivers; a total installation of 2,942,00 kw. was in service at the beginning of 1970. Power production in the province is facilitate by the regulation of streamflow by the provincial Department of Natural Resources throug the storage dams which it owns and operates. Some of the responsibility for regulatio rests with the Quebec Hydro-Electric Commission.

Almost all of the sizable water power potential in *Ontario* within easy reach of deman centres has been developed and planners are looking to the more remote sites as ne sources of supply. Improvements in long-distance transmission techniques have brough many of these sites within the economic orbit of demand centres. Several sites are bein developed and a number of others are under investigation. Most of the hydro-electri power produced in the province comes from the generators of The Hydro-Electric Powe Commission of Ontario, Canada's largest power producing and distributing organizatio Ontario's largest hydro-electric generating station is located on the Niagara River a Queenston, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2 and th associated pumping-generating station have a combined generating capacity of 1,804,200 kw

n addition to the power generated in its own plants, the Commission purchased electric ower generated outside the province to the extent of 6 p.c. of its total requirements in 1969.

Of the three Prairie Provinces, *Manitoba*, with immense hydro-electric capabilities on he Winnipeg, Churchill, Nelson and Saskatchewan Rivers, is the most generously endowed ith water power resources. Until recently, hydro-electric generating stations on the Vinnipeg River supplied most of the power requirements of southern Manitoba. Manitoba Hydro's high-voltage, long-distance transmission lines, however, will carry ever-increasing mounts of power south from hydro-electric stations on northern rivers to help meet the rovince's constantly growing power demands. Of particular interest is the initial develop- ient of the Nelson River System. The Kettle Rapids site is being developed toward an ltimate capacity of 1,219,200 kw. and power will be transmitted over a 556-mile high- oltage direct current transmission system at ±450 kilovolts to a receiving station near Vinnipeg. Large water power resources exist in the central and northern parts of *askatchewan*, principally on the Churchill, Fond du Lac, and Saskatchewan Rivers. Power rom Squaw Rapids on the Saskatchewan River is fed into the transmission network of the rovincially owned Saskatchewan Power Corporation, which serves the more settled areas f the province. Before the completion of this development in 1963, these areas had been erved by electric power from thermal plants fuelled by coal, oil or natural gas, the hydro- lectric power generated in the province being used almost exclusively for mining purposes n northern areas. In *Alberta*, most of the principal hydro-electric developments are located n the Bow River and its tributaries and, from these developments, Calgary Power Ltd. erves most of the southern part of the province. The Big Bend hydro-electric development n the Brazeau River in the headwaters of the North Saskatchewan River, completed in 967, augmented the energy from the Bow River plants and another development on that iver at Bighorn will add 108,000 kw. in 1972. Substantial water power resources are ocated in the northern regions and, although these are somewhat remote from present entres of population, the advent of extra-high-voltage transmission has enhanced the rospect of their development.

British Columbia has many mountain streams that offer abundant opportunity for he development of hydro-electric power. In terms of recorded available water power esources, developed and undeveloped, the province ranks second in Canada and is exceeded nly by Quebec and Ontario in the amount of generating capacity installed. Notable for he magnitude of their power potential are such rivers as the Columbia, the Fraser, the eace and the Stikine. Until recently, however, hydro-electric developments on smaller ivers in the southern areas have satisfied the major load requirements of the province but n 1968 the immense power resources of the Peace River began to supplement the energy upply. Development of the hydro potential of the Canadian portion of the Columbia iver is being planned, utilizing the water stored behind three huge storage reservoirs, wo of which have been completed. The foremost producer and distributor of electric ower in British Columbia is the provincially owned British Columbia Hydro and Power uthority.

Power from present developments in the *Yukon Territory* and the *Northwest Territories* used largely to satisfy the needs of local mines and adjacent settlements. To date, ossil fuel resources have not provided any significant contribution to electric power supply. he Northern Canada Power Commission is authorized to construct and manage public tility plants in both Territories. In the Yukon Territory, most of the resources are located n the Yukon River and its tributaries, and these represent some of the largest undeveloped ydro-electric resources in North America. In addition to developments within the Upper ukon River basin, there are attractive development opportunities being explored which nvolve the diversion of some of the headwaters of the Yukon River through the Coast Mountains to tidewater. Other hydro-electric resources in the Territories have been eviewed to establish an inventory of available developments which include, in addition to tes on the Yukon River tributaries, potential developments on the Lockhart and Copper- ine Rivers. The South Nahanni River also has a significant development potential.

Subsection 4.—Thermal Power Generation

The incidence of immense water power resources in Canada and the brisk pace of the development has tended to overshadow the very considerable contribution being made b thermal energy in the nation's power economy. At the end of 1969, the total installe thermal capacity in Canada was 12,724,000 kw., about 32 p.c. of the total electric generatin capacity in the country. The fact that energy produced in thermal plants during the yea accounted for only 22 p.c. of the total may be attributed in part to the fact that a considerabl amount of the capacity installed is operated for peak-load duty, with hydro-electric capacit providing base load generation. This pattern will change with the introduction of additiona nuclear-fuelled thermal generation plants which can be operated economically at hig capacity factors for base load purposes.

Conventional Thermal Power.—Over 90 p.c. of all thermal power generatin equipment in Canada is driven by steam turbines. The magnitude of the loads bein carried by steam plants has led to the installation of steam units with capacities as high a 500,000 kw. The remainder of the load is carried by gas turbine and internal combustio equipment. The flexibility of internal combustion engines makes this type of equipmen particularly suitable for meeting power loads in smaller centres, especially in the mor isolated areas.

Table 1, p. 742, shows that thermal generation is predominant in Prince Edwar Island and Nova Scotia, and also that in Alberta, Saskatchewan and New Brunswick mor than half of the installed capacity is thermal. Ontario still had more hydro than therma capacity at the beginning of 1970 but this situation will be reversed by the end of the yea and thereafter thermal generation will be predominant in that province.

Thermal capacity in Newfoundland has, to date, consisted of smaller internal combus tion stations serving more isolated communities together with a few medium-sized ga turbine and steam turbine units in larger centres. Construction of the province's firs thermal station at Holyrood is to be completed in 1970; its two 150,000-kw. steam unit will be fuelled by residual oil from a nearby refinery. Although coal is still the mos important fossil fuel for thermal plants in Nova Scotia, oil is rapidly becoming the preferre choice for thermal power generation in all of the Atlantic Provinces.

The abundance of Quebec's water power wealth, much of it within economic trans mission distance of existing demand areas, has so far limited the application of therma power to specific local use. However, the growing emphasis on thermal power in othe parts of Canada is also beginning to be apparent in Quebec, where thermal capacity wil serve not only to help guarantee an adequate power supply in the face of increasingly heavy demands but also to render the almost exclusively hydro-electric base more flexibl through integrated operation. Quebec's largest thermal plant, the Tracy Station nea Sorel, has an installed capacity of 600,000 kw.

Ontario has more thermal capacity than any other province in Canada; capacity installe at the beginning of 1970 was 5,880,000 kw., which was about 46 p.c. of the national total Ontario Hydro's Lakeview station at Toronto is Canada's largest thermal generating station, having an installed capacity of 2,430,000 kw. The Lambton station near Sarnia will reac its designed capacity of 2,000,000 kw. in 1970. Two more thermal stations are planned with final capacities of 4,000,000 kw. (at Nanticoke near Port Dover) and 2,295,000 kw. (at Lennox, west of Kingston). With the exception of Lennox which will use oil fuel, Ontario's fossil-fuelled thermal power plants are designed to be coal-fired.

Manitoba supplements its predominantly hydro-based power supply with a substantial amount of thermal capacity but current emphasis is on development of water power re sources. Saskatchewan, until recently, relied on thermal capacity to satisfy the needs of the more settled areas and hydro-electric power generated in the province was used almost exclusively for mining purposes in the northern areas. In the past few years, however, development of storage on the Saskatchewan River has made hydro-electric power

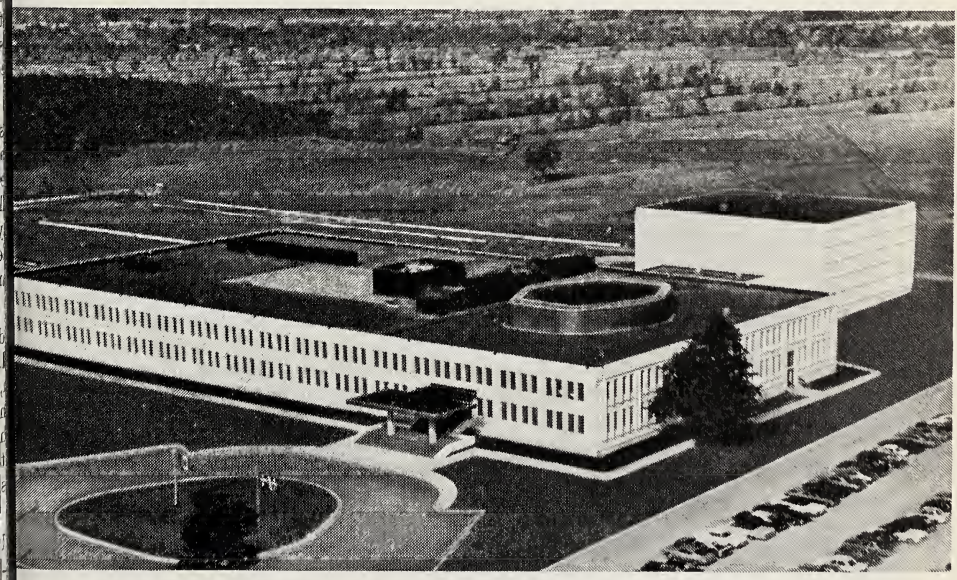
om Squaw Rapids and Coteau Creek available in the southern part of the province. hermal generation will provide the next stage of expansion with extensions under way at oundary Dam (Estevan) and Queen Elizabeth (Saskatoon) stations. The incidence of ast fuel resources accounts for the emphasis on thermal power generation in Alberta; the rovince's largest thermal plants are the 405,000-kw. gas turbine and steam station at dmonton and the 582,000-kw. Wabamun steam station. Planned expansion includes a 0,000-kw. unit at Sundance (near Wabamun) and two 165,000-kw. units at Clover Bar ear Edmonton).

About two thirds of British Columbia's thermal generating capacity is installed in ree plants located in the Vancouver area. The capacity of the largest of these plants, e Burrard generating station, is 750,000 kw.

Until 1965, most of the power requirements of the Northwest Territories were satisfied om thermal sources but the commissioning of the Twin Gorges hydro station on the altson River in that year altered the balance in favour of hydro. In Yukon Territory, ydro is the larger contributor. Virtually all of the thermal-electric energy in the Territories generated by small diesel units.

Nuclear Thermal Power.—Commercial electric power generated from the heat of uclear reaction became a reality in Canada in 1962 when the 20,000-kw. (electricity) Nuclear ower Demonstration station at Rolphton, Ont., fed power for the first time into a stribution system in Ontario. The NPD station is the forerunner in a series of large uclear stations that will shoulder more and more of Canada's rapidly growing power loads.

Research into reactor design and the application of nuclear energy in the electric ower field are among the more important responsibilities of Atomic Energy of Canada



Gentilly nuclear station, located on the south bank of the St. Lawrence River mid-way between Montreal and Quebec City, is scheduled to begin generating electricity in 1971. It is owned by Atomic Energy of Canada Limited, the Canadian Government nuclear agency, and will be operated, and eventually purchased, by Hydro-Quebec.

Limited, a Crown company incorporated in 1952 (see also pp. 480-487). AECL l concentrated its efforts on the development of the CANDU reactor, which uses natu uranium as a fuel and heavy water as the moderator. By using heavy water as the mode tor, a high energy yield can be obtained from natural uranium and, since natural urani is a low-cost nuclear fuel, the cost of fuel is a minor component in the cost of produci power. Natural uranium has the added attraction of being available in commerc quantities in Canada.

The NPD station has been used extensively to demonstrate the ability of the syst to operate at a high capacity factor and to determine the nature and predictability outages. Fuel changes while the system is in operation have become routine and a co siderable amount of research into the sources of heavy water losses has been carried o As a result of this research, losses have been cut down and the NPD station is demonstrati that a very acceptable heavy water loss rate is attainable. The station was modified 1968 to a boiling heavy water mode of operation to provide additional demonstrati capabilities.

At Douglas Point on the shore of Lake Huron, the country's first full-scale nucl power station went into commercial production in 1967. The station, built with t co-operation of Ontario Hydro, houses a 200,000-kwe. CANDU reactor. Experience gai in the design and operation of this reactor has encouraged the development of even lar units and construction of the four-unit, 2,160,000-kwe. Pickering nuclear station is under w near Toronto, with in-service dates for the units scheduled for 1971 to 1974. Constructi of the Bruce nuclear station for Ontario Hydro is under way with four 800,000-kwe. un planned for installation during 1975 to 1978.

A further step in the development of the CANDU reactor is the use of boiling lig water instead of pressurized heavy water as the coolant. Quebec's Gentilly nuclear stati being constructed near Trois-Rivières will utilize boiling light water in its CANDU reacto This station is scheduled for service in 1971 with 250,000 kwe. of nuclear-electric capaci

Subsection 5.—Electric Power Transmission

The nature of the loads handled by the small, widely scattered generating systems the early days of the electric power industry in Canada did not warrant the expense interconnecting power systems. However, as the demand for dependable electric pow increased and improved techniques reduced power transmission costs, the benefits integrating power systems to achieve reliability of service and flexibility of operation we re-appraised. Today, most of Canada's generating stations are components of lar integrated and often interconnected power systems operated by power utilities and co panies in the various provinces.

Constant research in the field of power transmission has developed techniques th enable power producers to utilize hydro-electric sites previously considered beyond econom transmission distances. Most noticeable, perhaps, is the progressive stepping-up of tra mission-line voltages. In Canada, there are a number of transmission lines designed f operation at 500,000 volts and 735,000 volts. A 574-mile, 500,000-volt line is in servi to carry power from the Peace River to the lower mainland of British Columbia. Ontario, a 435-mile, 500,000-volt line carries power from hydro-electric plants in the Jam Bay watershed to Toronto. In 1965, Hydro Quebec achieved world leadership when pow was carried for the first time at 735,000 volts over the 375-mile transmission line betwe Quebec's Manicouagan-Outardes hydro complex and the cities of Quebec and Montreal.

Most power is transmitted with alternating current but three applications of hig voltage direct current (HVDC) have been found in Canada. In service in British Columb is a 260,000-volt HVDC link from the mainland to Vancouver Island. It has a capacity 312,000 kw. and includes 21 miles of undersea cable; it is a monopolar system using t ground as the return path for current. A second HVDC system is expected to be placed service in 1971 over two 555-mile lines from the Kettle generation station on the Nels

er to Winnipeg. The initial capacity is 810,000 kw. and the planned ultimate rating is 00,000 kw. Another application is designed to provide a non-synchronous tie between systems of New Brunswick and Quebec; this is a 320,000-kw. back-to-back HVDC tem located at Eel River, N.B., which will be placed in service in 1972 and will employ d state thyristor valves in place of the mercury arc valves used for the earlier HVDC tems.

Interconnections of from 66,000 to 230,000 volts exist between British Columbia and erta; Saskatchewan, Manitoba, Ontario and portions of the Quebec system are interected and, through the Ontario Hydro system, are linked with the northeastern ted States systems; and Quebec, New Brunswick and Nova Scotia systems are interected. British Columbia has an international tie with the Pacific northwest (500,000 s) and links with the United States are planned for Manitoba (230,000 volts) and ween the New Brunswick and Maine systems (345,000 volts).

The search for economies in transmission systems has led to changes not only in materials d but also in tower erection and cable-stringing methods. Guyed V-shaped and Y-shaped nsmission towers are being used increasingly in place of self-supporting towers where terrain is suitable, and erection costs are being reduced by the use of helicopters to nsport tower sections to the site for tower assembly. The use of helicopters for spraying rush control on the right-of-way and for line inspection and maintenance is widespread.

ction 2.—Progress in Construction of Generating Facilities, 1969

Additions to electrical generating capacity in 1969 of 3,840,000 kw. raised the total alled capacity in Canada to 39,838,000 kw., an increase of 10.7 p.c. over 1968. This a record year for generation addition, exceeding by 29 p.c. the 1968 figure of 2,968,000 Of the 1969 additions, hydro-electric capacity accounted for 55 p.c., or 2,132,000 kw., thermal generation for the remaining 1,708,000 kw., so that at the end of the year total alled capacity was 68 p.c. hydro electric and 32 p.c. thermal.

The trend to larger unit sizes is indicated by the fact that units of 150,000 kw. or greater ounted for 85 p.c. of the hydro-electric capacity increase in 1969 and for 83 p.c. of the rmal-electric plant additions.

Newfoundland.—Load growth in the Island of Newfoundland will be met by the ition of 153,000 kw. in two units to the Baie d'Espoir hydro plant in 1970 and the first wo 150,000-kw. oil-fired thermal units at Holyrood; the second Holyrood addition is eduled for 1971. In 1969, transmission capacity was increased by the addition of 55 miles 30-kv. line.

In Labrador, the tremendous development at Churchill Falls continued on schedule. t power is planned for 1971 and commercial delivery to Hydro Quebec over the 735-kv. nsmission system for May 1972. A total of 5,225,000 kw. in 11 hydro generator units is eduled to be placed in service by 1976. Studies are under way to determine the feasiy of further generation developments at sites on the river below Churchill Falls.

Prince Edward Island.—No major changes were made in Prince Edward Island in 9. An additional 20,000 kw. of thermal capacity is scheduled for 1971.

Nova Scotia.—Thermal capacity totalling 230,000 kw. was added in 1969 by the va Scotia Power Commission, consisting of a 150,000-kw. extension at Trenton and an 00-kw. unit at Point Tupper; the latter will also supply steam to the nearby Canadian eral Electric heavy water plant. Nova Scotia Light and Power will add a 105,000-kw. to Tufts Cove in 1971.

Transmission expansion in 1969 included 88 miles at 138 kv. An additional 132 miles lanned at this voltage, some of which will be suitable for up-rating to 230 kv.

New Brunswick.—The 100,000-kw. thermal generating unit at Dalhousie was principal addition to plant capacity in 1969 in New Brunswick. Consideration is be given to additions to the Mactaquac hydro station and to extensions of thermal generat capacity.

Transmission expansion planning was very active in 1969. A 320,000-kw. back-to-b direct-current converter terminal was committed for Eel River to provide an interconnect with Hydro Quebec. The equipment will use solid state thyristors and is the first to inv converter valve equipment manufactured in Canada for a high-voltage DC system. interconnection will facilitate the purchase from Quebec of a portion of Churchill F energy, surplus to Quebec's needs, in the period 1972-76 and subsequently allow for econo interchange to the benefit of both provinces.

An agreement was reached with a group of New England utilities for an interconnect which will permit New Brunswick to sell peaking power at advantageous terms. A 345- transmission circuit is planned for this purpose and application has been made to National Energy Board for an export permit.

Quebec.—Major additions in 1969 amounting to 1,388,000 kw. to the Manicouag Outardes development at Outardes 3 and 4, completed nearly 50 p.c. of the total plan generating capacity in this region. By 1972, when an additional 1,322,000 kw. at Mani will be in operation, 70 p.c. of the final 5,540,000 kw. will have been completed. The m recently committed development of 1,176,000 kw. at Manic 3 is scheduled for operatio 1976. Much of Quebec's load growth in the period 1972-76 will be met from the Churc Falls development under a long-term contract with Brinco. The nuclear plant at Gent will add 250,000 kwe. to the capability of the province in 1971.

Ontario.—The placing in service of the first two 500,000-kw. units at Lambton ther station gave that station the distinction of having the largest unit size in Canada; it is third largest thermal station in Canada after Lakeview and R. L. Hearn. By the e of 1970, the Lambton capacity will be doubled, making it second only to Lakeview. H ever, this is somewhat overshadowed by the announcement of future plans for thermal pl expansion in Ontario, which include four 800,000-kw. units at the Bruce nuclear stati four 500,000-kw. nuclear oil-fired units at Lennox near Kingston, and four additional c fired units at Nanticoke. These additions, when added to previously committed expansi of four 500,000-kw. units at Nanticoke and four 540,000-kwe. units at the Pickering nucl station, will provide total expansion plans after 1970 of 11,745,000 kw. in fossil- a nuclear-fuelled capacity. Modest hydro expansion continues with somewhat over 200,(kw. added in 1969 and scheduled for each of the years 1970 and 1971.

Transmission expansion in 1969 related primarily to the completion and strengthen of the 230-kv. interconnection between the eastern and western regions of the provin a total of 610 circuit miles of 230-kv. line was added.

Manitoba.—In 1969, a 105,000-kw. thermal unit was added at Brandon and t 12,000-kw. gas turbines were installed at the Selkirk station, increasing the provinc thermal capability by 129,000 kw. A sixth 33,000-kw. generator unit at Kelsey on Nelson River raised the capacity of this northern Manitoba hydro station to 202,500 k The AC transmission system was extended by 126 miles at 115 kv. and 106 miles at 66 Planned expansion includes 140 miles at 138 kv. and 165 miles at 230 kv.

Major expansion plans centre on the Nelson River development, the first units of Kettle plant being scheduled for 1971. Construction of the related 1,112 circuit miles ±450-kv. high-voltage direct-current transmission is scheduled for completion in Aug 1971; the associated converter terminal equipment will provide 810,000 kw. of transmiss capacity for the initial service date. Some uncertainty exists in connection with the lo term development of the Nelson River pending re-examination of various aspects of wa diversion and storage pertaining to the Churchill River, Southern Indian Lake and La Winnipeg.

Saskatchewan.—In 1969 the first of three 150,000-kw. coal-fired thermal units ned for Boundary Dam was completed. The transmission system was reinforced by addition of a 115-mile 230-kv. circuit and plans are under way to add 120 miles of kv. line and upgrade 115 miles of existing 138-kv. circuit to operation at 230 kv.

Alberta.—The major addition during 1969 was a 150,000-kw. thermal unit at the tle River plant of Canadian Utilities Limited. Plans include a 165,000-kw. unit in 1970 monton Power) and a second 300,000-kw. unit in 1971 at Sundance (Calgary Power). next significant hydro-electric addition will be two 54,000-kw. units at Bighorn on the th Saskatchewan River (Calgary Power), scheduled for 1972. Transmission additions he province in 1969 included 168 circuit miles at 144 kv.

British Columbia.—Two additional units rated at 227,000 kw. each were placed in rice in the Gordon M. Shrum station on the Peace River and 781 miles of transmission were added to the related 500-kv. AC transmission system. Construction of the Mica n under the Columbia River Treaty continued. Downstream power benefits were eived during the year as a result of the early completion of the Hugh Keenleyside row Lakes) Dam in October 1968. The completion of 21 miles of undersea cable circuit 26 miles of associated overhead line and the doubling of both voltage and current rating 260 kv. and 1,200 amps., respectively, raised the transmission capacity of the DC trans- sion system to Vancouver Island from 78,000 kw. to 312,000 kw.; this is a monopolar tem with ground return path.

Yukon Territory.—The first 138-kv. transmission line in the Yukon, a 250-mile gle-circuit woodpole line, was placed in service in 1969 to supply power from Whitehorse he Anvil Mining Corporation at Faro. An 8,000-kw. hydro-electric unit was added to Whitehorse plant to meet, in part, this additional mining load.

Northwest Territories.—Most generating plant changes in the Northwest Territories 969 involved re-allocation of diesel units to suit local needs. Substantial additions will e place in 1970 to a number of generating stations when over 20,000 kw. in diesel plant acity is to be added to the existing system total of 66,000 kw. installed.

ection 3.—Power Generating Capability and Load Requirements

Power generating *capability*, as covered in this Section, is the measurement of the ilable generating resources of all hydro and thermal facilities at the time of the one-hour n peak load for each reporting company, and is not equal to the *capacity* of such generat- facilities. For example, a hydro plant may have a capacity of 100,000 kw. but if, at the e of peak load, the water available for generation is only 80 p.c. of the plant capacity uirements, then its capability is 80,000 kw.

Total generating capability has grown at a rapid rate especially in the last few decades. e annual rate of increase was 6.4 p.c. in the ten-year period 1959-69 and 7.8 p.c. in the r-year period 1965-69. In comparison, the forecast rate of growth for the years 1969-74 .5 p.c.; thermal generating capability is expected to grow at an average rate of 11.9 p.c. ear in the forecast period compared with 13.9 p.c. in the period 1959-69, and hydro- ctric capability is expected to increase at 5.3 p.c. a year compared with 4.3 p.c. in the 59-69 period. This rate of growth in hydro generating capability in the forecast period attributable to the large power projects under construction in relatively remote areas t will be completed within the next few years.

Among the provinces, Quebec has the largest generating capability, followed by On- io, British Columbia and Alberta. Quebec also has the largest hydro-electric generating pability, followed by Ontario and British Columbia, but Ontario has the largest thermal pability followed by Alberta and British Columbia. The first full-scale nuclear power tion went into commercial operation in Ontario early in 1967.

The largest absolute growth in generating capability for the forecast years is indicat for Ontario at 6,377,000 kw., followed by Newfoundland at 3,680,000 kw.; Quebec 1,716,000 kw. and British Columbia at 1,633,000 kw. Ontario will meet most of its increas generating capability by adding 5,927,000 kw. in thermal capability and 450,000 kw. hydro capability, the former including 2,000,000 kw. nuclear. Newfoundland will a 3,373,000 kw. hydro and 307,000 kw. thermal and Quebec 1,486,000 kw. hydro a 230,000 kw. thermal.

Firm power peak load is the measure of the maximum average net kilowatt dema of one-hour duration from all loads, including commercial, residential, farm and industri consumers as well as the line losses. Such load demand increased at the rate of 7.0 p. a year from 1959 to 1969 and 7.3 p.c. a year from 1964 to 1969; peak-load demand is fo cast to increase at the average rate of 7.1 p.c. a year in the period 1969-74. As a resu of the rapid increase in generating capability and the somewhat slower but steady increa in the peak loads, together with the slight reduction in deliveries of firm power to the Unit States, the indicated reserve on net generating capability in the 1959-69 period increas each year except 1961, 1963, 1964 and 1966. The forecast is for increases from 1969 1974 with the exception of 1970. The reserve ratio as a percentage of firm power pe load reached a high of 28.2 p.c. in 1960 and fell to 11.6 p.c. in 1966 but is expected to increa to 18.8 p.c. in 1974.

3.—Net Generating Capability, by Province, 1969

(Thousand kilowatts)

Province or Territory	Type of Generating Facility				Total
	Hydro-Electric	Thermal-Electric			
		Steam[1]	Internal Combustion	Gas Turbine	
Newfoundland	810	30	23	29	89

[1] Includes 208,000 kw. of nuclear capability in Ontario.

Section 4.—Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electric utilities and all industrial establishments that generate energy regardless of whether not any is sold and therefore show the total production and distribution of electric energ in Canada. Utilities are defined as companies, commissions, municipalities or individua whose primary function is to sell most of the electric energy that they have either generate or purchased. Industrial establishments are defined as companies or individuals tha generate electricity mainly for use in their own plants.

(Thousand kilowatts)

The current series of electric power statistics dates back to 1956. Earlier report entitled *Central Electric Stations*, were concerned solely with the electrical utility industr and hence excluded statistics relating to power produced by industrial establishments f their own use, although power sold by such establishments was included. The late figures available at time of printing (February 1971) for Tables **6-10** were for 1968.

5.—Electric Energy Generated, by Type of Station, 1960-69, and by Province 1968 and 19

Year and Province or Territory	Generated by—		Total	Year and Province or Territory	Generated by—		Total
	Water Power	Thermal Power			Water Power	Thermal Power	
	'000 kwh.	'000 kwh.	'000 kwh.		'000 kwh.	'000 kwh.	'000 kwh.

Of the total generation in 1969 of 190,093,000,000 kwh., 77.8 p.c. was produced fron water power and 22.2 p.c. was generated thermally; the proportions differed markedl among provinces as shown in the following statement.

Province	*Hydro*	*Thermal*
	p.c.	p.c.
Newfoundland	96.6	3.4
Prince Edward Island	—	100.0
Nova Scotia	20.4	79.6
New Brunswick	53.9	46.1
Quebec	94.5	5.5
Ontario	66.1	33.9

Province or Territory	*Hydro*	*Therm*
	p.c.	p.c.
Manitoba	98.9	1.1
Saskatchewan	56.8	43.2
Alberta	15.7	84.3
British Columbia	89.1	10.9
Yukon and Northwest Territories	83.6	16.4

Table 6 gives summary figures of power production and distribution classified by ince, and Tables 7 and 8 give figures classified by type of production establishment. l installed capacity in Canada amounted to 35,908,497 kw. in 1968, an increase of 3,130 kw. over 1967. Of the 1968 total, 30,599,012 kw. were accounted for by utilities the remainder by industrial establishments. During 1967 and 1968, total sales to nate customers amounted to 107,762,063,000 kwh. and 116,795,097,000 kwh., respecy, of which 99.8 p.c. in both years was sold by utilities.

Sales to power customers excluding sales to industrial establishments with generating ties made up 50.5 p.c. of the total in 1967 and 49.7 p.c. in 1968, sales to domestic farm customers were 32.5 p.c. and 32.3 p.c., respectively, and commercial sales 15.9 and 16.8 p.c., respectively. Exports to the United States in 1968 amounted to 8,314,000 kwh., slightly less than in 1967.

verage domestic and farm consumption rose from 6,261 kwh. in 1967 to 6,571 kwh. 68. Among the provinces, the averages in 1968 varied from a low of 3,305 kwh. in e Edward Island to a high of 8,062 kwh. in Manitoba. For domestic and farm cus- s the average annual bill was $97.52 in 1968 as against $90.71 in 1967.

lthough many utilities do not keep records on farm customers separate from other stic customers, the data reported on farm service indicate that the average consump- ose from 8,548 kwh. per customer in 1967 to 9,155 kwh. in 1968 and the average bill $145.08 to $156.26.

Section 5.—Electrical Utility Ownership and Regulation

Federal Government regulation of electrical utilities with respect to the expor electric power and the construction of lines over which such power is exported falls wi the jurisdiction of the National Energy Board (see Index).

Power is generated in Canada by publicly and privately operated utilities and industrial establishments. Table 8, p. 759, giving statistics by type of establishment sh that over 70 p.c. of the total electric power generated in 1968 was produced by pub operated utilities, 10 p.c. by privately operated utilities and 18 p.c. by industrial estab ments. However, ownership differs greatly in different areas of the country. Qu output at one time was predominantly from privately owned plants but since 1963 has l almost entirely publicly owned. In Ontario almost all electric power has been produ by a publicly owned utility for over 60 years.

Because the determination of market prices and regulation of services is limited to -fuel competition with oil, gas and coal, some regulation of electrical utilities has been mpted in all provinces. In most of them the generation and main transmission of er is the responsibility of a provincial Crown corporation. Investor-owned electrical ties are predominant in Alberta and play a significant role in Nova Scotia, Newfound- Prince Edward Island, Ontario and British Columbia; they contribute about 10 p.c. e total power generated. Generating facilities in industrial establishments represented p.c. of installed capacity at the end of 1969 and generated 17.6 p.c. of the electric gy produced during the year. There is an annual decline in industrial generation as ecomes increasingly attractive to purchase power from utilities which can take fuller ntage of larger unit sizes and operational flexibility. Even when process steam is ired for an industrial operation, there are instances when it is advantageous to purchase steam and power from the electrical utility; supply of steam to the Point Tupper y water plant from the Nova Scotia Power Commission Point Tupper thermal station, missioned in 1969, is an example.

Newfoundland.—The Newfoundland and Labrador Power Commission was estab- d by the provincial government in 1954 for the purpose of supplying power wherever ed throughout the province. The Commission began large-scale production of electric gy in 1967 when the Baie d'Espoir plant began operating and the provincial transmis- grid was established. Prior to this, electricity was provided to isolated areas through Rural Electricity Authority and Power Distribution Districts. The Newfoundland t and Power Company is an investor-owned company serving the city of St. John's and rtion of the province beyond this urban area. In Labrador, the Churchill Falls (Lab- r) Corporation, a subsidiary of Brinco, is engaged in the development of the massive rchill Falls power project which will commence production in 1972. This company controls the Twin Falls Power Corporation which operates a substantial generating t in the vicinity of Churchill Falls on the Unknown River and serves iron ore mining res in western Labrador.

Prince Edward Island.—The Maritime Electric Company provides service to cus- ers in Charlottetown and in most of the towns, villages and rural areas in the province. Company, having total assets of $29,608,082, supplied 21,893,000 kwh. in 1969, an ease of 9.9 p.c. over 1968, and had an installed capacity of 70,500 kw. The town of merside is supplied by a municipal electric department with an installed generating city of 6,900 kw. It is interconnected with the Maritime Electric Company System.

Nova Scotia.—With total fixed assets of $197,473,826, the self-supporting Nova Scotia er Commission is one of the largest businesses in the province. The Commission was ted under the Power Commission Act of 1919 to exploit the limited but useful hydro ntial of the province, as investigated by the Water Power Commission of 1915. The objective was to develop remote sites to supply power and energy at lowest possible to new industry, particularly pulp and paper operations, and a few centres of popula- . The 1937 Rural Electrification Act, however, provided equalization grants and made ossible to carry out the formidable task of bringing power and energy to low-density n and rural village areas. More than 6,500 miles of transmission and distribution lines luct the energy generated by about 533,000-kw. capability in 26 stations to and from y corner of Nova Scotia. Hydro power constitutes only a fraction of base load, although put to optimum use for peaking purposes, thermal power having risen greatly in im- ance during the past decade.

11.—Capacity and Output of the Nova Scotia Power Commission, Year Ended Mar. 31, 1

The Nova Scotia Light and Power Company is the second major generating utility the province and supplies an area that includes the Halifax–Dartmouth area and extens regions in central Nova Scotia. The peak load in 1968 was 284,770 kw. and total ass were $132,128,674. The company has nearly 1,200 employees and serves over 120,0 customers; it sold 1,275,153,000 kwh. in 1968. With the Nova Scotia Power Commissi the company forms part of the Maritime Power Pool, which includes New Brunswick a Nova Scotia. A number of municipal commissions provide power distribution wit their municipalities.

New Brunswick.—The New Brunswick Electric Power Commission was incorporat under the Electric Act, 1920. Generating stations owned by the Commission at Mar. 1969 were as follows:—

Plant	*Type*	*Capacity*	*Plant*	*Type*	*Capacity*
		kw.			kw.
Grand Falls	Hydro	60,500	Grand Lake	Steam	98,750
Musquash	Hydro	7,500	Saint John (Dock St.)	Steam	16,785
Tobique	Hydro	20,000	Chatham	Steam	36,155
Beechwood	Hydro	115,000	Grand Manan	Diesel	2,365
Milltown	Hydro	3,200	Mactaquac	Hydro	300,000
Sisson	Hydro	9,500			
Courtenay Bay	Steam	269,300	Total Capacity		939,055

All the foregoing generating units with the exception of Grand Manan are interected in a province-wide grid system. The statistical information given in Table 12 vs the growth of the Commission's undertakings since 1965.

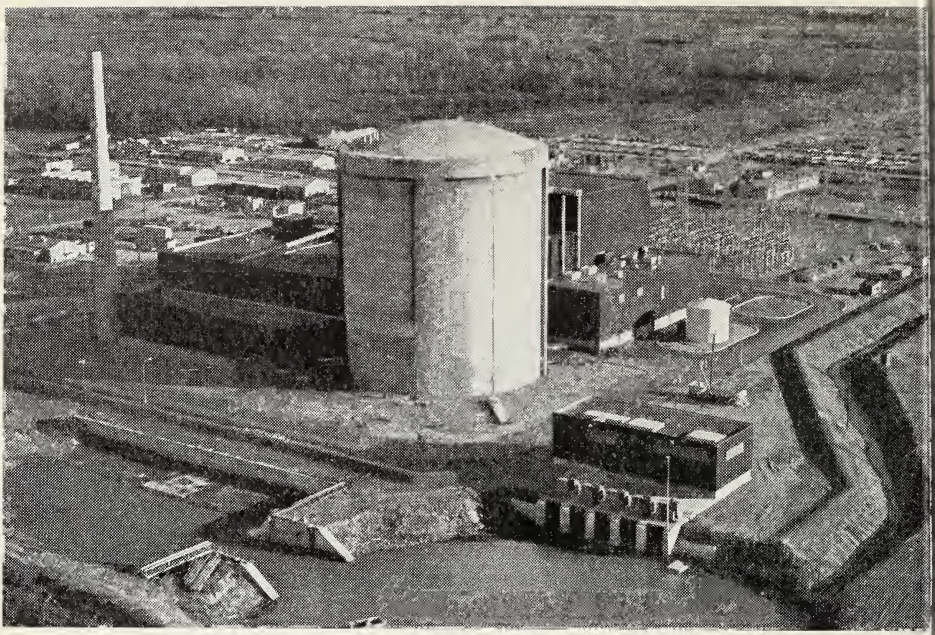
The provincial electric power system is interconnected with an extensive high-voltage smission system and, with the utilities in Nova Scotia, forms part of the Maritime Power l. At the end of 1969, plans were under way for important interconnections with Hydro bec and with utilities in the New England States. These interconnections will provide roved opportunities to meet the growing load requirements in the most economic ion, not only in New Brunswick but throughout the Maritime Power Pool.

Quebec.—*Stream and Reservoir Control.*—The Quebec Streams Commission was ated in 1910 (SQ 1910, c. 5) and given additional powers in 1912 (RSQ 1925, c. 46) and 0 (SQ 1930, c. 34); it was authorized to ascertain the water resources of the province, to ke recommendations regarding their control and to construct and operate certain storage ns to regulate the flow of streams. In 1955, the Commission was abolished and its vers and attributions transferred to the Hydraulic Resources Department, now the partment of Natural Resources. The rivers controlled by the Commission at the time ransfer, either by means of dams on the rivers or by regulating the outflow of lakes at headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the coutimi, the Au Sable and the Métis. The Commission also operated nine reservoirs the North River, two in the watershed of the Ste. Anne de Beaupré River and one at the let of Lake Morin on Rivière du Loup (lower). In 1965, eleven auxiliary reservoirs on St. Maurice System and two on the Gatineau were turned over by the Department of tural Resources to the Quebec Hydro-Electric Commission for operation and maintenance.

Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake nouane and Passe Dangereuse on the Peribonca River controlled by the Aluminum mpany of Canada; the Onatchiway on the Shipshaw River controlled by Price Brothers Company Limited; Memphremagog Lake on the Magog River controlled by the minion Textile Company; and Témiscamingue and Quinze Lakes on the Ottawa River trolled by the federal Department of Public Works. Storage reservoirs under the trol of the Quebec Hydro-Electric Commission are: Témiscouata Lake on the Madaska River, Kipawa Lake on the Ottawa River, Lac Dozois on the upper Ottawa River, Cassé in the Bersimis River watershed and Lac Ste. Anne on the Toulnustouc River, ributary of the Manicouagan River.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was ablished in 1944 (SQ 1944, c. 22) for the purpose of supplying power to the municipalities, ndustrial and commercial undertakings and to citizens of the Province of Quebec at the est rates consistent with sound financial administration. On May 1, 1963, the Comsion acquired control of the following privately owned electrical utilities operating in Province of Quebec: the Shawinigan Water and Power Company, the St. Maurice wer Corporation, the Quebec Power Company, the Southern Canada Power Company, Gatineau Power Company, the Northern Quebec Power Company, the Saguenay



Hydro-Quebec's new Institute of Research, located on the outskirts of Montreal, will soon be the most comprehensive electrical research and testing centre in North America. The General Laboratories building (above) was opened in 1970, the High Voltage Laboratory will be completed in 1971 and the High Power Laboratory in 1972.

Electric Company, and the Lower St. Lawrence Power Company. As a result of th transactions, all electricity production, except for facilities operated by certain industr organizations in their own manufacturing operations, was brought under the control of single authority. The services of the Commission now cover virtually the entire provin except for local distribution of small amounts of electricity by some municipalities, m of which is purchased from the Commission or its subsidiaries.

At the end of 1969, Hydro-Quebec and its subsidiaries had in operation 53 hydro-elect stations having a capacity of 9,152,891 kw., and 16 thermal-electric stations having capacity of 656,030 kw.—a total capacity in operation of 9,808,921 kw. These faciliti permit the balanced distribution of power throughout Quebec and the most efficient u of the water power resources of the province. Power plant construction under way Quebec during 1969 is outlined at p. 752.

13.—Summary Statistics of the Operations of the Quebec Hydro-Electric Commission, 1967-69

Item		1967	1968	1969

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate entity, lf-sustaining public enterprise endowed with broad powers with respect to the supply lectricity throughout the Province of Ontario. Its authority is derived from an Act he Provincial Legislature passed in 1906 to give effect to recommendations of earlier isory commissions that the water powers of Ontario should be conserved and developed the benefit of the people of the province. It now operates under the Power Com- sion Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and sequently modified from time to time (RSO 1960, c. 300, as amended). The Com- sion may have from three to six members, all of whom are appointed by the Lieutenant- vernor in Council. Two commissioners may be members of the Executive Council of Province of Ontario.

The basic principle governing the financial operations of the Commission and its ciated municipal utilities is that electrical service is provided at cost. The Com- sion interprets cost as including payments for power purchased, charges for operating maintaining the power supply facilities, and related fixed charges. The fixed charges resent interest on debt, provisions for depreciation, allocations to reserves for con- gencies and rate stabilization, and the further provision of a sinking fund reserve for ring the Commission's capital debt. While the enterprise from its inception has been -sustaining, the province guarantees the payment of principal and interest on all bonds ed by the Commission and held by the public. In addition, the province has materially sted the development of agriculture by contributing under the Hydro-Electric Dis- ution Act toward the capital cost of extending rural distribution facilities.

Beginning in 1962, the entire provincial area served has been regarded for financial and inistrative purposes as a unit, but for several years thereafter there was still no electrical nection between the Commission's facilities in northwestern Ontario and those serving tomers in the remainder of the province. By early 1969, facilities for some interchange e available. They were used in that year, but interconnection entirely over Commission- ned facilities was not completed until the spring of 1970. Statistics are, therefore, pre- ted for the two operating systems, known as the East System and the West System. y, respectively, serve the areas east and west of a line extending north from Lake erior to the Albany River, a line that conforms roughly with the boundary dividing nder Bay District from the Districts of Algoma and Cochrane.

In addition to administering the enterprise over which it has direct control, the Com- sion, under the Power Commission Act and the Public Utilities Act, exercises certain latory functions, particularly with respect to the group of municipal electrical utilities it serves. In order to provide convenient and expeditious service in this dual func- of regulation and supply, the Commission subdivides its province-wide operations seven regions with regional offices located in seven major municipalities.

The Commission is concerned primarily with the provision of electric power by genera- or purchase and its delivery to the electrical utilities for resale in municipalities having contracts with the Commission. The Commission also supplies power in bulk, although under cost contract, to direct customers, including industrial customers whose require- ts are so large or so unusual as to make service by the local municipal utilities impractic- , mines, industries in unorganized territories, and certain interconnected systems.

In addition to these operations, which represent about 90 p.c. of its energy sales, the mmission delivers electric power to retail customers in rural areas and in a small group 28 municipalities served by Commission-owned local distribution facilities. Retail ice throughout the province is provided for the most part, however, by the municipal trical utilities, which supply ultimate customers in most cities and towns, in many ages, and in certain populous township areas. The municipal electrical utilities are ed and operated by local commissions.

During 1969, the Commission's investment in fixed assets at cost increased by),384,755 and at the end of the year amounted to $4,098,351,192. Assets, after deduct- accumulated depreciation, were $4,128,643,797. In that year, 354 municipal electrical

utilities engaged in the retail distribution of electricity purchased power from the Co mission. The assets of these utilities, after deducting accumulated depreciation, amount to $1,211,548,610, of which $492,190,861 represented the equity acquired in the Comm sion's systems by the municipal utilities operating under cost contracts.

14.—Power Developments of The Hydro-Electric Power Commission of Ontario, Under Construction or Approved as at Dec. 31, 1969

Development and Location	Units	In-Service Dates	Total Installed Capacity
	No.		kw.
Fossil-fuelled Thermal-Electric—			
Lambton–St. Clair River, south of Sarnia (coal)	4	1969–70	2,000,000
Nanticoke–Lake Erie, near Port Dover (coal)	4	1971–74	2,000,000
Lennox–Lake Ontario, near Kingston (oil)	4	1974–77	2,295,000
Nuclear-fuelled Thermal-Electric—			
Pickering–Lake Ontario, east of Toronto	4	1971–73	2,160,000
Bruce–Lake Huron, near Kincardine	4	1975–78	3,200,000

[1]Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated e Commission, given in terms of net output of the sources of supply to each system for the last month of each year.

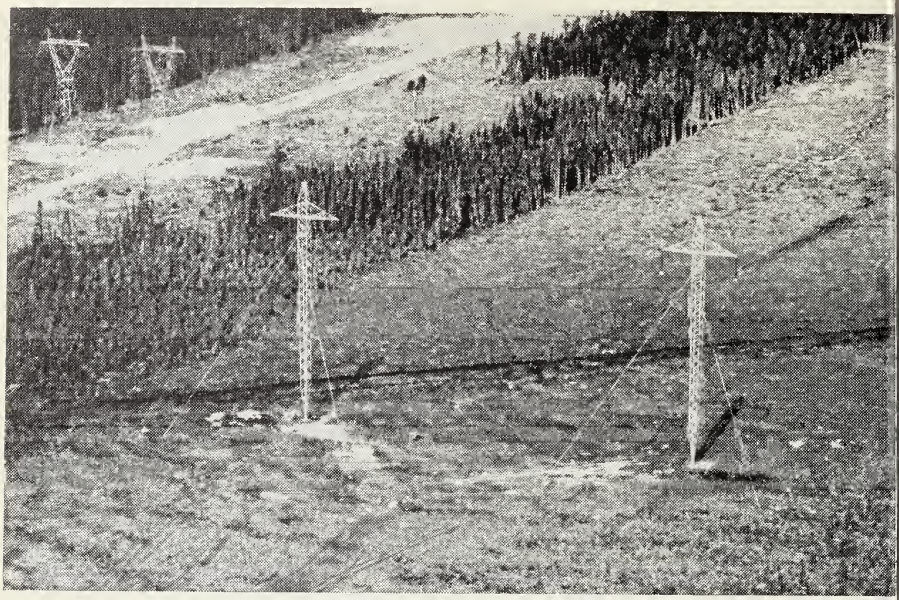
In addition to the Ontario Hydro province-wide system, a few investor-owned utilities ide service to customers in Cornwall, Fort Erie, Gananoque and Sault Ste Marie.

Manitoba.—Manitoba Hydro is the primary developing, generating and distributing r agency in the Province of Manitoba. The corporation came into being Apr. 1, 1961, wing amalgamation of the two former provincial government utilities engaged in the ation and distribution of electric power.

Manitoba Hydro operates six hydro-electric generating stations, two thermal-electric rating stations and 26 small diesel-electric generating plants. The combined generating bility is 1,501,418 kw., hydro installations accounting for 1,084,000 kw., thermal instal-ns for 394,000 kw. and diesel installations for 23,418 kw. Four hydro stations are ed on the Winnipeg River near Winnipeg, one is on the Saskatchewan River, 285 north of Winnipeg, and one is on the Nelson River, 450 miles northeast of Winnipeg. ix hydro stations and the thermal generating stations at Selkirk and Brandon are rically interconnected to a common network known as the Manitoba Integrated em. Diesel installations are used to provide power to isolated northern communities e extension of hydro-electric transmission facilities are not feasible.

Manitoba Hydro serves over 600 communities and 236,913 consumers in rural Manitoba suburban Winnipeg through a network of 37,012 miles of transmission and farm dis-tion lines. The Winnipeg Hydro Electric System distributes power within the cor-te limits of the city of Winnipeg. A portion of this power is generated by the city m from its own hydro and thermal plants and the remainder is purchased from itoba Hydro.

Saskatchewan.—The Saskatchewan Power Corporation was established in 1949 by Power Corporation Act (RSS 1965, c. 40, as amended). It succeeded the Saskatchewan r Commission which had been in operation since 1929. The original functions of the oration included the generation, transmission, distribution, sale and supply of electric y. The objective was to make electricity available to all the people of the province,



High voltage direct current is a very significant technique for moving large amounts of electric energy over great distances, and Manitoba's Nelson River Power project is an example of Canada's expertise in DC power generation and transmission. In the foreground are the transmission towers carrying power from the Nelson River at 900,000 volts DC while those in the background carry power from Grand Rapids at 230,000 volts AC.

in abundance and at reasonable rates. Since 1952, the Corporation has been authoriz to produce or purchase and to transmit, distribute, sell and supply natural or manufactur gas.

In 1969, the Corporation served 130 communities with 500 population or over, 8 smaller communities and 94 summer resorts. In addition, bulk power was supplied the cities of Saskatoon and Swift Current, the town of Battleford and Prince Albert Nation Park (Waskesiu). In February 1969, North-Sask Electric Ltd. was incorporated as wholly owned subsidiary to provide and improve electrical service to communities in nort ern Saskatchewan.

At the end of December, the Corporation served approximately 269,200 custome composed of 203,166 "urban" (defined as one in which there are at least six customer and 66,034 "rural" customers. Energy sales reached 4,100,000,000 kwh. with industri customers accounting for 41 p.c. and residential customers for 19 p.c. of the total. Durir 1969, 4,600,000,000 kwh. was supplied to the system, almost all of it generated in Corpor tion plants. This was the first full year of production at the Coteau Creek Hydro Electr Station. Total hydro generation amounted to 2,400,000,000 kwh. or 49.8 p.c. of tot generation in 1969. Steam generation from five plants supplied 45.4 p.c. of the total ar internal combustion the remainder. A new 150,000-kw. unit was placed in service Boundary Dam in December bringing total steam generating capacity to 682,000 kv compared to 467,000 kw. for hydro and 111,500 kw. for internal combustion and gas turbin The Corporation owned and operated 4,488 miles of 72-kv.-and-over transmission lines an 71,553 miles of less than 72 kv. (excluding urban distribution).

At the end of 1969, the Corporation had invested, at cost, $479,600,000 in electric system assets out of a total plant-in-service investment of $695,300,000.

18.—Growth of the Saskatchewan Power Corporation, 1960-69

[1]Power distributed=net system kwh. (net generated plus net purchased).

Alberta.—The generation and distribution of electric power in Alberta is handled by major investor-owned company groups and three municipal utilities. Several other icipal systems handle local distribution of power purchased from the investor-owned ties. The Alberta Power Commission acts as a regulatory body for the electrical utility stry in the province but has no facilities of its own.

-Statistics of Companies or Municipalities Providing Central Station Electrical Service in Alberta, 1969

Ownership and Company or Municipality	Net Capability as at Dec. 31	Net Peak Load during 1969	Net Generation during 1969
	kw.	kw.	kwh.
Privately Owned			
ry Power Ltd.....	1,249,000	1,028,900	5,187,152[1]
lian Utilities Ltd. and Northland Utilities Ltd.....	331,095	259,170	902,216
Totals, Privately Owned.....	**1,580,095**	...	**6,089,368**
Publicly Owned			
of Edmonton.....	392,000	363,000	1,668,613
of Lethbridge.....	30,700	31,500	154,873
of Medicine Hat.....	40,500	40,000	238,797[2]
Totals, Publicly Owned.....	**463,200**	...	**2,062,283**
Grand Totals.....	**2,043,295**	...	**8,151,651**

[1]Includes 48,975,200 kwh. supplied to British Columbia Hydro and Power Authority. [2]Includes 85,362,680 supplied to system.

The following relative percentages of capability and generation show that therm generation predominates as a source of electric power in Alberta and that the industry largely privately owned.

Method of Generation	P.C. of Capability	P.C. of Power Generated
Hydro	33.3	16.9
Steam and gas turbine	62.3	79.0
Internal combustion	4.4	4.1
Privately owned	77.3	74.7
Publicly owned	22.7	25.3

Following is a breakdown of the fuel used in larger thermal plants during 1969.

Company or Municipality	Gas	Oil	Coal
	Mcf.	gal.	tons
Calgary Power Ltd.—

British Columbia.—The British Columbia Hydro and Power Authority is a corpo tion and an agency of the Crown in right of the Province of British Columbia. B.C. Hyd operates an extensive system of public utility services. Electric energy is generat transmitted and distributed throughout areas of the province containing more than 90 p of the population. Natural gas is purchased and distributed in Greater Vancouver and the Fraser Valley eastward to Hope, and liquefied petroleum gas is distributed in Grea Victoria. B.C. Hydro operates three transportation services: an urban passenger transp tation system serves Greater Vancouver and Greater Victoria; an interurban passeng transportation system serves Greater Vancouver, the Fraser Valley eastward to Ho between Vancouver and Victoria and between Vancouver and Nanaimo (via ferries of t British Columbia Ferry Authority); and a rail freight system serves Greater Vancouv and the Fraser Valley eastward to Chilliwack.

Of B.C. Hydro's total electric power requirements of 13,750,000,000 kwh. for the y ended Mar. 31, 1969, 9,356,000,000 kwh. or 68.0 p.c. were produced by hydro-elect stations and 3,013,000,000 kwh. or 21.9 p.c. by thermal plants; of the remainder, 542,000,0 kwh. were purchased and 839,000,000 kwh. were received from the United States as Canad share of downstream power benefits from the Duncan and Arrow storage projects. Ki watt-hours of electricity sold during the year (12,237,000,000) were 10.4 p.c. higher th during the previous year. Impressive rates of increase in kilowatt-hours consumed w recorded for all categories of customers during the year ended Mar. 31, 1969. Resident consumption moved up 13.8 p.c., commercial 11.2 p.c., and industrial and bulk power 1 p.c. As at that date, the number of customers served with electricity by B.C. Hydro tot

l 605,188, an increase of 22,055 during the year. The average annual rate for residential stomers dropped from 1.68 cents to 1.65 cents a kilowatt-hour, and the average annual sidential consumption rose from 6,222 kwh. to 6,674 kwh.

20.—Summary Statistics of the British Columbia Hydro and Power Authority, Year Ended Mar. 31, 1969

Item		Amount	Item		Amount
nerating capacity	kw.	3,055,842	Proportionate Sales—

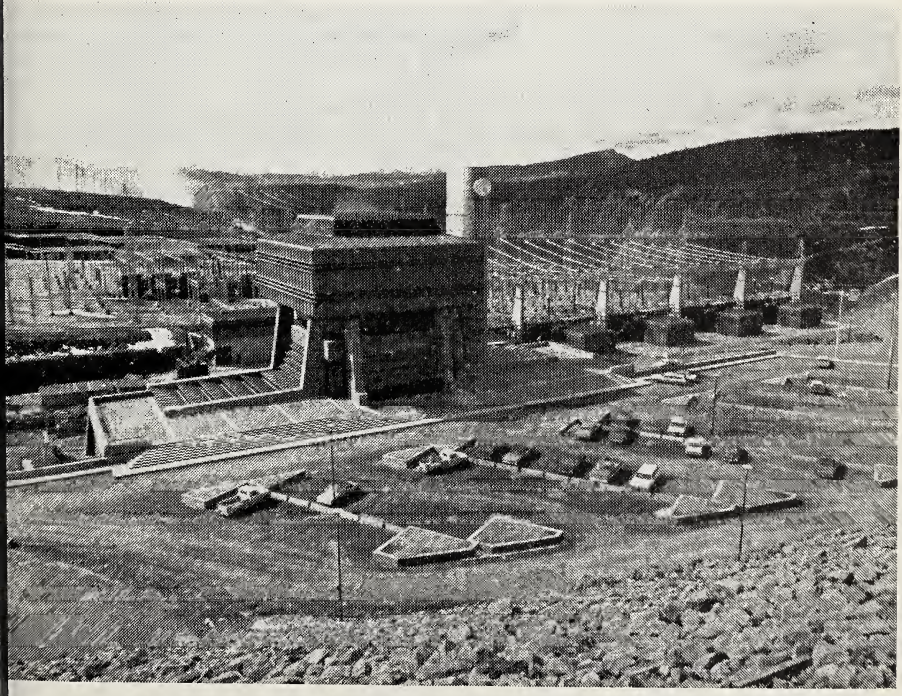
			Gross plant in operation (electric)	$'000	1,458,576
ctricity sold	'000 kwh.	12,236,869	Net plant in operation (electric)	$'000	1,188,738

[1] Including 567 underground circuit miles.



Control building at the Gordon M. Shrum Generating Station, British Columbia's Peace River project. The building, resembling a giant transformer, houses control and maintenance facilities for one of the world's largest operating underground power plants which, by the end of 1971, will be operating at six tenths of its ultimate capacity of 2,300,000 kw.

The West Kootenay Power and Light Company in 1969 served directly 31,700 cu tomers in south-central British Columbia and an additional 18,800 were supplied by whol sale customers who retail within municipal areas. Total energy sales rose 9.4 p.c. in 19(to 734,000,000 kwh. and total assets reached $22,157,000. The company has an installe capacity of 47,250 kw. and, in addition, operates and maintains under management contra five hydro power plants owned by Cominco Ltd.

Yukon and Northwest Territories.—The Northern Canada Power Commissio operating under authority of the Northern Canada Power Commission Act (SC 1956, c. 4 is a federal agency concerned with the construction and management of public utiliti on a commercial basis; it is empowered to construct and operate public utility plants i the Northwest Territories, Yukon Territory and, subject to approval of the Governc General in Council, elsewhere in Canada. The authorizing Act requires that projec undertaken by the Commission shall be self-sustaining; consequently rates charged f utilities supplied must provide sufficient revenue to cover interest on investment, repay ment of principal over a period of years, operating and maintenance expenses and a co tingency reserve.

The Commission has hydro-electric power developments on the Yukon River ne Whitehorse and on the Mayo River near Mayo in the Yukon Territory; in the Northwe Territories, it has developments on the Snare River northwest of Yellowknife and th Taltson River northeast of Fort Smith.

The 4,500-kw. Mayo River hydro-electric power development has supplied power t mining properties in the Elsa and Keno areas and to the communities of Mayo and Ken City since 1952. The Whitehorse Rapids power development (hydro capacity 19,000 kw. in service since 1958, supplies power to the city of Whitehorse and a copper mining operatio located within a few miles of Whitehorse. A 225-mile transmission line, completed in 196 supplies the Anvil Mining Corporation's lead and zinc mine mill complex at Faro in th Vangorda Creek area. A 9,000-kw. peaking standby diesel generating plant, situate adjacent to the hydro plant at Whitehorse, was commissioned in December 1968; a additional 5,000-kw. diesel unit was installed in 1970.

The two Snare River hydro-power developments (total capacity 13,500 kw.) com missioned in 1948 and 1960, supply power to the gold mines in the Yellowknife area an to the city of Yellowknife. These two hydro plants are operated by remote control fro Yellowknife and will be supplemented by a 5,000-kw. diesel plant being constructed i Yellowknife, commencing in 1970. The Taltson River hydro-electric plant is an 18,000-kw development supplying the lead-zinc mining and milling operation at Pine Point and th communities of Fort Smith and Pine Point, N.W.T. This plant is operated by remot control from Fort Smith.

Diesel electric power plants are operated by the Commission at Aklavik, Coppermine Cambridge Bay, Fort Resolution, Fort Good Hope, Norman Wells, Chesterfield Inlet an Baker Lake in the Northwest Territories, at Dawson in the Yukon Territory, and at Field i British Columbia. The Commission also operates and maintains utility plants comprisin electric power, central heat, water and sewerage services at Inuvik, Frobisher Bay, For McPherson, Fort Simpson in the Northwest Territories and Moose Factory in Ontario and operates the water and sewerage systems at Dawson and Faro in the Yukon Territory.

Investor-owned generation provides electric-power service to several regions within th Territories. In the Yukon Territory, Yukon Electric Company Ltd. has generation facili ties near Whitehorse and several isolated diesel plants. In addition, the Company provide distribution of electric power in Whitehorse, Carmacks, Carcross and Keno Hill with supplie purchased from the Northern Canada Power Commission. In the Northwest Territories Plains Western Gas and Electric Co. Ltd. distributes power (supplied by NCPC) in Yellow knife, and Northland Utilities has generation and distribution facilities in Hay River, For Providence and Enterprise.

Subsection 1. Federal Assistance to Manufacturing	800
Subsection 2. Provincial Assistance to Manufacturing	804

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Section 1 of this Chapter contains a summary of the regularly issued statistical data the manufacturing industries of Canada, based on the annual Census of Manufactures d on monthly and quarterly surveys. Section 2 is a special study of interprovincial ipments of the products of Canadian manufacturers which is based on the results of the st complete survey to be taken of all but the smallest manufacturers and relates to the ar 1967.

ction 1.—Statistical Data on Canadian Manufacturing Industries

Statistics on the manufacturing industries are issued by the Dominion Bureau of atistics on an annual, monthly and quarterly basis, depending on the type of data. The sic annual data are the results of the annual Census of Manufactures. Among the nthly figures available, two important sets of data provide a basis for projecting figures the annual Census of Manufactures—the monthly survey of manufacturers' shipments, ventories and orders, and monthly estimates of employees by industry.

The monthly shipments, inventories and orders series is published for the manufac- ring industries of Canada and the provinces, with breakdowns by industry group and selected industry in the case of the totals for Canada. They are based on a survey of pondents to the annual Census and are projections of the Census total, with the quali- ation that new entries into the manufacturing industries since then are not covered. his contributes to the tendency shown by monthly shipments figures, for instance, to l slightly below those of the subsequent annual Census for the same year.) The monthly imates of employees by industry provide figures on total employees in the manufacturing lustries for Canada and the provinces, each classified into durable and non-durable lustries. Like the monthly shipments survey, the figures are based partly on statistical mpling. Both sets of monthly figures also yield totals for the calendar year, while the nual Census includes some reports made on a respondent's fiscal year differing from the endar year. (The effect of this is not large.)

* Prepared in the Manufacturing and Primary Industries Division, Dominion Bureau of Statistics.

These data relate to establishments—roughly corresponding to the popular conceptio of a plant, factory or mill—and, for certain statistics, to non-manufacturing units know as "head offices, sales offices and auxiliary units". For some purposes, companies rathe than plants or factories are of interest. For example, a company owning factories, mine and merchandising outlets will normally report its profit for the whole company rathe than dividing it among the different industrial activities in which it is engaged. Thus, th quarterly survey of corporation profits provides figures on sales, profits and certain othe statistics for whole companies classified to industries on the basis of their principal activitie (for instance, factories might be included in mining or mines in the manufacturing industry Such figures are generally not comparable with establishment statistics.

Various other monthly and quarterly surveys relate to commodities rather than t establishments or companies. That is, they account for production or shipments o particular products without regard to the industry in which they are produced.

In addition to providing estimates of over-all employment in manufacturing (an other industries), monthly surveying of employment, hours and payrolls results in indexe of employment for larger establishments by industry and by province and sub-provinci area, and in data on average hours and earnings. Monthly indexes of industrial productio provide measures of the physical volume of output of the manufacturing industries. Tha is, they measure output, net of the effects of price changes. These indexes afford annua averages which can be used to indicate movement in the real domestic product at facto cost originating in the manufacturing industries. In addition, many users find valuabl information in the large number of monthly industry selling price indexes for variou manufacturing industries.

Subsection 1.—Post-Census Data on Manufacturing

This Subsection is included to give some preliminary data for 1969 and 1970 based o monthly or quarterly surveys, since the results of the Census of Manufactures for 1969 wer still in the processing stage at the time of preparation of this Chapter. Some factor influencing the levels of current and annual Census figures in comparison with each othe are indicated in the preceding text.

Table 1 compares the value of shipments of goods of own manufacture by provinc for the year 1970 with comparable data for 1969 and earlier censuses, and Table 2 make similar comparisons for industry groups. Table 3 gives estimates of employees in Canadia manufacturing industries by province for 1968, 1969 and (August) 1970, with 1968 Censu figures included for comparison. Table 4 gives company data on profitability in variou manufacturing industry groups in 1969 compared with annual Census figures from 1962.

1.—Value of Shipments of Goods of Own Manufacture, by Province, 1961 and 1966-70

Province or Territory	1961	1966	1967	1968	1969[p]	1970[p]

Subsection 2.—Census of Manufactures Data by Industry

Results of the Census of Manufactures are published industry by industry as they become available. Although statistics for the 1969 Census were appearing as this Chapter was being prepared (January 1970), the Census of 1968 was the latest for which all industries had been issued. Tables 5 to 7 show selected results of the 1968 Census for industry groups and individual industries compared with figures for earlier censuses. To help visualize some of the changes that took place in individual manufacturing industries in 1968, Table 8 shows the largest increases or decreases in number of employees; widely divergent movements characterized these industries.

5.—Summary Statistics of Manufactures, 1961-68

Year	Manufacturing Activity							
	Establishments	Production and Related Workers			Cost of Fuel and Electricity[1]	Cost of Materials and Supplies Used	Value of Shipments of Goods of Own Manufacture	Value Added
		Number	Man-Hours Paid	Wages				
	No.		'000	$'000	$'000	$'000	$'000	$'000
1961	33,357	939,413	1,968,163	3,532,943	516,409	12,579,798	23,438,956	10,434,832

[1] Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manufacturing activity. [2] Includes production and related workers, administrative and office employees, sales, distribution and other employees; excludes working owners and partners. [3] Includes supplies used in both manufacturing and non-manufacturing activity. [4] Includes shipments of goods of own manufacture, value of shipments of goods purchased for resale and other operational revenue. [5] Value of total operational revenue less total cost of materials, supplies, fuel and electricity used and goods purchased for resale in the same condition; all adjusted for inventory changes where required.

[1] Value of production, rather than shipments of goods of own manufacture, is shown.

8.—Industries Showing Changes of 1,000 or More in Number of Employees, 1967-68

(Ranked according to numerical increase or decrease)

Rank	Industry	Total Employees		Change 1967-68	
		1967	1968	Number	Percent
	Increases—				
1	Motor vehicle parts and accessories manufacturers	34,858	39,454	4,596	13.
2	Plastics fabricators, *n.e.s.*	15,014	18,976	3,962	26.
3	Communications equipment manufacturers	40,515	43,117	2,602	6.
4	Truck body and trailer manufacturers	7,053	8,625	1,572	22.
5	Fish products industry	17,960	19,478	1,518	8.
6	Boiler and plate works	6,622	7,962	1,340	20.
7	Miscellaneous vehicle manufacturers	2,905	3,940	1,035	35.
	Decreases—				
1	Shipbuilding and repair	18,929	15,660	−3,269	−17.
2	Cotton yarn and cloth mills	17,170	14,614	−2,556	−14.
3	Agricultural implement industry	14,553	12,107	−2,446	−16.
4	Aircraft and parts manufacturers	37,235	35,143	−2,092	−5.
5	Motor vehicle manufacturers	40,861	39,112	−1,749	−4.
6	Dairy factories	31,312	29,841	−1,471	−4.
7	Other rubber industries	11,441	10,011	−1,430	−12.
8	Bakeries	33,755	32,342	−1,413	−4.
9	Fabricated structural metal industry	18,547	17,150	−1,397	−7.
10	Manufacturers of major appliances (electric and non-electric)	13,523	12,185	−1,338	−9.
11	Manufacturers of electrical industrial equipment	23,903	22,634	−1,269	−5.
12	Railroad rolling stock industry	6,215	5,048	−1,167	−18.
13	Miscellaneous machinery and equipment manufacturers	48,852	47,813	−1,039	−2.

Subsection 3.—Distribution of Manufacturing by Province and by Census Metropolitan Area

Distribution by Province

According to the results of the Census of Manufactures, Central Canada accounte for about four of every five dollars of all value added by the manufacturing activity of tl manufacturing industries of Canada in 1968; Ontario's share was 53.0 p.c., and Quebec share 28.4 p.c. British Columbia was third in this respect, with 8.6 p.c. of the value adde by manufacture, the Prairie Provinces accounted for 6.6 p.c. and the Atlantic Provinc for 3.3 p.c. One way of comparing the intensity of manufacturing activity in these regio is in terms of value added per capita of their population. The Canada average was $88 per capita but the Ontario average per capita of its population was $1,330, reflecting th high degree of industrialization of that province's economy. Comparable per capit rates of manufacturing activity for other regions were: Quebec, $880; British Columbi $785; Prairie Provinces, $352; and Atlantic Provinces, $303.

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts.

Province or Territory and Year	Estab-lish-ments	Manufacturing Activity							Total Activity		
		Production and Related Workers			Cost of Fuel and Electricity	Cost of Materials and Supplies Used	Value of Shipments of Goods of Own Manufacture	Value Added	Total Employees		Total Value Added

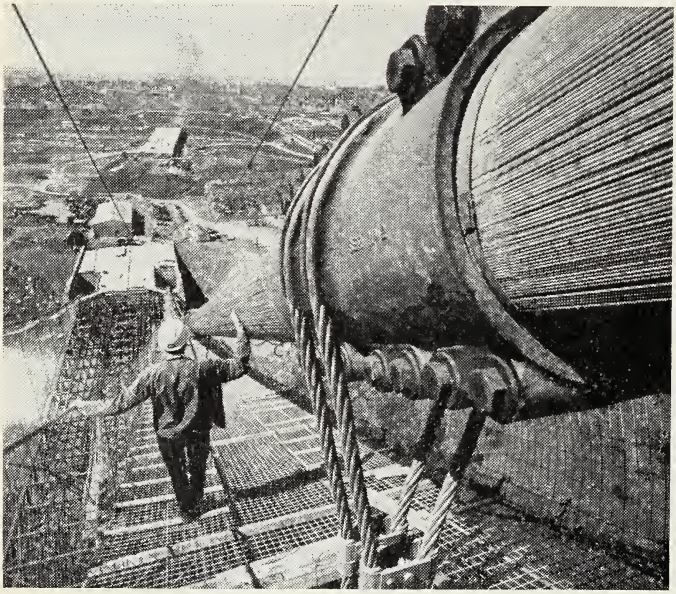
Distribution by Metropolitan Area

Table **11** shows the latest annual Census of Manufactures (1966 and 1967) data for Census Metropolitan Areas for which information can be published. These exclu employees and activity of head offices, sales offices and auxiliary units which are includ in manufacturing industry totals for Canada and the provinces given in Subsection 2.



Almost every sector of C economic activity involves of steel and Canada's steel tion has doubled during t decade, outpacing the general expansion and mo markets around the worl

For Canada's largest su bridge recently built in Quet one company alone supplied miles of galvanized steel cat 600,000 structural bolts, 5,0 of steel plate and 2,150 reinforcing steel.

More than two million po stainless steel will sheath the of the 57-storey Canadian Bank of Commerce building construction in Toronto

[1] Classified as a Census Metropolitan Area commencing 1966; CMA is coextensive with city.

According to the latest estimates of employees by industry available at the time writing (August 1970), employees of the manufacturing industries in the Toronto a Montreal Metropolitan Areas accounted for 36 p.c. of the Canadian total. These two are together with Vancouver and Winnipeg Metropolitan Areas accounted for 43 p.c. of t total. The average monthly estimates for 1969 and the August 1970 preliminary estima (unadjusted for seasonal variation) were:—

Metropolitan Area	Employees in Manufacturing Industries	
	1969 Average	August 1970
Toronto	322,300	318,200
Montreal	300,500	304,900
Vancouver	70,300	69,200
Winnipeg	41,800	40,900

Subsection 4.—Size of Manufacturing Establishments Based on Employment and Shipments

Although the average size of a manufacturing establishment in terms of number employees is about 50, establishments with 200 or more employees account for about o half of all employment in the manufacturing industries. The average size of establishmer with 1,500 or more employees indicates that there are some with very much larger emplo ment than that minimum; the average size of establishments in this class-size is more th double its lower limit.

12.—Establishments and Employment in the Manufacturing Industries, by Number Employed per Establishment, 1949, 1955, 1961 and 1967

Size Group[1]	Estab-lishments	Em-ployees	Working Owners and Partners	Pro-portion of Total Em-ployment[1]	Estab-lishments	Em-ployees	Working Owners and Partners	Pro-portio of Tot Em-ployme

Size Based on Shipments

The average size of a manufacturing establishment in terms of shipments of goo of own manufacture was $1,171,000 in 1967, about two thirds greater than in 1961. Ho ever, this average size is greatly affected by the large number of very small establishmer which in fact account for only a minor share of over-all shipments. Establishments wi $1,000,000 or more shipments of goods of own manufacture in 1967 accounted for abo one establishment in six but for about $13 out of every $15 of shipments.

Subsection 5.—Exports of Manufactured Goods

In recent years, far-reaching changes have taken place in the character of Canada's orts of manufactured goods. This country has traditionally been known as an exporter abricated materials but in 1969, for the first time, domestic exports of end products, sisting of highly manufactured goods, exceeded those of fabricated materials. This nge and the trends leading up to it are shown in the following figures:—

Year	Domestic Exports of—		
	Fabricated Materials	*End Products*	*Total Manufactured Goods*
	$'000,000	$'000,000	$'000,000
1961	2,916.4	706.4	3,622.9
1965	3,923.5	1,606.3	5,529.8
1966	4,217.0	2,455.1	6,672.1
1967	4,417.3	3,467.4	7,884.7
1968	5,027.9	4,702.4	9,730.3
1969	5,344.9	5,811.7	11,156.6

A comparison of these figures with those in Table 5 will show that the ratio t these apparent exports bears to over-all shipments of manufacturers has been rising recent years; however, the two series are not completely comparable principally beca of problems of valuation of manufacturers' shipments of metals (explained in Section p. 796). It should also be noted that the most important single reason for the rapi rising level of exports of Canadian manufactured products in the end-product categ is the Canada–United States Agreement on Automotive Products, which went into eff in 1965.

Section 2.—Origin and Destination of Canadian Manufacturers' Shipments

Information on the types and quantities of goods which the different countries of world ship to one another constitutes one of the oldest forms of official statistics. S data have been available for centuries in Canada's parent nations—Britain and Franc and in Canada itself from colonial days. However, statistics on the flow of goods betw different parts of the same country have only recently become of widespread interest. Canada, the demand for such figures has been growing because of their relevance to t needs of many current and potential users. For instance, they have a bearing on t economic relationships that underlie the political relationships of Confederation; th are important to any intensive investigation of regional disparity in economic developme and they are raw material for the statistician in the preparation of regional econor accounts; they may offer insights into the spread of business fluctuations through t economy (even if the data are available only for a base year); and they afford part measures of markets for businessmen and for officials concerned with the establishm of new industries.

Interprovincial shipments of Canadian manufacturers have been the subject of so limited studies for particular regions and such information has sometimes been gathe in a comprehensive fashion for a particular industry or product line. For the first tim however, a complete survey of the interprovincial shipments of all but the smallest ma facturers has now been carried out, along with figures gathered on manufacturers' dir shipments to other countries.* The survey relates to manufacturers' shipments in 19 and was conducted by the Merchandising and Services Division in co-operation with t Manufacturing and Primary Industries Division of the Dominion Bureau of Statist and by the Quebec Bureau of Statistics.

Basis of the Survey

All respondents to the 1967 annual Census of Manufactures were sent a supplementa questionnaire except, as mentioned above, the very small manufacturers who, becau they account for a minor percentage of their industry's shipments, customarily recei an abbreviated census form. Estimates of the interprovincial shipments of these sm manufacturers, many of whom ship mainly to markets in the same locality or provin were included in the survey results. Thus was secured for 1967 a comprehensive statistic picture of where the products of Canadian factories went when shipped to their first des nations, subject to some qualifications or perhaps distortions arising from limitations the concepts of the survey or in the reporting capabilities of the manufacturers. It w found that, in that year, 56 p.c. of the value of all shipments had first destinations in t same province as the establishment from which they originated. About two dollars seven, or 28 p.c. of the total value, went to other first destinations in Canada and o dollar in six, or 16 p.c., went direct to other countries. The patterns naturally vary wide from one industry to another and from one province or region of origin to another, as show in Table 18.

* DBS publication, *Destination of Shipments of Manufacturers* (Catalogue No. 31-504).

[1] Confidential. [2] Includes the Yukon and Northwest Territories.

The proportions of over-all shipments by Ontario and Quebec manufacturers going rect to other countries, at 14.5 p.c. and 15.3 p.c., respectively, were below the national erage of 16 p.c. On the other hand, the provinces with heavier relative dependence the processing of natural resources had apparent export shares above the national erage. For instance, in Newfoundland, 60.3 p.c. of shipments were reported as going to her countries. This was the highest export share for any province and was largely a flection of the prominence of the paper and allied industries among its manufactures. itish Columbia (including the Yukon and Northwest Territories) was in second place in is respect, having 36.5 p.c. of its shipments going to other countries as a first destination. owever, the British Columbia figures are an example of the sometimes misleading effect the first-destination criterion. It is known that large amounts of lumber are sold by condary distributors in the province and that much of the lumber so sold ultimately aches markets in other countries. The result is a disappearance in British Columbia products of the wood industries which is much above anything plausible, even after king account of the preferences of British Columbians for wood construction. Even , the first-destination criterion was the only practicable one to use and, for some purposes, ovides the most relevant information. Thus, movement of the products of some in- ustries, perhaps in carload lots, to wholesaling centres for redistribution in small lots ay be meaningful for an analysis of the demand for transportation. Likewise, in seeking attract industry to produce, for example, consumer goods characteristically sold through holesalers, the location of the wholesalers rather than of the ultimate consumers might present the market from a prospective manufacturer's viewpoint.

It should be noted also that reshipments of British Columbia lumber by second distributors are an important contributing factor in causing the total shipments to ot countries from all the manufacturing industries of Canada to fall well below the level exports of Canadian manufactured goods indicated in external trade data (see pp. 793-79 An additional factor is the large shortfall in exports reported by motor vehicle manufactur from the known level of exports of motor vehicles. In this area, some reporting compa are apparently exporting through head offices or sales offices which are separate report units statistically but are not manufacturing establishments, so that their shipments other countries are not shipments of goods of own manufacture according to Census Manufactures definitions. A transfer to the books of another unit of the same company treated, however, as a shipment in the Census, with the location, in this case, in Canada.

Another large contribution to the over-all shortfall in apparent exports of all mar factured goods originates in the primary metal industries. This arises from the fact th shipments of the smelting and refining industry include large amounts of work done reporting units in the mining industry owned by the same companies as the smelters. such cases, the mining industry makes the final shipment of the metals, perhaps to oth countries, at their full sale value, while the corresponding manufacturing industry "shi ments" are only an imputed custom charge for processing the ore; the destination of t smelter's shipment can be that of a reporting unit in Canada even if the metals are exporte

The over-all manufacturing shipments totals do not agree exactly with the Cens totals published elsewhere in the Year Book because of certain adjustments, such as t exclusion of advertising revenue of publishers and repair work of some industries.

Patterns of Interregional Shipments and of Provincial Demand

The ability of manufacturers in a particular region or province to ship to anoth section of Canada or to other countries reflects a variety of influences, among which is th nature of the industries within a region. Thus, the heavy concentration of motor vehic manufacturing in Ontario predisposes shipments from this region to the most distan regions of Canada and to other countries. Also, the heavy concentration of industri machinery manufacturing industries in Ontario and Quebec means widespread shipmen to other parts of Canada, even though there is a concentration of demand for such machine within the region itself and a large proportion of the shipments will remain there. In som of the smaller provinces, the representative manufacturing industries either are orient toward the processing of natural resources for shipment to other regions or countries tend to be of a type serving local or regional markets. The processing of natural resour products can involve widespread distribution beyond a province's borders which ma offset the more localized distribution of the products of other industries in the province.

The degree to which manufacturers' domestic shipments go to Canadian first destina tions outside the borders of a province is not itself an indicator of the degree to which tha province's industries are able to penetrate markets in other parts of Canada. A larg province, in terms of the total of its over-all manufacturers' shipments, naturally has mor opportunities for internal transactions; Ontario, for example, has a large capacity to orig inate shipments and also a large demand for such shipments. In addition, shipments t other parts of Canada may be some particular percentage of the originating province' shipments but represent either a relatively high or a relatively low performance in terms o the potential offered by the external markets. This potential is influenced by the size o the external markets, their distances and their special characteristics (such as, for example possessing capital-intensive industries which constitute a demand for machinery). Thes factors interact in a highly complex manner.

Table **19** summarizes the percentage distribution of the destinations of shipments o different regions of Canada and Table **20** shows the relative penetration of the apparen market for Canadian manufactures in different regions of Canada in terms of the percentag

over-all disappearance of Canadian manufactures accounted for by various Canadian urces. The percentage distribution of sources of exports and total shipment is also own.

It will be seen, for instance, that while manufacturers in the Atlantic Provinces send out the same percentage of their over-all shipments to Quebec as to Ontario, their percentage penetration of the more distant but larger Ontario market is somewhat lower. Their percentage share of apparent markets for Canadian manufacturers declines with distance from the Atlantic region.

Quebec manufacturers' shipments to the Atlantic Provinces are more than half those of Ontario manufacturers, whereas the corresponding ratio is about one to three in the Western Canada market. This is not surprising since Quebec is nearer than Ontario to the Atlantic provinces market. On the other hand, Quebec's position relative to Ontario's in the western provinces shows little decline as one progresses toward the Pacific Coast and actually rises in British Columbia. The fact that the largest manufacturing areas of both central provinces are roughly equidistant by rail from these markets is perhaps relevant but also im-

portant are the effects of specialization in Central Canada and the nature of regional d mand. Concentrated demand for farm machinery in the Prairie Provinces, for instanc favours shipments from Ontario where Canadian production of farm machinery is high concentrated; Quebec's specialization in certain non-durable goods industries contribut to its relative strength in the British Columbia market. Again, it must be remembere that imported goods are not included and that manufacturers in a particular region m use secondary distributors to one market more than to another.

It might be supposed that the manufacturers of the Prairie Provinces would not ship large a percentage of their products outside their borders as do the manufacturers of son other regions, and this is so. It might also be supposed that the Prairie Provinces' marke for their products in other regions of Canada would be less diversified than for manufacture of most other regions. This is not so, however, in the sense that shipments that do leav the Prairie Provinces to other parts of Canada are widely dispersed and relatively uncon centrated geographically; roughly equivalent dollar amounts and percentages of the region over-all shipments go to Quebec, to Ontario and to British Columbia.

A comparison of shipments of various regions to other regions, per capita of the re ceiving region, yields somewhat similar patterns to those shown in Table **20**, except tha per capita disappearance of manufactures in some regions is much higher than in other Table **21** shows the per capita disappearance in various provinces of the shipments different industry groups. It will be seen that the apparent absorption of products roughly the same in the more urbanized areas of Canada for some industries but for othe it varies sharply. Investigation of the reasons for the variations points in some instance to meaningful differences in the market, to the probable influence of secondary distributio or possibly, in some cases, to anomalies in reporting.

The manufacturing industries themselves use many products of Canadian factories such as steel, cotton yarn or machinery. Thus, provinces with highly developed manu facturing industries not related to use of local natural resources should tend to have highe per capita receipts of manufactures on an over-all basis; Table **21** shows that this is so. I addition, high per capita personal income or high levels of construction activity in a pa ticular year should favour high per capita receipts of the products of certain industr groups, which appears to be the case.

As in all the data, secondary distribution of lumber has distorted the distribution o shipments of the wood industries. The demand in the Prairie Provinces for agricultura machinery is reflected in a high per capita disappearance of products of the machinery in dustries. Manitoba's high per capita disappearance of products of the food and beverag industries and of a number of other industries undoubtedly reflects distributing activity located in Winnipeg, since the lower per capita disappearance of these industries' product in Saskatchewan would hardly reflect a proportionately lower level of consumption b Saskatchewanians. Although variation in apparent absorption per capita in the individua Atlantic Provinces also reflects the effects of secondary distribution, there is doubtless a over-all influence from lower per capita personal incomes.

When the data are examined at the level of shipments of individual industries, it ap pears that the market is more influenced by population in some cases and by personal dis posable income in others. Thus, per capita disappearance of the products of soft drin manufacturers is relatively stable across the country, except for being very high in Quebec but it varies sharply if calculated on per thousand dollars of personal income which show it to be much higher in lower income provinces. On the other hand, the disappearance o products of manufacturers of toilet preparations varies sharply per capita but is either $ or $3 per thousand dollars of personal disposable income for every province across Canada This presumably reflects the partial luxury status of the goods. An adequate analysis o demand for consumer products must, of course, go beyond such simple comparisons and use more extensive data. The full report contains a wealth of information by province and by industry.

21.—Per Capita Disappearance in Province of First Destination of Shipments of the Manufacturing Industries of Canada, 1967

Section 3.—Government Assistance to Manufacturing

Subsection 1.—Federal Assistance to Manufacturing*

The Department of Industry, Trade and Commerce (a merger of the former Depa ments of Industry and of Trade and Commerce Apr. 1, 1969) has responsibility for stimul ing the establishment, growth and efficiency of the manufacturing, processing and tou industries in Canada, and also for the development of export trade and external tr policies. It assists Canadian industries to initiate and take advantage of technologi advances, improve products and services, increase productivity and expand domestic a foreign markets. To achieve these goals, a wide variety of programs and services offered. At each phase of the product cycle—from research, development and des through production and marketing—the Department can assist with information a financial assistance.

Program for the Advancement of Industrial Technology (PAIT).—A progr of forgiveable loans for the development of new products and processes was initiated 1965 and in 1970 was changed to provide non-repayable cash grants for qualifying projec The objective of PAIT is to encourage industrial growth and production by providi financial assistance for the development of new or improved products and processes whi incorporate new technology and offer good opportunities for commercial exploitation domestic and international markets.

Financial assistance in the form of a grant (normally 50 p.c. of the development a preproduction cost) is available to companies incorporated in Canada for projects to carried out and exploited in Canada. Title to any invention or patent is vested in a remains the property of the company. Companies are expected to have the capabilit and facilities to undertake the development work and also to provide for the manufactu and sale of the resulting products. The program is designed to increase the techni competitiveness of Canadian industry and is also intended to help create an industr environment attractive to Canada's best-qualified scientific, technical and manager personnel.

To Mar. 31, 1970, 229 projects having a total estimated value of $72,000,000 had be assisted by the Government to the extent of approximately $37,000,000.

Industrial Research and Development Incentives Act.—This legislation, enact in March 1967 and administered by the Department of Industry, Trade and Commer provides cash grants or equivalent tax credits equal to 25 p.c. of capital expenditures corporations for scientific research and development conducted in Canada, and for t increase in current expenditures in Canada for scientific research and development ov the average of such expenditures in the preceding five years. To qualify for a grant, expe ditures must be for scientific research and development which, if successful, is likely to le to or facilitate an extension of the business of the corporation. In addition, a corporati must undertake to exploit the results of the research and development in Canada and mu normally be free to export products resulting from such research and development to countries of the world.

Automotive Program.—The Canada–United States Agreement on Automoti Products signed by the Prime Minister of Canada and the President of the United Stat on Jan. 16, 1965, provides for the removal of tariffs and other impediments to trade betwe the two countries in motor vehicles and original equipment parts. The basic objectiv of the Agreement are: creation of a broader market to permit benefits of specialization a scale; trade liberalization to enable both countries to participate in the North Americ market on a fair and equitable basis; and development of conditions in which market forc would operate to attain economic patterns of investment, production and trade.

* Prepared in the Publicity Branch, Canadian Division, Department of Industry, Trade and Commer Ottawa.

As a result of this program, Canada is now producing an increasingly larger share of total North American output of vehicles and components. Canadian exports of icles and parts and employment in this industry have increased substantially, and itional investment in new plants and expansion to existing facilities have been extensive. hough all of the objectives have not yet been fully realized, the Agreement is working l.

Machinery Program.—A machinery program was introduced on Jan. 1, 1968, with objective of increasing efficiency in Canadian industry by enabling machinery users to uire advanced capital equipment at the lowest possible cost while affording Canadian chinery producers tariff protection on what they manufacture. At the same time, nadian machinery producers are protected by a single statutory rate of duty which applies mediately when they are in a position to supply. This is particularly significant for nadian producers of custom-engineered machinery.

The program covers a broad range of machines classifiable under Tariff Item 42700-1 luding general-purpose machinery, metalworking and woodworking machinery, construc- n and materials handling equipment and various types of special industry machinery, h as pulp and paper and plastics industry machinery, and service industry equipment. e statutory rate of duty under that Tariff Item is 2½ p.c. British preferential and 15 p.c. st-favoured-nation.

The program provides that the duty otherwise payable on machines, accessories, achments, control equipment, tools and components, imported under Tariff Item 42700-1, y be remitted if such remission is in the public interest and the goods imported are not ilable from production in Canada. A Machinery and Equipment Advisory Board vises the Minister of Industry, Trade and Commerce regarding the eligibility of machinery remission of duty in accordance with the provisions of the Tariff item. The Board, in n, is assisted by the Branches of the Department concerned with individual industries, luding machinery manufacturing. Final authority for granting remission lies with the vernor in Council.

Under the program, machinery producers may also apply for remission of duty on duction parts and components included in Tariff Item 42700-1 which they cannot cure in Canada. This provision is for the purpose of stimulating Canadian machinery nufacturers to specialize their production and enable them to compete more effectively.

Building Equipment, Accessories and Materials Program (BEAM).—The AM program was established to assist in achieving greater efficiency and productivity the manufacture and use of building equipment accessories and materials, thereby lizing economic gains from the industry's domestic and foreign activities. The objec- es of the program include: establishment of a comprehensive National Construction ormation System; encouragement of modular dimensional standardization and co- ination; acceleration of the industrialization of the building process; development and ansion of export markets; promotion of uniform building regulations and standards; l encouragement of building design excellence through awards programs.

The program is being implemented and is subject to further development through the nstruction Industry Development Council and in co-operation with industry through major associations. The Council, which is responsible to the Minister of Industry, de and Commerce, is national in scope, comprised of 35 representatives of the manu- turing, design and contracting sectors of the industry as well as labour unions, universi- and government. It provides a forum for industry-government dialogue on matters of nomic and technological importance to the construction industry and a means of assist- the industry to become a modern integrated industry with a high potential for com- ing in export markets. Co-operating directly in the BEAM program are the Canadian nstruction Association, the Royal Architectural Institute of Canada, the Association of nsulting Engineers of Canada, the Specification Writers Association and the National me Builders Association.

Having established the needs and priorities for construction information in Can ways in which a comprehensive and flexible information system can be developed have b identified. An experimental system has been put into operation and user reactions being assessed. At the same time, a thesaurus of Canadian construction industry ter nology is being developed in both English and French to enable users to find terms given meanings and to resolve the ambiguity in natural language terminology. Origina the Industry Advisory Committee on Construction Information Systems advised dep mental officers on this aspect of the BEAM program. Now this group functions as a s committee of the Construction Industry Development Council.

The Department has developed a program to encourage the increased use of dim sional standardization of building components. Initially, a series of six conferences v held to acquaint policymakers within the industry with the technological and econo advantages of modular standardization. Following these conferences a continuing progr of Clinics of Modular Practice was organized, the clinics being held in all parts of Can to instruct architects, engineers, draftsmen and building supervisors on modular princi in buildings. Over 90 clinics have been held to date and more than 5,000 design pro sionals, draftsmen, contractors and manufacturers have participated. A directory Canadian Modular Building Components was published and distributed and a sec edition is being prepared in both English and French.

Further, orderly intelligent industrialization of the building process has been couraged under BEAM through technical missions, publications and conferences. this connection, a National Conference on a Systems Approach to Building was held April 1968 to inform all sectors of the industry on the development of industrialized buildi techniques, following which seven regional conferences were held in October-Novem 1969 across Canada, with leading authorities participating in the lectures and semina More than 2,500 senior representatives of the design profession and industry attend

It seems likely that the BEAM Industry Advisory Committees on Modular Coordi tion and Industrialized Building Techniques and Systems will be integrated to serve a sub-committee on systems building to the Construction Industry Development Coun

The promotion of universal use of the National Building Code is continuing. Onta is taking specific action in this regard and Nova Scotia, New Brunswick, Manitoba, S katchewan and British Columbia are considering similar action. An index of all cod standards and specifications used in the Canadian construction industry has been compil which will facilitate wider use of such standards in the industry.

Industrial Design.—The design program, under authority of the National Desi Council Act, administered by the Department of Industry, Trade and Commerce, imp ments programs to promote and expedite improvement in the products of Canadian industr The Department is also responsible for developing and carrying out programs and proje that may be appropriate to the utilization of improved industrial design.

Current design programs include: financial and technical assistance to co-operati educational institutes for the purpose of introducing design training at the technical a university levels; seminars on various facets of design for the benefit of the profession educators, business executives and the general public; awards programs for achievemen over a broad field of design endeavour; the awarding of scholarships for advanced traini in industrial design in Canada and abroad; the awarding of grants for design research a design promotion in Canada; and the provision of technical and financial assistance committees and groups dedicated to the implementation of programs to foster good desig on a national, regional or industry basis.

Extensive studies conducted in 1969 into the state of design in Canada revealed th the focus of attention should be directed to the manufacturing sector. As a result, t operation of the Design Canada Centres ceased on Mar. 31, 1970, and a program of i dustrial design assistance was introduced in 1970-71, under which financial support is give to the manufacturing industries that demonstrate their interest in developing new a

proved designs by employing qualified industrial design services. Such assistance is ailable to companies incorporated in Canada, to groups of companies organized as con- rtia, and to trade associations that can satisfy program requirements; it is concentrated relatively short-term projects of product innovation and is limited to 50 p.c. of the dustrial design operational and administrative costs, subject to the technical and com- ercial feasibility of the project.

In recognition of the outstanding contribution of Canadian business management ward the cause of good design, a National Design Council Chairman's Award for Design anagement was introduced in 1970, to be presented to the management which, in the ouncil's opinion, does the most to integrate and efficiently apply good corporate design licy. This Award is conceived in the broadest terms of a total design management ntext—from the premises to the packaging.

Defence Industry Productivity Program.—This program (combining the former dustry Modernization for Defence Exports Program and the Development Sharing ogram) is designed to enhance the technological competence of the Canadian defence dustry in its export activities by providing financial assistance to industrial firms for lected projects. Emphasis is placed on those areas of defence technology having civil port sales potential. Assistance may cover the development of products for export rposes; the acquisition of modern machine tools and other advanced manufacturing equip- ent to meet exacting military standards; and assistance with preproduction expenses to tablish manufacturing sources in Canada for export markets.

Projects initiated under this program have greatly assisted industry in developing ills on a specialized basis in fields of technology that have defence and civil applications, hich Canada is favourably situated to exploit. Costs of these projects are shared by the epartment and the Canadian firm concerned, and, in some instances, by the governments other NATO countries. Manufacturing equipment projects are selected for assistance the basis that the machinery acquired will make a significant contribution to increased oductivity. Generally this means that the machinery is the most advanced of its type, ch as numerically controlled metalworking equipment.

Automotive Adjustment Assistance Program.—This program, which remains in rce until June 30, 1971, offers opportunities to Canadian automotive parts manufacturers r expanded production, rationalization of output and reduced costs. In order to take lvantage of these opportunities, Canadian parts makers must engage in substantial re- uipment and plant expansion programs. Term loans are made available for the financing the acquisition, construction, installation and modernization of facilities or machinery d for use as working capital. To further assist automotive parts producers to become ore productive and competitive, the Adjustment Assistance Board considers applications r tariff remission on imported machinery and equipment used in the production of original uipment automotive parts, accessories and tooling, when such machinery and equipment e not available from Canadian sources in time to meet production schedules.

General Adjustment Assistance Program.—The objectives of this program, which e related to the Kennedy Round Agreements, are to enable Canadian industries to benefit much as possible from the widening markets and the increased scope for specialization d longer production runs, and to assist firms adversely affected by increased imports sulting from tariff quotas made by Canada to adapt to more competitive conditions. nder this program, the Government proposes to offer insurance on the major share of k of loss for industrial adjustment assistance loans made by private lenders. Where jury can be proved, direct loans may be made. Assistance in the form of grants may also offered to manufacturers to contribute to the costs of preparing adjustment proposals improve production, marketing and financial operations.

Ship Construction Subsidy Regulations.—Since 1967, the Department of Industry, rade and Commerce has been responsible for shipbuilding matters, including the Ship

Construction Subsidy Regulations and certain sections of the Income Tax Act and Regul tions. The industry continues to respond to the policy of national competition for gover ment shipbuilding requirements and has made active use of the subsidy program for co mercial vessels. The latter provided a subsidy rate of 25 p.c. for vessels other than fishi trawlers for the period 1966-69, after which time it is being reduced by ½ of 1 p.c. each quart until a rate of 17 p.c. is reached in 1973. For fishing vessels, the subsidy rate is 35 p. With the support of other programs, the Department has encouraged the development production of marine components and exports in this area have been increased.

Subsection 2.—Provincial Assistance to Manufacturing*

Assistance given by the respective provincial governments to manufacturing with their own territories is outlined in the following paragraphs.

Newfoundland.—The Newfoundland Government offers the following forms assistance to prospective manufacturing firms:

(1) The government offers advice and assistance to prospective industry in determining desi able plant location in the province and in the preparation of feasibility studies. Informati can be made available on the source and availability of raw materials, transportation cost labour costs and a variety of other economic data. The government will transport industr alists anywhere in the province so that they may obtain a first-hand look at potenti plant sites.

(2) Financial assistance may be provided by the government directly or through its Crow corporation, the Newfoundland Industrial Development Corporation and may take th form of loans against the securities offered by the prospective enterprise, or the acquisiti and holding of shares or other securities of any company wherever incorporated, with th right of the enterprise to buy back these shares.

(3) Buildings, where they exist, and land may be provided on very attractive terms.

(4) Based on cost-benefit analyses, the government might be willing to subsidize the co of electric power.

(5) In two special areas within the province (Stephenville and Bell Island) the Newfoundlan Government is prepared, for a period of two years after production commences, to exemp prospective firms from the province's share of the corporation income tax.

(6) In special instances and in two special areas (Stephenville and Bell Island), the Newfoun land Government is prepared to exempt prospective firms from the provincial sales ta on original machinery, equipment and material used for plant construction or expansion

(7) Development operators may be exempted from paying the provincial tax on diesel oil an gasoline used in manufacturing or processing operations.

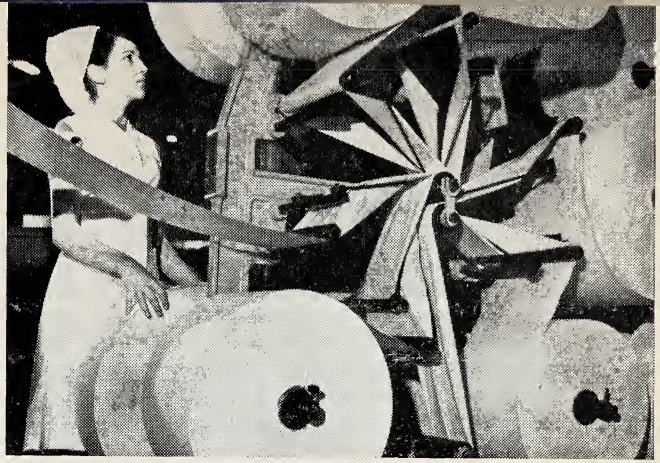
(8) Industrial training facilities are available throughout the province for specialized course to meet the requirements of incoming industry.

Prince Edward Island.—Provincial assistance to manufacturing is generally fun nelled through Industrial Enterprises Incorporated (IEI), a Crown corporation of th Prince Edward Island Government. It is prepared to offer assistance to prospectiv Island industries by way of long-term financing at attractive rates of interest. In addition IEI assists industries by acting as a clearing house for information regarding alternat sources of credit in financing through other lending institutions or outright grants that ma be available from government sources. IEI is also equipped to provide research and man agement services to existing Island industries or to groups contemplating new project on the Island.

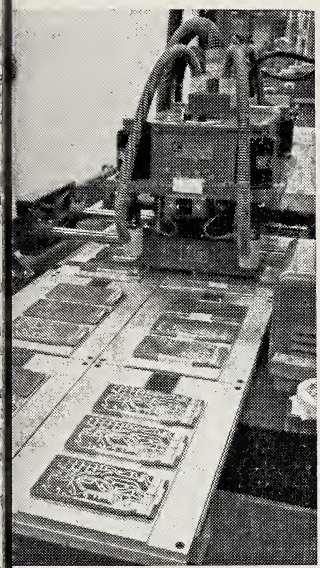
The Act incorporating IEI is particularly flexible in the terms of reference describin the manner in which IEI may participate financially in assisting industry in the province Participation is generally by way of a first mortgage on facilities but could well be in th form of an equity position. The ratio of IEI's participation to that contributed by th investors has been very generous in the past and, necessarily, will be negotiated on a individual project basis in the future.

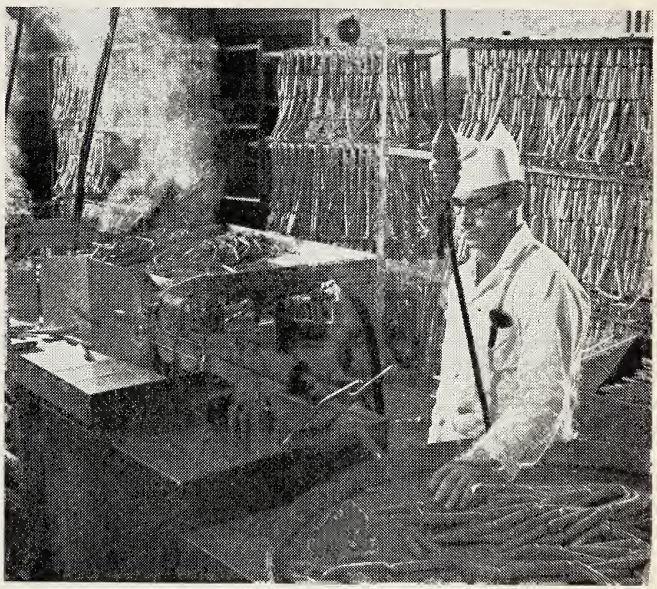
* Prepared by the provincial authorities concerned.

esting and efficient machine is used facial tissues in a paper products plant.



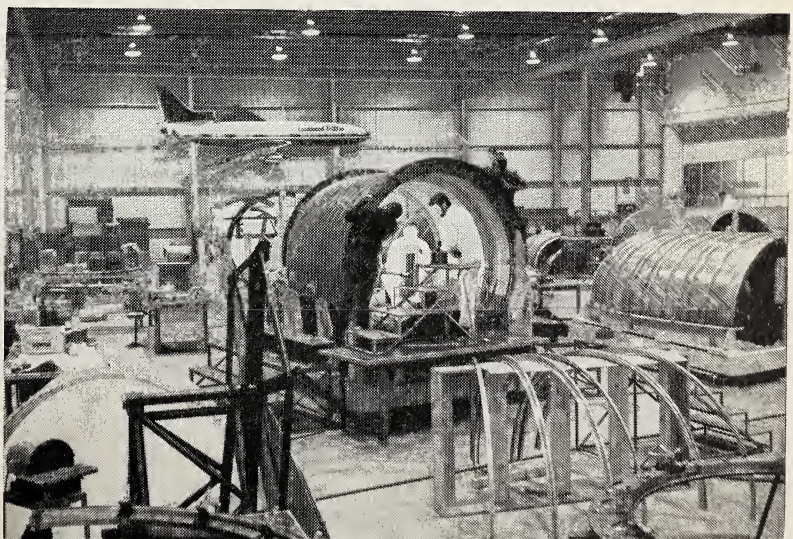
nted wiring boards in a shop out many kinds of telephone equipment.





A large meat-packing establishment produces great quantities of a very popular product.

lding a portion of will feed air into ted engine of a etliner.



Nova Scotia.—The Province of Nova Scotia offers two programs of direct financ assistance to new or expanding manufacturers.

(1) *Industrial Estates Limited* (IEL), a Crown corporation of the province formed 1957, will finance 100 p.c. of the cost of land and buildings and at least 60 p.c. of the install cost of machinery and equipment of new or expanding Nova Scotia manufacturers. T terms and conditions of financing made with clients are negotiable. IEL has made spec arrangements with most Nova Scotia municipalities whereby the local taxes paid by clients are limited to 1 p.c. of the building cost for a period of 10 years.

(2) *The Industrial Loan Board* (ILB), affiliated with the Department of Trade a Industry, provides mortgage financing for a wide range of new or expanding manufactur and processors and, in addition, financing is made available to businesses providing tour accommodation facilities. Eligible businesses may receive up to 75 p.c. of the cost of lan buildings, equipment, furnishings and other chattels taken as security. The term of lo for industrial enterprises is 15 years and for tourist and accommodation facilities, 20 yea

The special municipal tax assistance, mentioned above, is authorized under the No Scotia Bonus Act.

It should be mentioned, in addition, that the Cape Breton Development Corporatio a federal Crown agency, is responsible for fostering greater economic activity in the Ca Breton area of Nova Scotia through the promotion of industries. The program is ve flexible and the actual amount of financial assistance that will be provided to any one co pany or group will depend upon the over-all merits of the individual case. (See Index.)

New Brunswick.—The New Brunswick Department of Economic Growth has t key function of planning, directing and co-ordinating the broad strategy of economic a industrial development activities in the province. This, to a large extent, involves t provision of assistance to encourage existing industry to expand and new industry to esta lish. In order to carry out this function, the Department consists of three operati Branches.

(1) *The Industrial Finance Board* guarantees the repayment of loans by person associations or corporations engaged in industry. Applications are accepted from manu facturers only and the assistance takes the form of a guarantee of a bank loan or bon issue. Loans are to be secured by a first charge on real property, machinery and equipmen

(2) *The Industrial Services Branch* provides support services to industry through tw Divisions: the Marketing Services Division complements the work of the federal Depar ment of Industry, Trade and Commerce with a substantial external trade promotion pr gram, including trade fairs and missions, licensing arrangements and assistance in docume tation and provides local industry with export opportunities; the Engineering Service Division has the prime responsibility for implementing the government's program c maximizing New Brunswick product content in public construction and the provision c industrial engineering assistance, production control and other engineering services.

(3) *The Development Co-ordination Branch* is responsible for co-ordinating the develop ment efforts of the various provincial departments and agencies. It also acts as the pro vincial liaison unit with the federal Department of Regional Economic Expansion.

In addition, the New Brunswick Development Corporation, a Crown agency, wa established to develop existing and introduce new industry to the province. It is em powered to make loans or guarantees of loans, security being usually taken in the form of first mortgage. The Corporation must be satisfied that the funds required could not b obtained from conventional sources on reasonable terms and conditions.

A Project Branch undertakes feasibility studies required by industrial principals wish ing to establish manufacturing facilities within the province. It investigates, for example markets, resources, labour, transport, plant location, economic viability, etc., as required An Engineering Branch advises on all engineering aspects for any new developments an expansion proposals. It has also developed and administers three industrial parks, eac of which is set up as a separate company.

Another agency directed toward the economic development of the province is the New Brunswick Research and Productivity Council (see p. 494). The Council is an industrial research and development consulting organization and the source of technical information on processes, machinery, plant, etc., and industrial engineering advice and assistance to local industry. A wide selection of testing and calibration services is provided.

Quebec.—Over the years, the Quebec Government has developed a number of measures intended to give direct stimulation to industrial development in the province; these cover three of the most important aspects of industrial development—capital investment, taxation and grants. The programs under which the government may grant incentives to investment include: aid to regional industrial development; financial aid to selected industries; and financial aid to key industries.

The regional industrial development program applies to all capital investment in manufacturing outside of the industrial area of Montreal. Investment must be for the building or expansion of plant or for the purchase of machines or equipment, and it must be of the order of at least $50,000. The area eligible for grants under this program is divided into two zones. In Zone I, which is the Montreal area, the grant equals 25 p.c. of capital investment up to $500,000. In Zone II, which is the remainder of the eligible area, the grant equals 40 p.c. of the first $250,000 of investment plus 30 p.c. of the next $750,000 plus 5 p.c. of the remainder, up to a maximum of $500,000.

The financial aid to selected industries program permits grants to be made to manufacturers investing in certain industrial production equal to 15 p.c. of their investment up to a total of $500,000. This program applies to the administrative area surrounding Montreal with the exception of a zone some 20 miles wide measured from the centre of the city proper. Conditions of eligibility are based generally on the competitive capacity of the product concerned—one not manufactured in sufficient quantity in Quebec or one destined largely for export. To be eligible, a firm must export one third of the value of production resulting from assisted investment.

The financial aid to key industries program is intended to promote development in Quebec of technologically advanced industries or to promote the manufacture of new products offering some prospect of serving the international market. To be eligible for this assistance, the minimum investment must be $5,000,000. The amount of the grant is 10 p.c. of the first $10,000,000 plus 10 p.c. of the remainder; the maximum grant is $5,000,000. The program applies only to areas not covered by the federal Regional Development Grant Act. A firm benefiting under the program must undertake to spend on research in Quebec during the 10 years following the opening of the plant, an amount at least equal to the grant required. Moreover, it must agree to employ, within three years of application, graduates of Quebec universities at the rate of one graduate for every $50,000 of grant.

Over and above these investment incentive programs, the Quebec Government considers it advisable to grant manufacturing firms a reduction in taxes on profits for their investment in Quebec. Here, too, eligibility is governed by building or expansion of plants or purchase of new machinery and equipment. The taxation easement allows for a reduction in taxable revenue amounting to 30 p.c. of all investment exceeding $50,000.

The Quebec Government grants industrial credit through the Industrial Credit Board which was set up in 1967. The Board grants loans to new or existing manufacturing enterprises for the purchase of land, for the purchase or construction of buildings and for the purchase of machinery or equipment. It gives credit to small and medium-sized firms at reasonable rates if they are not able to find it elsewhere, provided they show a potential for growth and furnish adequate guarantees.

Ontario.—The Province of Ontario gives direct assistance for industrial expansion and increased trade through the Ontario Development Corporation (ODC), a Crown agency for economic and regional development which is answerable to the Legislature through the Minister of Trade and Development. The ODC program provides interest-

free forgiveable loans; term loans at reasonable rates of interest; technical and advisor services; and rental and leaseback of manufacturing plants in approved areas. Forgiveabl loans, generally representing about one third of the total capital requirement, are forgive over a six-year period as the company meets commitments. Term financing is provide through mortgages, debentures, etc., in many of Ontario's smaller centres of population Loans may run up to 20 years and are available for construction of new manufacturin buildings or the extension of existing buildings, and for purchase of new manufacturin equipment that will substantially add to employment. The Corporation may also act a a catalyst in arranging financial packages for companies, and will provide advice on ob taining financing from private lenders, government and other sources.

Equalization of Industrial Opportunity (EIO).—Under this program, started in 1967 secondary manufacturing companies establishing new facilities in provincial equalizatio areas or making approved additions to existing facilities are eligible for EIO loans. Th loans are available to companies building new plants and will also apply on new machiner when 75 p.c. of the machinery installed is new.

Northern Ontario Development.—A new Northern Ontario Development Corporation wa formed in 1970, offering loan and advisory services. This Corporation is part of a larg reorganization of services for northern Ontario.

Trade and Development.—The Trade and Industry Division of the Department o Trade and Development provides advisory services on financial and marketing matter through four Branches: the Industrial Development Branch provides market researc information, details of land and building costs, municipal services, energy and labour costs incorporation and customs laws, material sources, and transportation facilities; the Market ing Branch assists Ontario companies to export by sending trade missions abroad, b bringing in foreign buyers and through educational programs; the Research Branch pro vides economic studies for the Division and may also undertake short-term research fo industry; and the International Branch operates a trade and industry counselling servic in 14 world markets—New York, Chicago, Los Angeles, Boston, Atlanta, Cleveland Minneapolis/St. Paul, London, Frankfurt, Milan, Stockholm, Vienna, Brussels and Tokyo

The Department of Trade and Development also operates an immigration service t assist Ontario employers seeking staff.

The Sheridan Park Research Community.—The Sheridan Park Corporation has estab lished the Sheridan Park Research Community at Mississauga, which has research labora tories and facilities that offer an interchange of ideas and techniques and help participatin companies to stay competitive in world markets. Research creates new and improve products as well as better utilization of natural resources. This unique $36,000,000 com munity employs some 1,600 persons in nine resident companies and corporations.

The Ontario Economic Council.—This 20-member advisory group reports to Cabine on methods to encourage maximum development of human and material resources through out Ontario. Members of the Council are private citizens who serve without pay. (Se Index.)

Manitoba.—The Department of Industry and Commerce, established in 1948, is th focal point of provincial government effort in the drive for economic development in Mani toba. To carry forward a comprehensive range of economic development programs, th Department has established various branches and agencies, using an organizational con cept that provides industry specialization combined with comprehensive program support

The Industry Group consists of five Branches with the specific commodity interest of: Food Products; Chemicals; Machinery and Equipment; Industrial Materials an Services; and Textiles and Consumer Goods. Each is charged with the responsibility o fostering maximum economic growth in its sector, through expansion of existing firms an attraction of new investment. Each has the function of studying trends in its sector

dentifying business opportunities, and assisting firms through market research, business evelopment, trade development and casework. The Programs Group has four Branches irectly concerned with the implementation of programs in the areas of economic research, roduct development, production efficiency, manpower recruitment and regional devel- pment.

Some 50 professionals plan and carry out all programs, consulting and engineering rvices, and research activities. In addition, the Department works closely with other gencies on matters affecting Manitoba's economic development. The following three ssociated agencies are special-purpose bodies of private citizens supported by Department aff.

The *Manitoba Export Corporation* assists Manitoba firms in developing export sales. works closely with each industry Branch and is empowered to appoint agents abroad d to handle exports for Manitoba manufacturers. Services include extensive practical dvice on pricing documentation, export procedures and tariffs. The Corporation can ssume all the duties of an export department for Manitoba companies. The *Manitoba esign Institute* promotes and encourages the application of industrial design principles Manitoba companies through a series of seminars, workshops, product evaluation ses- ns, packaging clinics and direct assistance. The *Manitoba Research Council* promotes cilities to enhance the applied research and development capabilities of Manitoba indus- ies; provides information to industry regarding sources of financial assistance for research d development; and works with research units and reference authorities throughout the rld to assemble and present the latest in theoretical, technical and practical know-how Manitoba producers. (See also p. 496.)

The Department of Industry and Commerce has introduced two new programs to ovide assistance. The first is the establishment of Industrial Fellowships to stimulate e creation of industrial enterprises and the second is the formation of four committees help develop centres of excellence in research.

The Manitoba Development Corporation.—This is a Crown corporation established in 58 to provide financing for new and existing manufacturing and processing industries, r the tourist industry and for community development corporations in the province. In nsidering applications for financial assistance, the Corporation is influenced mainly by und business practices and the potential contribution to the economic growth of Mani- ba, including the creation of employment opportunities. Given these considerations, ans are usually extended when financing is not otherwise available on reasonable terms d conditions, provided the owner has invested a reasonable amount of capital in the siness. The terms of repayment can be tailored to suit the requirements of the in- vidual applicant.

Manitoba Regional Development Corporations.—By Manitoba legislation, enacted in 64, these essentially autonomous organizations came into being to undertake promotion a wide sphere of regional interests. They were created to promote industrial, commer- al and tourist developments in their respective areas and to respond more effectively to e changes taking place in rural areas. They represent a unique instrument in Manitoba d have proved extremely effective in meeting the challenges of regional development rough improved communication with people at the regional level. The Department of dustry and Commerce has encouraged the formation of regional development corpora- ns in Manitoba and the Manitoba Government has contributed to their operating costs. present, seven regional development corporations, encompassing all of Manitoba except etropolitan Winnipeg, have been formed.

Manitoba Incentives to Industry.—The Province of Manitoba offers an improved in- ntives program for Manitoba companies generally engaged in production/processing, stribution or specialized construction. These incentive programs are offered through

the Department of Industry and Commerce to help Manitoba firms pay for growth-plan costs in the following six areas of industrial interest.

(1) The Feasibility Studies Incentive Program has been established to share the costs incurred by eligible Manitoba companies undertaking feasibility studies to develop plans for company growth and assist in application for new grants offered by the federal Department of Regional Economic Expansion.

(2) Technical Assistance Incentives are available to aid Manitoba firms to retain private consulting and advisory services, thus permitting Manitoba companies to take advantage of modern management techniques to improve manufacturing productivity, product acceptance and organizational control and efficiency.

(3) Design Improvement Incentives are available to aid Manitoba firms to retain private consulting and advisory services. The purpose is to assist Manitoba companies with the improvement of market acceptance and competitiveness of existing products, with the creation of profitable new products and generally to improve their competitive position in national and international markets.

(4) The Research and Development Incentives Program enables eligible Manitoba companies to obtain assistance for product innovation and testing. The objective is to encourage the introduction of new products or a radical improvement of existing products, through research and development.

(5) The Exports Incentives Program assists eligible Manitoba companies seeking new export markets by participating in defraying the costs incurred in approved advertising, sales promotion or merchandising in new export markets.

(6) The Manpower Development Incentives Program assists Manitoba companies in the establishment of effective manpower development and training programs for employees, through a sharing of costs incurred for the professional advice necessary to set up such programs.

Saskatchewan.—Assistance to industry in Saskatchewan is given through the Department of Industry and Commerce, the main functions of which are to provide co-ordination for resource industries with all locational factors and problems connected with major resource development; to identify and promote secondary industrial opportunities and provide service to local secondary industry; to promote domestic and export marketing of products produced in Saskatchewan; and to stimulate, co-ordinate and promote the development of tourism in the province. The Department also assists industry by sponsoring or supporting trade shows, industrial seminars and displays of Saskatchewan products at provincial, national and international fairs and exhibitions.

The Industry Incentives Act.—In March 1970, the Saskatchewan Legislature passed the Industry Incentives Act, the purpose of which is to encourage the establishment, expansion and modernization of industry in certain areas of the province. The Act, which is administered by the Department of Industry and Commerce, provides forgiveable loans amounting to either $5,000 for each job created in the operation of the new or expanded facility, 20 p.c. of the capital cost of establishing, expanding or modernizing the facility, or $300,000, whichever amount is the least. One tenth of the loan will be forgiven each year until the end of the fifth year, when the balance will be forgiven provided the company has performed satisfactorily. Provincial loans will not be made in those areas eligible to receive Federal Government incentive grants.

The Saskatchewan Economic Development Corporation (Sedco).—Assistance to industry is also given by the Saskatchewan Government through the loan program of Sedco, a Crown agency established in 1963. Assistance is intended for primary or secondary manufactures, including certain specialized agricultural businesses. Enterprises may be of any size, they may be local, provincial, national or foreign organizations and ownership may take any form. An industrial enterprise is defined as an industry engaged wholly in extracting or processing natural or mineral resources, but not basic farming operations; a secondary manufacturing industry or one engaged in processing agricultural products; and an industry serving the former or one of service to agriculture. A specialized agricultural operation is one whose investment is centred in fixed assets other than land, such

in machinery, equipment and buildings. Loans are normally mortgage loans secured a pledge of the fixed assets of the borrower, repayable for a specific term but, in appro- ate circumstances, other forms of financing may be arranged.

In addition to loans, Sedco can provide or arrange to provide industrial sites, buildings plants on lease, lease-purchase arrangements or by outright sale.

Alberta.—The Province of Alberta assists industry through the services of the Alberta mmercial Corporation, a Crown corporation established in 1964. As a means of further ngthening the industrial base in the province, a program of financial assistance is offered new incoming manufacturers as well as to the expansion programs of existing Alberta cerns, and financial assistance is provided in various forms to industries unable to ain suitable financing through other sources.

The assistance is intended primarily for small manufacturers and producers and vides the financing of inventories of raw and/or finished materials, the financing or re- ncing of plant equipment, the financing of plant-sites including land and buildings, , at present on an experimental basis, the provision of leased premises under sub-lease.

Under the banner "Assistance to Industry", the service operates on an assist basis. e company and its principals are expected to lay the financial foundations and the erta Commercial Corporation then fills requirements not provided for by the banks or er lending institutions. Inventory financing is usually limited to about 75 p.c. of costs; loans covering equipment or plant-sites, the level is set to suit the purpose and usually s to about 60 p.c. Inventory financing lends itself to the broadest application among nufacturers and producers, since most of such industries face inventory problems and, en these are solved, operating capital problems usually disappear. Hence the service vides an alternative to the facilities of other lending institutions. In these specific as, the Corporation is unique in Alberta.

Under inventory financing contracts, the Corporation actually purchases and stores entory for resale to the Alberta industries being served and all benefits, such as savings ough bulk buying, etc., go to the industries. Equipment and building finance contracts designed to suit the needs and future planning of the operating company and the periods r which these contracts extend vary in accordance with their respective needs. Repay- nt is made against a blended schedule of monthly payments allowing the company to get ahead accordingly.

Service under the program is provided through the Corporation's head office in Ed- nton and its southern area office in Calgary. Financing programs are individually lt with through an experienced staff of professional personnel. Applications for as- ance call for suitable back-up material, such as financial statements, etc., which is died and broadly assessed. Applications are considered for approval by the Board of ectors and, under normal circumstances, funds are scheduled to flow in four to six ks. All funds employed under the various schemes call for interest at a favourable e and security is in the form of clear first charges with suitable involvement of the prin- als and the prudent stabilizing of the company's economic structure for the period of the dertaking.

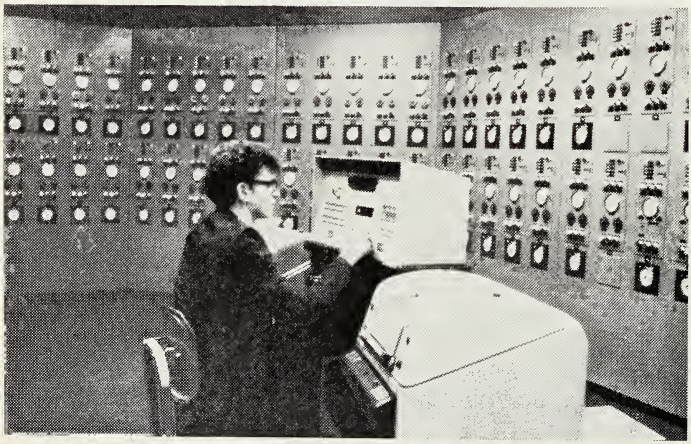
A further and often equally or even more important function of the Corporation is t of providing guidance to small manufacturers and producers in management prob- s. Such assistance is usually applied, without cost, with the object of helping the nufacturers lay down strong procedural foundations upon which to build and better ract suitable financing as a result. These operations are directed toward the regular fessional counselling services at the earliest suitable moment and as soon as their budg- allow.

The services of the Corporation are continuously examined and updated as a means keeping all aspects of the program fully abreast of the changing needs of industry.

British Columbia.—The functions of the Department of Industrial Developmer Trade, and Commerce are to encourage industry, to extend foreign trade, to investiga matters of economic importance, to collect and publish statistical information, and assist in regional industrial development. In these fields, the Department is organiz to assist existing activities and encourage new enterprises by placing its facilities at th disposal, and to co-operate in all problems incidental to establishment. Direct financ assistance is not provided for manufacturers except for the provision of bounties for t production of blister copper or refined copper (not yet exercised) and a bounty for pig ir of British Columbia origin used for steel-making purposes in the province.

The chief means employed by the British Columbia Government to promote industri development are: (1) to develop the basic provincial infrastructure, including the extensi of rail services to northern centres by the provincially owned Pacific Great Eastern Ra way, and to develop electric power facilities by the British Columbia Hydro and Pow Authority; (2) to provide economic data and analysis relating to markets, production, wa costs, etc. (a function of the Economics and Statistics Branch of the Department of Indu trial Development, Trade, and Commerce); and (3) to assist in locating plant sites.

The Department maintains industrial and trade promotion offices in London, Englan and also in San Francisco and Los Angeles.



One man monitors mo than 60 varying typ of dyeing machin from the central contr room. All workers d placed as a result the new operatio were given alterna employment by t company.

←

The first fully computerized dyehouse of its kind in Canada is on line in the Cowansville, Que., plant of one of the country's largest textile manufacturers. The system, built at a cost of $1,800,000, controls a greater number of diversified dyeing machines than any other known dyehouse in the world.

A length of freshly dyed fabric is extracted from a dye machine in one of the few manual stages left in the dyeing operation.

ubsection 1. Value of Construction Work Performed	823
ubsection 2. Building Permits Issued	828
Section 3. Housing	830
Subsection 1. Government Aid to House-building	830
Subsection 2. Housing Activities, 1969-70	834
Subsection 3. Housing Statistics of the 1966 Census	839

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the nadian economy on construction and on machinery and equipment, together with mmaries of other available statistics for the construction industry. Section 1 shows amounts spent by each of the various industrial or economic sectors. Section 2 brings ether a number of summaries of related series on construction activity—value of work formed by type of structure, value of materials used, salaries and wages paid, numbers ployed, and building permits issued. Government aid to house-building, construction dwelling units and housing statistics of the 1966 Census are covered in Section 3.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment†

A survey carried out early in 1970 indicated that capital expenditures in Canada by iness establishments, institutions, governments and house-builders are expected to ch $17,865,000,000 during that year. This total represents an increase of about 7 p.c. r the $16,612,000,000 estimated for 1969. Within the total, outlays for new construc- n are expected to rise by some 7 p.c. and those for new machinery and equipment by htly more than 8 p.c. above the comparable 1969 expenditures.

The capital program planned for 1970, if accomplished, would match the estimated ease in investment spending for 1969 and would represent a rising level of activity in

* Except where otherwise noted, prepared (June 1970) in the Business Finance Division, Dominion Bureau tatistics.

† Capital expenditure figures for 1968 and earlier years are final and those for 1969 are preliminary and subject to ion at a later date. Capital expenditures for 1968 and 1969, as well as intentions for 1970, appear in greater detail e publication *Private and Public Investment in Canada, Outlook 1970*, available from Information Canada (Catalogue 61-205).

volume terms. These increases follow two years of marginal increase in value terms and decline in the physical volume of investment activity if allowance is made for price increases during the two years. The rate of increase expected in 1970 is similar to the average experienced over the past decade and will provide moderate growth impetus to the economy without placing generally excessive demands on investment supporting activities.

With the exception of housing, planned capital spending for 1970 for all other major sectors of the economy is expected to be higher than the 1969 level. Spending plans of business involve an increase of 11 p.c. and social capital outlays by institutions and governments are expected to rise by 10 p.c. House-building activity, on the other hand, is expected to decline by 5 p.c. following a record year in 1969.

The pattern of investment expenditures expected in 1970 differs considerably from that experienced in 1969. In the latter year, the most buoyant area of investment was house-building which recorded an increase of 20 p.c. Business investment advanced by about 7 p.c. following declines in the previous two years, and capital outlays by governments and institutions were slightly lower than in 1968. Results of the 1970 survey indicate that planned spending for new construction will rise by about 7 p.c. in 1970, with a 5-p.c. decline in residential construction more than offset by a 13-p.c. rise in non-residential construction. Outlays for the acquisition of new machinery and equipment are expected to be 8 p.c. above those of 1969.

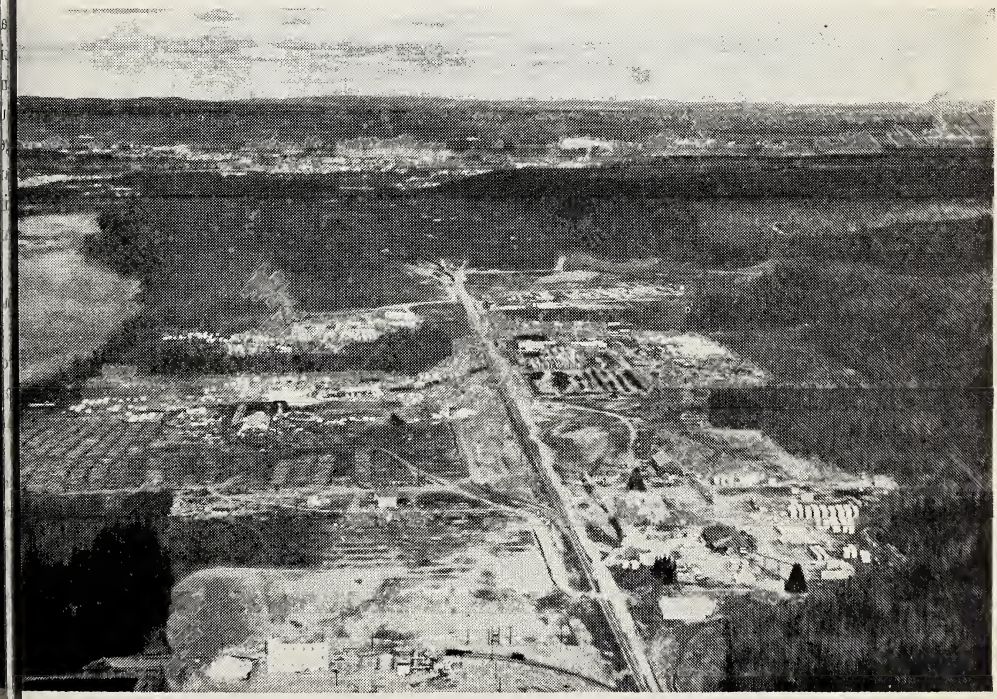
The breakdown of capital spending plans for 1970 by region reveals that capital outlays may be above the 1969 level by about 6 p.c. in the Atlantic region, Quebec and British Columbia and by 14 p.c. in Ontario. Outlays in the Prairie region, however, are not expected to exceed those of 1969. Considerable variations exist among the individual provinces of the Atlantic and Prairie regions. Plans for the Atlantic Provinces suggest that there will be a decline in New Brunswick, but an increase of 16 p.c. in Newfoundland and lesser increases in Prince Edward Island and Nova Scotia. Similarly in the Prairie Provinces, an increase of 4 p.c. is planned in Alberta but expenditures in Saskatchewan and Manitoba are expected to decline moderately.

The spending sectors that contribute to the expected strengths and weaknesses vary considerably from region to region. Business investment is expected to increase in all regions except the Prairie Provinces, where a moderate decline may occur. The most rapid growth is expected in Ontario where plans by business show an increase of more than 26 p.c., largely attributable to higher spending on commodity-producing plants, stores and commercial buildings. Business spending is expected to rise in the Atlantic Provinces by 8 p.c., in Quebec by 6 p.c. and in British Columbia by 7 p.c. In the Atlantic Provinces the main area of strength is in primary industry construction and a significant increase is also expected in spending on electric power facilities in Newfoundland and on manufacturing in Nova Scotia. In Quebec, a moderately higher level of spending is expected in most major sectors. In British Columbia, the most important contributor to the added strength is an expanded program in utilities but, with the exception of commercial building, all other major sectors show moderate gains. In the Prairie Provinces, business investment as a whole is likely to be below the level of 1969 with the only major elements of strength occurring in oil and gas developments and manufacturing in Alberta. House-building is likely to decline in Quebec, Ontario and the Prairie Provinces but modest increases are recorded for the Atlantic Provinces and British Columbia.

Social capital outlays are expected to increase in all regions in 1970. The largest crease of 12 p.c. is expected in the Prairie Provinces, followed by increases of about 11 p.c. British Columbia and of about 10 p.c. in Quebec; moderate advances are also expected r the Atlantic Provinces and Ontario.

It should be noted that, in the smaller provinces in particular, individual projects or ecial conditions in one industry may have an important bearing on the year-to-year trend total investment. For example, a decline in planned outlays by the New Brunswick per industry, where some large projects reached the completion stage, accounts for most the reduction in that province. On the other hand, the marked increase expected in ewfoundland is largely the result of an expanded program for electric power facilities. should also be noted that actual outlays in 1970 may differ from the stated intentions as result of developments occurring as the year progresses.

Table **1** shows the trend in capital spending over the years 1952-70 in both current and nstant (1961) dollars. Table **2** gives a summary of capital and repair expenditures by onomic sector for 1968-70 and Table **3** contains details of the manufacturing, mining, ilities, trade, institutions, finance and commercial services sectors.



nce George Industrial Park, one of several being developed along the Pacific Great Eastern Railway British Columbia. The 65 plants completed or in the planning stage in this area will generate rail traffic d the establishment of warehouse and service industries for customer use. Other industrial parks are under construction at Williams Lake, Mackenzie and Fort Nelson.

[1] Includes privately operated social and welfare institutions. [2] Mainly expenditures of real estate companies engaged in developing, owning and leasing properties, and may include outlays for multi-purpose developments with such facilities as theatres, stores, hotel accommodation, etc. [3] Includes services to business, certain recreational and personal services and such miscellaneous services as trade and exhibition associations.

A summary of the capital expenditures in each province for the years 1968 to 1970 is given in Table 4. Such expenditures represent gross additions to the capital stocks of

the province and are a reflection of economic activity in the area, although the act production of these assets may generate major employment and income-giving effects other regions.

Section 2.—Construction Statistics

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the e time and from the same sources as the data on capital expenditures that appear in ion 1. The data represent the estimated total value of all new and repair construction ormed by contractors, by labour forces of utility, manufacturing, mining and logging s, and by government departments, home-owner builders and other persons or firms primarily engaged in the construction industry. Table 5 shows the value of new and ir construction work performed during the period 1961-69 with intentions for 1970, and le 6 shows the value of such work performed by contractors and others in the years 3-70.

5.—Value of New and Repair Construction Work Performed, 1961-70

NOTE.—Actual expenditures 1961-68; preliminary 1969; intentions 1970.

[1] Includes petrochemical plants.

Principal statistics of the construction industry are shown by province and for con-ctors, utilities, governments and others in Table 8. The statistics given for Canada a whole may be considered as relatively accurate but those for individual provinces and class of builder are approximations only. All estimates given for cost of materials used e based on ratios of this item to total value of work performed, derived from annual rveys of construction work and applied to the total value-of-work figures. Estimates of bour content are similarly based but, in addition, are adjusted to include working owners d partners and their withdrawals. Although the ratios were calculated in some detail type of industry, still further refinements are required. There are also some difficulties obtaining the precise location of projects undertaken or to be undertaken by large mpanies operating in a number of provinces. However, if used with these qualifications mind, the table provides useful estimates.

8.—Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1968-70

Price Index Numbers of Construction and Capital Goods.—Reference is made here to Chapter XXI, Part IV on Prices. Section 2 of that Part contains index numbers which measure price changes in residential and non-residential building materials and changes in construction wage rates; price indexes of highway construction which express prices paid by provincial governments in contracts awarded for highway construction each year as a percentage of prices paid in 1961; and price indexes of electrical utility construction (distribution systems, transmission lines, transformer stations) which provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping such utilities.

Subsection 2.—Building Permits Issued

The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected from more than 1,400 municipalities across the country and are available for individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

The total value of permits issued for building construction in 1969 was $4,895,551,000, a figure 2.5 p.c. higher than that in 1968. Residential construction values held steady, showing only a 1-p.c. increase and, although non-residential construction values increased by 4.1 p.c., the advance was more than accounted for by increases of 7 p.c. and 20 p.c. in the industrial and commercial sectors, respectively; the institutional and government permit values decreased by 7 p.c. All provinces showed increases in 1969 except Newfoundland, Quebec and Saskatchewan, where the decreases were 19 p.c., 14 p.c. and 32 p.c., respectively. The value of building permits issued in each province in the years 1968 and 1969 is given in Table **9**, in each of 50 municipalities in Table **10** and in each of the 19 metropolitan areas in Table **11**. The latter made up 68 p.c. of the 1969 total for Canada.

Section 3.—Housing*

Subsection 1.—Government Aid to House-Building

Federal Assistance.—The role of the Federal Government in housing has expande progressively since the introduction of the first continuing statute in 1935. Although th Government originally entered the housing field in 1918 when it made money available t the provinces for re-lending to municipalities for housing purposes, the first general piec of federal housing legislation was the Dominion Housing Act passed in 1935. This wa followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with th present National Housing Act, defined as "an Act to promote the construction of ne houses, the repair and modernization of existing houses and the improvement of housin and living conditions". Central Mortgage and Housing Corporation (CMHC), a Crow

* Prepared (June 1970) in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

ıcy incorporated by Act of Parliament in 1945, administers the National Housing Act co-ordinates the activities of the Federal Government in housing. The Corporation the authority and responsibility for a variety of functions affecting housing in its long- ı outlook as well as in its immediate requirements. It is empowered to act as an rer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an er of property and other assets. It also acts as a research agency in fields associated ı housing and assists provinces and municipalities in many aspects of urban growth. general, the Government, through the successive Housing Acts, has attempted to ılate and supplement the market for housing rather than assume direct responsibilities rightfully belong to other levels of government or that could be borne more effectively private enterprise. In each case the aim has been to increase the flow of mortgage ey and to encourage lenders to make loans on more favourable terms to prospective e owners. Close to half of the country's present stock of approximately 5,900,000 ses have been built since the first covering legislation was enacted; about one third of e were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, Federal Government is active in many ways.

Loan Insurance.—Insured mortgage loans may be made for both home-ownership for rental housing. They are normally available from approved lenders to individual e-owner applicants, to builders constructing houses for sale or for rent and for some ial groups, such as co-operative housing associations and farmers. Insured loans are available for the purchase, improvement, refinancing or sale of existing dwellings.

Prior to June 1969, the maximum interest rate on insured loans was restricted to $2\frac{1}{4}$ p.c. ve the long-term Government bond rate adjusted quarterly to the nearest one eighth of per cent. Amendment to the National Housing Act, approved June 27, 1969, removed restriction from all but home improvement loans, thus allowing the NHA interest rate nd its own level in relation to the open market.

Upon application, the borrower pays CMHC a fee of $35 per unit to help defray enses incurred in the examination of plans and specifications, in the determination nding values and in compliance inspections during construction. An approved lender ires evidence that a home owner or home purchaser is providing 5 p.c. of the value of house from his own resources. For the home owner this equity may be in the form ash or a combination of cash, land and labour; for the home purchaser it may be in cash abour. The regulations require that gross debt service—the ratio of repayments of cipal and interest plus municipal taxes to the income of the borrower—should not ed 27 p.c., although instances involving higher ratios may be considered on their merits. borrower pays an insurance fee which is added to the amount of the loan and is repaid the term of the mortgage; the fee ranges from $\frac{7}{8}$ p.c. to $1\frac{1}{4}$ p.c. of the loan, according ype of unit and time of mortgage advances.

Loans for new home-ownership may be up to 95 p.c. of the first $20,000 of lending value 80 p.c. of the remainder to a maximum loan of $25,000. For rental housing, loans may or 90 p.c. of lending value. Loan maxima vary with the type of rental housing but ıot exceed those set for similar dwellings built for home-ownership. Current maxima single family units $25,000; apartment multiple units $18,000 per unit; and hostels 00 per person accommodated. Loans for existing houses may be 95 p.c. of the lending e, up to a maximum amount of $18,000 per housing unit. The repayment period may ıp to 40 years for new home-ownership, rental housing, and for existing home-owner llings.

Direct Loans.—CMHC may make direct loans for both home-ownership and ren housing where, in the opinion of the Corporation, loans are not available through approv lenders. Loans are made to any eligible home-owner applicant but direct loans to build are normally subject to a requirement that the houses be pre-sold to satisfactory purchase By the end of 1970, direct lending by the Corporation totalled approximately $4,203,397,0

CMHC may make loans to any organization, corporation or individual to assist financing the construction of low-rental housing projects or in the purchase of existi buildings and their conversion into low-rental housing projects. In addition to se contained units, developments undertaken may include hostel or dormitory accommodati for elderly and low-income individuals. Loans may be up to a maximum of 95 p.c. of t lending value established by CMHC. The period for repayment may not exceed the use life of the project and in any case may not be for more than 50 years. The interest rate established by Order in Council. Plans and specifications for such projects as well as f ancing and operating arrangements must be approved by the Corporation.

Since December 1960, the National Housing Act has provided financial assistan for the elimination or prevention of water and soil pollution. CMHC is authorized make a loan to a province, municipality or a municipal sewerage corporation for the purp of assisting in the construction or expansion of a sewage treatment project. The loan m not exceed two thirds of the cost of the project and the maximum repayment term is years from date of completion. The interest rate is prescribed by the Governor in Coun The agreement covering the project contains a condition whereby 25 p.c. of the loan princi and 25 p.c. of the accrued interest will be forgiven for projects completed to the satisfacti of CMHC on or before Mar. 31, 1975. Where construction is not completed before th date, 25 p.c. of the loan advanced or warrantable by construction progress at that da plus 25 p.c. of the accrued interest on advances, may be forgiven.

Long-term loans are available to a province or its agency, a municipality or its agen a hospital, a school board, a university or college, a co-operative association or a charita corporation for the purpose of assisting in the construction of a student housing proje or the acquisition of existing buildings and their conversion into a student housing proje In all cases, the government of the province concerned must approve the loan. CMH may lend up to 90 p.c. of the project cost, subject to maximum amounts as follows: $25,0 per new unit; $18,000 per self-contained unit or existing housing unit, and $7,000 per pers housed in dormitory or hostel accommodation. The term of the loan may not exceed years. The interest rate is prescribed by the Governor in Council.

Guarantees.—CMHC is authorized to give a limited guarantee to banks or approv instalment credit agencies in return for an insurance fee paid by the borrower on loans ma for additions, repairs and alterations to existing houses and apartments. A home improv ment loan and the balance owing on any existing NHA home improvement loan on t property may not exceed $4,000 for a one-family dwelling or $4,000 for the first unit of duplex, semi-detached or multiple-family dwelling, plus $1,500 for each additional un Loans are repayable in monthly instalments over a period not exceeding 10 years. T maximum rate of interest is restricted to 2¼ p.c. above the long-term Government bo rate adjusted quarterly to the nearest one eighth of one per cent.

Public Housing.—Under the National Housing Act and complementary provinci legislation, the Federal Government and the government of a province may enter into partnership agreement to build rental housing for families and individuals of low income to purchase and rehabilitate existing housing for this purpose. Projects may include host or dormitory accommodation in addition to self-contained units. The Federal Governme

s up to 75 p.c. of the capital costs and the provincial government the remainder, although latter may call upon the municipality concerned to bear a portion of the provincial re. Rents for units in federal-provincial projects are related to the tenant's family ome and size of family. Operating deficits are shared on the same contractual basis as capital costs.

As an alternative method of producing public housing, the CMHC is empowered to ke long-term loans to a province, or to a municipality or public housing agency with approval of the province, for the provision of housing accommodation. Projects may sist of new construction or existing buildings and include dormitory and hostel accomdation as well as self-contained family units. Loans may be up to 90 p.c. of the total s as determined by CMHC and for a term as long as 50 years but not in excess of the ful life of the development. The maximum that may be borrowed for a fully serviced rtment is $18,000, and for hostels or dormitories $7,000 for each person accommodated. a house, the maximum is $25,000. The interest rate is set by the Governor in Council. ere this alternative is selected, federal grants may be made covering up to 50 p.c. of es incurred in the operation of public housing projects, for a period of up to 50 years not exceeding the useful life of the project.

Urban Renewal.—Federal grants and loans are available under the Act to assist provs and municipalities undertaking programs of urban renewal. CMHC, with Federal vernment approval, may arrange with a municipality to undertake a study to identify hted areas, determine housing requirements and provide data upon which an orderly gram of conservation, rehabilitation and redevelopment can be based. The federal tribution may be as much as 75 p.c. of the cost. The legislation also authorizes federal tributions equal to one half of the costs of preparing an urban renewal scheme setting proposals for urban renewal action, a similar cost-sharing arrangement for the implentation of a scheme, and loans up to two thirds of the provincial or municipal share of cost of carrying out an urban renewal scheme. Loans may be for 15 years at an interest e prescribed by the Governor in Council. To encourage the improvement and conservaa of housing meeting minimum standards of construction, loans are available for the sale, chase or refinancing of existing housing in urban renewal areas not designated for nolition.

Activity under the urban renewal provisions of the National Housing Act was restricted 969 following the report of the Task Force on Housing and Urban Development. The ort expressed strong reservations about existing approaches to urban renewal and made cific recommendations for the future. As a result of this report, an in-depth study was ertaken with a view to formulating a new federal policy for urban assistance. Prenary findings indicated that, in the next decade, urban assistance would be based on y different principles to those used in the past. In August, a suspension of federal roval of new projects was put into effect. As an interim measure negotiations were ertaken to permit at least partial implementation of a small number of projects.

Land Assembly.—The Federal Government and the government of a province may er into an agreement to provide for a land assembly project which involves the develop-t of raw land for housing purposes. The Federal Government pays up to 75 p.c. of cost and the provincial government the remainder. The latter may call upon the nicipality concerned to bear a portion of the provincial share. In addition, loans equal 0 p.c. of the cost of assembling and servicing land for public housing or general housing poses are available at a preferential interest rate to provinces, municipalities and their ncies.

CMHC Building.—The Corporation may construct and administer housing and cer other buildings on its own account and for other government departments and agen Its responsibilities include the provision of architectural and engineering designs, calling of public tenders and the administration of construction contracts—including necessary on-site surveying and engineering. On such contracts, the Corporation car out full architectural and engineering inspections.

Research.—CMHC is concerned with building technology in the formulation of sta ards for housing construction, in the use of suitable materials and in the developmen new building techniques. The Corporation has no laboratory facilities but has di experience of performance in the field and seeks the advice of specialists in various agen and departments of the Federal Government in such matters. Research into the fact affecting housing is concerned with the measurement of the demand for new housing, volume of new housing built and the supply of mortgage money for house construct The Corporation also co-ordinates and publishes statistical information on housing. Fu provided under the National Housing Act support the activities of the Canadian Hous Design Council, the Community Planning Association of Canada and the Canadian Cou on Urban and Regional Research.

Other Federal Legislation.—The Farm Credit Act, 1959 provides for federal long-t loan assistance for housing as well as for other farm purposes (see pp. 561-562); the Vetera Land Act, 1942 provides a form of loan and grant assistance to veterans for housing other purposes (see p. 409); and the Farm Improvement Loans Act, 1944 (see pp. 559-5 provides for guarantees for intermediate- and short-term loans made by approved lend agencies to farmers for housing and other purposes. These three statutes are concer only incidentally with housing.

Provincial Assistance.—All provinces have complementary legislation providing joint federal-provincial housing and land assembly projects and, in addition, most provin have enacted separate legislation with respect to housing. Details of such assistance m be secured from the provincial government departments listed in the Directory of Sour of Official Information included in Chapter XXVII under the heading of "Housing".

Subsection 2.—Housing Activities, 1969-70

During 1969, housing starts totalled 210,415 dwelling units, 6.9 p.c. above the previ record of 196,878 established in 1968. Completions also increased to a record level 195,826 units from 170,993 in the previous year. Dwellings under construction at year-e rose from 126,638 to 137,357. Apart from the production of self-contained housing uni hostel accommodation was provided for more than 19,000 persons, mainly the elderly a students. Investment in housing was also at a record level of $3,400,000,000, an incre of 18.6 p.c. over 1968.

Housing for low-income groups made a significant advance in 1969 as a result Government policy which directed the principal federal effort into this field. Of the 210,4 starts during the year, just over 28,000 were under NHA rental programs for low-inco families, including students; this compared with 13,800 in 1968 and 10,300 in 1967. T policy continued into 1970 and, for this purpose, two thirds of the federal housing bud of $854,000,000 was allocated to housing for low-income families, elderly people, stude and handicapped individuals; it is estimated that this amount will support the provision about 35,000 units.

Two factors dominated house-building activity during 1969. Massive injection mortgage funds from both public and private sources in the last few months of 1968 a

early 1969 resulted in record seasonally adjusted start rates of 267,300 and 215,500 units r year for the first and second quarters of 1969. The second factor, which emerged ring the latter half of the year, was the effect of the high and rising level of interest rates the supply of mortgage funds with its resultant decrease in house-building activity. he latter circumstance had the effect of reducing the annual rate of starts to 186,000 by e end of 1969.

The same situation continued into 1970 with further drops in the annual rate to a low 161,600 unit starts in February. Starting in March, increases were recorded which, though modest, appeared to be consistant with the trend in private institutional lending, dicating that building activity in the latter part of 1970 might compensate in part for e low start rate experienced in the first half of the year. In actual terms, starts in urban eas during the first four months of 1970 totalled 29,272, a decrease of 41 p.c. from the tal of 49,499 for the same period of 1968. This was equivalent to a seasonally adjusted nual rate of 166,600 units for all areas in Canada.

Operations under the National Housing Act.—NHA mortgage loans amounting to $1,197,228,000 were approved in 1969 for the provision of 79,868 new units and 17,23[illegible] hostel beds, compared with loans of $1,242,055,000 approved for 86,641 new dwellings and 14,119 hostel beds in 1968. Direct lending by CMHC for the second consecutive year was below the volume of insured loans by approved lenders operating under the Act; loans by the federal agency had a value of $546,938,000 against $650,290,000 for approved lenders

ans made available through private lenders in 1969 amounted to $700,621,000 for 48,695 vellings. Trust companies remained the largest source of private funds, approving loans r 16,833 units; insurance company loans represented 9,059 dwellings; and chartered bank ns amounted to $234,151,000, representing 14,944 units.

Borrower and House Characteristics.—The average income of purchasers of NHA-anced houses in 1969 was $9,385 or, in terms of family income, $10,810. These incomes re 6.6 p.c. higher than the corresponding averages for purchasers in 1968 and appeared be in line with the general increase in incomes in 1969. As in previous years, relatively w purchasers of NHA houses were drawn from the lower third of the range of family comes. In 1969 only 0.1 p.c. of the borrowers had family incomes of less than $5,000 compared with 1.4 p.c. in 1967.

The average age of purchasers of NHA houses was about 33 years in 1969, a slight crease from earlier years. In 1969 just over one half of the purchasers had two or more ildren and 27.6 p.c. had previously been home owners.

The average price of NHA-financed houses purchased in 1969, including many started the previous year, was $20,831. On these houses, purchasers provided down-payments eraging $3,903 and undertook monthly payments of $190.76 for mortgage principal, terest and taxes. Compared with 1968, these represented increases of 2.8 p.c. in price d 20.3 p.c. in monthly charges and a decrease of 14.2 p.c. in down-payment. The pro-rtion of monthly charges to income increased from 21.8 p.c. to 22.6 p.c.

As in other years, most of the NHA-financed single-detached houses purchased in 69 were bungalows, which type represented 72.4 p.c. of the total compared with 75.6 p.c. 1968. The proportion of split-level dwellings increased from 18.4 p.c. to 21.1 p.c. and at of two-storey dwellings from 5.4 p.c. to 6.0 p.c. Of these dwellings about 84 p.c. had ree bedrooms and the remainder had four or more.

Loans for Low-Rental Housing.—In 1969, loans amounting to a total of $444,835,000 re approved to assist in the construction of 28,040 self-contained units of low-rental using and hostel accommodation for 19,211 persons.

Loans for Student Housing Projects.—Loans totalling $67,812,000 were approved in 69 for 58 student housing projects, involving the construction of 1,604 self-contained units, 97 hostel beds, and the purchase and conversion of existing buildings to provide a further units and 806 beds. Comparable figures for 1968 were 1,115 new units, 8,833 new hostel ds and conversion of existing buildings to provide 167 units and 988 beds.

[1] No loans were approved for student housing projects in Newfoundland or the Yukon and Northwest Territori

From December 1960, when student housing loans were first authorized, to Decemb 1969, 289 totalling $361,631,000 were approved involving the construction of 4,785 uni and 56,986 beds, and the acquisition and conversion of existing buildings to provide 2 units and 2,705 beds. The statutory limit that may be advanced for such loans $550,000,000.

*Loans for Municipal Sewage-Treatment Projects.**—During 1969, 147 loans amountin to over $50,913,000 were authorized to assist municipalities to undertake sewage-treatme projects, distributed provincially as follows:—

*Province**	*Loans*	*Amount*	*Province*	*Loans*	*Amount*
	No.	$'000		No.	$'000
Newfoundland	—	—	Ontario	50	20,305
Prince Edward Island	2	58	Manitoba	3	721
Nova Scotia	16	1,165	Saskatchewan	12	2,571
New Brunswick	5	2,887	Alberta	15	3,469
Quebec	29	8,323	British Columbia	15	11,414

From December 1960, when assistance for sewage-treatment projects was authorized, t December 1969, 1,523 loans totalling $322,578,000 were approved.

Mortgage Marketing.—Sales of NHA-insured mortgages amounted to $127,600,000 i 1969 compared with $43,000,000 in 1968. Because of heavy pressure on the market fo long-term funds, auctions were not held by the Corporation between 1966 and 1969; tota sales by the Corporation to the end of 1965 totalled $308,600,000.

Urban Renewal.—As indicated in Subsection 1, p. 833, activity under the urban renewa provisions of the National Housing Act was restricted in 1969. During the year, th Corporation approved contributions totalling $117,000 to four municipalities to undertak urban renewal studies—two in Ontario and two in Quebec. In 1968, 46 grants totallin $879,000 were approved for such studies.

Federal contributions totalling $496,000 were approved during 1969 for the preparatio of 26 urban renewal schemes, all in the Province of Quebec. Also, 20 schemes were approve for implementation supported by a federal contribution of $17,991,000. Together, thes involved the rehabilitation of 1,097 acres and the displacement of 948 families, and th estimated total cost was $45,249,000. Locations and acreages were: 13 in Quebec involvin a gross of 1,000 acres; four in Ontario of 62 acres, and three in British Columbia of 53 acres By far the largest in size was the St. Maurice project in Thetford Mines, Que. It will in

* Provincial data are gross; all others are net

volve the redevelopment of 739 acres and a federal contribution estimated at $2,750,000 with a loan to assist in the implementation of a further $1,833,000.

Public Housing.—During 1969, approval was given for 41 federal-provincial housing projects—11 in Nova Scotia, 20 in Saskatchewan, five in Alberta, two in British Columbia and three in the Northwest Territories. These projects will provide 1,070 dwellings and the federal contribution will be $12,400,000. To the end of 1969, approval had been given for 16,869 rental units under federal-provincial arrangements. Of these, 14,429 are to be subsidized at rents related to the income of tenants and the remainder will be leased at fixed rents related to dwelling size and at levels sufficient to recover capital costs and to meet operating expenses. The federal 75-p.c. share of the deficit of the subsidized units in 1968, paid in 1969, was $6,400,000.

Under arrangements with the Provinces of Nova Scotia and Prince Edward Island, assistance may be given under the National Housing Act for co-operative house-building. In 1969, projects were approved for 1,049 units in Nova Scotia, bringing the total approved since the inception of the program in 1953 to 2,637 units. Since 1960, 152 units have been approved in Prince Edward Island.

In April 1965, agreement was reached between the Federal Government and the Province of Saskatchewan for a joint program to provide housing for metis and enfranchised Indians in sparsely settled regions of northern Saskatchewan. During 1969, 74 units were approved, bringing to 168 the total number approved under this experimental program. The units are located at Air Ronge, Beauval, Buffalo Narrows, Cumberland House, Green Lake, Île à la Crosse, La Loche, Turnor Lake, Dore Lake, Pelican Narrows, Pine House, and St. Walburg. The federal contribution for 1969 was $265,000. Similar agreements have been reached with the Provinces of Manitoba and Alberta directed primarily to people of Indian origin.

Loan-Assisted Projects.—In 1969, 208 loans amounting to $196,862,000 were approved for 16,027 units: 75 in two projects in Newfoundland, 52 in three projects in Nova Scotia, 384 in 13 projects in New Brunswick, 4,132 in 44 projects in Quebec, 11,054 in 140 projects in Ontario, 76 in two projects in Manitoba, and 342 in six projects in Alberta. The estimated annual 50-p.c. federal contribution toward operating losses for the projects was $6,200,000.

Land Assembly.—Under the federal-provincial arrangements, six land assembly projects for 816 residential building lots were approved in 1967, located in Campbellton, New Brunswick; Aurora and Wallaceburg, Ontario; and Ladysmith, Masset and Sparwood, British Columbia. During 1968, 1,381 lots were approved for development and approval was also given for the acquisition and ultimate development for housing purposes of 4,685 acres of land. In 1969, 14 loans were approved, amounting to $7,551,000, to assist in the acquisition of land for future housing purposes. These were located in Corner Brook, Newfoundland; Halifax, Lower Sackville, North Preston, Port Hawkesbury and Sydney, Nova Scotia; Hearst, Kenora, Oakville, Pembroke, Waterloo Township and Woodstock, Ontario; and Edmonton and Redwater, Alberta. By far the largest project is in Edmonton. It involves a loan of $4,541,000 for the acquisition of 3,500 acres.

Subsection 3.—Housing Statistics of the 1966 Census

Because of the abbreviated nature of the 1966 Census, only two housing questions were included in the questionnaire, one relating to structural type of dwelling and the other to tenure. Tables **16** and **17** provide a 1961-to-1966 comparison of structural type and tenure of occupied dwellings for the provinces and the Census Metropolitan Areas.

Data relating to specific housing characteristics are summarized for 1951 and 1961 in the 1967 Year Book at pp. 728-729 and are detailed in Vol. II (Part 2) of the 1961 Census (Catalogue Nos. 93-523 to 93-534). Housing data in similar detail will be available from the 1971 Census.

Section 1.—The Government in Relation to Labour

Subsection 1.—The Canada Department of Labour and the Federal Department of Manpower and Immigration

The Canada Department of Labour

The Canada Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds. Since that time the Department has been charged with the administration of new legislation and has taken on new functions. Its work fell broadly into two main areas—industrial relations and manpower supply—until Jan. 1, 1966, when all manpower activities were transferred to a new Department of Manpower and Immigration (see p. 843).

The legislation now administered by the Canada Department of Labour in the industrial relations area applies to employers, workers and trade unions under federal jurisdiction. The Department is responsible for conciliation procedures in industrial disputes, the investigation of complaints of unfair labour practices, refusals to bargain and violations of legislation, the processing of applications for the certification and decertification of trade unions and the conducting of representation votes. It determines wage rates and hours of work in Federal Government contracts for construction or supplies, and promotes joint labour-management consultation. It also administers legislation to prevent discrimination

* Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Canada Department of Labour, Ottawa.

employment based on race, religion, colour or national origin and to provide for equal pay r female employees. In 1965, the Canada Labour (Standards) Code became law. The ode establishes minimum standards of wages, hours of work, vacations with pay and paid eneral holidays in industries under federal jurisdiction. To ensure safe working conditions r all employees in industries and undertakings coming under federal jurisdiction, the anada Labour (Safety) Code was passed by Parliament at the end of 1966 and was proaimed in effect Jan. 1, 1968.

Since 1947, the Canada Department of Labour has encouraged and assisted in the tablishment of labour-management committees in industry and services. With conderable expansion in this work in 1966, the service was reorganized and became a separate anch of the Department, namely, the Labour-Management Consultation Branch. There e now 2,663 (March 1970) active committees whose efforts are directed to such subjects improving work methods, safety, operating efficiency, plant maintenance, eliminating aste, maintaining good morale, promoting educational and training activities, and joint nsultation on operational changes brought about by technological change.

Research, involving regular and special surveys and analyses of economic and social ends affecting the labour force, is an important part of the Department's work carried t by the Economics and Research Branch. It studies wages and working conditions, ion organization, collective bargaining, industrial relations, labour standards and safety. hrough the Women's Bureau, it investigates the problems of women in the labour force. operates a plan of workmen's compensation for seamen on Canadian ships and arranges rkmen's compensation for Federal Government employees. In addition to the publicaon of statistical reports and the results of research studies, the Department publishes the onthly *Labour Gazette*, maintains records of labour legislation in the provinces and in other untries, operates a labour lending library and provides liaison between the International abour Organization and the federal and provincial governments.

he Department of Manpower and Immigration*

The fundamental purpose of the Department of Manpower and Immigration is to rther the growth of Canada through effective allocation and development of manpower sources in response to the changing needs of the national economy. The Department es two main channels to ensure that the supply of qualified manpower is adequate to meet e demands of the labour market: (1) counselling, placement and, where necessary, train- g and relocation of workers, and (2) introduction of new manpower through immigration.

Operations Canada.—"Operations Canada" distinguishes the Department's domes- field activities from those at head office and at offices abroad; it comprises five regional adquarters, some 360 Canada Manpower Centres and 90 Canada Immigration Centres. egional Directors-General, responsible for both manpower and immigration activities the field, report to the Assistant Deputy Minister, Operations, at head office.

The objectives of Operations Canada are: (1) to provide, through strategically located anada Manpower Centres, the facilities for an effective employment service for both rkers and employers; (2) to help workers utilize their maximum potential through coun- lling or referral to manpower development programs and obtain jobs which match their ills, capabilities and needs; (3) to assist employers in the recruitment of skilled workers, d offer advice in their manpower planning by providing up-to-date occupational and bour market information; (4) to help workers adapt to economic and technological change encouraging employers and workers to co-operatively pre-plan, and through the use of partmental training and mobility programs; (5) to provide services for the reception, ttlement and job placement of immigrants; and (6) to process international travellers d enforce the Immigration Act and Regulations within Canada, providing facilities to ocess applications by Canadians wishing to sponsor or nominate relatives.

* Prepared by the Information Service, Department of Manpower and Immigration, Ottawa.

In the 12-month period ended Mar. 31, 1970, Canada Manpower Centres assist some 723,000 persons, excluding casual workers, to find gainful employment, and referr more than 312,000 clients to full or part-time upgrading or skill-development traini courses under the Canada Manpower Training Program. In the same period, some 15,0 handicapped clients were referred to federal-provincial rehabilitation assistance program and more than 49,500 workers and trainees received moving and transportation assistan under the Canada Manpower Mobility Program.

Manpower Division.—Under the Assistant Deputy Minister, Manpower, th Division provides functional support for the manpower areas of Operations Canada; consists of three units—the Activities Development Branch, the Manpower Utilizatio Branch and the Programs Branch.

The Activities Development Branch deals with the demand side of the labour marke providing guidelines in the following main areas: development and utilization of depar mental services for employers; specialized information on industrial needs; and organiz tion of Canada Manpower Centres to give effective employment service to employer It also directs the operations of the Manpower Consultative Service which administe Federal Government assistance to industries undergoing manpower dislocations resulti from technological and other changes.

The Manpower Utilization Branch is concerned with the supply side of the labo market. It formulates policies and guidelines for the provision of employment services workers and promotes the use of Canada Manpower Centres; develops aptitude and achiev ment tests for use in counselling and selection; advises on methods of matching jobs a workers; and advises on the manpower utilization of special groups such as youths, hand capped persons, immigrants, migrants and indigenous people. The Branch administe the Vocational Rehabilitation of Disabled Persons Act under which the Federal Gover ment shares equally with participating provinces in the costs of vocational rehabilitatio services to disabled persons, and the Operation Retrieval program which is designed to p Canadian employers interested in hiring new university graduates in touch with Canadia studying abroad. The Branch carries on a continuing educational program designed t create a more favourable employment climate for middle-aged and older workers, as we as a program to facilitate and encourage the employment of high school and universit students during the summer months.

The Programs Branch deals with the major programs that facilitate the matching labour market supply and demand. It administers the Canada Manpower Training Pr gram which provides for the training or retraining of adults in schools and industry, a the Canada Manpower Mobility Program which facilitates the movement of workers t areas of job opportunity.

Immigration Division.—Under the Assistant Deputy Minister, Immigration, th Home Service Branch of the Division provides procedural guidelines for field operations Canada relating to admission of immigrants and non-immigrants, apprehension of perso who contravene Canadian laws after being admitted or gaining illegal entry, and remov from the country of those liable to deportation.

Subsection 2.—Federal Labour Legislation and Provincial Labour Legislation

Federal Labour Legislation*

Fair Wages Policy.—The Fair Wages Policy applying to all Federal Governme contracts was first set forth in a Resolution of the House of Commons (1900) and lat incorporated in an Order in Council and amended from time to time. Wages and hou

* The Act establishing the Canada Labour (Safety) Code (SC 1966-67, c. 62), proclaimed in effect Jan. 1, 196 provides for the consolidation, under the title "Canada Labour Code", of the Acts described under this headin with the exception of the Fair Wages and Hours of Labour Act and the Fair Wages Policy Order.

contracts for construction are now regulated by the Fair Wages and Hours of Labour t (RSC 1952, c. 108), as amended by an Act to amend the Fair Wages and Hours of bour Act, effective Apr. 1, 1967 (RSC 1967, c. 24), and by the Fair Wages and Hours Labour Regulations. Hours of work on construction contracts are limited to eight lay and 48 a week, except in exceptional circumstances approved by the Minister or in :h cases as the Governor in Council may prescribe; hours worked in excess of eight in lay or 40 in a week must be paid for at an overtime rate at least equal to one and one lf times the rates required under the contract; wages to be paid are those current for e type of work in the district or, if there are no current rates, fair and reasonable rates determined by the Minister of Labour; in no case shall the rates be less than the minimum urly rate prescribed by or pursuant to the Canada Labour (Standards) Code.

Wages and hours of work on contracts for equipment and supplies are regulated by der in Council PC 1954-2029. The hours of such work must be those fixed by the stom of the trade in the district where the work is performed, or fair and reasonable urs. The wages must be current or fair and reasonable but in no event shall they be s than those established by statute or regulation of the province in which the work is ng performed.

The Fair Wages and Hours of Labour Regulations and Order in Council PC 1954-2029 th contain a clause prohibiting discrimination against any person in matters of em- yment because of that person's race, national origin, colour or religion, or because he s made a complaint or given information with respect to such alleged discrimination.

The Industrial Relations and Disputes Investigation Act.—This legislation came o effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regu- ions in effect since March 1944 and repealing the Industrial Disputes Investigation Act ich had been in force from 1907 until suspended by the Wartime Regulations in 1944. e Act protects proceedings commenced and decisions, orders and certifications made der the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, erprovincial railways, canals, telegraphs, steamship lines and ferries, both international d interprovincial, aerodromes and air transportation, radio broadcasting stations, and rks declared by Parliament to be for the general advantage of Canada or of two or more ovinces. However, the Act provides that provincial authorities if they so desire may ct similar legislation for application to employees within provincial jurisdiction and ke mutually satisfactory arrangements with the Federal Government for the admini- ation of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers ll have the right to organize and bargain collectively and that trade unions may be tified as bargaining agents for employee groups. Trade unions and employers are uired, upon notice, to bargain collectively in good faith. The Act provides for invoking lective bargaining negotiations and for the mediation of conciliation officers and con- ation boards in reaching collective agreements. Employees may change bargaining nts at times under conditions specified in the Act, which also prescribes conditions ecting the duration and renewal of collective agreements. Collective agreements are uired to contain provision for the arbitration of disputes concerning the meaning or lation of such agreements and, where such provision is lacking, application may be made its establishment. The Act prohibits unfair labour practices, i.e., the interference with domination of trade unions by employers or interference, discrimination and coercion rade union activity. The conditions that must be observed prior to strike and lockout ion are set down in the Act. Industrial inquiry commissions may be appointed to in- tigate industrial matters or disputes. The Minister of Labour is charged with the ministration of the Act and is directly responsible for the provisions affecting the appoint- nt of conciliation officers, conciliation boards, industrial inquiry commissions, consent to secute, and complaints that the Act has been violated or that a party has failed to

bargain in good faith. The Canada Labour Relations Board administers provisions c cerning the certification of bargaining agents and the writing of a procedure into a collect agreement for the final settlement of disputes concerning the meaning or violation of s agreement.

Detailed statistics concerning activities under the Act may be found in the Ann Report of the Canada Department of Labour.

Canada Fair Employment Practices Act.—This Act, which came into effect July 1, 1953, prohibits discrimination in employment based on race, colour, religion national origin. It applies only to industries within federal jurisdiction—those covered the Industrial Relations and Disputes Investigation Act (see above). This law prohib acts of discrimination by employers; discrimination by trade unions in regard to memb ship or employment; the use by employers of employment agencies that practise crimination; and the use of advertisements or inquiries in connection with employm that express, directly or indirectly, any limitation, specification or preference as to ra colour, religion or national origin.

Female Employees Equal Pay Act.—This Act came into effect on Oct. 1, 1956 a applies to employers and employees engaged in works, undertakings or businesses comi within federal jurisdiction. The Act, in its principal provision, prohibits an emplo from employing a female for any work at a rate of pay that is less than the rate at wh a male is employed by that employer for identical or substantially identical work.

Canada Labour (Standards) Code.—This Act received Royal Assent on Mar. 1965 when the administration and general provisions of Part V came into effect. The A provides, in Parts I to IV which came into force on July 1, 1965, minimum standa with respect to hours of work, minimum wages, annual vacations and general holidays industries under federal jurisdiction; the Annual Vacations Act 1958 was repealed.

The standard hours of work are eight a day and 40 a week, with maximum hours 48 a week. Overtime pay at not less than time-and-one-half is required for all ho worked in excess of the standard hours. Permits are required in order to work more th 48 hours a week. Where the nature of the work necessitates irregular distribution hours of work, the hours may be averaged over a period of two weeks or more.

The minimum wage is $1.65 an hour for all persons 17 years of age or over and t minimum wage for persons under 17 years of age is $1.40 an hour. Special rates may set for persons receiving on-the-job training and for disabled or handicapped persons.

Employees are entitled to a two-week vacation with pay after one year of employme with vacation pay calculated at 4 p.c. of wages. The general holidays are eight in numb and every employee is entitled to a holiday with pay on each of them, or substitutes them. Pursuant to an amendment to Part IV of the Code, the Multi-employer E ployment (Longshoring) Regulations have been passed to provide for the granting pay in lieu of general holidays to longshoremen in multi-employer employment who p viously could not qualify for general holiday benefits because they did not have sufficie employment with one employer.

The Code has special and transitional provisions. Any person may make a submissi (under Sect. 51) for deferment or suspension of Part I (Hours of Work). The Minister m grant deferment or suspension where it can be shown that the application of Part I is would be prejudicial to the interests of the employees or detrimental to the operation the business. The Minister's order to defer or suspend may be for a period up to but r exceeding 18 months from the date of the order, and the order may or may not cont conditions on hours. A further deferment or suspension may be made by the Gover in Council but only after there has been an inquiry, and the order of the Governor Council must contain conditions on hours of work. Regulations have been enacted carry out the purposes of the Code.

Canada Labour (Safety) Code.—This Code, which received Royal Assent in late 1966 and was proclaimed in effect as of Jan. 1, 1968, is the first general safety legislation to be passed by the Parliament of Canada. Its primary purpose is to ensure safe working conditions for all employees in industries and undertakings under federal jurisdiction. The main features of the Code are that: (1) it provides for all the elements of a complete industrial safety program; (2) it sets out the general obligation of employers and employees to carry out their duties in a safe manner and authorizes the making of regulations for dealing with problems of occupational safety; (3) it does not override but complements other federal laws and provincial legislation, thus strengthening the safety movement; (4) it authorizes the use of advisory committees and special task forces to assist in developing the program, all to be done under continuous consultation among federal and provincial government departments, industry and organized labour; and (5) it provides for research into causes and prevention of accidents and for an extended program of safety education.

Provincial Labour Legislation

Because of the authority given by the British North America Act to the provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights in the province, power to enact labour legislation is largely the prerogative of the provinces. Since it imposes conditions on the rights of the employer and employee to enter into a contract of employment, labour legislation is, generally speaking, law in relation to civil rights. Under this authority, the provincial legislatures have enacted a large body of legislation affecting the employment relationship in such fields as working hours, minimum wages, the physical conditions of workplaces, apprenticeship and training, wage payment and wage collection, labour-management relations, workmen's compensation and other matters. In each province a department of labour or department of labour and manpower (the designations vary) is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a workmen's compensation board appointed by the Lieutenant-Governor in Council.

Minimum Wages.—As a means of ensuring adequate living standards for workers, all provinces have enacted minimum wage legislation. These laws vest in a minimum-wage-fixing board or the Lieutenant-Governor in Council authority to establish minimum wages for employees. In most provinces, minimum wage orders now cover almost all employment except farm labour and domestic service. Minimum rates set by the orders apply throughout the province except in Nova Scotia, Quebec and Saskatchewan. Both Nova Scotia and Quebec are divided into two zones for minimum wage-setting purposes. In Saskatchewan, minimum rates vary between urban and rural areas. Except in Newfoundland, Nova Scotia and Prince Edward Island, the same rates are set for both sexes.

Hours of Work.—Five provinces have general hours-of-work laws. Those of Ontario, Alberta and British Columbia set limits on daily and weekly hours of work. Hours are limited in Alberta and British Columbia to eight a day and 44 a week, and in Ontario to eight a day and 48 a week. The Ontario Act requires, with some exceptions, that one and one half times the regular rate be paid for work done, under permit, beyond the 48-hour limit. The Manitoba and Saskatchewan Acts do not limit daily and weekly hours but require the payment of one and one half times the regular rate if work is continued after specified limits. The Manitoba law requires payment of the overtime rate after eight and 48 hours for men and eight and 44 hours for women. The Saskatchewan Act requires payment of the overtime rate after eight and 44 hours. Some exceptions are provided for in all five Acts.

Regulation of Wages and Hours in Certain Industries.—Apart from general hours-of-work laws, other statutes regulate working hours in some industries. Industrial standards legislation is in effect in Newfoundland, Prince Edward Island, Nova Scotia,

New Brunswick, Ontario, Saskatchewan and Alberta. These laws provide that a schedul of wage rates and hours of work agreed upon by a representative group of employees an employers in an industry or trade may, upon approval by the government, be given statu tory effect by Order in Council, with the result that such wage rates and hours become th minimum terms of employment for the entire industry or trade in the area. An advisor committee, usually equally representative of employers and employees, is established t assist in enforcing a schedule. This legislation is used fairly extensively in the buildin trades, the clothing industries, barbering and a few other industries. In Newfoundlan Nova Scotia and New Brunswick, schedules have been issued only for certain constructio trades in some areas. In Ontario, schedules for the garment trades, the fur industry an the hard furniture industry apply thoughout the province and a substantial number c schedules apply to various construction trades and to barbering in specified areas.

Under the Quebec Collective Agreement Decrees Act, certain terms of a collectiv agreement, including those dealing with hours and wages, may be made binding on a employers and employees in the industry concerned in a defined area, provided the partie to the agreement represent a sufficient proportion of the industry. The standards mad binding under this procedure are contained in a decree, which has the force of law. Ap proximately 85 decrees applying to the garment trades, barbering and hairdressing, com mercial establishments, garages and service stations, and other industries and services ar in effect. Of these decrees, 14 apply throughout the province. Working conditions in th construction industry are governed by decrees under a separate Act, the Construction In dustry Labour Relations Act, 1968.

The Construction Industry Wages Act in Manitoba, which applies to both private an public construction work, provides for the setting of minimum rates of wages and maximun hours of work at regular rates for employees in the construction industry, on the recom mendations of a board equally representative of employers and employees, with a publi member as chairman. Under this Act, annual schedules set the regular work week an hourly rates of wages for various classifications of workers in the heavy construction in dustry, in the Greater Winnipeg building construction industry, and in rural buildin construction.

Annual Vacations and Public Holidays.—All provinces have annual vacation legislation applicable to most industries. In Prince Edward Island and New Brunswick workers are entitled to a vacation of one week after a year of service; in Ontario, worker are entitled to a vacation of one week after each of the first three years of employment, an of two weeks after the fourth and each subsequent year. In Nova Scotia, Quebec, New foundland and the four western provinces, the annual paid vacation required by law is tw weeks after a year of service and, in Saskatchewan, three weeks after five years of service.

Six provinces—Alberta, British Columbia, Manitoba, Nova Scotia, Ontario an Saskatchewan—have enacted legislation of general application dealing with public holi days. The number of holidays named varies from five to eight, and the provisions fo payment also vary.

Anti-discrimination Laws.—All provinces have adopted fair employment practice laws forbidding discrimination in hiring and conditions of employment and in trade unio membership on grounds of race, colour, religion or national origin, and on grounds of socia origin in Newfoundland and Quebec, and political opinion in Newfoundland. The Britis Columbia, Newfoundland and Quebec Acts also forbid discrimination in these areas o grounds of sex. In addition, in British Columbia, Ontario and Newfoundland, discrimina tion in employment and trade union membership on grounds of age is prohibited. Nin provinces have provisions in separate equal pay Acts or in human rights or labour standard legislation that forbid discrimination in rates of pay solely on the basis of sex. Quebe does not have equal pay legislation but, as indicated above, forbids discrimination in em ployment on the basis of sex.

Accident Prevention.—Factory or industrial safety Acts in most provinces establish safeguards for the protection of the health and safety of workers in factories and other workplaces with respect to such matters as sanitation, hearing, lighting, ventilation and the guarding of dangerous machinery. Long-established laws regulating the design, construction, installation and operation of mechanical equipment, such as boilers and pressure vessels, elevators and lifts and electrical installations, have been revised in recent years in line with technological changes, and legal standards have been set in new fields involving hazards to workers and the public, such as the use of gas- and oil-burning equipment. This legislation also prescribes standards of qualification for workers who install, operate or service such equipment. Laws requiring safety standards to be observed in construction and excavation work are in force in most provinces.

Labour Relations.—In all provinces, there is legislation similar in principle to the Federal Industrial Relations and Disputes Investigation Act, designed to establish harmonious relations between employers and employees and to facilitate the settlement of industrial disputes. These laws guarantee freedom of association and the right to organize, establish machinery (labour relations boards or other administrative machinery) for the certification of a trade union as the exclusive bargaining agent of an appropriate unit of employees, and require an employer to bargain with the certified trade union representing his employees. Except in Saskatchewan, the laws require the parties to comply with the conciliation or mediation procedures laid down in the legislation before a strike or lockout may legally take place, and they also provide that every collective agreement must contain provisions for the settlement of disputes arising out of the agreement, and prohibit strikes and lockouts while an agreement is in effect. All prohibit defined unfair labour practices and prescribe penalties. In most provinces, certain classes of employees who are engaged in essential services, such as policemen and firemen, are forbidden to strike and, in lieu of the right to strike, have recourse to final and binding arbitration. There are provisions relating to hospital disputes in six provinces.

Certification of Qualified Tradesmen.—All provinces have apprenticeship laws providing for an organized procedure of on-the-job training and school instruction in designated skilled trades, and statutory provision is made in most provinces for the issuing of certificates of qualification, on application, to qualified tradesmen in certain trades. In some provinces, legislation is in effect making it mandatory for certain classes of tradesmen to hold a certificate of competency.

Changes in 1969.*—In the field of *labour relations*, amendments to the Quebec Labour Code in 1969 set a precedent in the administration of labour relations in North America. The Quebec Labour Relations Board was abolished and its functions assigned to civil servants (designated as investigators and investigation commissioners acting under the authority of a chief investigation commissioner, all of whom are officials of the Department of Labour and Manpower) and a Labour Court. The role of the investigator, which is mainly administrative, is to issue certification in clear-cut cases; the investigation commissioners handle the more complex cases and make extensive inquiries. The Labour Court has exclusive and final jurisdiction to hear appeal cases arising out of the decisions of the investigation commissioners. In addition, all penal prosecutions under the Code must, in the first instance, be tried in the Labour Court. Another amendment to the Code removed "recognized" associations from the protection of the Code, thus permitting only certified unions to make binding collective agreements.

The Quebec Construction Industry Labour Relations Act, in force from Dec. 18, 1968, established a collective bargaining system adapted to the particular needs of the industry. Certification was abolished. Associations of employers and employees recognized by the Act as representative are now required to negotiate a collective agreement leading to the adoption of a decree that will determine working conditions. Bargaining is conducted by region for the entire industry.

* For 1969 changes in workmen's compensation legislation, see p. 852.

Several provinces enacted or amended labour relations legislation in the public sector. In New Brunswick, the Public Service Labour Relations Act, which went into effect on Dec. 1, 1969, gave public servants collective bargaining rights, including the right to strike. Nova Scotia brought municipal policemen under the Trade Union Act, and Ontario made binding arbitration procedures governing hospital employees applicable to a wider range of institutions, such as nursing homes.

Amendments were made to several *minimum wage* Acts and the general minimum wage rates in six provinces were increased. New Brunswick brought part-time employees within the scope of the Minimum Wage Act. Prince Edward Island amended the definition of "wages" in its Minimum Wage Acts to exclude tips. Saskatchewan deleted from its legislation the section setting out the criteria to be followed by the Minimum Wage Board in establishing the minimum wage; only the Manitoba and Quebec Acts now contain any such criteria.

The highest general minimum wage rates set in 1969 were provided for in Alberta: $1.40 an hour, effective Apr. 1, 1970, and $1.55 an hour, effective Oct. 1, 1970.

The minimum rates in effect on July 1, 1970, for experienced adult workers in certain cities are shown in Table 1.

[1] 40 hours in shops. [2] 60 hours in food processing industry. [3] 55 hours for seasonal workers in the hotel, motel, tourist resort, restaurant and tavern industry; 60 hours for seasonal workers in fruit and vegetable processing. [4] $1.10 an hour for male workers in food processing plants.

Newfoundland enacted *annual vacations* legislation—the Annual Vacations with Pay Act—requiring employers to grant their employees a vacation with pay of at least two weeks after every completed year of employment, provided the employee has worked at least 90 p.c. of the regular working hours in any continuous 12-month period. Vacation pay is 4 p.c. of total wages for the year. A new *weekly rest* law in Newfoundland—the Weekly Day of Rest Act—stipulates that employees must be granted a rest period of at least 24 consecutive hours in every seven days, wherever possible on Sunday. One month's notice of

mination of employment is required of both employers and employees under another 1969 actment in Newfoundland—the Employment (Notice of Termination) Act.

Newfoundland also adopted its first *anti-discrimination* legislation, a comprehensive uman Rights Code (to come into effect on proclamation) dealing with public accom-odation, fair employment practices (including trade union membership) and equal pay. scrimination is prohibited on the usual grounds of race, religion, religious creed, colour ethnic or national origin, with the addition of public opinion and social origin. In em-yment and trade union membership, discrimination is also prohibited on grounds of sex d on grounds of age (between 45 and 65). Under the equal pay provisions of the Code, emale employee must be paid at the same rate of pay as a male employee for the same rk done in the same establishment.

In British Columbia, the Acts relating to fair employment practices, fair accommoda-n practices and equal pay were embodied in one statute—the Human Rights Act—and a uman Rights Commission was established to assist in the enforcement of the Act. The w Act removed the exemption of employers with fewer than five employees and added as a ground of discrimination which is prohibited in employment, or in conditions of ployment, and in trade union membership. The Nova Scotia Human Rights Act was ised extensively and strengthened, and the equal pay provisions were removed and acted as a separate Act.

Under a new Manpower Vocational Training and Qualification Act in Quebec, dis-mination is forbidden, with some qualifications, on grounds of race, sex, religion, national raction or ethnic origin in selecting candidates for apprenticeship or vocational training, carrying out such training programs, or in examinations for certificates of qualification.

In the *industrial safety* field, Newfoundland enacted an Elevators Act requiring annual pection and prior approval of plans for installation and major alteration of elevators and er lifting devices within the jurisdiction of the province. British Columbia completely ised its Coal Mines Act in the light of modern techniques. In Nova Scotia, the Work-n's Compensation Board assumed responsibility for accident prevention, replacing an ployers' association.

Comprehensive new accident prevention regulations were issued in Newfoundland, katchewan and Alberta by the Workmen's Compensation Boards, and industrial safety ulations were issued by the Nova Scotia Department of Labour under the Industrial ety Act.

Several provinces also revised safety regulations applying in specific industries and des, notably in construction in Nova Scotia and Ontario. Revised regulations under the tario Construction Safety Act went into effect on July 22, 1969.

Workmen's Compensation.—In all provinces legislation is in force providing for ment of compensation to workmen who are injured by accident arising out of and in the rse of their employment or who are disabled as a result of a specified industrial disease. be entitled to benefits, a workman must be employed in an industry covered by the Act the time of the injury. Compensation is not payable, however, where the disability s less than a stated number of days (varying from one to four in the provincial Acts), f the injury is due to the workman's own misconduct. A workman who is entitled to mpensation has no right of action against his employer for injury sustained during em-yment.

The Acts provide for a compulsory system of collective liability on the part of em-yers. Industries covered are divided into classes or groups, according to hazard. ployers are required to contribute to the Accident Fund at a rate fixed in accordance h the accident experience of the class or group. Each class is liable for the costs of all idents occurring in that class.

The laws apply to enumerated employments but the range of industries covered by h Act is very wide. The principal exceptions are farm workers (who are not covered ept in Ontario), domestic servants, casual workers, employees of financial, insurance

and professional undertakings, employees of non-profit religious or charitable organizatio and workers in certain service industries in most provinces, for example, barber shops a beauty parlours. Small undertakings, i.e., those with fewer than a specified number employees, are exempted from the Act in some provinces. Excluded employments n generally be brought under the Act on the voluntary application of the employer.

Benefits for disability are based on 75 p.c. of earnings, subject to an annual ceili Where disability is permanent, a life pension is paid, irrespective of future earnings. M ical benefits are provided without limitation, regardless of a waiting period, and rehabili tion services are available where necessary. Where death results from an employm injury, fixed monthly payments are made to dependants.

A federal Act provides for compensation for accidents to Federal Government e ployees according to the scale of benefits provided by the Act of the province in which employee is usually employed. Seamen who are not under a provincial Workmen's Co pensation Act are entitled to compensation under the federal Merchant Seamen Comp sation Act.

Changes in 1969.—Amendments were made to nine of the provincial Workmen's Co pensation Acts. One of the most significant developments was that Quebec became second province, after British Columbia, to tie compensation benefits to the cost of livi As of Jan. 1, 1970, death and disability benefits are to be adjusted yearly in accordance w the increase in the pension index established under the Quebec Pension Plan.

The maximum annual earnings on which compensation may be paid was raised fr $5,000 to $6,000 in Newfoundland and Prince Edward Island, from $5,500 to $6,000 in N Brunswick, and from $5,600 to $6,600 in Alberta. The waiting period was reduced fr three days to one day in Quebec.

In Ontario and Alberta, a minimum pension of $175 a month was established for wo ers who become permanently and totally disabled. The increased rate (in Ontario, fr $150 a month or earnings, if less, subject to a minimum of $100 on earnings; in Albe from $35 a week or earnings, if less) was made applicable to pensions already being paid well as to those payable in the future.

The minimum weekly payment for temporary total disability was increased by $5 New Brunswick and Alberta (to $30 and $40, respectively) and by $10 in Ontario and Ma toba (to $40 and $35, respectively). In British Columbia, as a result of the rise in consumer price index in 1968, the minimum weekly payment for temporary total disabil was increased, beginning Jan. 1, 1969, by 4.04 p.c. to $33.78, or average earnings if l from a minimum in 1968 of $32.47. Three provinces—Prince Edward Island, Quebec a Alberta—amended provisions dealing with benefits payable in case of a recurrence of ability from a compensable accident.

Dependants' allowances in British Columbia were increased, in line with a rise in cost of living index, by 4.04 p.c., effective Jan. 1, 1969. A number of other provinces creased benefits payable to dependent widows and children.

New groups of workers brought under the Acts of several provinces included: hospi workers in Prince Edward Island; employees of taverns and lounges in Nova Scotia; fishing industry and also persons assisting a peace officer in making an arrest or in p serving the peace in New Brunswick; deep-sea fishing enterprises and some coastal fish men in Quebec, and workers engaged in janitorial services as a business in Alberta.

Section 2.—The Labour Force*

Since 1946, reliable information for analysis of employment in Canada, at the natio level and for the five major regions, has been provided through a labour force surv Between November 1945 and November 1952, quarterly surveys were undertaken and si then the survey has been carried out on a monthly basis. The sample used in the surv

* Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

s been designed to represent all persons in the population, 14 years of age or over, residing Canada, with the exception of residents of the Yukon and Northwest Territories, Indians ing on reserves, inmates of institutions and members of the Armed Forces. Interviews e carried out in approximately 30,000 households chosen by area sampling methods across e country.*

In the labour force survey, persons are classified on the basis of their activity during e week prior to the survey interview week. This week is called the reference week. The in divisions in the classification are:—

Labour Force.—The civilian labour force is composed of that portion of the civilian non-institutional population, 14 years of age or over who, during the reference week, were employed or unemployed.

Employed.—The employed include all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; (c) had a job, but were not at work, because of bad weather, illness, industrial dispute or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed.—The unemployed include all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work, or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force.—Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed or, if they looked for work, as unemployed.

The estimates derived from the labour force survey, which are based on a sample of seholds, are subject to sampling error. Somewhat different figures might be obtained complete census were taken and this difference is called the sampling error of the estites. In the design and processing of the labour force survey, extensive efforts are made minimize the sampling error; in general, the percentage of error tends to decrease as the of the estimate increases. A statistical measure of the sampling error is given in DBS nthly publication *The Labour Force* (Catalogue No. 71-001).

The Labour Force, 1970.—Data for the first nine months of 1970 indicate an increase he Canadian labour force of 2.4 p.c. to a level of 8,372,000, compared with the same iod in 1969. This increase consisted of a 3.2-p.c. (82,000) rise in female participants a 2.0-p.c. (112,000) increase for males. The over-all participation rate, which is the o of the labour force to the population of working age (14+ years), remained at about same record high level achieved in 1969. Employment rose by 86,000 (1.1 p.c.) to 1,000 as the result of a 2.3-p.c. (58,000) increase among females employed and a 0.5- (28,000) increase among males. Of the industry divisions, service registered the est gain (5.2 p.c. or 124,000) and agriculture and manufacturing the largest declines p.c. or 27,000 and 1.6 p.c. or 30,000, respectively). Regionally, most of the increases mployed occurred in Ontario (53,000) and British Columbia (21,000). Total unemyment rose by 107,000 to 500,000 over the same period a year earlier. Of this total, ales unemployed increased by 24,000 to 119,000 and males unemployed increased by 00 to 381,000. All of the regions except the Atlantic, which reported no change, wed substantial increases in the number of unemployed. The national unemployment , at 6.0, for the first nine months of 1970 was up from the level of 4.8 recorded for the e period in 1969.

* A comprehensive description of the survey is given in DBS publication *Canadian Labour Force Survey—odology* (Catalogue No. 71-504).

Characteristics of the Civilian Labour Force, 1960-69.—The period 1960-69 w characterized by rapid expansion of the Canadian labour force, which increased by 1,750,0 or 27.3 p.c. The greatest rise took place in the last five years of the period, when the annu rate of increase averaged 3.3 p.c. During the decade, the number of women in the labo force increased by 945,000 or 57.0 p.c., an advance that was greater, both absolutely a relatively, than the increase of 806,000 or 17.0 p.c. experienced by men. The participati rate reached a record high of 55.8 in 1969 because of the increased participation of wom and despite the continued decline of male participation rate which reached a record low 76.6 compared with the 1960 level of 80.7. This decline can be attributed largely to r duced participation among younger and older men; the rate for those in the 14-19 a group dropped from 42.9 to 37.9, for those in the 20-24 age group from 91.1 to 84.2, and tho in the 65 or over group from 30.3 to 23.6. These declines were caused primarily by tv factors—the increase in the number of young men delaying their entrance into the labo force by acquiring additional years of education, and the increased use of both governme and private pension plans which tend to remove the former delay of retirement caused financial need.

As already stated, the decline of the male participation rate was more than offset duri the 1960-69 decade by a strong increase in the female rate, which rose from 27.9 to 35 Increases occurred in all age groups from 20 to 64; the rate for women in the 20-24 a group rose from 48.0 to 59.3, for those in the 25-44 age group from 28.4 to 38.5, and f those in the 45-64 group from 26.6 to 35.5. This increase was very largely attributable the greater number of married women remaining in or re-entering the labour force; in 19 56 p.c. of the female labour force was married compared with 45 p.c. a decade earlier. T participation rate for married women rose during that period from 19.1 to 31.2.

Total employment in 1969 was higher than in 1960 by 1,815,000, or 30.4 p.c.; ma employment increased by 904,000 or 20.7 p.c., and female employment by 911,000 or 57 p.c. All regions of the country shared in the increase. The gain in the Atlantic regi was 23.0 p.c., in Quebec 30.1 p.c., in Ontario 30.5 p.c., in the Prairie region 22.7 p.c., a in British Columbia 54.1 p.c.

In 1961, two new systems of coding industry and occupation data were introduced the 1960 standard industrial classification and the 1961 Census occupational classificatio Data prior to 1961 were coded according to the old classification system and are therefo not comparable; for this reason, Tables 4 and 5 cover only the period 1961 to 1969. T most notable features concerning the changes in the distribution of employment by indu trial group (Table 4) during the 1961-69 period were the tremendous growth of the servi industries whose share of the employed rose from 25.3 p.c. to 30.7 p.c. (an actual growth 858,000 or 56 p.c.), and the decline in the share of the employed held by agriculture fro 11.2 p.c. to 6.9 p.c. (an actual decline of 146,000 or 21 p.c.). These trends are confirmed the occupation data of Table 5, which shows that the proportion of professional and tec nical employed rose from 9.9 p.c. to 13.3 p.c. during the period, service and recreation em ployed increased from 10.9 p.c. to 12.0 p.c., while farmers and farm workers declined fro 11.3 p.c. to 6.9 p.c.

There was an uneven regional pattern of unemployment levels throughout the 1960- decade. Expressed as a percentage of the labour force, unemployment in the Atlan region, Quebec and British Columbia was consistently above the national average, while Ontario and the Prairie region, unemployment rates were lower. In 1969, the avera national unemployment rate was 4.7 and the rates for the regions were: Atlantic 7.5, Queb 6.9, Ontario 3.1, Prairie 2.9, and British Columbia 5.0. Unemployment in Canada duri the 1960-69 decade followed a cyclical pattern. The rate of 7.0 in 1960 increased to 7.1 1961, declined steadily from 1962 to 1966 to a low of 3.6, and after 1966 increased to t 1969 level of 4.7. The average unemployment rate for the 10-year period was 5.1.

Section 3.—Employment Statistics*

Subsection 1.—Statistics of Employment, Earnings and Hours

Monthly records of employment have been collected from larger business establis ments since 1921. At that time a survey was instituted to provide employment ind numbers which would serve as current economic indicators. In 1941 the survey w extended to provide information on payrolls and per capita wages and salaries and in 19 it was further extended to provide data on hours of work and hourly and weekly wag Also during the war period, separate records for men and women employees were establishe Beginning with the January 1966 issues of *Employment and Average Weekly Wages a Salaries* and *Man-Hours and Hourly Earnings*, the data compiled are on a revised bas A historical series (Catalogue No. 72-504) provides, on the revised basis, monthly a annual data from 1961-65. The revision has involved the publishing of employment i dexes on the time base 1961 = 100 in place of the time base 1949 = 100. All data are co piled on the 1960 standard industrial classification.

The survey now covers sectors of the following major industry divisions: forestr mining (including milling); manufacturing; construction; transportation, communicati and other utilities; trade; and finance, insurance and real estate. Also included are certa branches of the service industry, mainly hotels and restaurants, laundries and dry-cleani plants, and recreational and business services. The survey excludes agriculture, publ administration and community services such as health and education. The covera corresponds closely, therefore, to the business sector of the economy. Since the surv covers only firms employing 20 or more persons in any month of the year and exclud several industries, the employment records are published in the form of index numbers.

The monthly employment statistics relate to the number of employees drawing pa in the last pay period in the month. Data are requested for all classes of employees wi the exception of homeworkers and casual employees working less than one day in the pa period. Owners and firm members are also excluded. The respondents report the gro wages and salaries paid in the last pay period in the month, before deductions are made f income tax, unemployment insurance, etc. The reported payrolls represent gross rem neration for services rendered and paid absences in the period specified, including salarie commissions, piece-work and time-work payments, and such items as shift premiums an regularly paid production, and incentive and cost-of-living bonuses. The statistics o

* Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

urs relate to the straight and overtime hours worked by those wage-earners for whom cords of hours are maintained, and also to hours credited to wage-earners absent on paid ve during the reported period. If the reported period exceeds one week, the payroll d hours data are reduced to weekly equivalents.

Employment.—Table 7 shows that, over the 1965-69 period, the industrial composite dex of employment rose by 11.0 p.c. Each sector except forestry contributed to the ad- nce: service increased by 36.5 p.c., trade by 19.5 p.c., finance, insurance and real estate by .0 p.c., manufacturing by 6.8 p.c., transportation by 6.8 p.c., mining by 2.7 p.c. and con- ruction by less than 1 p.c. The decline in forestry amounted to 14.8 p.c. Compared with 68, the 1969 composite index moved up 3.4 p.c.

7.—Annual Average Index Numbers of Employment, by Industrial Division, 1965-69, and Monthly Indexes 1969

NOTE.—These indexes are calculated as at the last pay period of each month, on the base 1961=100.

Weekly Wages and Salaries.—Average weekly wages and salaries have increas substantially in the years for which current payroll statistics have been collected, risi from $23.44 in 1939 to $109.88 in 1968 and $117.79 in 1969. The upward movement gain momentum after the end of the War and average annual increases from 1946 to 1952 we more than double those between 1939 and 1946. After 1952 the rate of increase, in ter of year-to-year percentage changes, fell slightly, particularly between 1959 and 1962 wh average earnings rose about 3 p.c. per annum. In the following years the rate increas moderately—earnings in 1968 were 7.0 p.c. higher than in 1967 and 7.2 p.c. higher in 19 than in 1968.

[1] Mainly hotels, restaurants, laundries, dry-cleaning establishments and recreational and business services.

Hours and Earnings of Hourly Rated Wage-Earners.—The monthly survey of nployment and payrolls covers statistics of hours of work and paid absence of those age-earners for whom records of hours are maintained, together with the corresponding tals of gross wages paid. These wage-earners are mainly hourly rated production work-s; information on hours is frequently not kept by employers for ancillary workers nor, in any industries and establishments, for any wage-earners. Salaried employees are ex-uded by definition from the series. As a result of these exclusions, data are available r fewer industries and workers than are covered in the employment and average weekly age and salary statistics.

During the period 1965-69, there was little change in average weekly hours but average urly and weekly wages rose substantially. For the most part, upward wage-rate revisions all industries were responsible for the increases. Technological changes, which in many ses involve the employment of more highly skilled workers at the expense of those in the wer-paid occupations, also contributed to the advance of average hourly earnings. From 65 to 1969, average weekly wages rose 28.5 p.c. in manufacturing, 32.1 p.c. in mining d 40.5 p.c. in construction. Average hourly earnings increased 31.6 p.c. in manufacturing, .0 p.c. in mining and 46.6 p.c. in construction. In construction, 1969 average hourly rnings of $3.71 and average weekly wages of $147.68 represented increases of 11.4 p.c. d 9.5 p.c., respectively, over the 1968 levels.

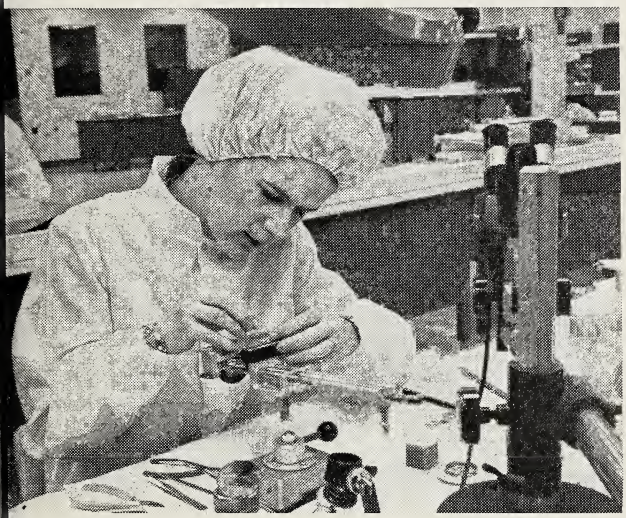
[1] Durable goods manufacturing includes wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products and non-metallic mineral products; non-durable goods manufacturing includes all other manufacturing industries.

Subsection 2.—Earnings and Hours of Work in Manufacturing*

Since 1946 an annual survey of earnings and hours of work in manufacturing has been conducted using (since 1948) the last week of October as the survey week. Information is collected during this normal or representative working week of the year, following generally the same concepts, definitions and coverage as in the larger establishment monthly employment survey. If strikes or other unusual working conditions distort the norm for

* More detailed information is given in DBS annual report *Earnings and Hours of Work in Manufacturing* (Catalogue No. 72-204).

The number of women employed in all industries in Canada rose from 1,911,000 in 1964 to 2,508,000 in 1969. In the later year, more than one out of three women in the country were in the labour force and over half of them were under 35 years of age.



The largest number of women workers, over 1,300,000, were in clerical, service and recreation occupations and 436,000, including teachers and skilled technicians, were in the professional and technical category.

s week, a more suitable week is substituted. Over the whole period, earnings and urs of work in manufacturing have been reported by sex and category and, since 1951, ures have been available for clerical and related workers as distinct from other salaried ployees. In addition, the distribution of employees by weekly earnings has been col- ed periodically since 1950 and the distribution of wage-earners by hours worked or d for was collected each year from 1946 to 1949 and periodically thereafter.

Tables **15** and **16** give figures for 1963-68. It should be noted that in 1963 there was reak in continuity with previous years. The new establishment concept introduced 961 drew into the manufacturing universe some activity reports, such as sales branches, ch formerly reported to other industries; these are now coded to manufacturing when y form part of an establishment, the principal activity of which is manufacturing. The vey was not carried out in 1961 and 1962 and revised figures are available only from 1963. 1960 standard industrial classification is used in Tables **17** and **18.**

15.—Average Earnings of Male and Female Employees in Manufacturing, Survey Week 1963-68, and Percentage Increases over Previous Year

NOTE.—Survey week is the last week of October. This survey was not conducted in 1961 and 1962 (see p. 8

Subsection 3.—Estimates of Employment*

Estimates of employees by province and industry are produced by adding together ta from the long-standing employment and earnings survey of larger establishments, m a sample survey of smaller establishments, and from special surveys in the non-com- rcial sector. These estimates are available from 1961 on a monthly basis.

The estimates of employees are more reliable indicators of changes in total employment an the large-establishment employment indexes released in the publication *Employment d Average Weekly Wages and Salaries*. However, the design of the sample survey does t permit the publication of extensive geographic and industrial detail and the large- tablishment employment indexes are the only source of current information of this type.

* More detailed information is given in DBS monthly publication *Estimates of Employees by Province and Industry* atalogue No. 72-008).

Subsection 4.—Estimates of Labour Income*

Labour income, as shown in Table **20**, is the compensation paid to employees for se vices rendered either as wages and salaries or as supplementary labour income. Wag and salaries include directors' fees, bonuses, commissions, taxable allowances and benefi some imputed earnings (e.g., those for persons in religious orders) and living allowanc considered to be an additional benefit to the employee. Supplementary labour incom which consists of payments made by employers for the future benefit of employees, composed of employers' contributions to employee welfare and pension funds, to t Workmen's Compensation Fund and to the Unemployment Insurance Fund.

* More detailed information is given in DBS publication *Estimates of Labour Income* (Catalogue No. 72-005).

20.—Wages and Salaries, by Industry, and Supplementary Labour Income, 1965-69, and by Month 1969

NOTE.—Based on the 1960 standard industrial classification. Figures are unadjusted for seasonal variation.

(Millions of dollars)

[1] Excludes military pay and allowances. [2] Includes fishing and trapping.

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and locality, with standard weekly hours of labour, are compiled by the Canada Department of Labour and published in the annual report *Wage Rates, Salaries and Hours of Labour*. The statistics are based on an annual survey covering some 35,000 establishments in most industries and apply to the last normal pay period preceding Oct. 1. Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers for selected occupations are shown separately in the report but are combined in the calculation of industry index numbers shown in Table **21**. Predominant ranges of rates for each occupation used are also given; overtime pay is excluded.

The index numbers of Table **21** measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. Information on concepts and methods of developing these statistics is given in the annual report.

21.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1961-69

(1961=100)

NOTE.—Figures for years prior to 1961 are not available on the 1961 base; indexes for 1956-65 on the 1949 base are given in the 1967 Year Book at p. 763 and indexes back to 1901 on the same base appear in the Department of Labour publication *Wage Rates, Salaries and Hours of Labour 1965*.

Table **23** gives summary data on working conditions of plant and office employees in anufacturing industries and all industries for the years 1967-69. The percentages in his table denote the proportions that employees—plant or office—of establishments report- ng specific items bear to the total number of all such employees in all establishments eplying to the survey; they are not necessarily the proportions of employees actually overed by the various items. Further details and additional information are given n the annual report *Working Conditions in Canadian Industry,* compiled and published by he Canada Department of Labour and based on a survey at May 1 each year of some 5,000 reporting units.

Wages of Farm Labour.—The information on farm wages is provided by volunteer m correspondents located in all provinces except Newfoundland. The rates presented Table 24 are average wages paid to all farm help regardless of age and skill. Because rates reported may cover a wide range of skills, of types of work and of ages of hired kers, the value of the resulting data is considered to be an indicator of trends rather than easure of absolute wage levels.

24.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1968-70

Section 5.—Pension Plans*

Very few pension plans in Canada have been in existence for more than 25 years and st of the older plans were established by governments, banks and railways. The greatest owth in pension plans and coverage began during World War II and continued through

* Prepared by the Pension Plans Section, Labour Division, Dominion Bureau of Statistics.

the postwar years. In 1960 there were 9,000 pension plans in Canada covering so 1,800,000 persons and by 1969 the number of plans had increased to an estimated 18,4 covering some 2,441,000 persons.

Up to 1948, most plans were of the insured type, being underwritten by either insurance company or the Government Annuities Branch of the Canada Department Labour. The trust fund arrangement then began to grow in popularity and is now t dominant instrument for funding pension benefits measured in terms of membership a assets held. In 1969, contributions to trusteed pension funds alone amounted $961,000,000, accounting for over 75 p.c. of all contributions to private pension pla excluding government plans having no invested assets. Funds of this magnitude represe a major medium for personal savings and the investment of these funds exerts a consid able influence on the capital market.

Table **25** shows the distribution of pension business for the years 1965-69, excludi the public service superannuation funds of the Federal Government and of six provinc governments which are nominal funds only, having no invested assets.

Most trusteed pension plans use the facilities of corporate trustees (trust companie who invest the contributions, accumulate the earnings and pay benefits to the plan me bers. Trusteed pension plan funds are also managed by individual trustees or pensi fund societies. The designated trustee, corporate or individual, must invest the cont butions in accordance with the trust agreement which sets forth the rights and duties the trustee. Many of the small funds invest in the "pooled funds" of trust companies whi combine the assets of many pension funds, thus providing the diversification of investmen usually available only to larger funds.

Federal Government Annuities.—Since 1908 the Federal Government has sold nuities and industrial pension plans under the Government Annuities Act (RSC 1952, 132). The purpose of the introduction of this legislation was to encourage people to e for old age but since the need for government service in this form has decreased in ent years, reduction of the program became justified and the employment of salesmen solicit business was ended on Nov. 30, 1967. Annuities are still available under the t to those who ask for them. They are now administered by the Unemployment Insurce Commission.

Section 6.—Unemployment Insurance*

During the depression of the 1930s the need for a nation-wide unemployment insuran program became recognized. In 1935 the Employment and Social Insurance Act w passed by the Federal Parliament but was subsequently declared invalid by the Priv Council. Later, by consent of the provinces, an amendment to the British North Ameri Act was obtained empowering the Federal Parliament to legislate on unemployment insu ance and in 1940 the Unemployment Insurance Act was passed, making provision for compulsory contributory unemployment insurance program at the national level and al for the establishment of a national employment service to operate in conjunction with a ancillary to the unemployment insurance operations. The Act came into effect on July 1941; amended on several occassions, it was replaced by a new Unemployment Insuran Act, effective Oct. 2, 1955.† On Apr. 1, 1965, the operation of the National Employme Service was transferred to the Department of Labour and on Jan. 1, 1966 to the Departme of Manpower and Immigration (see pp. 843-844).

Legislation provides for a compulsory insurance program administered by the Feder Government, and requires employers to join with their insurable employees and the Gover ment in building up a fund. This fund is held in trust by the Unemployment Insuran Commission for the payment of benefit to eligible unemployed persons. The Act is admin stered by a Commission of three persons appointed by the Governor in Council, of who one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, appointed after consultation with employer organizations and the other after consultatio with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contra of service‡ except: the Canadian Armed Forces; the permanent public service of t Federal Government; provincial government employees except where insured with t concurrence of the government of the province; certified permanent employees of municip or public authorities; persons engaged in hunting and trapping, private domestic servic private-duty nursing, and teaching; workers on other than an hourly, daily or piece ra earning more than $7,800 a year effective June 30, 1968, unless they elect to continue insured persons; employees in a charitable institution or in a hospital not carried on f purpose of gain except where the institution or hospital consents to insure certain groups classes of persons with the concurrence of the Commission. All persons paid by the hou day, or at a piece rate (including a mileage rate) are insured regardless of amount of earning

The amount of the employee contribution is determined by the employee's week earnings; an equal contribution is required from the employer. The Federal Governme contributes one fifth of the aggregate employer-employee contribution and defrays admin strative expenses. Contributions became payable on July 1, 1941. Benefit became pay able on Jan. 27, 1942 and by Mar. 31, 1969 a total of $6,262,000,000 had been paid.

The following statement shows the current weekly rates of contribution and benef effective June 30, 1968. The weekly contribution is based on actual earnings in the week irrespective of the number of days worked. The benefit rates are calculated on the averag weekly contributions for the last 30 weeks in the 104 weeks preceding claim. In order t qualify for regular benefit, a claimant must have at least 30 weekly contributions in the la 104 weeks prior to claim, eight weekly contributions since the start of the last precedin

* Prepared by the Unemployment Insurance and Manpower Section, Labour Division, Dominion Bureau Statistics; statistics of unemployment insurance are compiled and published by the DBS from material supplie by the Unemployment Insurance Commission.

† Copies of the 1955 Act incorporating subsequent amendments are available from Information Canada, Ottaw (Catalogue No. YX92-222/50).

‡ Commencing Apr. 1, 1957, coverage was extended to persons engaged in fishing, notwithstanding the fact tha such persons are not employees of any other person but are usually self-employed; commencing Apr. 1, 1967, coverag was extended to employees engaged in agriculture and horticulture.

gular benefit period or in the last year prior to claim, whichever is the shorter period, and weekly contributions since the start of the last preceding benefit period, or in the year ior to the claim, whichever is the longer period.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, IN EFFECT FROM JUNE 30, 1968

NOTE.—Weekly rates in effect from Oct. 2, 1955 to June 30, 1968 are given in the 1962 Year Book, p. 738 and the 7 edition, p. 769.

The Act contains a special provision whereby the regular contribution requirements re relaxed somewhat during a 5½-month period commencing with the first week of Decemer each year. Under this provision, claimants unable to fulfil the contribution requirenents for regular benefit may draw "seasonal benefit" if they have at least 15 contribution eeks during the fiscal year, or, failing this, if they terminated regular benefit since the revious mid-May.

Statistics on the Operation of the Act.—In order to assess the impact of changing economic onditions on the insurance program, provision is made for collection of current operational ata, such as claims filed and processed and payments made. This information is published nonthly in the *Statistical Report on the Operation of the Unemployment Insurance Act* Catalogue No. 73-001). Current claims and payment data are useful for administrative urposes and are also a source of information to the public regarding financial and other spects of the program.

Persons wishing to draw benefit must file either an initial or a renewal claim. Where t is necessary to compute entitlement to benefit, an initial claim is taken, otherwise a enewal. In the main, initial and renewal claims combined are an approximation of ecorded separations from employment during a month. However, if a claimant exhausts is benefit and wishes to be reconsidered for further benefit, an initial claim is required. uch claims, accounting for approximately 15 p.c. of the monthly volume in 1969, are ot new cases of unemployment. The count of claimants at the month-end indicates the xtent to which claimants maintain contact with local offices of the Commission.

[1] Month-end average.

In addition to the monthly data published on the operation of the Unemploymen Insurance Act, annual tabulations are compiled regarding persons employed in insurabl employment and benefit periods established and terminated. These data are publishe in the annual report *Benefit Periods Established and Terminated under the Unemploymen Insurance Act* (Catalogue No. 73-201). Data on persons insured under the Act are obtaine from a 5-p.c. sample of insurance books and contribution cards renewed at June 1 eac year (10-p.c. sample prior to 1969). Included are persons engaged in insurable employmen as well as persons on claim at that date.

Benefit.—The duration of regular benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks. However, contributions more than one year old cannot be used if they have already been taken into account in computing previous rights. Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks

y be imposed if an employee is discharged by reason of his own misconduct or leaves ployment voluntarily without just cause or refuses suitable employment.*

Table **29** distributes regular benefit periods terminated by province and shows average ks and average dollar benefit paid on these terminations. A claimant establishes a *ular benefit period* when he submits his claim in the prescribed manner and proves he fulfilled the minimum contribution requirements. The duration of benefit and the kly rate authorized, comprising total entitlement, are then calculated and the claimant's efit may be drawn upon during successive intervals of unemployment. His benefit od terminates either when he has exhausted the amount authorized or when 52 weeks† e elapsed since he established, whichever comes first.

–Regular Benefit Periods Terminated, Duration and Average Amount of Benefit Paid, by Province, 1968 and 1969

NOTE.—In 1968, based on a 20-p.c. sample, except for Quebec and Ontario where a 10-p.c. sample was used; in 1969, sampling ratio was 10 p.c. and 5 p.c., respectively.

Section 7.—Employment Injuries and Workmen's Compensation

Fatal Employment Injuries.—Data on fatal employment injuries, compiled h the Canada Department of Labour, are obtained from provincial Workmen's Compensati Boards, the Canadian Transport Commission, other government authorities and pre reports. Of the 1,057 fatal injuries to industrial workers that occurred during 1969, 2 were the result of a person being struck by an object, 250 were caused by collisions, dera ments or wrecks, and 208 by falls or slips. Inhalations, contact, absorptions, ingestio and industrial diseases accounted for 103 deaths and the act of getting caught in, on between objects, vehicles, etc., accounted for another 100. There were 48 deaths caus by contact with electric current, 46 by conflagrations, temperature extremes and explosion 17 by over-exertion and four by striking against or stepping on objects. The remainin 22 were the result of various miscellaneous accidents.

[1] Injuries requiring medical treatment but not causing disability for a sufficient period to qualify for compen-n; the period varies in the several provinces. [2] Includes, except where noted otherwise, payments to pensate loss of earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital nditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities; the Quebec com-ation figure includes pensions awarded as well as pensions paid. [3] Excludes payments by employers who e direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec kmen's Compensation Acts. [4] Estimated from a combined figure of 131,866 for temporary disability and nanent disability claims; these were the only figures available from the Ontario Workmen's Compensation Board.

Section 8.—Organized Labour

Subsection 1.—Union Membership

At Jan. 1, 1970, unions active in Canada reported a total membership of 2,173,000, nprising 33.6 p.c. of the non-agricultural paid workers in the country and 27.2 p.c. of the l civilian labour force. The increase in membership over 1969 was 4.7 p.c. and 36.7 over 1965.

Of the 1970 total, 1,632,000, or 75.1 p.c., were in organizations affiliated with the nadian Labour Congress (CLC) and, of these, 1,111,000 were in unions also affiliated h the American Federation of Labor (AFL) and the Congress of Industrial Organizations O) in the United States; another 207,000, or 9.5 p.c. were in affiliates of the Confedera-n of National Trade Unions (CNTU) and 15.3 p.c. were in various unaffiliated and in-endent national and international labour organizations.

Of the total union members in Canada, 62.5 p.c. belonged to international unions; ther 34.6 p.c. were members of national and regional unions which charter locals in nada only; and the remaining 2.9 p.c. belonged to independent local organizations and l unions chartered directly by the central labour congresses. In recent years there has

been an increase in the proportion which the membership of national and regional uni bears to the total and a corresponding decline in the proportion represented by inter tionals. This shift is attributable largely to the extension of collective bargaining rig in the public service sector and the concomitant inclusion of the membership of governm employee organizations in the totals for national and regional unions. In 1965, there w 52 national and regional unions reporting 390,000 members; by 1970, the correspondi figures were 64 and 752,000.

34.—Union Membership in Canada, 1942-70

Grand Totals	**434**	**9,593**	**2,173,10**

Of the 166 international and national unions reporting membership in January 197 more than half, including 52 internationals and 30 national unions, had 5,000 or more mer bers; the combined membership of these amounted to almost 2,000,000. The Unit Steelworkers of America (AFL-CIO/CLC) remained the largest union, reporting a Canadi membership of 150,000. Two national unions, both affiliated with the CLC, were next size—the Canadian Union of Public Employees with 136,000 members (an increase 11,500 over January 1969) and the Public Service Alliance of Canada with 120,000 membe (an increase of 23,800 over the 1969 figure). A list of the unions reporting 30,000 or mo members at the beginning of 1970 follows.

Relative Position in 1970	Union and Affiliation	1970 Membership	Relative Position in 1969
1	United Steelworkers of America (AFL-CIO/CLC).....	150,000	1
2	Canadian Union of Public Employees (CLC).....	136,127	2
3	Public Service Alliance of Canada (CLC).....	119,743	4
4	International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (CLC)....	109,274	3
5	United Brotherhood of Carpenters and Joiners of America (AFL-CIO/CLC).....	72,209	5
6	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.).....	58,178	6

19	Civil Service Association of Ontario (Ind.).....	30,000	[2]

[1] Fewer than 30,000 members in 1969. [2] Not included prior to 1970.

Further details on the labour movement in Canada, including lists of individual ns, their membership, principal officers and the geographic distribution of their locals rried in *Labour Organizations in Canada*, an annual publication of the Canada Depart- of Labour; it is available from Information Canada, Ottawa.

Subsection 2.—Wage Developments under Major Collective Agreements, 1969

The Canada Department of Labour obtains data on wage settlements under collective ments on a quarterly basis. The agreements covered are limited to negotiating units 0 employees or more in all industries, with the exception of construction. The base- for a negotiating unit is defined as a straight-time hourly wage rate for the lowest paid fied workers, usually unskilled or semi-skilled workers, although some contracts n only skilled workmen. Thus, the wage data are not necessarily representative of verage increases enjoyed by the workers in the negotiating unit as a whole. On the hand, the data on numbers of agreements and workers refer to all occupational s in the negotiating units.

Wage-rate data given in Tables **36** and **37** indicate that on Dec. 31, 1969, approximately ,000 workers were covered by 661 major collective agreements in negotiating units 500 or more workers in industries other than construction. The average base-rate 6.9 cents, or 7.1 p.c., during the 12-month period ended Dec. 31, 1969, compared with crease of 14.9 cents or 6.6 p.c. during the preceding 12-month period. During 1969,

the consumer price index rose 4.6 p.c. and during 1968 it rose 4.1 p.c., so that, deflating wage increases by the consumer price index increase, the average hourly base-rate increa in real terms by 2.4 p.c. during 1969 and by 2.4 p.c. during 1968.

36.—Employees Covered by All Collective Bargaining Agreements in Negotiating Ur Covering 500 or more Employees in Industries other than Construction, in Ef December 1969.[1]

[1] Refer to all agreements in force, irrespective of the year of settlement. As of Dec. 31, 1969, this univ included 661 agreements covering 1,430,980 employees. [2] Covers agreements pertaining to workers locate more than one province.

Additional data are available from the Canada Department of Labour on wage set ments under agreements newly settled during quarterly periods, including number of agr ments settled, number of employees affected and duration of contracts. The agreeme covered are again limited to negotiating units of 500 employees or more in all industr except construction. Details are not given here but, for 1969 as a whole, 341 contra were settled. These 341 settlements affected the wage-rates of about 780,000 work On the average, the 341 settlements provided an annual percentage increase in the straig time hourly base-rate equal to 8.0 p.c. over the lives of the contracts; this percentage v the same as the comparable percentage for the year 1968.

Settlements during the year 1969 of one-year duration provided for increases averag 8.0 p.c.; those of two-year duration for increases of 8.4 p.c. and 5.9 p.c. for the first and sec years, respectively; and those of three-year duration of 10.8 p.c., 6.5 p.c. and 5.3 p.c. the first, second and third years of the contract. These increases compare with those 1968 as follows: one-year agreements, average increases of 7.3 p.c.; two-year agreemer average increases of 8.4 p.c. and 6.2 p.c.; and three-year agreements provided for aver increases of 12.0 p.c., 6.7 p.c. and 5.1 p.c. for the first, second and third years of the contra

37.—Annual Percentage and Cents-Per-Hour Increases in Base-Rates under Major Collective Agreements, by Month, 1969

NOTE.—Based on all major collective agreements covering 500 or more employees in force except those in the truction industry. Data refer to rates actually paid in the month specified; no adjustments have been made etroactive wage increases.

Section 9.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics l Research Branch of the Canada Department of Labour on the basis of reports from nada Manpower Centres of the Department of Manpower and Immigration. Table 38 ers strikes and lockouts lasting 10 or more man-days. The developments leading to rk stoppages are often too complex to make it practicable to distinguish statistically ween strikes on the one hand and lockouts on the other. However, a work stoppage t is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, ether or not they all belonged to the unions directly involved in the disputes leading to rk stoppages. Workers indirectly affected, such as those laid off as a result of a work ppage, are not included. Duration of strikes and lockouts in terms of man-days is culated by multiplying the number of workers involved in each work stoppage by the nber of working days the stoppage was in progress. The data on duration of work stop-es in man-days are provided to facilitate comparison of work stoppages in terms of a mon denominator. They are not intended as a measure of the loss of productive time the economy.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

The important role played by transportation in the history and economic development Canada has been told often and well. The history of Canadian transportation may be vided into three distinct stages—the early or development stage lasting up to about 1920, e monopolistic stage from 1920 to about 1950, and the competitive stage beginning in e early 1950s.

The early settlers of Canada depended almost exclusively on transport by water. ng before Confederation, public works such as canals and docks were built by local vernments for the purposes of defence and internal economic development. However, the movement of goods and people became heavier, waterways and canals were found be inadequate as transportation routes and the railway came into use. The first was ened in 1836 but the real railway boom began in the 1850s, and their construction or omised construction formed part of the Confederation scheme of 1867. The promised nstruction of the Intercolonial Railway from Central Canada to the Maritimes was ritten into the British North America Act of 1867. Similarly, one of the conditions under hich British Columbia joined Confederation in 1871 was that the Dominion Government ndertake the construction of a railway connecting it with the rest of the country and in 74 work started on the construction of a transcontinental line. The successful completion the Canadian Pacific Railway in 1885 marks the end of this part of Canadian railway his- ry. By 1905, Canada was committed to the building of two additional transcontinental il lines—the Canadian Northern and the Grand Trunk Pacific. The expectation that ese railways would operate profitably proved ill-founded as both (as well as the Grand runk Railway Company) collapsed as privately owned enterprises. A Royal Commission

in 1917 recommended that all three railways be consolidated with other government-owne railways; this proposal was accepted and the present Canadian National Railway Syste was founded. In the late eighteenth century Canada was one of the largest ship-owni nations in the world. However, by 1900, because of stiff foreign competition and the adve of iron and steel ships, Canadian ocean shipping tonnage had decreased by nearly hal

The second period of Canadian transportation history, 1920-50, was characterized b the rapid development of different, competing modes of transport. The motor vehic emerged as one of the dominant features and not only revolutionized the transportatio industry but became indispensable to modern living; registrations increased nearly tenfol from 280,000 in 1920 to 2,400,000 in 1949. Air service for the conveyance of passenger mail and freight started in 1924 and later in the 1920s flying services were in operatio between major urban centres. In 1937 the Canadian Government established Tran Canada Air Lines (now Air Canada) as a national airline which, by the end of that decad operated regular passenger services between the largest cities of the country. Equall important in the field of civil aviation was the amalgamation of a number of independe airlines to form Canadian Pacific Airlines. At the same time during this period, Canadia international sea-borne shipping in Canadian vessels had been declining due partly to th depression and partly to competition from other nations. High wages, depreciation an heavy interest charges also had a depressing effect on Canadian shipping.

In the late 1920s, the Canadian Government attempted to rehabilitate and unify th various individual and often competing railway companies. Despite all these efforts th financial position of the railways deteriorated during the depression years and did n improve until the outbreak of World War II. During the war, railways assumed the mai burden of carrying food, ammunition and troops. Railway passenger traffic reached it peak in 1944 when 60,000,000 passengers were carried and then began to decline with th increasing use of the automobile and bus for short or medium distances and of air carrie for medium and long distances.

Since the end of the Second World War, the transportation field has become highl competitive. The growth of highway transport has been one of the most important devel opments. Its amazing growth may be traced directly to the great technical advances tha have been made in the design and operating efficiency of motor vehicles and also to th development of secondary manufacturing industries, the decentralization of industry an the growth of metropolitan areas. Long-distance highway transport became importan in the early 1950s and the construction of the Trans-Canada Highway in the followin years gave a further direct impetus to the growth of the industry.

The St. Lawrence Seaway, opened 1959, has been of great economic benefit to Canad by permitting the low-cost movement of such bulk commodities as wheat, iron ore and coa There has been some speculation that the Seaway might soon become obsolete due t technological progress currently taking place in transportation. There would seem to b little doubt that changes such as container ships, giant tankers, unit trains, etc., will certainl influence the future pattern of Seaway traffic.

Pipelines came rapidly into the picture following the discovery of vast petroleum an gas reserves in Western Canada in the late 1940s. By 1950, there were 1,400 miles of trunk pipeline in operation in Canada and just six years later the total was 5,807 miles. Thi mileage has grown into a vast network which is making possible the economical exploitatio of Canada's tremendous resources of oil and gas. In the early 1950s resource development and the building of defence projects in the Canadian North gave a great impetus to the growth of air freight but, more recently, the advance has been mainly in the area of inter city operations.

The airlines' share of intercity passenger-mile traffic carried by public conveyances e to 37 p.c. by 1968, a growth attributable to the demand for fast service and to the volutionary technological developments that have occurred in this industry, mainly the velopment of the turbo prop and jet engines which permitted the use of larger and more cient aircraft. During this period, Canada's two major airlines—Air Canada and nadian Pacific (CP Air)—became world carriers, Air Canada ranking among the largest.

Automobiles now account for more than four fifths of all intercity passenger travel d this, together with the growth of travel by air, has had an adverse effect on intercity travel which has declined more than 50 p.c. since 1950. The railways, too, have lost ffic in the past 20 years, especially passenger traffic, for the same reason. Nevertheless, portant advances have been made in the rail transport field, the most outstanding being, haps, their complete conversion to diesel power. Complex programs of plant and equip-nt modernization were undertaken and centralized traffic control devices, electrically ntrolled classification yards, piggybacks and unit trains were developed to fight the mpetition as well as to supply better service. It should be noted also that the railways repeating in the Canadian North the essential services they performed in the early tory of Canada when great isolated areas were being opened up to industry and develop-nt.

Thus, the Canadian transportation environment has changed fundamentally in the st 20 years and will keep changing as each mode of movement, in competition with the ers, continues to take advantage of technological developments in its own area and ntinues to adapt to changing economic requirements.

PART I.—RAIL TRANSPORT*

The Canadian railway scene is dominated by two giant transcontinental systems, plemented by a number of regional railways. The two largest railway companies ntrol a wide variety of Canadian and international transport and communications services. e government-owned Canadian National Railway System is the country's largest public lity and operates the greatest length of trackage in Canada. It serves all ten provinces well as the Great Slave Lake area of the Northwest Territories. In addition, it operates ighway transport service, a fleet of coastal steamships, a chain of large hotels and resorts, d a scheduled Canadian and international air service (see p. 939). The Canadian Pacific ilway Company is a joint-stock corporation operating a railway service in eight provinces. is also a multi-transport organization, operating, in addition to its railways, a domestic ck network, a fleet of inland, coastal and ocean-going vessels, a chain of year-round and ort hotels and a domestic and foreign airline service (see p. 941). The Pacific Great stern Railway, owned by the British Columbia Government, operates over an 800-mile te from North Vancouver to Fort St. John in the Peace River area of northeastern itish Columbia, and is currently being extended farther north toward Fort Nelson. The rthern Alberta Railway, jointly owned by CP and CN, serves the area north of Edmonton h a 900-mile system. Northern Ontario is served by the provincially owned Ontario rthland Railways with a 600-mile system stretching from North Bay to Moosonee, and the privately owned Algoma Central Railway operating over 300 miles of line between ult Ste Marie and Hearst.

Of the total railway revenue recorded in Canada in 1969, Canadian National contributed 2 p.c. and Canadian Pacific 36.7 p.c. The Quebec, North Shore and Labrador Railway,

* The statistical data in this Part were revised in the Transportation and Public Utilities Division, Dominion reau of Statistics; more detailed information is given in the annual reports of the Division.

built primarily to transport ore and concentrates from the iron mines of the Scheffervill and Wabush areas of Labrador and Quebec to water transportation facilities on the S Lawrence River, accounted for 2.4 p.c. of the revenues. Other railways contributing 1 p.c or more to the total revenue figure were the Pacific Great Eastern 1.8 p.c., the Ontari Northland 1.1 p.c. and the Chesapeake and Ohio 1.0 p.c.

Even though the railways have in recent years faced strong competition from highwa and air transport for the movement of people and much of the commodity trade, they ar still indispensible for carrying bulk commodities and thus are necessary to the developmen of natural resources located in isolated areas of this great country. Only the pipelines hav competed with the railways in this respect by providing an economical means of transportin the products of the oil and gas fields for long distances overland, and it is altogether probabl that pipelines for transporting solids will, before long, constitute additional competitior (It is interesting to note that Canadian Pacific is in the forefront of research in this field. The rapid growth of containerization in recent years has made the integration of the serv ices of railway, highway, shipping and other modes of transport of growing importance However, the two major railways of Canada, with their multi-transport interests, are in a excellent position to face this and other trends appearing in the transportation industry Canadian railways have evolved over the past 100 years from a position of virtual monopol in the movement of goods and people by rail, through a highly competitive stage to th present system of co-operation and co-ordination with other modes of transport. Th latter approach permits each mode of transport to concentrate on the particular functio it can perform most efficiently, thus establishing the most effective and economical syste of transportation services possible.

Government Aid to Railways.—In order that the private railways of Canada migh be constructed in advance of settlement as colonization roads or through sparsely settle districts where little traffic was available, it was necessary for federal and provincial govern ments and even for municipalities to extend some form of assistance. The form of ai was usually a bonus of a fixed amount for each mile of railway constructed and, in th early days, grants of land were also made other than for right-of-way. As the countr developed, objections to the land-grant method became increasingly apparent and ai was given more frequently in the form of a cash subsidy for each mile of line, a loan or subscription to the shares of the railway. Guarantees of debenture issues came later and since the formation of the Canadian National Railways, all debenture issues of that System except those for rolling-stock, have been guaranteed by the Federal Government. Durin the era of railway expansion before 1918, provincial governments guaranteed the bond of some railway lines that afterwards were incorporated in the Canadian National Railwa System. These bonds as they mature or are called are paid off by the Canadian Nationa Railways, in large measure through funds raised by the issue of new bonds with Federa Government guarantee. Railway bonds guaranteed by the Government of Canada a Dec. 31, 1970 amounted to $1,042,019,500.

As discussed on pp. 959-961, the National Transportation Act (SC 1967, c. 69), ad ministered by the Canadian Transport Commission, expresses a national transportatio policy for Canada aimed at the development of "an economic, efficient and adequat transportation system making the best use of all available modes of transportation at th lowest total cost". This law is intended to provide the railways with greater freedon to meet the competition with which they are faced and to develop as an integral part o today's complex transportation system.

Under the Act, the 1966 level of Federal Government rail subsidy of $110,000,00 a year will decline by $14,000,000 a year until it disappears at the end of 1974. The Crows nest Pass rates on grain and flour from Western Canada and the rates under the Maritim Freight Rates Act remain in force. The so-called "bridge subsidy" paid under the Rail way Act to the major railways for operation of lines through the light-traffic territory i the Lake Superior District ceased at the end of 1966 but the reduction in freight rate

e possible by the bridge subsidy remains in force. However, commencing on Mar. 23, , the railways were permitted to make successive annual increases for a period of three s to the freight rates over the territory formerly covered by the bridge subsidy, to l additional operating revenues in the first year of $3,000,000, in the second year of 00,000, and in the third year of $2,000,000.

Track Mileage.—The first railway to be built in Canada—the Champlain and St. rence Railroad between Laprairie and St. Johns (St. Jean), Que.—was officially opened ervice on July 21, 1836. However, the first great period of railway construction did take place until the 1850s when the Grand Trunk and the Great Western Railways built as well as numerous smaller lines. The building of the Intercolonial and the adian Pacific Railways contributed to another period of rapid expansion in the 1870s 1880s and, in the last period of extensive railway building (1900-17), the Grand Trunk fic, National Transcontinental and Canadian Northern Railways were constructed. e change has occurred in the total track mileage in Canada since the 1920s. There been some recent construction, including the CN-operated 230-mile Alberta Resources way west of Edmonton and the extension of British Columbia's Pacific Great Eastern way to Fort St. John, with construction continuing northward, but new construction been largely offset by the abandonment of unprofitable lines.

Defined as a single track extending the entire distance between terminals, upon which the length of the road is . [2] Includes 190 miles of track of the Cartier Railway which began operations in 1963 but was not in- l in the statistics until 1967. [3] Newfoundland included from 1950. [4] Excludes joint track amount- 55 miles in 1965, 74 miles in 1966, 143 miles in 1967, 140 miles in 1968 and 141 miles in 1969.

Rolling-Stock.—Table 2 shows the numbers of the various types of freight and pas- er equipment in operation in 1960, 1968 and 1969 revealing a generally downward l prior to 1969; however, these figures do not reflect the offsetting trend toward larger, efficient cars and locomotives or the steady improvement in speed of movement itated by modernized handling and terminal services. Each year hundreds of units, icularly freight cars, are converted and modified to make them suitable for specific s of traffic or are replaced by special-purpose equipment designed for distinctive hauling

jobs. The average capacity of all freight cars was 56.8 tons in 1969 compared with 5 tons in 1960. Also, although the number of diesel-electric locomotives in service remained fairly static over this period, it should be noted that an extensive program power upgrading has been followed by the railway companies. The combined tract power (the force exerted by powered equipment measured at the rim of the driving whe of all locomotives in 1969 averaged 61,811 lb. as compared with 55,793 lb. in 1960.

[1] Includes those of non-rail industrial firms such as oil, chemical and railway car leasing companies which fur freight cars to, or on behalf of, any railway line.

Traffic, Employment and Finance Statistics.—Statistics presented under t heading are for the Canadian National Railways, the Canadian Pacific Railway Comp and 22 other common carrier lines whose gross revenues are $500,000 or more annua Excluded are the British Columbia Hydro and Power Authority Railway line and Cartier Railway, and lines with annual revenues of less than $500,000 annually, wh operations account for about 1 p.c. of the total.

Table 3 gives traffic and employment statistics for the above railways for the ye 1965-69 and Table 4 gives similar data for the Canadian National and Canadian Pac railways separately for 1968 and 1969.

3.—Statistics of Total Railway Traffic and Employment, 1965-69

Total tonnage for 24 railways is sum of tonnages carried by individual railways; thus traffic handled by more one railway (interline) is included more than once. [2] Footnote [1] applies also to number of revenue passrs.

The total tonnage of freight carried by all common carrier railways (including national ings and receipts from United States connections) increased steadily for a number ears until 1969 when a 4.2-p.c. decline was experienced. In that year, mine products unted for 41.4 p.c. of the total freight handled and the minerals carried in largest me were iron ore, other ores and concentrates and bituminous coal.

Of the total of 207,595,448 tons of freight carried (excluding freight handled by more th one railway and in intermediate switching), manufactured products accounted for 35.2 p agricultural products for 11.8 p.c., forest products for 11.0 p.c., animal products for 0.5 p and less-than-carload lots for 0.1 p.c.

5.—Commodities Hauled as Freight by Railways, 1965-69

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railway counted only once. The statistics do not include the United States lines of the Canadian National Railways, but link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of Un States railways. Freight carried by the Cartier Railway is included from 1967 on.

Tables **6** to **12** give information on capital liability and capital investment in road and uipment, and on operating revenues, expenses and net income of all common carrier ilways operating in Canada, except that of the Cartier Railway which is not available. Uniform Classification of Accounts has been in operation for the Canadian National and e Canadian Pacific Railways since Jan. 1, 1956 and for other common carrier railways nce Jan. 1, 1957. In transportation statistics, a distinction is made between expenditures d expenses. In the following data, the term 'expenses' is used as defined in the Uniform lassification of Accounts and refers to the expenses of furnishing rail transportation rvice and of operation incident thereto, including maintenance and depreciation of the ant used in such service.

6.—Capital Liability of Railways, 1960-69

(Exclusive of Canadian railway capital owned by Canadian railways)

[1] Restatement to reflect transfer of certain non-rail property of one railway to a subsidiary company.

Capital Structure and Financial Statistics of the Canadian National Railway System.— view of the interest in Canada's publicly owned railway, the capital structure of the anadian National Railway System is given separately in Table **8** and financial details Table **9.** The original financial structure of the CNR and the steps taken through the apital Revision Acts of 1937 and 1952 to alleviate the burden of interest undertaken by e company on its formation in 1923 are described in the 1955 Year Book, pp. 840-847. riefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover eficits and also unpaid interest on loans, and certain loans made for the purpose of additions d betterments were converted to equity capital, relieving the CNR from paying fixed harges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's terest-bearing debt was changed to preferred stock on which, after settling income taxes, dividend of 4 p.c. is paid on earnings. Also, for a term of 10 years ended Jan. 1, 1962, e Railway was not obliged to pay interest on $100,000,000 of its long-term debt. The overnment is authorized to buy additional preferred stock annually in amounts related the company's gross revenues. As a consequence, the proportion of total capitalization presented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec.

31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced. By the end of 1967, the proportion represented by equity capital in shareholders' account was 50.7 p.c.

8.—Capital Structure of the Canadian National Railway System as at Dec. 31, 1960-69

A 100-car CP Rail train carrying Alberta coal to Vancouver for shipment to Japan. To accommodate Canada's revitalized coal trade with a new unit train system, CP Rail is spending some $35,000,000 on new coal-carrying cars, diesel locomotives and complementary robot power equipment, new and upgraded trackage and new servicing facilities.

The financial details presented in Table 9 are those of the Canadian National Railway System, including both Canadian and United States operations. Revenues and penses include those of express and commercial communications and highway transport ail) operations. In conformity with the requirements of the Uniform Classification of counts adopted Jan. 1, 1956, tax accruals and rents are charged to operating expenses.

[1] Includes appropriations for insurance fund. [2] Contributed by or paid to the Government of Canada.

Revenues, Expenses and Net Income.—Total operating revenues and expenses of com- on carrier railways operating in Canada (except the Cartier) continued to rise, both aching peak levels in 1969; increases over 1968 amounted to 3.6 p.c. and 4.1 p.c., res- ctively. However, because the increase in expenses was greater than that in revenues, t earnings declined slightly.

Of the total operating expenses in 1969 amounting to $1,496,126,185, "transportation" penses, including the operation of trains, yards, stations, wharves, etc., accounted for .9 p.c.; equipment maintenance for 21.8 p.c.; road maintenance for 18.4 p.c.; rents and xes for 6.9 p.c.; expenses connected with traffic soliciting, such as advertising and informa- n, ticket and freight offices, etc., for 2.8 p.c.; and general and miscellaneous expenses, cluding general overhead, accounting, dining and buffet services, grain elevators, etc., the remaining 11.2 p.c. These proportions have remained fairly constant in recent ars.

10.—Operating Revenues and Expenses of All Railways, 1960-69

NOTE.—These data cover all common carrier rail operations in Canada and therefore do not agree with those sented in Table 11 which represent only 24 of the larger lines.

Railway Accidents.—Accidents shown in Table **12** (for all common carrier railway operating in Canada) include all those in which railway trains were involved and accidents on railway property; all passengers injured are included but, for employees, only those who were kept from work for at least three days during the 10 days following the accident are recorded. The classification of accidents used in reporting other DBS statistics treats collisions between motor vehicles and trains as motor vehicle accidents. Therefore, care should be exercised when compiling total accidental deaths of all kinds or when comparing results of accidents of different kinds, such as train and motor vehicle.

PART II.—ROAD TRANSPORT*

Section 1.—Motor Vehicle and Traffic Regulations

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. However, the Federal Government has recently passed legislation establishing motor vehicle safety standards. This legislation is outlined below, followed by summaries of motor vehicle and traffic regulations common to all provinces and territories. The source of information on detailed regulations for each province and territory is given at pp. 907-908.

Federal Safety Regulations

The Motor Vehicle Safety Act (SC 1969-70, c. 30), which was passed by the House of Commons on Mar. 11, 1970 and received Royal Assent on Mar. 25, 1970, became effective Jan. 1, 1971. The general objective of the Act is to establish mandatory safety standards for new motor vehicles for the purpose of protecting persons against injuries or death and the impairment of health by exhaust emission and possibly noise. The legislation is directed to all new motor vehicles and components thereof manufactured in or imported into Canada. The safety of vehicles in use continues to be a provincial responsibility to be discharged under existing provincial legislation.

* Except as otherwise indicated, most of the material in this Part has been revised in the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

The safety regulations currently include 29 standards relating to the design and performance of passenger cars, trucks, buses, motorcycles and trailers, five standards limiting motor vehicle exhaust emissions and ten standards applying to snowmobiles. These regulations will be subjected to continual review and additions or revisions will be incorporated to keep pace with engineering or technical advances. The regulations require all Canadian motor vehicle manufacturers or distributors to apply the national safety mark to every classified vehicle produced after Jan. 1, 1970 and this mark must be accompanied by a label certifying compliance with all applicable federal motor vehicle safety standards. Vehicles imported for commercial or individual use must comply with the Act and Regulations.

Provincial Motor Vehicle and Traffic Regulations*

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests. Such licence is renewable annually in Saskatchewan, in the Yukon Territory and in the Northwest Territories; in Alberta it is renewable every two years; in Quebec, operator and chauffeur permits expire on the holder's birthday and the odd-numbered year following the issue of renewal thereof; in Prince Edward Island and New Brunswick it is renewable every two years and expires at the end of the licensee's birth month; in Newfoundland and Ontario a licence is issued on a three-year basis and expires on the licensee's birth date; and in Nova Scotia a licence is issued on a three-year basis and expires at the end of the licensee's birth month. Special licences are required for chauffeurs in all provinces except Newfoundland. In most provinces, a motorcycle operator is required to pass a special examination and have his driver's licence endorsed authorizing him to operate such vehicle or, if he has no driver's licence, he may be issued a licence to operate only this class of vehicle. In Alberta a person under 16 but not under 14 years of age may be issued a licence to operate a scooter, which is defined as a motor vehicle with a speed limit not exceeding 30 miles an hour.

Motor Vehicle Regulations.—All motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the rear of the vehicle (one only for the rear of trailers; in New Brunswick two licence plates are issued for all vehicles other than commercial tractors, trailers and motorcycles; in Prince Edward Island, Quebec, Manitoba, Alberta and British Columbia one plate is issued for motorcycles, to be mounted on the rear; in Saskatchewan, motorcycles and snowmobiles carry one plate on the rear and truck tractors carry one plate on the front).

In most provinces, in event of sale the registration plates stay with the vehicle but in Quebec, Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia, vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exemption from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is three months for non-residents; in Ontario where it is six months for vehicles from other provinces and three months for vehicles registered outside Canada; in Manitoba where residents may use registration plates from other jurisdictions for 90 days, visitors are exempt from registration provided the vehicle is not used for business purposes, and an out-of-province student is exempt from registration provided he obtains a student sticker to be affixed to his windshield and provided the vehicle is properly registered in his home jurisdiction; in Saskatchewan where an out-of-province student may on application extend the period of exemption from registration requirements for the whole school year, provided the vehicle is properly registered in its home jurisdiction; in Alberta where non-residents may operate vehicles currently registered in their home province or state of the United States for a period not exceeding six months and in British Columbia where it is one month or six

* Revised according to information received from the respective provincial and territorial authorities concerned.

months for tourists and where an out-of-province student may extend the period of registration requirements for the whole school year, provided the vehicle is properly registered in its home jurisdiction). Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device. In Ontario, under a 1968 amendment to the Highway Traffic Act, a certificate of roadworthiness is required for a vehicle sold on the second-hand market before a permit is issued for its operation.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Prince Edward Island, unless otherwise posted, is 60 miles an hour in daytime and 55 at night; in Manitoba, the basic speed limit is 60 miles an hour in daytime and 50 at night unless otherwise posted—speed limits may be raised to 70 miles an hour or modified in semi-built-up areas; in Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highway where higher speeds may be posted; in Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour except where 65 miles an hour is authorized; in New Brunswick, maximum speeds vary from 50 to 60 miles an hour depending on type of highway; and in Ontario and Quebec maximum speeds vary from 50 to 70 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour; in Saskatchewan and British Columbia where higher speeds are in effect they are posted. In Yukon Territory the speed limit for all vehicles is 60 miles an hour, unless otherwise posted. In the Northwest Territories, the highway limit is 60 miles an hour for all vehicles, day or night, except as otherwise posted, and in municipalities it is 30 miles an hour except as posted. Slower speeds are required in cities, towns and villages (in Nova Scotia and British Columbia when passing schools and public playgrounds), at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In most provinces, truck speed limits are at least five miles an hour below automobile speed limits, although in Manitoba, Saskatchewan and British Columbia they are the same as for passenger vehicles. In most provinces, accidents resulting in personal injury or property damage in excess of $200 ($100 in Newfoundland, Prince Edward Island, Nova Scotia, Quebec and the Yukon and Northwest Territories) must be reported to a police officer (in Nova Scotia to the Registrar of Motor Vehicles or to a police officer; in Quebec to a police officer or to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.—All provinces and territories impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of licence or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.—Each province (other than British Columbia) has enacted safety responsibility legislation (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle registration of a person convicted of a serious offence (impaired driving, driving under suspension, dangerous driving, etc.). It also provides for the automatic suspension of a person's driving licence and registration of the owner whose uninsured vehicle is involved directly or indirectly in an accident resulting in damage in excess of $200 or injury or death to any person (in Nova Scotia, Ontario, Manitoba, British Columbia, the Northwest Territories and Alberta the amount is $100). In Saskatchewan, Alberta and Quebec, if a Judgment is rendered for damages against the driver or owner, the driver's

licence and registration remain suspended until the Judgment is satisfied and proof of financial responsibility for the future is filed. In Saskatchewan, the Yukon Territory and the Northwest Territories uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of $100 ($200 in Saskatchewan). In the Province of Quebec, furthermore, pursuant to the Code of Civil Procedure, the plaintiff may seize before Judgment the motor vehicle which has caused him damage whatever the amount of property damage whether covered for third-party insurance or not. In Ontario, Manitoba, Alberta and British Columbia the non-resident motorist is not required to carry or produce any form of proof of insurance. In Manitoba, proof of insurance must be supplied at the time of registration but if such insurance expires or is cancelled registration of the vehicle is not suspended unless the vehicle is involved in an accident.

In the Yukon Territory and the Northwest Territories, proof of insurance must be supplied before vehicle licence is issued, and when the insurance expires or is cancelled vehicle licence plates must be returned to the Registrar of Motor Vehicles. By order, the Yukon Commissioner and the Northwest Territories Commissioner may exempt certain areas from the insurance requirement.

Unsatisfied Judgment Fund.—Legislation has been enacted in all provinces except Saskatchewan and in the Yukon Territory, usually in the form of an amendment to the motor vehicle laws of the province or territory, providing for the establishment of a fund, frequently called an Unsatisfied Judgment Fund (in New Brunswick, the Unsatisfied Judgment Fee; in Ontario, the Motor Vehicle Accident Claims Act; in Alberta, the Motor Vehicle Accident Claims Fund; and in British Columbia, the Traffic Victims' Indemnity Fund), out of which are paid Judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. In Newfoundland, Prince Edward Island, Nova Scotia, Quebec and British Columbia the fund is maintained by insurance companies. In all the other provinces, except Saskatchewan where insurance is compulsory, the funds are obtained by the annual collection of a fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued. The fee usually does not exceed $1 per annum; in New Brunswick the fee is $3 a year; in Ontario a fee of $25 is paid by the uninsured motorist (in the absence of the fee being paid the uninsured, if apprehended, is liable to a fine) and, in addition, the fund is subsidized by a $1 annual charge from each licensed driver; in Alberta $20 is collected from each uninsured owner of a motor vehicle at the time of registration or transfer; and Manitoba collects an additional $25 from each uninsured owner at the time of registration.

A feature of this legislation, which is contained in some provincial statutes, is the provision for the payment of Judgments in hit-and-run accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles (the Minister of Finance in Newfoundland and the Administrator of the Motor Vehicle Accident Claims Fund in Alberta); any Judgment secured against the responsible authority is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one Judgment. In Newfoundland and Nova Scotia, the limits are $10,000 for one person, $20,000 for two or more persons injured in one accident and $5,000 for property damage. In Nova Scotia and New Brunswick, the limit is $35,000 in respect of any one accident. In Prince Edward Island and Quebec, the limit is $35,000 for all damages in the same accident, subject to a deduction of $200 from all damage to the property of others; damages resulting in bodily injury or death are, up to $30,000, payable by priority over damages to property and the latter are, up to $5,000, payable by priority over the former out of the amount of any insurance or other guarantee of indemnity. In British Columbia, the limit is based on the single amount of $50,000 for any one accident with the provision that not more than $5,000 may be paid on a property damage claim until injury claims up to $45,000 have been satisfied; the $50,000 limit exists for hit-and-run accidents but does not apply to

yments for property damage. In Alberta, the limit is $35,000 for death or personal ury to one or more persons and $5,000 for damage to property, subject to a limit of 5,000 in any one accident; where in one accident claims result from bodily injury to or ath of one or more persons and loss of or damage to property, claims arising out of bodily ury or death have priority over claims arising out of loss of or damage to property to the ount of $30,000, and claims arising out of loss of or damage to property have priority er claims arising out of bodily injury or death to the amount of $5,000. In Manitoba, e limit based on one accident is $35,000, with Judgments arising out of bodily injury or ath having priority to the extent of $30,000 over claims resulting from loss of or damage property; and Judgments arising out of loss of or damage to property having priority to e extent of $5,000 over Judgments resulting from bodily injury or death; the maximum ount payable for a single Judgment resulting from loss of or damage to property is $3,000, oject to a deduction of $200.

In Ontario, the Motor Vehicle Accident Claims Act passed in 1962 replaced the Unisfied Judgment Fund which had been in effect since 1947. The new Act was streamed to adjust promptly and efficiently all those claims incurred by the uninsured motorist. aims could be adjusted much the same as by the insurance companies. The limits under amendment to the Act of September 1969 are $50,000, inclusive of $5,000 for any property mage claim. Many small claims are handled by the Ontario Department of Transport, oject to a $50 franchise clause in respect to property damage, but the procedure is such at claims can be settled under Sect. 5 of the Act without resort to litigation. Sect. 6 vers Judgment cases and Sects. 11 and 14 cover the hit-and-run cases in which a Judgment necessary and property damage is not payable. A 1968 amendment to the Act gave the inister of Transport power to act where the defendant is an infant.

Legislation.—The Vehicles Ordinance (1967, c. 9, second session).

Section 2.—Highways, Roads and Streets

Highways and Roads.—The populated sections of Canada are well supplied wi highways and roads. Access to outlying settlements is provided to some extent by roa built by logging, pulp and paper, and mining companies, although these are not general available for public travel. At the same time, great areas of Newfoundland, Quebe Ontario, the Prairie Provinces, British Columbia and the Territories are very sparse settled and are virtually without roads of any kind.

At the end of 1968, the reported mileage of highways and rural roads was 476,6 miles, a figure that includes all roads under provincial jurisdiction, federal roads and lo roads under municipal jurisdiction other than the roads and streets in census metropolit areas and urban centres of more than 1,000 population. Mileage for the latter is giv separately under the heading of "Urban Streets".

1.—Highway and Rural Road Mileage classified by Type and by Province, 1968

Apparent Supply of Automobiles.—The apparent supply of automobiles in Canada n any year is computed by deducting the number exported from the sum of the production nd imports. Statistics regarding retail sales and the financing of motor vehicle sales are iven in Chapter XXI on Domestic Trade and Prices.

6.—Apparent Supply of New Automobiles, 1960-69

Provincial Government Revenue from Motor Vehicles.—The taxation of motive uels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial overnment revenue. In every province, licences or permits duly issued by the provincial uthorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid hauffeurs, dealers, garages and gasoline and service stations. In 1969, the average cost er motor vehicle for operating taxes and licences was about $169 compared with $162 1968.

The more important sources from which provincial revenue from motor vehicles is erived are shown in Table 7. Motive fuel tax rates are given in the Public Finance hapter, Section 2, Subsection 2 on Provincial Taxes; Federal Government revenue from xcise and sales taxes is given in the same Chapter, Section 3, Subsection 3 on Revenue om Taxation.

[1] Operators' licences are issued for different periods in different provinces; see p. 904 for provincial regulations. [2] Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines fo infractions of motor vehicle laws. [3] Included with other motor vehicles. [4] Included with miscella neous revenues and therefore in total. [5] Included with passenger automobiles. [6] Not complete.

Sales of Motive Fuels.—In order to estimate the total amount of motive fuel purchased in Canada for use in motor vehicles on public streets and highways, it has been necessary to eliminate from the total the amount of motive fuel used for other purposes. Thus, from the total or gross sales, including imports and exports, the following are subtracted to obtain net sales: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds were paid. Net sales are thus defined as sales on which a tax or taxes have been paid in full and are considered to approximate the actual amount of motive fuel purchased in Canada for use on public streets and highways. As shown in Table 8, consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 4.7 p.c. in 1968 and net sales of diesel oil 8.1 p.c.

Passenger Buses.*—The operations of companies predominantly engaged in passenger bus service are summarized in Table **11.** Data refer to the for-hire segment of the industry. Only firms engaged in intercity and rural operations and having an annual gross revenue of $6,000 or over are covered. Operators predominantly involved in the provision of school bus service are not included nor are airport servicing and urban transit bus operators.

* Statistics are given in more detail in DBS annual report *Passenger Bus Statistics* (Catalogue No. 53-215).

11.—Summary Statistics of Intercity and Rural Passenger Bus Companies, 1964-68

NOTE.—Only carriers with annual gross revenue of $6,000 or over are included.

Urban Transit Systems.—The collection of statistical information on urban transit stems has been extensively reorganized in recent years because of major changes made the types of vehicles used for mass passenger movement in urban centres. The current ies, which was started in 1956, includes operations of motor buses, trolley coaches, eetcars and subway cars carrying passengers in urban and suburban service.

[1] Excludes British Columbia Hydro and Power Authority.

There are two subway systems in operation in Canada; the Toronto subway officially opened on Mar. 30, 1954 and the Montreal subway went into public use on 17, 1966.

Motor Vehicle Traffic Accidents.—There were 484,436 motor vehicle traffic a dents reported in 1968 compared with 452,759 in the previous year. Deaths from s accidents numbered 5,429 in 1967 and 5,318 in 1968 as against 3,118 in 1958. Statis for 1968, reported by place of occurrence, are given by province in Table **13** but it sh be noted that, although motorists are required by law to report accidents, complete statis of these accidents are not available for all provinces.

PART III.—WATER TRANSPORT*

The Canada Shipping Act.—Legislation regarding shipping is consolidated in the ıada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments, the Parlia- ıt of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

Subsection 1.—Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, ept in the case of the coasting trade, to the shipping of all countries of the world so that ıadian shipping must compete with foreign flag shipping.

Within the region from approximately Havre St. Pierre on the St. Lawrence River tream to the head of the Great Lakes, the carriage of goods or passengers from one ıadian port to another Canadian port, commonly known as the coasting trade, is re- cted to ships registered in Canada. Elsewhere in Canada, the coasting trade is open ll Commonwealth ships.

Canadian Registry.—Under Part I of the Canada Shipping Act, ships in excess of ons net register and pleasure yachts in excess of 20 tons net are required to be registered; s of lower tonnage may be registered voluntarily, otherwise they are required to be rated under a Vessel Licence if powered by a motor of 10 hp. or more. Sect. 6 of the restricts ownership to British subjects or bodies corporate incorporated under the law country of the Commonwealth or of the Republic of Ireland and having their principal e of business in those countries. Under the British Commonwealth Merchant Shipping eement, all Commonwealth ships are given the general designation 'British Ship', and ip that should be but is not registered is not entitled to the privileges accorded to ish ships. Ships in the planning stage or in course of construction may be recorded re registry by a Registrar of Shipping at one of the 75 Ports of Registry in Canada.

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, ours, administrative services and marine services by the Ministry of Transport and the National Harbours d; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; canal traffic and statistics of shipping by Transportation and Public Utilities Division, Dominion Bureau of Statistics; and shipping subsidies by the ctor of Subsidized Steamship Services, Water Transport Committee, Canadian Transport Commission.

The freight movement through a large port takes a number of different forms. The include cargoes for or from foreign countries and cargoes loaded and unloaded in coastwi shipping, i.e., domestic freight moving between Canadian points. There is, as well, t in-transit movement in vessels that pass through the harbour without loading or unloadi and the movement from one point to another within the harbour, which in many por amounts to a large volume.

Shipping statistics, which cover traffic in and out of both customs and non-custo ports, do not include freight in transit or freight moved from one point to another with the harbour. Table 4 shows the principal commodities loaded and unloaded in foreign a coastwise shipping at the 12 ports handling the largest cargo volumes in 1968. These por handled 66.8 p.c. of all Canada's international shipping and 45.0 p.c. of the coastwise trad The specific commodities shown are those transported in volume and often in bulk for

4.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handli the Largest Tonnages in 1968

NOTE.—Only commodities totalling over 50,000 tons are listed.

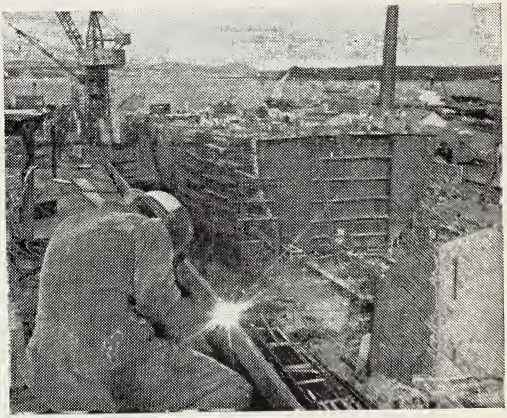
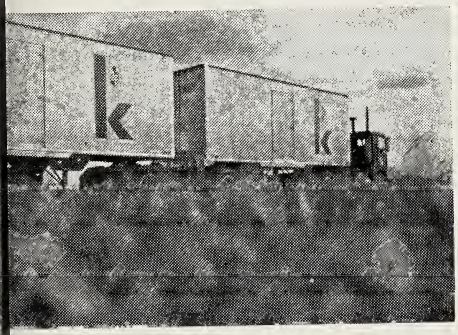
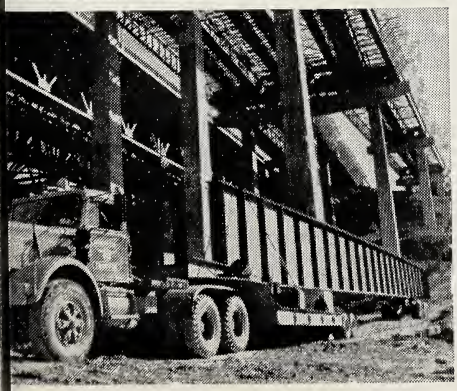
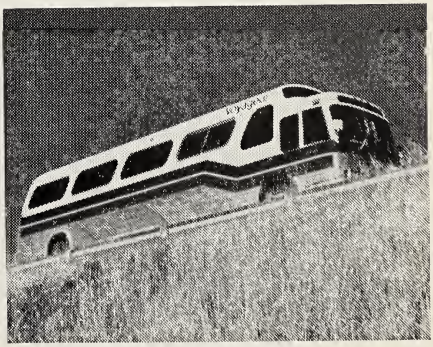
sport companies, facing increasing competition in present-day demand for fast and efficient move- mmodities and people, have become multi-transport ction operations. Canada Steamship Lines, for a mover by water and by land. It operates a large of bulk carriers and fast package freighters built shipyards, a trucking fleet with heavy-haulage ning out in every direction across the continent, s services moving thousands of people daily, and all the necessary terminal facilities.









Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness with taking into consideration the co-ordination of land and water transportation at many the ports. Facilities provided to enable interchange movements include the necess docks and wharves, some for passenger traffic but most of them for freight, warehouses handling of general cargo, and special equipment for bulk freight of all kinds. Facili may include cold storage warehouses, harbour railway and switching connections, gr elevators, coal bunkers, oil storage tanks and, in the chief harbours, vessel repair do

Nine of the principal harbours of Canada are administered by the National Harbo Board and 11 other major harbours are administered by Harbour Commissions, wh include municipal as well as Federal Government appointees. In addition, there some 300 public harbours under the direct supervision of the Ministry of Transport, admi stered under rules and regulations approved by the Governor General in Council. Harb masters are appointed by the Minister of Transport for these harbours, their remunerat being paid from fees levied on vessels, under the terms of the Canada Shipping Act.

Throughout the country there are several thousand wharves and breakwaters admi stered by the Ministry of Transport under the Government Harbours and Piers A These facilities are for the accommodation of cargo ships and commercial fishing cr and are under the general supervision of the Ministry of Transport District Marine Ager Wharfingers, whose remuneration is determined as a percentage of wharfage fees collect are appointed for the direct supervision of these public wharves and floats. The whar are designed to accommodate the smallest fishing or pleasure craft or the largest oce going vessels, according to local requirements. At many ports, in addition to pub harbour works operated by the administering authority, there are extensive dock a handling facilities owned by private companies including railway, lumber, pulp and pap coal, steel, iron ore, petroleum, grain, fish and other industries moving large volumes bulk materials.

In 1969, the harbours of Canada handled more than 245,609,000 tons of cargo 223,000 vessel arrivals and departures in international seaborne and coastwise shippi

National Harbours Board.—The National Harbours Board, a Crown corporati established in 1936, is charged with the administration and operation of the followi properties: port facilities such as wharves and piers, transit sheds, grain elevators, c storage warehouses, terminal railways, etc., at the harbours of St. John's (Nfld.), Halif Saint John (N.B.), Belledune (N.B.), Chicoutimi, Quebec, Trois-Rivières, Montre Churchill and Vancouver; grain elevators at Prescott and Port Colborne in Ontario; a the Jacques Cartier and Champlain Bridges at Montreal.

The installation of full container-handling facilities at several of the ports under NH administration highlighted 1969 activities. During the year 38,000 full containers pass through the Port of Montreal following the opening of the first full container terminal th in late 1968. Interim container services were also available at Halifax, Saint John, Que and Vancouver while work continued on the provision of permanent facilities at the fo ports to be in operation in 1970. The first outerport in the Americas, the Roberts Ba development at Vancouver, was completed and in operation in April 1970. This 50-ac facility for the bulk-handling of coal was created mainly from material dredged from t area and is connected with the British Columbia mainland by a three-mile causew

Facilities at the larger harbours are listed in Table **5**, and summary traffic statist for 1968 and 1969 in Table **6.**

5.—Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1969

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the onal Harbours Board.

Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Mini of Transport, together with those under the jurisdiction of the St. Lawrence Sea Authority, comprise a series of waterways providing navigation for 1,875 miles inl from salt water.

Those included under the two classifications—Seaway canals and Ministry of Trans canals—are listed in Table 7 with their locations, lengths and lock complement. addition to these, the federal Department of Public Works administers the St. Andr Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red Rive Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provir authorities.

During 1969, 97,357,234 tons of freight and 19,710 vessels passed through the ca as compared with 108,274,370 tons of freight and 20,378 vessels during 1968. In addi to freight and passenger vessels, thousands of pleasure craft are locked through the can Vessels locking at Sault Ste Marie during 1969 carried 192,891 passengers as comp with 138,011 in 1968.

7.—Lengths of Channels and Dimensions of Locks under the Control of the St. Lawrence Seaway Authority or the Ministry of Transport

Totals	**43,810,360**	**111,803,641**	**155,614,001**	**35,545,472**	**123,493,908**	**159,039,380**

Cargo passing through the Canadian lock and the United States locks at Sault Ste Marie during 1969 totalled 98,506,987 tons, more than the 89,342,181 tons during the 1968 season but appreciably less than the record 128,489,170 tons reported for 1953. The United States locks, because of their larger facilities, accounted for all but 1,427,841 tons of the total. Iron ore, grains and coal normally contribute more than 90 p.c. of the combined tonnage moving through the Canadian and United States locks, most of it downbound. Because upbound transits are often in ballast, the 1969 upbound cargo accounted for only 10,394,050 tons of the total and consisted mainly of coal, gravel, liquid fuels and manufactured goods. Iron ore mines alone contributed 74,583,888 tons or 75.7 p.c. of the total 1969 traffic as against 65,681,543 tons in 1968, and wheat shipments were 7,960,799 tons as against 8,430,960 tons in the same comparison. A relatively small volume of wheat moves directly overseas—most of it is carried by the laker fleet to elevators along the St. Lawrence River to await trans-shipment to ocean-going vessels. Bituminous coal recorded a second consecutive decline in 1969 to 6,571,324 tons from 6,702,220 tons in 1968 but larger tanker cargoes of gasoline and fuel oil more than offset that loss.

Canadian Use of the Panama Canal.—The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor

importance. Of the total of 5,966,547 long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1969 and passing through the Panama Canal, none were destined for eastern Canadian ports. Similarly, of the 1,313,554 long tons of cargo leaving eastern Canadian ports and passing through the Panama Canal, none were destined for western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 1,668,443 long tons in the year ended June 30, 1969; the total from any origin arriving at eastern Canadian ports after having passed through the Panama Canal was 666,764 long tons.

Subsection 4.—The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. The 1956 edition (pp. 821-829) gives detailed information on Great Lakes–St. Lawrence waterway traffic immediately prior to the beginning of construction on the project and the 1960 Year Book (pp. 851-860) relates the story of the Seaway during the second year of its operation. The first decade of Seaway development and operations is discussed in the 1969 edition (pp. 841-845).

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and operation) of Canadian facilities between Montreal and Lake Erie to allow 27-foot navigation, concurrently with the construction of similar facilities in the International Rapids Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection. Major construction undertaken in 1967 was on the channel to bypass the city of Welland, scheduled for completion by the navigation season of 1972.

Seaway Traffic.—Tables **13** and **14** give combined traffic statistics of the St. Lawrence and Welland Canals for the years 1968 and 1969. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway.

In 1969, 4,536 ships carrying about 25,314,000 tons of cargo moved upbound throu the Seaway and 4,558 vessels carrying 35,501,000 tons moved downbound. Ocean-goi ships carried 24.2 p.c. of the total cargoes and lakers 75.8 p.c. Of the total tonnage carri upbound in 1969, 18,723,000 tons were domestic cargo and 6,591,000 tons were forei traffic; downbound, 27,347,000 tons were domestic freight and 8,154,000 tons were carri to and from foreign ports.

On the Montreal–Lake Ontario section, upbound traffic amounted to 22,445,000 t in 1969 and downbound traffic to 18,569,000 tons, a decrease of 14.5 p.c. from 1968. Alm 51.5 p.c. of the former was accounted for by iron ore shipped from St. Lawrence ports Hamilton and Lake Erie, and the latter consisted largely of overseas shipments of whe There were 72 fewer upbound transits and 112 fewer downbound transits in 1969 than

968, indicating a slight decrease in the number of vessels using this portion of the Seaway. Bulk cargo comprised 82.8 p.c. of the total traffic through the section in 1969, the principal ommodities through the St. Lawrence canals being iron ore, wheat, corn, fuel oil, soybeans nd scrap iron and steel. Traffic patterns show that 25.8 p.c. of the total movement was etween Canadian ports, 38.0 p.c. moved between Canadian and United States ports and 5.9 p.c. consisted of foreign trade to and from Canada and the United States. The small emainder was traffic between ports in the United States.

There were 6,863 transits through the Welland Canal in 1969, with a cargo volume of 9,379,000 tons upbound and 34,153,000 tons downbound; bulk cargo accounted for 88.4 p.c. f the traffic. Although many vessels pass through both the St. Lawrence and the Welland anals on "through" trips, there is a substantial amount of local traffic between Great akes ports which involves only the Welland Canal. These movements are largely of on ore, grain and coal. The Welland Canal traffic was 12,518,000 cargo tons greater than hat reported for the Montreal–Lake Ontario section.

Income of the St. Lawrence Seaway Authority for 1969 amounted to $20,601,270, omprising toll revenue of $18,138,610 assessed for transits through the Seaway locks etween Montreal and Lake Ontario and sundry revenues (rentals, wharfage, bridge rev- nue, etc.) of $2,462,660. Total expenses for 1969 amounted to $17,544,146, of which peration and maintenance expenses amounted to $11,929,907, regional headquarters, eadquarters administration and engineering expenses amounted to $4,798,851, and con- truction to $815,388.

Section 2.—Marine Services of the Federal Government

The Marine Services of the Ministry of Transport comprises four Branches—Marine Works, Marine Regulations, Marine Operations, and Marine Hydraulics—each headed by director responsible to the Administrator, Canadian Marine Transportation Admini- tration.

The *Marine Works Branch* responsibilities include provision and maintenance of aids o navigation, maintenance and management of Canada's secondary canals, administration f public harbours and wharves, and general supervision of harbour commissions. It has hree Divisions—Aids to Navigation, Canals, and Harbours and Property.

The *Marine Regulations Branch*, with two Divisions—Steamship Inspection and Nautical and Pilotage—is responsible for the administration of those parts of the Canada Shipping Act that relate to the operations of Canadian ships and ships within Canadian waters. It is charged with the registry and licensing of ships, the certification of ships' officers and the engagement and discharge of ships' crews. Other responsibilities include

pilotage, safety inspection of ships, handling of dangerous cargoes, prevention of oil pollution of Canadian waterways and air pollution by ships, and the investigation of marine accidents. It is also responsible for the co-ordination of Canada's participation in the Intergovernmental Maritime Consultative Organization, a United Nations body charged with the promotion of marine safety on an international basis.

The *Marine Operations Branch* is responsible for operating the departmental fleet, the Canadian Coast Guard, which consists of 146 ships of various types including both heavy and light icebreakers, an icebreaking cable repair ship and two weather-oceanographic ships, the CCGS *Vancouver* and CCGS *Quadra*, which alternate in manning Weather Station "Papa" in the Pacific Ocean.

A principal duty of the fleet is tending lighthouses, buoys and other aids to navigation in Canadian coastal and inland waters. Coast Guard ships, including icebreakers, take part each summer in the Ministry's Arctic re-supply operations, moving some 100,000 tons of cargo to more than 40 ports of call in the Far North. These ships work in conjunction with a number of chartered commercial vessels which carry most of the cargo. During the winter, the icebreakers operate in support of commercial shipping in the Gulf of St. Lawrence from Cabot Strait to the Quebec North Shore. They also operate in the St. Lawrence River to break ice jams and prevent flooding, particularly in the section between Trois-Rivières and Montreal.

The Coast Guard ships assist with projects of other Canadian Government departments, such as scientific programs carried out by research teams based aboard various ships ranging from the Great Lakes to the High Arctic in such fields as oceanography, hydrography and related sciences. Departments concerned with the development of the Canadian Arctic and with the welfare of its population also carry out their undertakings with the aid of Coast Guard ships.

A Canadian Coast Guard Officer Training College, officially opened in September 1966 at Sydney, N.S., provides a four-year course for students, who will graduate as junior engine-room or deck officers. Upon acquiring the necessary sea experience, they may take the examinations to earn the rank of engineer first-class or of master foreign-going.

The *Marine Hydraulics Branch* comprises three Divisions—Marine Hydraulics, the St. Lawrence Ship Channel, and Marine Traffic Control. Marine Hydraulics deals with the hydraulic and engineering aspects of providing navigable channels for marine transportation on the Great Lakes and the St. Lawrence River. Maintenance and improvements of the St. Lawrence River below Montreal and of the Saguenay River are under the jurisdiction of the St. Lawrence Ship Channel Division, which is located in Montreal.

In the interests of St. Lawrence River traffic safety, a Marine Traffic Control Service was established on Apr. 3, 1967, as a result of studies initiated by the Ministry in 1964. Using very high frequency (VHF) radio equipment, the Service keeps track of ship traffic in much the same way as the air traffic controllers watch over the busy sky lanes. The information needed to assist ships' masters in the safe conduct of their vessels comes from two main traffic control centres—one at Quebec and the other at Montreal—six shore stations and 18 reporting points along the river between Montreal and Les Escoumins, Que. All ships navigating the river must be equipped with the required VHF equipment to take advantage of the service.

Field Organization.—In the field, a regional management organization within the Marine Services is being developed. This system will provide the Ministry with more efficient means of matching resources to workloads in all areas. Included in the completed system will be the 11 district marine agencies that have existed for many years, and some 15 other Marine Services field offices that in the past have been reporting individually to Marine Services directors or to the Administrator, Canadian Marine Transportation Administration.

The first step was completed in May 1967 with the establishment of the Maritime Region. This covers the Maritime Provinces and their outlying islands including Sable

nd and the Magdalen Islands, and embraces all Marine Works, Marine Operations and rine Regulations activities in the three provinces. In July 1968, the Western Region, uding the Pacific Coast, western and northwestern Canadian waterways and the western tic, was established with the same responsibilities as the Maritime Region. Other ions will be formed as reorganization progresses.

Aids to Navigation.—The Canadian system of aids to navigation is similar to that ther North American countries. Such aids maintained by the Ministry of Transport Canadian and contiguous waters consist of buoys, lightships, lighthouses, day beacons, o beacons and two electronic networks operating on the hyperbolic principle—Loran Decca. The numbers of danger signals maintained during the years ended Mar. 31, 8 and 1969 were:—

Type of Aid	*1967-68*	*1968-69*
	No.	No.
Lights	3,757	3,853
Lightships	1	1
Fog signals	390	384
Lighted buoys	2,199	2,300
Unlighted buoys and beacons	13,448	15,842

All aids incorporating light or sound devices are listed in the Ministry of Transport ual publication *List of Lights and Fog Signals.* Information on the radio beacons and Loran and Decca is published in *Radio Aids to Marine Navigation.*

Navigable waters have been improved greatly by dredging in channels and harbours, the removal of obstructions, and by the building of remedial works to maintain or trol water levels. Incidental to these developments of navigable waters are works to rd shorelines and prevent erosion, and for the control of roads and bridges that cross igable channels.

St. Lawrence Ship Channel.—This channel extends from about 40 miles below Quebec y to Montreal, a distance of 200 miles. About 130 miles of this distance is dredged nnel. In the Montreal–Quebec reach, the channel has a limiting depth of 35 feet at reme low water and a minimum width of 800 feet. Below Quebec the limiting depth of dged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. average tidal range of 15 feet in this area provides sufficient depth for any vessel using St. Lawrence route. Above Quebec, maintenance requirements as a result of silting his dredged channel are relatively minor but below the city silting is more pronounced ause of tidal action.

The Ship Channel is well defined by buoys and the centre marked by range lights, mitting uninterrupted day and night navigation throughout the open season. Year- nd navigation from the sea to Montreal is made possible for reinforced ships by con- ious icebreaking operations in the Ship Channel. The movements of ships, weather ice conditions and obstructions to traffic throughout the St. Lawrence waterway are de available through the Marine Traffic Control Service (see p. 934).

Saguenay River.—The Saguenay River constitutes a naturally deep waterway up to e des Ha! Ha! on which lie the ports of Port Alfred and Bagotville. A dredged channel naintained from St. Fulgence up to the port of Chicoutimi, providing a limiting depth of feet at lowest normal tide and a minimum width of 250 feet.

Steamship Inspection.—The Steamship Inspection Service was established by hority of the Canada Shipping Act. Its functions include the formulation and subse- nt enforcement of regulations concerned with the approval of design of hulls, machinery l equipment of ships; inspection during construction; periodic inspection and issuance nspection certificates; the assignment of load lines; the conditions under which dangerous ds may be carried in ships; the protection against accident of workers employed in

loading and unloading ships; the protection from pollution of Canadian territorial wat by oil, chemicals, garbage, sewage or any other substances from ships; control of polluti of the atmosphere by smoke emitted by ships; control of the powering, equipment and lo limits of small vessels; and the certification of marine engineers. The Board also prepa correspondence courses in marine engineering for use in Marine Engineering Schools n controlled by the Department of Labour.

The Chairman and the Board of Steamship Inspection are located at Ottawa a field offices are maintained in the principal ocean and inland ports. A total of 1,8 vessels of Canadian ownership or registry, including 449 passenger ships, 141 new shi built in Canada, nine ships built outside Canada for registry in Canada, and 14 converted reconditioned ships were inspected during the year ended Mar. 31, 1969.

Pilotage.—Pilotage service functions under the provisions of Part VI and Part V of the Canada Shipping Act. Wherever a pilotage district has been created by the Go ernor in Council, qualified pilots are licensed by the pilotage authority of the distri There are in Canada 24 pilotage districts, in nine of which the Minister of Transport the pilotage authority (see Table 16); in each of the other districts the authority is a lo body appointed by the Governor in Council. There are also three districts that a administered jointly by Canada and the United States; and one area in which the Minist of Transport provides qualified pilots.

PART IV.—CIVIL AIR TRANSPORT

Section 1.—Civil Aviation Administration and Policy

Administration.—Civil aviation in Canada is under the jurisdiction of the Feder Government and is administered under the authority of the Aeronautics Act and t National Transportation Act and amendments thereto. The Aeronautics Act is in thr parts. Broadly speaking, Part I deals with the technical side of civil aviation comprisi matters of registration of aircraft, licensing of airmen, the establishment and maintenan of airports and facilities for air navigation, air traffic control, accident investigation a the safe operation of aircraft. This Part of the Act is administered by the Director Civil Aviation under the supervision of the Assistant Deputy Minister, Air Service Ministry of Transport. Part II of the Act deals with the economic aspects of commerci air services and assigns to the Canadian Transport Commission certain regulatory functio of commercial air services (see p. 959). Part III deals with matters of government intern administration in connection with the Act.

International Air Agreements.—The position of Canada in the field of aviation as l as its geographical location makes imperative its co-operation with other nations of world engaged in international civil aviation. Canada therefore took a major part in original discussions that led to the establishment of the International Civil Aviation ganization (ICAO) which has headquarters at Montreal, Que. In 1970, Canada had agreements with 25 other countries.

During 1969, two countries—the Netherlands and New Zealand—abrogated their air reements with Canada. CP Air was required to cease services to New Zealand but h CP Air and KLM continue to operate between Canada and the Netherlands under cial authorities issued by the respective governments.

Federal Civil Aviation Policy.—The intent of Federal Government concern in il aviation is to provide an efficient and stable service for the Canadian public and the t possible economic framework for the orderly development of commercial aviation. In mulating its aviation policy in 1964, three principles were accepted by the Government basic. The first related to the international field and stated that air services provided by nadian airlines should serve the Canadian interest as a whole; that these services should be competitive or conflicting but should represent a single integrated plan which could be ieved by amalgamation, by partnership or by a clear division of fields of operations. a further policy statement in June 1965, the Minister of Transport defined more precisely respective areas of operation of Air Canada and Canadian Pacific Air Lines Limited P Air) and additional international air services have since been introduced consistent h Government policy.

The second principle concerned the domestic mainline services and stated that, although mpetition was not to be rejected, development of competition should not compromise seriously injure the economic viability of Air Canada's domestic operations which resent the essential framework of its network of domestic services, and in the event that mpetition continues, opportunity should be ensured for growth to both lines above this ic minimum. In accordance with this principle, the Government has authorized the nadian Transport Commission to permit CP Air to operate additional transcontinental services, and to serve Calgary, Edmonton and Ottawa in addition to Vancouver, Win- eg, Toronto and Montreal which were already being served.

The third principle concerned the role of regional air carriers providing scheduled vice and their relationship with the mainline carriers. Recommendations were prepared the two major airlines and the larger regional carriers which resulted in a "Statement of nciples for Regional Air Carriers" tabled in the House of Commons on Oct. 20, 1966, the Minister of Transport. These principles are summarized as follows:—

(1) Regional carriers will provide regular route operations into the North and will operate local or regional routes to supplement the domestic mainline operations of Air Canada and CP Air; they will be limited to a regional role.

(2) Greater scope will be allowed regional carriers in the development of routes and services by the following means: (*a*) where appropriate, limited competition on mainline route segments of Air Canada or CP Air may be permitted to regional carriers if this is consistent with their local route development; (*b*) in a few cases, secondary routes at present operated by Air Canada and CP Air may become eligible for transfer to regional carriers; and (*c*) a larger role will be allotted to regional carriers in connection with the development of domestic and international charter services, inclusive tours and new types of services.

(3) Greater co-operation between the mainline carriers and the regional carriers will be developed in a variety of fields, ranging from technical and servicing arrangements to joint fare arrangements.

(4) A limited policy of temporary subsidies for regional routes will be introduced, to be based upon a "use it or lose it" formula.

(5) Firmer control will be exercised over the financial structure of regional carriers in connection with new licensing arrangements.

(6) Regional carriers will be assisted with the acquisition of aircraft by development of a scheme for consultation between government and the carriers regarding plans for new aircraft, and by a special investigation designed to explore the possibility of developing a joint approach to this problem on the part of the carriers.

In a statement made on Aug. 15, 1969, the Minister of Transport defined more p cisely the regions in which each of the five regional carriers would be permitted to supp ment or authorized to replace mainline operations as circumstances warranted, and autl ized the Canadian Transport Commission, in consultation with the mainline carriers a appropriate regional carriers, to give urgent consideration to the application of the regio policy. During 1969, the Air Transport Committee issued a number of decisions authoriz new services by regional air carriers in accordance with the Regional Air Policy, and Committee is continuing an orderly application of this policy in consultation with the ma line and regional carriers, and in accordance with the procedures of the Canadian Transp Commission.

Thus, in the international field, the joint approach to the provision of world-w service by the two major Canadian carriers is intended to strengthen their position in a v competitive field and provide a better over-all service to the travelling public. In domestic field, a degree of competition remains to provide the public with the advanta that can result from a competitive atmosphere but avoids excesses of competition t could be ruinous to the operators and unsatisfactory to the public.

Section 2.—Current Air Services

The Canadian flag carriers operating on international air routes are Air Canada a CP Air, which together earn 77 p.c. of the total operating revenues of Canadian co mercial air carriers; the five regional carriers (Eastern Provincial Airways, Norda Quebecair, Pacific Western Airlines and Transair) earn 12 p.c. The remaining 11 p.c. earned by some 400 smaller airlines operating scheduled and non-scheduled services, ma of them in Canada's hinterland which is relatively inaccessible by surface transport. international routes, the Canadian flag carriers provide scheduled services to Europe, t Soviet Union, Japan and Hong Kong, Central and South America, the Commonwea Caribbean, Australia and the United States (including Hawaii). Twenty-nine Comm wealth and foreign airlines have scheduled services between Canada and other countr (see p. 944).

The Canadian Transport Commission (Air Transport Committee) in its Direct of Canadian Commercial Air Services classifies commercial air carriers into two ma groups—domestic and international—and divides these groups into nine classes:—

Domestic Air Carriers—

(1) *Scheduled Air Carriers*—which offer public transportation of persons, mails and/or goods aircraft, serving designated points in accordance with a service schedule and at a toll unit;

(2) *Regular Specific Point Air Carriers*—which offer public transportation of persons, mails an or goods by aircraft serving designated points on a route pattern and with some degree regularity, at a toll per unit;

(3) *Irregular Specific Point Air Carriers*—which offer public transportation of persons, mails an or goods by aircraft, from a designated base, serving a defined area or a specific point points, at a toll per unit;

(4) *Charter Air Carriers*—which offer public transportation of persons and/or goods by aircra from a designated base, at a toll per mile or per hour for the charter of the entire aircra or at such other tolls as may be permitted by the Air Transport Committee;

(5) *Contract Air Carriers*—which do not offer public transportation but which transport pers and/or goods solely in accordance with one or more specific contracts;

(6) *Flying Clubs*—which are air carriers incorporated as non-profit organizations for the purp of furnishing flying training and recreational flying to club members;

(7) *Specialty Air Carriers*—which operate for purposes not provided for by any other class su as aerial photography and survey, aerial distribution (crop dusting, pest control, seedin aerial inspection, reconnaissance and advertising (forest, fire patrol, pipelines), aerial conti (fire, water-bombing), aerial construction, and air ambulance and mercy services.

International Air Carriers—

(8) *International Scheduled Air Carriers*—are commercial carriers designated by the Government of any state to operate international scheduled air services between Canada and any other state, pursuant to an international agreement to which Canada is a party; and

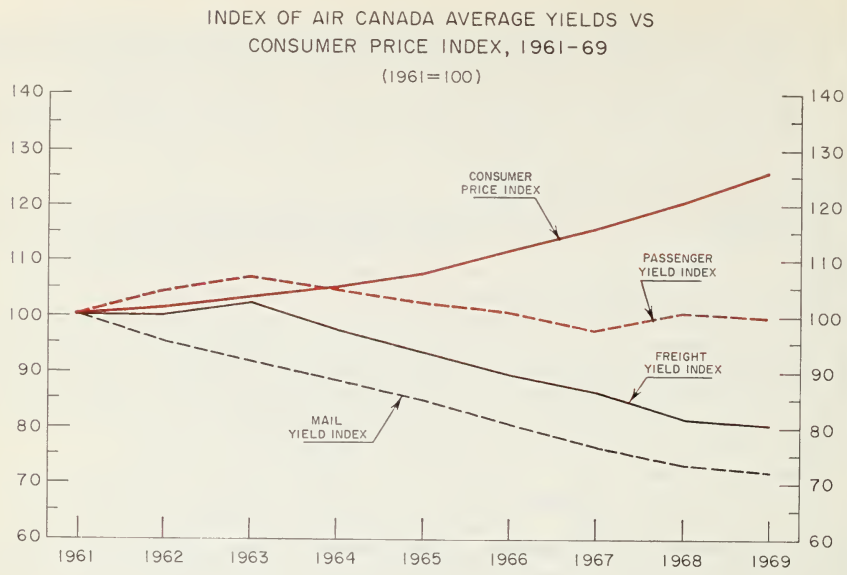
(9) *International Non-scheduled Air Carriers*—are carriers which are permitted by the Air Transport Committee to operate, between Canada and any other state, any commercial air service that is not a scheduled service.

Canada's International Flag Carriers

Air Canada.—The high standards of technical excellence coupled with a route network of 89,000 unduplicated route miles in domestic and international commercial air services extending to 62 destinations in Canada, the United States, the British Isles, Europe and the Caribbean, have made Air Canada a major asset to the Canadian nation. The years 1968 and 1969, the 31st and 32nd of Air Canada's operations, were characterized by modest increases in passenger traffic and lower load factors when compared with 1967 during which year, under the stimulus of Canada's Centennial celebrations (including Expo 67) and the Pan American games, traffic growth was exceptional. In general, the orderly growth of passenger traffic in 1968 and 1969 was adversely affected by labour and other social unrest in various areas of the world and by a decline in immigration to Canada.

Passengers carried on all services by Air Canada numbered 6,400,000 in 1968 and 6,600,000 in 1969, representing marginal increases of 1.0 p.c. in 1968 over 1967 and 3.1 p.c. in 1969 over 1968. Available seat-miles on scheduled services were up 4 p.c. to 10,100,000,000 in 1969 from 9,700,000,000 in 1968, while revenue passenger-miles on scheduled services reached 5,700,000,000, up 2 p.c. in 1969 from 5,600,000,000 in 1968. Passenger load factors on scheduled services continued to decline, from 66 p.c.

A million-dollar guarded shipment of paintings, antique porcelain, silver, arms, armour and furniture leaving London Airport by Air Canada DC-8 Jet Trader aircraft for Toronto, to be later sold by auction by the world-famous Sotheby's of London.



in 1966 to 65 p.c. in 1967, to 58 p.c. in 1968 and to 57 p.c. in 1969. Operating revenues in 1969 rose a modest 4 p.c. to $405,000,000, of which passenger revenue on scheduled services was $333,000,000, an increase by only 1 p.c., over the operating revenues for 1968. There was a phenomenal 73-p.c. increase in revenues from charter operations to $8,800,000 in 1969 over the previous year; freight revenues increased by 14 p.c. and mail revenues by 10 p.c. Net income after taxes was $1,500,000 in 1969 compared with $8,200,000 in 1968.

1.—Operating Statistics of Air Canada, 1960-69

NOTE.—Some of the figures in this table have been calculated from the monthly reports of Air Canada but most of them are from the audited annual reports of the corporation; there are slight variations in a few of the figures but the degree of error is less than 1 p.c.

Year	Traffic				Operating Revenue			Operating Expenses	Operating Profit	Net Income
	Revenue Passengers[1]		Revenue Commodity[2]	Mail						
	No.	Passenger-miles	Ton-miles	Ton-miles	Passenger	Freight[3] and Mail	Total[4]

[1] Scheduled and non-scheduled services. [2] Freight, express and excess baggage. [3] Freight includes express and excess baggage. [4] Passenger, freight, excess baggage and mail, plus all other operating revenue.

During 1969, Air Canada acquired six DC-8-63s and two DC-93s; at the year-end the rporation's fleet consisted of 112 aircraft comprising 32 DC-8s, 33 DC-9s, 12 Vanguards nd 35 Viscounts. Jet travel continued on the up-trend; in 1969 jets accounted for 85 p.c. total available seat-miles compared with 75 p.c. for the previous year.

Canadian Pacific Air Lines Limited (CP Air).—This private airline was established 1942 by integrating a number of small bushline air carrier companies and has since eveloped into a major national flag carrier for Canada. In 1969, CP Air carried 1,300,000 venue passengers 2,216,000,000 passenger-miles; of this total, 1,200,000 passengers were rried 1,985,000,000 passenger-miles on scheduled flights. Operating revenues for the ar reached $134,000,000, an advance of 25 p.c. over 1968; revenues from charter operations se spectacularly from $300,000 in 1968 to $6,100,000 in 1969, while passenger revenues se from $88,000,000 to $107,000,000.

CP Air's network radiates from the company's systems headquarters at Vancouver, rving Japan and Hong Kong over the Great Circle North Pacific Route; Holland over ie Polar Route via Calgary and Edmonton; Honolulu, Fiji and Australia via the South acific Route; the Azores, Holland, Portugal, Spain, Italy and Greece via Toronto and Iontreal on the North Atlantic Route; Mexico, Peru, Chile and Argentina via Montreal nd Toronto on the South American Route; and regular West Coast flights between San rancisco, Hawaii and Vancouver. The airline's operations in the Far East are extremely nportant to Canada's relations with the developing nations in that area. Within Canada, P Air transcontinental air services link Vancouver, Edmonton, Calgary, Winnipeg, oronto, Ottawa and Montreal, and the company also operates interior services in British olumbia, Yukon Territory and northern Alberta.

CP Air became an all-jet airline in 1969, operating 20 aircraft—seven Boeing 737s, ie Boeing 727, 11 DC-8s and one DC-3.

egional Airlines

Regional airlines comprise five domestic companies (Eastern Provincial Airlines, ordair, Pacific Western Airlines, Quebecair and Transair-Midwest), which provide rth-south scheduled services linking Canada's northern regions with the metropolises the south. In addition to their scheduled services, the five regional airlines operate arter air services within Canada as well as between Canada and other countries.

Eastern Provincial Airways (1963) Ltd.—This company is the regional carrier for ie Atlantic Provinces. In 1969 it carried 162,000 revenue passengers 61,000,000 passenger-iles, and 7,495 tons of freight 3,000,000 ton-miles. Operating revenues were $11,800,000,) p.c. higher than the 1968 revenues of $9,100,000. Scheduled services are operated to harlottetown and Summerside in Prince Edward Island; Moncton–Chatham and Charlo New Brunswick; New Glasgow and Halifax in Nova Scotia; Deer Lake–Stephenville–rner Brook, Gander, St. John's and St. Anthony in Newfoundland; Goose Bay, Wabush–abrador City and Twin Falls–Churchill Falls in Labrador; and Montreal, Sept Îles and ie Magdalen Islands in Quebec. In addition to its scheduled services lifting passengers nd freight in the four Atlantic Provinces and in eastern Quebec, the airline provides air rvices for mineral exploration, hunting and fishing, forestry and ambulance, seal and ice atrol, aerial photography and for other purposes, thus making a significant contribution the development of areas in Canada relatively inaccessible by surface transport.

The company's mainline fleet comprises three Boeing 737s; three Handley Page Dart eralds; one DC-4; two Convairs; and four DC-3s; its bushline fleet consists of five PBY ansos; six DH Beavers; six DH Otters; two DH Twin Otters; one Beech Baron; and two per Super Cubs.

Nordair Ltée-Ltd.—Nordair with head office at Dorval, Que., was established in 957 by the merger of Mont Laurier Aviation and Boreal Airways. Since its formation,

Nordair has enjoyed a steady expansion and operates scheduled services in Quebec, Ontari and in the Northwest Territories, as well as extensive domestic and international charte flights throughout Canada and from Eastern Canada to the southern United States an Caribbean islands.

Scheduled services are operated between Montreal and Hamilton, between Montre and Great Whale and Fort Chimo in Quebec, and Frobisher Bay and Resolute Bay in th Northwest Territories. Nordair also maintains an extensive air service based at Frobishe Bay in the Northwest Territories supplying numerous Arctic settlements in the Baffi Island area, such as Clyde River–Cape Christian, Broughton Island, Pangnirtung, Cap Dyer, Cape Dorset, Coral Harbour, Hall Beach, Igloolik and Pelly Bay. Application are now (mid-1970) before the Air Transport Committee to extend Nordair's services t Pittsburgh in Pennsylvania, Ottawa in Ontario and Alert in the Northwest Territories.

Nordair's charter flights accommodate inclusive tour travels and group travel Nordair's northern charter operations are based at Fort Chimo and Frobisher Bay fron which points a variety of aircraft, including DC-3s on skis, are available.

Nordair's fleet is composed of three Boeing 737-200Cs, five DC-3s, three C-46s, on DC-4, one Twin Otter and one Short Skyvan.

Pacific Western Airlines Ltd.—Pacific Western Airlines Ltd., with head offic at Vancouver International Airport, operates over more than 11,000 route-miles; its service include scheduled mainline local regular unit toll and charter flights in British Columbia Alberta, the Northwest Territories and Saskatchewan.

Regularly scheduled mainline services are operated north-bound from Edmonton t Prince George, Prince Rupert, Dawson Creek (B.C.); Peace River, Fort McMurray Rainbow Lake, Fort Chipewyan (Alberta); Uranium City (Saskatchewan); Fort Resolu tion, Hay River, Fort Smith, Fort Simpson, Wrigley, Norman Wells, Inuvik, Yellowknife Cambridge Bay and Resolute (Northwest Territories). The only no-reservations-required AirBus service in Canada operates daily between Calgary and Edmonton in Alberta. On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River Campbell River and Port Hardy. In the interior region of British Columbia, Pacific Western operates scheduled services from Vancouver to Kelowna, Penticton, Cranbrook Kamloops and through to Calgary in Alberta. The company also operates international charter passenger services. Large aircraft charters are operated from major centres of Vancouver, Edmonton and Calgary. Pacific Western operates extensive freight services both scheduled and chartered into the Northwest Territories. Three Lockheed Hercules provide charter freight services throughout the free world.

In 1969, 701,000 revenue passengers were carried, revenue passenger-miles totalled 395,000,000 and cargo ton-miles 20,000,000. Aircraft miles flown were 10,000,000. Comparable figures for 1968 were 427,000, 226,000,000, 10,000,000 and 6,000,000, respectively.

Aircraft operated by Pacific Western number 23, including two Boeing 707s, three Boeing 737s, four Convair 640 jet-props, three Lockheed Hercules (freight), six DC-6s, three DC-4s and two DC-3s.

Quebecair.—Quebecair, with head office at Montreal, offers scheduled services in Quebec and Labrador. The company dates from 1946 and was founded under the name "Le Syndicat d'Aviation de Rimouski". In 1947, the name was changed to Rimouski Airlines and the company inaugurated an air transport service between the shores of the Gulf of St. Lawrence, linking Matane, Mont Joli, Rimouski, Forestville, Baie Comeau and Sept Îles. Until 1953, service was limited to towns and small centres located between Rimouski and Gaspé on the south shore of the St. Lawrence River and between Forestville and Sept Îles on the north shore. In 1953, with amalgamation of Gulf Aviation, the name "Quebecair" was adopted. With the expansion of mining and industrial activities, it

nded its network to Quebec City and Schefferville in 1955, to Montreal in 1957, to non and Rivière du Loup in 1959, to Wabush in 1960, to Manicouagan and Saguenay 961 and to Murray Bay in 1962. During 1965, Quebecair acquired Northern Wings ted and Northern Wings Helicopters Limited and merged their scheduled services. 967, Quebecair acquired A. Fecteau Transport Aérien Ltée, thus extending its opera- to the Abitibi region and eastern bank of Hudson Bay. Quebecair was purchased e end of July 1968 by Sogebry Ltée, a Montreal private holding company.

Quebecair is responsible for the operation of the scheduled services and the subsidiaries le flights by light aircraft, charter and contract services. Scheduled services are ated over 6,000 miles serving some 43 localities in nine economic regions of Quebec Labrador. Points linked are Montreal, Quebec City, Murray Bay (Charlevoix), Comeau (Hauterive), Churchill Falls (Twin Falls), Gagnon, Wabush (Labrador City), gan, Mont Joli–Rimouski, Rivière au Tonnerre, Saguenay (Bagotville), Schefferville, Îles, Senneterre, Mistassini, Temiscaming, Lac Doda, Lac Caché, Lac Mistassini, ert River, Fort George, Obedjiwan, Oskelaneo, Manouane, Val d'Or, Amos, Lebel-sur- illon, Rupert House, Chibougamau, Matagami, Blanc Sablon, Saint Paul, Old Fort St. Augustin, La Tabatière, Tête à la Baleine, Harrington Harbour, Gethsemani, aska, Natashquan, Aguanish, Baie Johan Beetz, and Havre St. Pierre. Quebecair operates group charters within Canada, to the United States and to the Caribbean, g 79 passenger jet aircraft.

Revenue passengers transported by Quebecair in 1969 numbered 211,000 for 79,000,000 nger-miles compared with 189,000 for 56,000,000 passenger-miles in the previous year; 00 tons of goods were hauled 13,400,000 ton-miles in 1969 compared with 2,200 tons 18,000 ton-miles in 1968. There was a substantial increase of 46 p.c. in operating nues in 1969 to $9,200,000 from $6,300,000 in 1968.

At the end of 1969 the combined fleet of Quebecair and subsidiaries totalled 50 units: BAC-1-11s, four F-27s, two DHC-6 Twin Otters, four DC-3s, one C-46, five DHC-3 rs, 12 DHC-2 Beavers, two Cessna 185s, seven Cessna 180s, seven Bell 47-G-4As, three hes 300s and one Hughes 500.

Transair-Midwest.—This company was formed in November 1969 through the merger ransair Limited and Midwest Airlines Ltd., both of Winnipeg. With headquarters he Winnipeg International Airport, the company operates scheduled services in itoba, Saskatchewan, Ontario and the Northwest Territories and charter flights ughout Canada and from Canada to the United States. The company's scheduled ces are operated in four areas: (1) the Prairies—from Winnipeg to Regina–Saskatoon– ce Albert and return; from Winnipeg to Yorkton and return; (2) Manitoba—from nipeg to The Pas–Flin Flon–Lynn Lake–Thompson and return; from Winnipeg to m–Churchill and return; from Winnipeg to Thompson–Churchill and return; from nipeg to Norway House and return; from Winnipeg to Brandon and return; from nipeg to Dauphin and return; (3) Eastern—from Winnipeg to Thunder Bay–Toronto return; from Winnipeg to Kenora–Dryden–Thunder Bay–Sault Ste Marie–Toronto return; from Winnipeg to Red Lake and return; and (4) Arctic—from Churchill to mo Point–Rankin Inlet–Baker Lake and return; from Churchill to Coral Harbour– ulse Bay–Hall Beach and return. Several other points in the Northwest Territories, ding Yellowknife, are also served by flights from Churchill.

The diversity of Transair-Midwest's aircraft fleet, which is comprised of 58 aircraft, ding 14 helicopters, supports the company's claim of being Canada's "most versatile" "most complete" airline. The fleet ranges from small, single-engined aircraft equipped wheels, skis or floats for access to remote hinterland and short-airstrip areas, to 34 multi- ne aircraft, including two Boeing 737 twin jets and four recently acquired Argosy 222 hters capable of carrying 28,500 lb. Most of the fleet is stationed at Winnipeg but a 4 and a C-47 are usually positioned at the company's major base at Churchill, Man., pport of its arctic and DEW-line operations. Since 1961, under contract with the

United States Air Force, Transair has operated, from Winnipeg and Churchill, the vert re-supply flights to the four main sites in the Canadian sector of the DEW-line in extreme Arctic.

Major company developments in 1969 were: (1) the merger of Transair Limited Midwest Airlines Ltd.; (2) the start of scheduled service from Winnipeg to Kenora–Dryd Thunder Bay and return which replaces the former service between Winnipeg and Thun Bay via Red Lake although Red Lake continues to be served by daily flights from Winnij (3) the revision of the company's northern Manitoba route system to provide service betw points on the two routes which were formerly entirely separate; and (4) a marked expans in the number of charters operated, one for the Admiral Richard E. Byrd Polar Cente several points in the high Arctic including a flight over the North Pole, being particul noteworthy.

During the first half of 1970, developments included: (1) receipt of two Boeing twin jets; (2) authority from the Air Transport Committee of the Canadian Transp Commission to inaugurate on Apr. 26, 1970, a daily Boeing 737 service from Winnipeg Thunder Bay–Toronto and return and a daily YS-11A service from Winnipeg to Keno Dryden–Thunder Bay–Sault Ste Marie–Toronto and return.

In 1969, Transair flew 4,090,550 miles and carried 180,000 passengers for 72,000,(passenger-miles, compared with 134,000 revenue passengers for 58,000,000 passenger-m in 1968; 9,500 tons of goods were hauled for 5,000,000 ton-miles as against 4,400 tons 3,000,000 ton-miles in 1968. Operating revenues of $8,500,000 in 1969 were 35 p.c. ab the revenue of $6,300,000 in 1968. Employees numbered 451, including 73 pilots.

Commonwealth and Foreign Scheduled Commercial Air Services

At the end of 1969, there were 29 Commonwealth and foreign air carriers holding va Canadian operating certificates and licences issued for the following international schedu commercial air services into Canada:—

Aeroflot, operating between Moscow (U.S.S.R.) and Montreal (Canada) in transit to New Yo

Aeronaves de Mexico, S.A., operating between Montreal and Toronto (Canada) and Mexico C (Mexico).

Air France (*Compagnie Nationale Air France*), operating between Paris (France) and Montr (Canada) and beyond to Chicago (U.S.A.) with traffic rights, and to other points beyc in transit to Los Angeles and New York.

Airwest Inc., operating between Calgary (Canada) and Spokane (U.S.A.).

Alaska Airlines Inc., operating between Ketchikan (U.S.A.) and Prince Rupert (Canada).

Alitalia (*Italian International Airlines*), operating between Rome and Milan (Italy) and Montr (Canada) and beyond to Chicago (U.S.A.) with traffic rights, and to other points beyc in transit.

Allegheny Airlines Inc., operating between Erie (U.S.A.) and Toronto (Canada).

American Airlines Inc., operating between Toronto (Canada) and New York/Newark (U.S. and between Chicago (U.S.A.) and Toronto (Canada), and between Los Angeles (U.S. and Toronto (Canada).

British Overseas Airways Corp., operating between London and Manchester (England), Prestwi (Scotland) and Montreal and Toronto (Canada), beyond Montreal with traffic rights Chicago and beyond in transit to Boston, New York and Detroit (U.S.A.) and betwe London (England), Prestwick (Scotland), Gander (Canada), Bermuda, Nassau, Monte Bay, Barbados and Trinidad.

BWIA (*British West Indian Airways*), operating between Port of Spain (Trinidad), Antig Barbados and Toronto (Canada).

Deutsche Lufthansa Aktiengesellschaft (*Lufthansa German Airlines*), operating between Germa and Montreal (Canada) and beyond in transit to Los Angeles (U.S.A.) and Mexico City.

Eastern Airlines, Inc., operating between the terminals Ottawa and Montreal (Canada), a New York (U.S.A.) and between the terminals Ottawa and Montreal (Canada), a Washington (U.S.A.) and between Tampa/Miami (U.S.A.) and Toronto (Canada) a between Buffalo (U.S.A.) and Toronto (Canada).

Iberia (*Lineas Aereas de España*), operating between Madrid (Spain), Montreal (Canada), Mexi City (Mexico) and Guatemala.

Irish International Airlines (*Aerlinte Aireann Teoranta*), operating between Shannon (Ireland) and Montreal (Canada) and beyond in transit to Chicago (U.S.A.).

Japan Air Lines Co. Ltd., operating between Tokyo (Japan) and Vancouver (Canada) and San Fransisco (U.S.A.).

KLM Royal Dutch Airlines, operating between Amsterdam (Netherlands) and Montreal (Canada) and beyond in transit to Houston (U.S.A.) and Mexico City (Mexico) and for cargo to New York (U.S.A).

Mohawk Airlines, Inc., operating between Toronto (Canada) and Buffalo (U.S.A.) and Rochester (U.S.A.) and Toronto (Canada) and between Burlington (U.S.A.) and Montreal (Canada).

North Central Airlines, Inc., operating between Thunder Bay (Canada) and Duluth/Superior (U.S.A.) and between Detroit (U.S.A.) and Toronto (Canada).

Northeast Airlines, Inc., operating between Montreal (Canada) and Boston (U.S.A.) via Concord, Montpelier-Barre, Burlington and White River Junction (U.S.A.) and between Tampa/Miami (U.S.A.) and Montreal (Canada).

Northwest Airlines, Inc., operating between Minneapolis (U.S.A.) and Winnipeg (Canada).

Olympic Airways, S.A., operating between Athens (Greece), Montreal (Canada) and New York (U.S.A.).

Qantas Empire Airways Ltd., operating between Sydney (Australia), San Francisco (U.S.A.) and Vancouver (Canada).

Sabena Belgian World Airlines, operating between Brussels (Belgium), and Montreal (Canada) and beyond in transit to New York (U.S.A.) and Mexico City (Mexico).

Scandinavian Airlines System, operating between Stockholm (Sweden), Bergen (Norway), Copenhagen (Denmark) and Montreal (Canada) and beyond in transit to New York and Chicago (U.S.A.).

Seaboard World Airlines, Inc., operating between points in the United States, Gander (Canada) and peints in Europe.

Swiss Air Transport Company Ltd. (*Swissair*), operating between Zurich and Geneva (Switzerland) and Montreal (Canada) and beyond in transit to Chicago (U.S.A.).

United Air Lines, Inc., operating between Vancouver (Canada) and Seattle (U.S.A.) and between Chicago (U.S.A.) and Toronto (Canada).

Western Air Lines, Inc., operating between Calgary (Canada) and Great Falls/Denver (U.S.A.) and between Los Angeles/San Francisco, Portland (U.S.A.) and Vancouver (Canada).

Wien Consolidated Airlines Inc., operating between Whitehorse, Y.T. (Canada) and Fairbanks and Juneau (Alaska, U.S.A.).

rsonnel Licences

At Mar. 31, 1970, the total number of personnel licences in force in Canada was 37,492, npared with 35,378 on the same date of 1969. The 1970 licences were constituted as ows, with comparable 1969 figures in brackets: glider pilots, 1,356 (1,190); private ots, 23,748 (22,824); commercial pilots, 4,677 (4,525); senior commercial pilots, 698 (544); ine transport pilots, 2,676 (2,206); flight navigators, 216 (210); air traffic controllers, (937); flight engineers, 95 (114); aircraft maintenance engineers, 3,074 (2,825); and ocopter pilots, 4 (3).

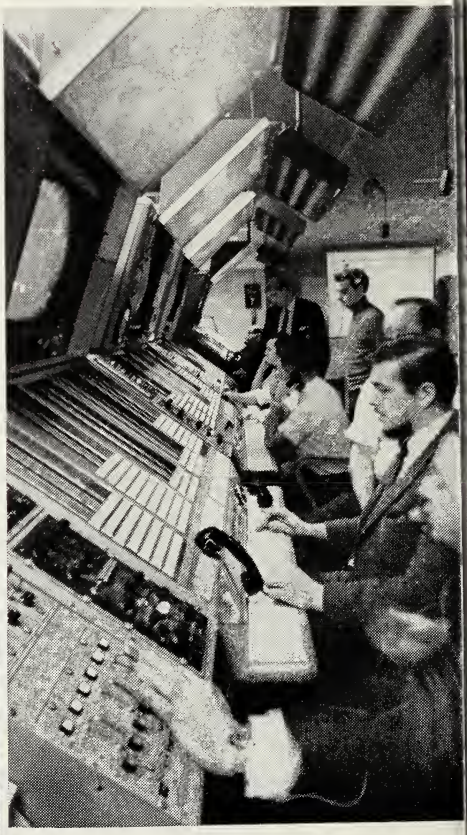
r Traffic Control

The primary functions of Air Traffic Control in the Ministry of Transport are to prevent lisions between aircraft operating within controlled airspace and between aircraft and structions on the manœuvring area of controlled airports, and to expedite and maintain afe, orderly flow of air traffic. These functions are carried out by Air Traffic Controllers ated in Airport Control Towers, Terminal Control Units and Area Control Centres. e services provided by these units are described below.

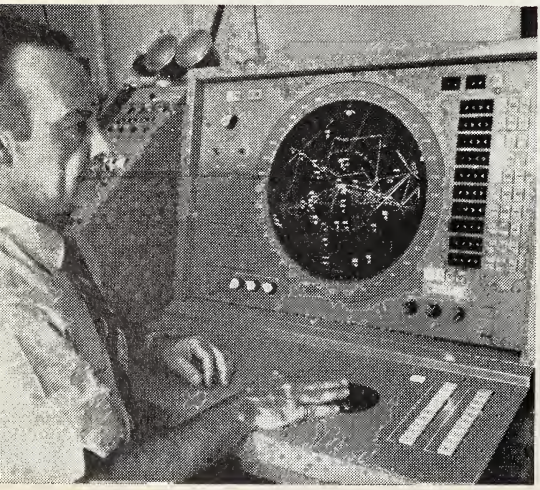
Airport Control Service is provided to aircraft operating on the manœuvring area or in close vicinity (5-10 nautical-mile radius) of civil airports where the volume and complexity of air traffic indicate its need in the interest of flight safety. Service is also provided to other traffic, such as vehicles and maintenance equipment, on the manœuvring a of an airport. Radio is the prime means of communication in the provision of the vice, although light signals may be used where radio is not available. Airport Control

Towers are in operation at: Gander International, St. John's, and Wabush (Labrado Newfoundland; Halifax International and Sydney in Nova Scotia; Fredericton, Mon and Saint John in New Brunswick; Baie Comeau, Cartierville, Montreal Internati Quebec, St. Hubert, St. Jean and Sept Îles in Quebec; Buttonville, Hamilton, Lon North Bay, Oshawa, Ottawa International, Sault Ste Marie, Thunder Bay, Tor International, Toronto Island, Waterloo–Wellington and Windsor in Ontario; Bran St. Andrews and Winnipeg International in Manitoba; Regina and Saskatoon in Sas chewan; Calgary International, Edmonton International, Edmonton Industrial, Lethbr and Springbank in Alberta; Abbotsford, Fort St. John, Kamloops, Penticton, Pitt Mead Port Hardy, Prince George, Vancouver International and Victoria International in Br Columbia; and Whitehorse in the Yukon Territory.

Canada's air traffic control facilities, although ranking in quality among the world's best, are in course of being automated and refined in response to advances in electronics and extended to overcome gaps in present coverage including the far northern areas. Installation of two systems, expected to be the nucleus of the total computerized nation-wide system, will be completed in 1971 on a test basis. It will provide for the 'remoting' of radars anywhere they are needed, eliminate the controller's manual operations and give instantly all information that could be needed on an aircraft in flight.



The Montreal area control centre showing flight strips recording flight information posted on the master boards. These must be updated constantly by the controllers, a time-consuming task subject to error.



Prototype of the new fully automated system, which will leave the controller free to manage aircraft in his control zone. When an aircraft moves from one radar screen to another, the operator can alert the new controller by making the aircraft blip on and off.

Terminal Control Service is provided to aircraft which are 'climbing out' after departure om or 'letting down' for a landing at an airport. It is a service provided to such flights perating in accordance with the Instrument Flight Rules in order to separate them from ne another and from en route aircraft operating through the Terminal Area which normally an airspace within 30-50 nautical miles of an airport and which, in some cases, may ncompass more than one airport. Radar is normally used, in conjunction with direct ntroller-pilot radio communication, in the provision of this service. Procedural means e used at some remote locations where radar is not yet available. The service is provided om all Area Control Centres but separate Terminal Control Units are installed at high affic density airports where no Area Control Centre is located. Such separate units ave been established at Halifax in Nova Scotia; Quebec City in Quebec; North Bay, Ottawa nd Thunder Bay in Ontario; Regina and Saskatoon in Saskatchewan; and Calgary in lberta.

Area Control Service is essentially an aircraft separation and flight-following service rovided to aircraft operating en route between airports. All flights that elect to file ight plans are given flight-following service, and separation is provided to all aircraft perating in accordance with the rules for instrument flight or controlled visual flight ithin designated controlled airspace, i.e., all airways below 23,000 feet above sea level ASL) and all airspace in Canada south of 70° North latitude above 23,000 feet ASL. In ddition, the service is provided north of 70°N to all aircraft operating above 29,000 feet SL, and to aircraft operating above 5,000 feet over almost all of the western half of the orth Atlantic Ocean. Separation is provided using both radar and procedural means, ith direct and indirect communication between controller and pilot. An extensive land-ne communication system links an Area Control Centre with all affiliated Airport Control owers, Terminal Control Units and communication stations and with adjacent Area ontrol Centres in Canada and adjoining States, as well as with other agencies providing ipporting and auxiliary services or having a need to deal directly with the centre, i.e., air arrier operation agencies, military operation agencies, etc. Additional services provided y Area Control Centres are:

Aircraft Movement Information Service which assists the Department of National Defence in establishing the identification of all aircraft operating in specified areas.

Customs Notification Service which facilitates the notification of the appropriate customs agency by pilots planning to cross the Canada-United States border at certain designated customs airports. This service is provided when requested by a pilot in his flight plan.

Alerting Service which ensures that the appropriate search and rescue organization is notified of an aircraft which may be in need of its aid.

Flight Information Service which provides pilots with advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information and other information of use to the pilot in planning and conducting a flight.

rea Control Centres are located at Gander in Newfoundland; Moncton in New Brunswick; Iontreal in Quebec; Toronto in Ontario; Winnipeg in Manitoba; Edmonton in Alberta; nd Vancouver in British Columbia.

Airspace Reservation Service provides reserved airspace for specified operations within ontrolled airspace and information to other pilots concerning these reservations and mili-ary activity areas in controlled and uncontrolled airspace. The Airspace Reservation oordination Office, located in Ottawa, is responsible for provision of the service in all the irspace of Canada and in the Gander Oceanic Control Area.

Ground Facilities

Canadian aerodromes are listed in Table 2, classified by administrative agency as censed or unlicensed land facilities or seaplane bases, or military aerodromes. Licensed erodromes are those that are inspected by Ministry of Transport inspectors at regular

intervals and meet specific standards. In addition to aerodromes, a network of radio aid to navigation is maintained to facilitate en route navigation and safe landings unde instrument conditions.

2.—Aircraft Landing Areas classified by Type of Facility and Operator, by Province, as at April 1970

Airport Activity.—In 1969, aircraft movements at the 159 airports reporting such movements totalled 5,850,000, of which 1,326,000 were reported by airports without control towers and 4,488,000 by the 51 airports with towers operated by the Ministry of Transport (see p. 945). Of the latter, the 46 airports with Ministry of Transport towers registered 4,325,000 aircraft movements and the five Department of National Defence airports reported 163,000 movements.

The following chart shows the growth of aircraft movements at airports with Ministry of Transport towers during the decade ended in 1969.

For the second consecutive year, Toronto International Airport led in itinerant activity. Montreal International Airport retained second place after leading from 1964 to 1967; the exceptionally high movements at Montreal in 1967 were attributable to the influx of visitors to Expo 67. Vancouver and Winnipeg International Airports occupied third and fourth positions, respectively, in 1969, unchanged since 1965, and Ottawa was in fifth place, having replaced Cartierville which held that place from 1965 to 1968.

Rankings of the five leading airports in itinerant movements for 1965, 1967 and 1969 e:—

International Airport	1965 Rank	1965 Itinerants	1967 Rank	1967 Itinerants	1969 Rank	1969 Itinerants
		No.		No.		No.
Toronto	2	99,958	2	141,477	1	165,426
Montreal	1	107,255	1	151,202	2	148,027
Vancouver	3	84,879	3	124,748	3	142,120
Winnipeg	4	74,787	4	106,776	4	114,161
Ottawa	7	62,845	6	82,705	5	93,194

At the Ministry of Transport airports with air traffic control towers, aircraft weighing than 4,000 lb. accounted for 46 p.c. of the itinerant movements in 1969 and those ghing over 39,000 lb. for 30 p.c. Aircraft in the heaviest weight group (over 314,000 recorded a phenomenal growth from 41 itinerant movements in 1965 to 4,027 in 1967 to 29,666 in 1969.

In 1969, international movements rose 8.4 p.c. over 1968 to reach 199,089 and 41.5 of them were reported by Toronto and Montreal International Airports. Toronto dled 66,892, of which 59,343 were "transborder" (to and from the United States) and 9 were "other international" (to and from points outside Canada and the United es). Montreal International reported 49,645 international movements, of which 41 were transborder and 14,404 were other international.

During 1969, airports without towers, of which there were 108, handled 1,362 movements, 6.8 p.c. fewer than the 1,462,000 movements reported by the 102 airp in the 1968 survey. Itinerant movements were 397,000, up 12.1 p.c. over the 354,00 1968, and local movements, which were mainly training flights, numbered 965,000, p.c. fewer than the 1,108,000 movements in the previous year.

Section 3.—Civil Aviation Operation Statistics

In Table 3 the statistics in respect of commercial air services in Canada for the pe 1965-69 relate to foreign airlines (including those of the United States and to Cana airlines that earned annual gross flying revenues of over $100,000 in 1965-68 and $150,000 in 1969. The figures for Canadian airlines cover both domestic and internati operations; the data for foreign airlines cover miles and hours flown only over Cana territory and exclude passengers and goods in transit through Canada.

3.—Summary Statistics of Commercial Air Services, 1965-69

NOTE.—Most of the figures in this table are from the audited annual reports of commercial air carriers; w preliminary figures have been used there are occasionally slight variations from the audited figures but the d of error is less than 1 p.c.

PART V.—OIL AND GAS PIPELINES*

Oil Pipelines.—Since the late 1940s large capital expenditures have been m each year for oil pipeline construction. In 1969 they were estimated at $52,600,000 were forecast at $25,500,000 for 1970, raising the estimated cumulative total for the pe 1950-70 to $1,001,900,000.

The prime components of the network of Canadian oil pipelines are the trunk l of the Interprovincial Pipe Line Company and the Trans Mountain Oil Pipe Line C pany. The bulk of domestic crude oil is carried in these lines. Refineries that do rely on these systems are located in the oil producing regions such as Calgary and Edm ton. The Interprovincial system carries crude oil eastward from Edmonton, receiv and discharging oil at various locations along its length. The Trans Mountain sys operates similarly westward from Edmonton. Supplying these two trunk lines are p

* Prepared in the Mineral Resources Branch, Department of Energy, Mines and Resources, Ottawa.

e systems funnelling oil from hundreds of fields into storage tanks at the pipeline ter-nals. Some of these feeder lines are impressive in themselves, not only in size of pipe d in length of route but in the volumes of oil that they transport. Most of the feeder es are in Alberta, which is to be expected because of the pre-eminent position of that vince in oil production.

The main pipeline terminal at Edmonton has 10 crude oil feeder lines, including the erprovincial extension to Redwater, as follows:—

Pipeline	*Total System Length*	*Capacity*	*General Area of Supply Related to Edmonton*
	miles	bbl./day	
Canadian Industrial Gas and Oil Ltd.	82	15,000	southeast
Federated Pipe Lines Ltd.	529	175,000	northwest
Great Canadian Oil Sands Limited	266	50,000	north-northeast
Gulf Alberta Pipe Line Company Limited	410	40,000	south-southeast
Imperial Pipe Line Co. Ltd.	378	72,000	southwest
Interprovincial Pipe Line Co.	31	110,000	northeast
Peace River Oil Pipe Line Co. Ltd.	1,240	95,000	northwest
Pembina Pipe Line Ltd.	931	154,000	west-southwest
Rainbow Pipe Line Company, Ltd.	605	110,000	northwest
Texaco Exploration Company	173	111,000	south

In addition, three pipelines are connected to the Interprovincial at Hardisty, some) miles southeast of Edmonton. Here, Gibson Associated Oil Ltd. makes deliveries up to 15,000 bbl. daily of oil from fields just south of the pipeline terminal. Husky e Line Ltd. operates a multiple-line system in which one line is used to transport con-nsate from Hardisty to mix with the heavy, asphaltic crude found at Lloydminster. e condensate-crude blend is returned to Hardisty through an eight-inch line, and a v 10-inch line which was completed in 1969. Total capacity of these lines is 72,000 . daily. The third pipeline connection, Bow River Pipe Line Ltd., carries crude from most southerly oilfields in Alberta, near Taber; this line has a capacity of 27,000 bbl. ly. Home Oil Limited operates a pipeline serving refineries in the Calgary area with from fields north of the city; the line also has connections with the Rangeland pipeline ich, in turn, is linked to the Texaco line going north to Edmonton. o serving Calgary is the oldest pipeline in Alberta operated by Valley Pipe Line Com-ny, which carries crude from the historically important Turner Valley in quantities up 15,000 bbl. daily.

The Trans Mountain pipeline has a second receiving terminal in Alberta at Edson ere the Peace River pipeline makes deliveries to Trans Mountain from fields to the th. In British Columbia, the Western Pacific Products and Crude Oil Pipelines Ltd. ries crude over a distance of 500 miles from fields near Fort St. John in northeastern tish Columbia to the Trans Mountain pipeline at Kamloops; this line has a capacity 6,500 bbl. daily.

Three main pipeline systems carry crude oil from Saskatchewan fields to the Inter-vincial pipeline. The largest is the Westspur Pipe Line Company-Producers Pipelines . network, with a capacity of 175,000 bbl. daily, which delivers crude from the important theast Saskatchewan producing area to the Interprovincial terminal at Cromer, Man., also carries crude delivered to it by Trans-Prairie Pipelines Ltd. from fields in the dale area of southeast Saskatchewan. In 1969, Producers Pipelines built a 56-mile in southwestern Saskatchewan to connect the new Plato oilfield with Interprovincial Kerrobert. The South Saskatchewan Pipe Line Company, with a capacity of 115,000 . daily, takes medium-gravity crude from fields near Swift Current in southwest Sas-chewan to the Interprovincial pipeline at Regina. The third system is the mid-Sas-chewan pipeline of Royalite Oil Company, which has a capacity of 10,000 bbl. daily carries crude oil from the Coleville–Dodsland area to the Interprovincial terminal at rrobert.

The Manitoba System of Trans-Prairie Pipelines Ltd. is the only pipeline in Manit serving the producing fields in the general area of Virden. It carries crude to the In provincial terminal at Cromer and has a capacity of 27,000 bbl. daily.

Interprovincial Pipeline.—The system of Interprovincial Pipe Line Company Canada's longest oil pipeline. It incorporates the wholly owned subsidiary in the Uni States, Lakehead Pipe Line Company Incorporated, and has a right-of-way length 2,025 miles including a 95-mile lateral to Buffalo, New York. In a major expans program undertaken in 1969, 170 miles of 34-inch pipeline were added in Western Cana thus completing three complete lines between Edmonton and Superior, Wisconsin. addition, 290 miles of 30-inch line were laid from the Chicago area to Sarnia, ther providing two pipelines from Superior to Sarnia, one north of Lake Michigan and to the south. The pipeline can deliver 30 grades of crude oil. Year-end capacities of various sections of the pipeline are shown below for 1969 and for 1970.

Section	1969	1970
	bbl./day	bbl./day
Edmonton–Regina	633,000	1,001,000
Regina–Cromer	823,000	873,000
Cromer–Gretna	862,000	1,027,000
Gretna–Superior	821,000	983,000
Superior–Sarnia via Straits of Mackinac	536,000	538,000
Superior–Chicago	204,000	331,000
Chicago–Sarnia	—	306,000
Sarnia–Port Credit	281,000	287,000
Westover–Buffalo	79,000	90,000

Interprovincial serves 34 refineries: three at Edmonton; one at Lloydminster via Husky pipeline; one at Saskatoon via Saskatoon pipeline from Milden; one at Mo Jaw via B-A Saskatchewan pipeline from Stony Beach; two at Regina; two at Winnip via Winnipeg pipeline from Gretna, 17 in the United States either directly or throu connecting carriers; three at Sarnia; two at Oakville; one at Clarkson; and one at P Credit.

Trans Mountain Pipeline.—The system of Trans Mountain Oil Pipe Line Compa extends from Edmonton to Vancouver via Jasper and has a right-of-way length of 7 miles, including a section of 57 miles in the United States which belongs to a wholly own subsidiary of Trans Mountain. Trans Mountain serves eight refineries: one at Kamloo four at Vancouver; and three in the Puget Sound region of Washington State. Un a contract with Gulf Oil Canada Limited, facilities were completed at the Vancou terminal to handle storage and transfer of liquid propane from railway tank cars to refr erated Japanese tankers. First loading under the 10-year contract was made in Octo 1966, and in 1969, 3,276,000 bbl. were delivered to tankers. Capacity of various segme of the system at the end of 1968 were:—

Section	1968	Section	1968
	bbl./day		bbl./day
Edmonton–Edson	310,000	Sumas–Ferndale	220,000
Edson–Kamloops	285,000	Sumas–Anacortes	235,000
Kamloops–Sumas	335,000	Sumas–Burnaby	335,000

Montreal–Portland Pipeline.—The Montreal refinery centre is served by a 236-m pipeline which is a joint system of Montreal Pipe Line Company and its wholly own subsidiary in the United States, Portland Pipe Line Corporation. This line takes delive of tanker-borne crude from Venezuela, the Middle East and Africa at Portland, Mai In 1965, the company completed a 24-inch pipeline alongside the existing 18-inch a 24-inch crude oil lines. An additional 24-inch line was completed under the St. Lawre River in 1967 to serve the refineries in Montreal and, at the same time, 16- and 20-in lines were installed for future use. Present capacity of the system is 504,000 bbl. dai

Product Pipelines.—Traditionally, a product pipeline carries refined products from refineries to truck terminals in large consuming centres. However, with the growth natural gas processing in Canada, which results in large volumes of products such as ppane, butane and pentanes plus being produced, a new type of product line has emerged ich carries these products to markets or to refineries.

There are three product lines in Eastern Canada, all supplying markets in Ontario h refined petroleum products. Two pipelines, Sun-Canadian Pipe Line Company l Sarnia Products Pipe Line, run from refineries at Sarnia to bulk plants in London, milton and Toronto. Trans Northern Pipe Line Company, once a pipeline carrying ducts from Montreal to markets in Ontario as far west as Hamilton, now has a two-way w. Products from Montreal are now delivered only in the area east of Brockville, luding the Ottawa Valley; products from refineries west of Toronto are carried eastward far as Kingston.

In Western Canada, the Petroleum Transmission Company pipeline carries propane, tane and pentanes plus from a plant at Empress in Alberta to Winnipeg in Manitoba, listance of 578 miles. The predominant product carried is propane which is also mark-d at various locations along the line. Elsewhere in Alberta, the Rimbey Pipe Line mpany transports condensate from the Rimbey gas plant and takes deliveries from Rangeland condensate pipeline to serve areas north of Calgary as far as Edmonton. so going to Edmonton from the Leduc gas conservation plant are three pipelines owned Nisku Products Pipe Line Company Ltd., one each for propane, butane and pentanes s. Near Calgary, Home Oil Company operates a condensate pipeline to serve refineries re and also to make deliveries to the Rangeland condensate pipeline. In 1969, a 186-e, 8-12-inch pipeline was built by Dome Petroleum Limited to transport mixed natural s liquids from the Alberta Natural Gas Company's new gas reprocessing plant at Coch-e to Interprovincial's Edmonton terminal. The liquids will be transported to plants Superior, Wis., and Sarnia, Ont., where they will be fractionated into propane, butane l other products for use in the surrounding market areas. There are other condensate elines in Alberta, most of which are associated primarily with production and do not ve end-users.

Pipeline Tariffs.—Typical of the charges to move crude oil are the following pipeline iffs:—

	Charge	*Distance*
	cts./bbl.	miles
Edmonton to Vancouver	40.0	718
Edmonton to Regina	20.7	438
Edmonton to Winnipeg	32.7	847
Edmonton to Sarnia	48.0	1,743
Edmonton to Port Credit	51.0	1,899
Portland to Montreal	10.5	236

Natural Gas Pipelines.—Natural gas now accounts for about 19 p.c. of Canada's rgy requirements and, in addition, large volumes are delivered to markets in the United tes. Relatively small amounts of natural gas have been transported in other areas he world as a liquid under refrigeration, and this method was utilized for the first time Canada in 1967 to supply gas to the distribution system of the town of Squamish, B.C. wever, most of the gas used in Canada, as well as in North America as a whole, is moved pipeline. There is an extensive network of pipelines serving most centres of population m Vancouver to Montreal and delivering gas to several points of export on the United tes border.

Since the mid-1950s when large-volume gas removal was authorized from Alberta, ital expenditures in gas pipeline construction have constituted a significant proportion he country's total outlay for transportation facilities. In 1969, capital expenditures of 9,000,000 were made and forecast expenditures for 1970 amounted to $345,100,000,

bringing the cumulative expenditures for the period 1955-70 to an estimated $1,934,500,0 for gathering and transmission systems, with an additional $1,217,700,000 for distributi systems.

Pipelines are usually categorized under three headings—gathering lines, transmissi lines and distribution lines. The gathering lines are those that take gas from the we or separators to the field gate or some other specified point. Transmission lines are n mally the large-diameter pipelines that take gas from gathering lines and deliver it to t distributors principally at the 'city gate'. In total, there were 54,942 miles of all typ of gas pipeline in operation at the end of 1969, of which 6,549 miles were gathering, 17,1 miles were transmission, and 31,196 miles were distribution.

Unlike oil pipeline companies which are common carriers that transport oil for fixed charge, gas pipeline companies, with few exceptions, own the gas that is transporte The principal exception is the Alberta Gas Trunk Line Company which delivers virtual all of the gas exported from Alberta to the provincial boundary where main transmissi companies accept delivery. This is an important exception because most of the Canadi gas reserves are in Alberta. The Alberta Gas Trunk system contains 2,778 miles pipeline.

Some details of the main transmission systems are contained in the following par graphs. Like oil pipelines, there are two trunk lines serving Canada. One is the Tran Canada Pipe Lines Limited system and the other is that of Westcoast Transmission Cor pany Limited.

Trans-Canada Pipe Lines Limited.—The Trans-Canada pipeline, originating at th Alberta border near Burstall, Sask., follows a route eastward to a point near Winnipe Man., where it branches into two lines. One continues eastward into Ontario throug Thunder Bay, then arches through the clay belt before swinging south via North Bay Toronto, where one branch goes westward into Ontario and another follows the shore Lake Ontario and the St. Lawrence River to Montreal and the United States border. number of lateral lines extend from the main transmission line to serve communities alor the route. The second line from Winnipeg goes south to the United States boundary Emerson where it connects with the Great Lakes Gas Transmission Company systen which is jointly owned by Trans-Canada and an American company. This pipelin follows a route south of Lake Superior through the Straits of Mackinac and east of Lak Michigan to reconnect with the Trans-Canada system at Sarnia, Ont. The Trans-Canad system is Canada's longest pipeline, having a total mileage of 3,638 miles including loo lines. The maximum daily gas delivery through the system in 1969 was 2,298,000 Mc Export sales averaged 428,000 Mcf. daily.

Westcoast Transmission Company Limited.—The supply of gas for Westcoast come mainly from fields in northeastern British Columbia but significant quantities are gathere in northwestern Alberta. The main line from Fort St. John runs in a southerly directio to Vancouver and to the United States border at Sumas, B.C. An extension to its syste from the Fort St. John area to the Fort Nelson area permits the pipeline system to pic up gas from the main areas stretching from Dawson Creek to the Kotcho Lake area, nort east of Fort Nelson. Total pipeline in the Westcoast system exceeded 1,400 miles in 196

Alberta Natural Gas Company.—Although the Alberta Natural Gas pipeline is onl 107 miles long, it forms a vital link in a major gas export scheme which carries Canadia gas as far south as California. The pipeline connects with Alberta Gas Trunk pipelin at Crowsnest Pass on the Alberta border and extends across southeastern British Columbi to the international border near Kingsgate where it meets the Pacific Gas Transmissio Company system, which transports the gas in the United States.

Other Gas Pipelines.—There are many other natural gas pipelines operating in Canad Some systems are devoted exclusively to gathering gas in producing fields, while other receive gas from the main transmission lines and distribute it to gas customers. Severa

ge systems combine elements of gathering, transmission and distribution. Among e larger systems, Inland Natural Gas Co. Ltd. distributes gas to a number of centres interior and southern British Columbia. In west-central British Columbia, the Pacific rthern Gas Ltd. pipeline services communities and industries along a 435-mile route ween the Westcoast main line at Prince George and the Pacific Coast cities of Prince pert and Kitimat. Canadian Western Natural Gas Company Limited and North-stern Utilities, Limited serve markets in central and southern Alberta with a total of re than 7,200 miles of pipeline. The Saskatchewan Power Corporation delivers all gas d in Saskatchewan; the 5,968-mile system transports and distributes gas to most of the pulated areas of Saskatchewan. The Northern and Central Gas Corporation Limited s probably the most geographically widespread distribution system in Canada, as it tributes gas to industries and communities adjacent to the Trans-Canada system from nnipeg as far east as the Montreal area. Two large utility companies serve the highly pulated and industrialized areas of southern Ontario. The Consumers' Gas Company erates in the Toronto area, the Niagara peninsula and eastern Ontario while the Union s Company of Canada, Limited serves the southwestern corner of the province. These d many other systems make up the growing network of gas pipelines which serves domes-commercial and industrial customers in all provinces except Prince Edward Island, va Scotia and Newfoundland.

Oil Pipeline Statistics.*—There were 45 oil pipeline companies operating in Canada the end of 1969. Pipeline deliveries shown in Table 1 were made to non-pipeline riers, foreign pipelines, and terminals including refineries and distributing centres.

Gas Pipeline Statistics.—As already stated, the natural gas transport indus became a significant factor in the Canadian economy in 1957 with the completion of t first of several extensive pipelines constructed to transport natural gas from the field processing plant to distribution outlets. Consequently, the distribution industry a greatly increased deliveries to consumers from that time. Table 3 illustrates this exp sion for the years 1966-69.

PART VI.—GOVERNMENT PROMOTION AND REGULATION OF TRANSPORTATION

The Federal Government plays a twofold role in the development of transportation vices. One is the promotional role, ensuring the growth and development of the kind ransportation appropriate to the times; the other is a regulatory role, including economic ulation of rates and services and also technical regulation to meet safety requirements l for other purposes. Examples of promotion are the building of canals from the time Confederation to the recent constructing of the St. Lawrence Seaway, the underwriting railway development and branch-line extension, the establishment of Air Canada, the ge investments in airports and aeronautical installations, and the building of the Trans-nada Highway.

The Ministry of Transport and the various Crown agencies reporting to Parliament ough the Minister of Transport have jurisdiction over canals, harbours, shipping, civil ation and interprovincial and international railways. Interprovincial or international elines for carrying gas, crude oil or petroleum products are under the jurisdiction of National Energy Board. Jurisdiction over for-hire interprovincial or international hway transport also rests with the Federal Government but these powers are at present rcised by the provincial highway transport boards under the federal Motor Vehicle nsport Act of 1954.

Railway regulation was developed in a period when railways enjoyed a virtual nopoly of transport in the country. Measures to protect the public against excessive rges, unjust discrimination and other objectionable monopoly practices, together with asures to ensure safe operations, have over the years subjected railways to the most prehensive regulation of any Canadian industry. In the intervening years the rapid wth of road, air and pipeline services has ended the railway monopoly for a large part he total traffic available and has placed the railways in a highly competitive situation.

A Royal Commission was appointed in 1959 to inquire into the railway rate structure other problems. Its findings indicated a need to shift from regulating monopoly to ntaining a balance between the several competing modes of transport. Legislation ed on the findings of the Royal Commission was passed by Parliament and received val Assent on Feb. 9, 1967. The statute, called the National Transportation Act, nes a national transportation policy for Canada looking to the achievement of an nomic and efficient transportation system making the best use of all available modes of nsportation at the lowest total cost. It established the Canadian Transport Com-sion to carry out the functions formerly performed by the Board of Transport Com-sioners for Canada, the Air Transport Board and the Canadian Maritime Commission. ddition, the Act creates a framework within which the pipeline carriage of commodities er than oil and gas and the interprovincial and international motor transport under-ings can be regulated by the Canadian Transport Commission.

The general purpose of the Act is to create a situation in which the development of transportation industry and the protection of the public against excessive or discrimi-ory charges are accomplished in the main by competition between modes rather than regulation and control. The railways are relieved of some of the more onerous and dated restrictions on their freedom to meet competition. On the other hand, a shipper has no practical alternative to rail shipment can apply to have a maximum rate fixed his goods by the new Commission. The Act also provides a procedure to allow the ways, under safeguards for the public interest, to abandon lines and withdraw passenger ices where they are no longer needed.

The Canadian Transport Commission.—The Commission, created by the ional Transportation Act (SC 1967, c. 69), was organized on Sept. 19, 1967 and ceeded to all the powers and duties of its predecessors, the Board of Transport Commis-ers for Canada, the Air Transport Board and the Canadian Maritime Commission. Commission is a court of record. It consists of a maximum of 17 members, of whom

one is president and two are vice-presidents. One of the vice-presidents is charged w the superintendence of the work of the committees of the Commission and the othe charged with the superintendence of the programs of study and research of the Commissi For the purpose of performing its duties the Commission must establish committees, a of which may, in accordance with the rules and regulations of the Commission, exer the powers of the Commission. Three of these committees—the Railway Transp Committee, the Air Transport Committee and the Water Transport Committee—are present functioning in respect of these several modes of transport. The finding determination of the Commission upon any question of fact within its jurisdiction binding and conclusive and no order or decision may be questioned or reviewed except appeal to the Supreme Court of Canada upon a question of law or a question of jurisdict with leave of that Court, or by the Governor in Council. However, a party to an appli tion for a licence under the Aeronautics Act or the Transport Act may appeal to Minister of Transport from a final decision of the Commission.

The Commission has jurisdiction under more than a score of Acts of Parliame including the Railway Act, the Aeronautics Act and the Transport Act, over transpor tion by railway, by air and by inland water, and over communication by telephone a telegraph.

Railway Transport.—Under the Railway Act the jurisdiction of the Commission stated generally, in respect of construction, maintenance and operation of railways t are subject to the legislative authority of the Parliament of Canada, including matt of engineering, location of lines, crossings and crossing protection, safety of train operati operating rules, investigation of accidents, accommodation for traffic and facilities service, abandonment of operation and uniformity of railway accounting. The Comm sion also has certain jurisdiction over telephones and telegraphs, including regulation the telephone tolls of Bell Canada and over tolls for the use of international bridges a tunnels.

Except for certain statutory rates, and subject to certain powers of the Commiss to deal with rates that it finds to be contrary to public interest, the railways are free charge rates as they wish. However, rates must be compensatory, and the Commiss may prescribe tolls for captive shippers if such tolls take undue advantage of a monop situation favouring the railways.

Air Transport.—The Commission is responsible for the economic regulation of c mercial air services in Canada and is also required to advise the Minister of Transp in the exercise of his duties and powers in all matters relating to civil aviation. T regulatory function relates to Canadian air services within Canada and abroad and foreign air services operating into and out of Canada. It involves the licensing of such services and the subsequent regulation of the licensees in respect of their econo operation and the provision of service to the public. The Commission issues regulati dealing with the classification of air carriers and commercial air services, accounts, reco and reports, traffic tolls and tariffs, and various other matters. All regulations, rules a orders issued by the former Air Transport Board continue in force until repealed or amend by the Canadian Transport Commission.

On Oct. 20, 1966, the Minister of Transport tabled in the House of Commons "Statement of Principles for Regional Air Carriers", which assigns to the Commission t responsibility for initiating measures to implement the policy set out therein. In t connection, the Commission has under review the route structures of regional air carri

The Commission takes an active part in the work of the International Civil Aviati Organization and, when appropriate, undertakes bilateral negotiations for the exchan of traffic rights. At present, Air Canada and CP Air are Canada's designated interr tional scheduled carriers.

Water Transport.—Under the Transport Act, the Commission entertains applicatio for licences for ships to transport goods or passengers for hire or reward between places

nada on the Great Lakes and on the Mackenzie and Yukon Rivers, except goods in k on waters other than the Mackenzie River. Before granting a licence, the Commis- n must be satisfied that public convenience and necessity require such transport. The mmission also has regulative powers over tolls for such transport.

Shipping Subsidies.—The Canadian Transport Commission also administers subsidies d by the Federal Government for the maintenance of certain coastal and inland water pping services. Table 1 shows the net amount of steamship subventions paid in con- tion with contracts made for the maintenance of essential coastal and inland water pping services in the years ended Mar. 31, 1968 and 1969.

The National Energy Board.—The National Energy Act (SC 1959, c. 46) pro- med Nov. 1, 1959, provided for the establishment of a five-member Board charged h the duty of assuring the best use of energy resources in Canada. In the performance his function, the Board is responsible for the regulation of the construction and opera- n of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, tolls charged for transmission by oil and gas pipeline, the export and import of gas and export of electric power, and the construction of the lines over which such power is nsmitted. The functions and operations of the Board are covered in the Domestic ade and Prices Chapter of this volume, Part II, Section 4.

Section 1.—Telecommunications

Subsection 1.—Telecommunications Media*

Communications media in Canada have been shaped to meet the needs of the countr Great networks of telephone, telegraph, radio and television facilities, inextricably bou together, provide adequate and efficient service which, in this era of electronic advancemer is under continual technological change and development. The familiar challenges of t country—its size, its topography, its climate, its small population—which have rear their heads in other areas of development, have had to be faced as well in the field of te communications. That these have been met is evidenced by the fact that today Cana possesses communications facilities and services which are second to none in the world a which are somewhat unique in structure. On the one hand there is a group of telepho companies acting in concert to provide national services and on the other there are tv railway companies providing services, each of which is national in scope. These compani provide a most comprehensive total telecommunications network and almost all Canadia from the Arctic Coast to the 49th parallel and from St. John's in Newfoundland to Va couver in British Columbia can communicate with each other and with the rest of the wor by the simple action of twisting a dial or pushing a button. Messages are carried by micr wave, tropospheric scatterwave systems, land lines and high frequency radio bands. T great advancement in telecommunications during the past few years indicates that machin to-machine communications will, within a very short time, surpass the volume of man-t man communications. The use of computers is becoming more and more commonpla and the ability to transmit computer data from one location to any distant location acr the country is a tremendous boon to industry and commerce and a benefit to every Canadia

The vital importance of telecommunications to Canada was recognized in the creati of the federal Department of Communications in 1969. This brought together into a sing ministry the Telecommunications Policy and Administration Bureau (formerly with t Department of Transport), the Defence Research Telecommunications Establishment, t

*Revised by Canadian National Telecommunications, Ottawa.

nadian Overseas Telecommunication Corporation and the Canada Post Office. Initially, e Department has concerned itself with a comprehensive inquiry into all aspects of nada's information system. This "Telecommission" study, as it nears completion, is oviding the Department with guidance for the formulation of national communications licies and programs.

Public Telephone Service.—Telephone service, local and long-distance, is provided telecommunications companies serving a total of almost 10,000,000 telephones across nada. The largest serving organization is the Trans-Canada Telephone System comising eight telephone companies, either privately or publicly owned—the Newfoundland lephone Company Ltd., the Maritime Telegraph and Telephone Company Ltd., The ew Brunswick Telephone Company Limited, Bell Canada, the Manitoba Telephone stem, Saskatchewan Telecommunications, Alberta Government Telephones and the itish Columbia Telephone Company. In addition, there are almost 1,900 independent lephone companies providing private service in smaller communities across the country, any of which link into the Trans-Canada Telephone System for world-wide telephone cess. Each company has a monopoly within its own territory and is subject to government gulations at the appropriate level—federal, provincial or municipal.

CN Telecommunications, the largest single telecommunications system in Canada on e basis of area served, provides telephone service for residents in the Yukon and Northest Territories, in parts of Newfoundland, and in northern sections of British Columbia. all, there are some 35,000 subscribers on the CNT telephone network. Without exception, all CNT exchanges are of the automatic dial type. Subscribers in the Far North ve access to the outside world via CNT-operated long-distance toll centres at Whitehorse, T., Fort Nelson, B.C., and Hay River and Inuvik, N.W.T. In some areas, such as the ackenzie River delta, short-haul long-distance calls are handled by automatic toll ticketing milar to that used by the large telephone companies in the major southern Canadian ntres. A $3,000,000 expansion program in Newfoundland will include 10 new telephone changes, extensions of 22 existing exchanges and the expansion of transmission facilities; any isolated settlements now have as modern a telephone service as any in Canada.

The latest telephone innovation is the electronic switching system and the touch-tone lephone, developed in the United States. The dial is replaced by push-buttons, each of hich, when pressed, emits a tone that activates the exchange to contact the desired party. ectronic exchanges are now being used in many areas by the Trans-Canada Telephone stem and CN-CP Telecommunications are using a similar touch-tone application in eir Broadband Exchange Service (see p. 965).

Public Telegraph Service.—Canada's telegraph systems are operated by CN-CP lecommunications. These companies operate telegraph offices, often amalgamated, in 10 provinces and in the Yukon and Northwest Territories, and messages can be sent to d from any point in Canada or throughout the world via the overseas cable services ee pp. 979-980). At one time, much of the CNT and CPT revenue came from telegraph essage traffic but the proportion now accounted for by such traffic is only about 20 p.c. ven so, the reduced telegraph message traffic is handled by the most up-to-date facilities. essages are transmitted by teleprinter and facsimile equipment, and telegraph networks er which public messages flow are controlled by computers. In other words, messages e taken in and forwarded automatically in accordance with special programs stored in e computer's memory. The computer determines where the message is to be sent and nds it as soon as the circuits are free.

A recent experiment by CNT using cathode ray tube displays (CRT) in Toronto oved so successful that CRT display units were installed during 1970 at the larger centres Edmonton, Winnipeg, Ottawa, Quebec City, Saskatoon, Moncton and Halifax. Even-

tually, units will be installed in all medium-sized centres and the Toronto centre w be expanded to include four more displays, bringing the total to 16. Basically, Cl displays have television-like screens placed above a keyboard similar to a typewriter whi is connected to the message switching computer. As the operator receives a telephon telegram message, she types it on the keyboard and it appears on the screen at the sa time. She is able to read the message back to the caller and, with editing capabilities bu into the displays, may make changes to the text if required. When the message is c firmed, the push of a button sends it into the message switching computer for transmissi to its destination.

The cathode ray tube display system is being installed in all the large and medium-sized centres across Canada. A telegram message typed on the keyboard shows up on the screen and the push of a button sends the message on to its destination.

Telex Service.—Telex, by far the largest teletypewriter service in Canada, is provid by CN-CP Telecommunications. Its network of 20,000 subscribers in Canada interco nects with the Western Union Telex network in the United States and with European a world-wide networks of more than 372,000 subscribers. Telex is a direct distance di teleprinter system which permits a subscriber to directly dial any other subscriber on t network. Two speeds are offered to customers—66 words a minute and 100 words a minu —at costs determined on a time-used and distance basis; there is no minimum charge.

TWX, similar to Telex, is provided by the major telephone companies. One transm sion speed of 100 words a minute is offered on this service, the network of which consists some 2,700 subscribers in Canada and interconnects with the American Telephone a Telegraph network of some 50,000 TWX subscribers and also with the European and worl wide Telex network outside the North American network.

A medium-speed Telex service is offered exclusively by CN-CP Telecommunication operating in the speed range of up to almost 300 words a minute. The subscriber may ow his computer or data sending-receiving equipment or may lease it from CN-CP. Th service provides a direct dial interconnection with subscribers anywhere in Canada achieve a medium-speed range transfer of data from one location to another. The month rates to subscribers are the same as the stand-speed Telex service, that is, are based on tim used and distance. A six-level code, an eight-level code and punched computer cards ca operate on the medium-speed service.

Broadband Exchange Service.—In 1967, CN-CP Telecommunications introduced automatic switching system of the most advanced design, known as Broadband Exchange rvice, which has moved Canada into a new era of extremely high quality and very rapid mmunications. It is the first such system to operate in Canada and the second in the rld. Broadband has more than tripled the fastest conventional machine-to-machine nsmission. Furthermore, it has the capability, upon customer demand, of transmitting mputer data at 51,000 words a minute, or more than 50 times faster than the top speed ched by conventional switched networks. The Royal Canadian Mounted Police was e first organization to be tied into this supersonic network, using it for intricate and high-ality transmission of fingerprints, photographs and documents between headquarters Ottawa and divisional headquarters at Montreal, Toronto, Winnipeg, Edmonton, Regina, ncouver, Fredericton, Halifax and St. John's.

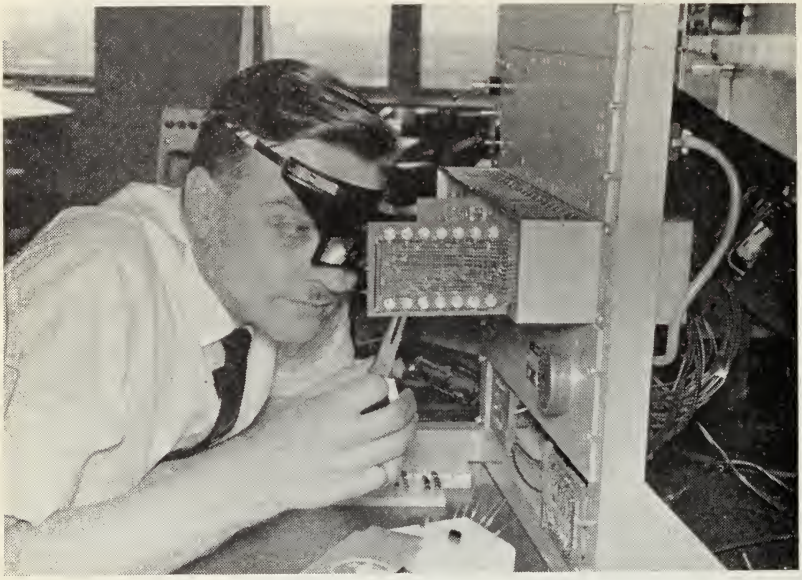
The name, Broadband Exchange Service, is derived from the actual system since oscribers eventually will be able to select various bandwidths, depending upon their mmunications needs. The broader the bandwidths, the faster the speed of transmission. N-CP will offer four bandwidths: four and eight kilocycles for voice, facsimile and data om 1,000 to 3,000 words a minute); 16 kilocycles for high fidelity radio program transmis-n and facsimile; and 48 kilocycles for high speed computer-to-computer data exchange 1,000 words a minute) and high speed facsimile. The four-kilocycle bandwidth is now erational and the other bandwidths will become available upon customer demand.

Transmission is carried by the CNT-CPT microwave system using frequency diversity chniques to provide a high degree of reliability. In other words, the transmission is rried twice both ways over different circuits at the same time, one being the back-up stem for the other.

Each subscriber has in his office a voice-data subset—a most advanced telephone strument which, with the flick of a button, can change from voice communication to nsmission of computer data. The subset features push-button "dialling" and the stomer, to reach a distant point, simply pushes the buttons in a series of seven digits. e first three digits pressed designate the distant exchange, the fourth digit indicates the sired bandwidth and the last three digits are for the line of the desired party. A re-ring tton is included so that the customer may signal the distant party to revert to voice mmunication during or after sending computer data. A feature of Broadband is abbre-ted keying, where customers may contact frequently called stations by pushing a two-git code instead of the normal seven. Broadband will make distant connections, including ying time, within five seconds, or two seconds on the special "hot line" service. Actual nnection time after keying or "dialling" is less than two seconds. Another feature of oadband is conference calling, where a subscriber, by pushing a two-digit code, will tomatically contact a pre-determined list of parties needed for the conference. Sub-ibers are charged on a "pay-as-you-use" basis.

Multicom Service.—This Service, offered by the Trans-Canada Telephone System ginning in 1969, is a medium-to-high-speed data transmission system designed for the ta processing industry. It transmits data at a variety of speeds from 2,400 to 50,000 bits econd—or as high as 60,000 words a minute. Transmission speeds can be increased as e need becomes evident. The data may be prepared in the form of either punched cards, nched paper tape, magnetic tape, disc storage or facsimile for optical scanning. As in oadband Exchange Service, the caller presses the first three numbers to identify the ving office and the class of service. The last four digits identify the station being called. e initial system is made up of three high-speed switching centres at Calgary, Toronto d Montreal and five medium-speed switching centres at Vancouver, Calgary, Winnipeg, ronto and Montreal. These switching centres are located in existing telephone switching ntres but are more sophisticated than the regular telephone exchanges.

Data-Phone Service.—The major Canadian telephone systems operate Data-Phone rvice which transmits data from punched cards, tape or magnetic tape between two or



Communicatio cuitry is now logic and a may be a mi purity requir attention of tronic engi

more machines or computers. It takes pulses from punched cards or tape-data machi and transforms them into tones which are sent over telephone circuits or leased priv lines. The subscriber pays for the line used at regular long-distance rates. Data-Pho transmits at a speed of 1,200 bits a second or 1,000 words a minute.

Data-Line Service.—Data-Line Service was put into operation by the Trans-Cana Telephone System in late 1968, primarily for customers who wished to be connected to tim sharing computers. Using the normal telephone lines and exchanges, this service has t capability of transmitting computer data from 1,000 words a minute to a new offering 1969 of 50,000 words a minute. The subscriber may use his own send-and-receive equi ment or he may lease the equipment from the Trans-Canada Telephone System. Charg are based on a flat rate and depend upon the bandwidth used.

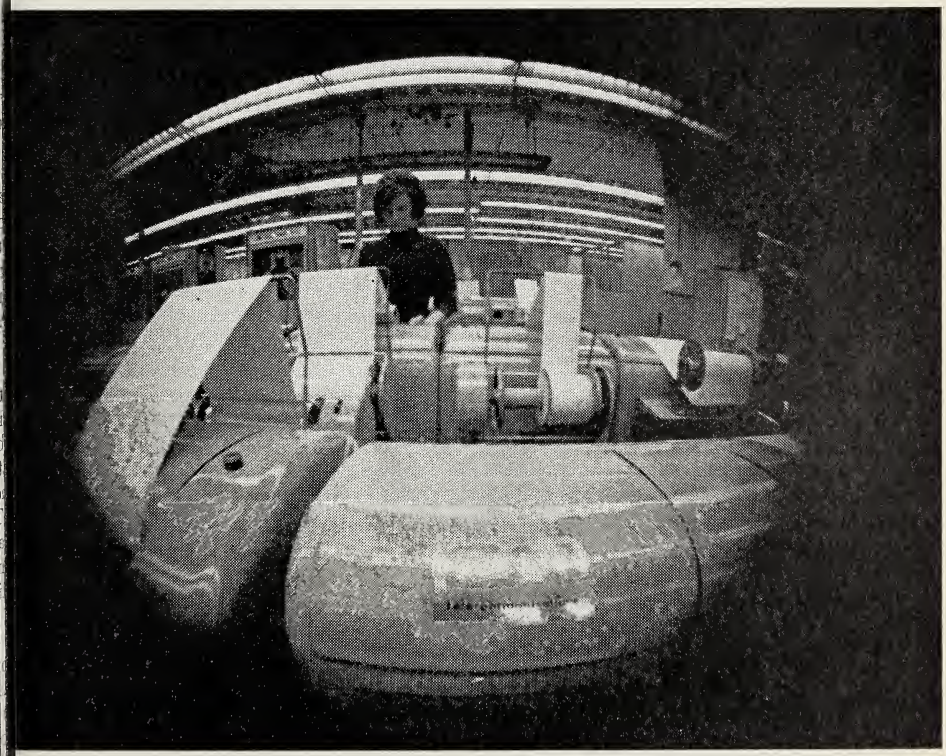
Wide Area Telephone Service.—Wide Area Telephone Service (WATS), operat by the Trans-Canada Telephone System, provides dial-type telephone communicati from one WATS zone directly to another long-distance zone. In other words, the subscri has a wider area that he may call directly without going through the long-distance operat or Direct Distance Dialling, and he may select any or all of the WATS zones he wish The customer has an access line to a dial exchange office for use only in originating WA calls. INWATS, the reverse series to WATS, was introduced in 1969. Subscribers a charged a measured time-period rate and an additional hourly rate. The measured tim period is 10 hours of accumulated time in each month and the additional hourly rate appli to the time used above the measured time.

Hot-Line Service.—A new service offered in 1969 by CN-CP Telecommunicatio and Western Union is the Hot-Line Service where companies in Toronto or Montreal m talk to their offices in New York City by simply picking up the handset of the telephon When a customer picks up his handset, the exchange equipment will seek out the prop telephone at the other end. If all the circuits are in use at the time of calling, the call will hang up and as soon as a circuit is free the equipment will make the connection a ring the telephone set at each end. Subscribers are charged on a time-used basis.

Private Wire Teletype Systems.—A transformation has been gradually taking place private wire systems. Most major Canadian firms with large communications requirements in years past found that private wire systems best suited their needs—that is, their wn private teletype network rented to them by telecommunications companies. Although ivate wire services are still a significant part of business for the telecommunications industry, prime communications users who must communicate with many stations across e country have been moving to the newer computer-controlled transmission systems.

Computer-Controlled Transmission Systems.—CNT, CPT and the Trans-anada Telephone System all have in operation store and forward message switching mputers which control the flow of message traffic. CNT pioneered in the uses of message itching computers in Canada, having operated in this field since 1964. Trans-Canada elephone System inaugurated a computer-controlled system in late 1968 and CPT put eir system in operation in 1970. The telephone companies have switching centres located Vancouver, Calgary, Edmonton, Regina, Winnipeg, Montreal and at Toronto, their imary centre. This computer-controlled system converts transmission codes and speeds d also determines where messages are to be sent.

CNT's system provides a switching medium for Air Canada, CP Air and CN administrative message traffic and also controls and transmits information on CN's reservation stem. When a railway customer wishes to make a reservation, a computer card is



A section of CNT's Data Central at Toronto, where store and forward message switching computers control the flow of message traffic for Air Canada, CP Air, the CN, and commercial users.

marked and inserted into a card reader. Within seconds, a reply will return via a te printer confirming the reservation. Air Canada's "Notice to Airmen" (NOTAM) proj is also handled by this system; particular flight plans, runway conditions and navigatio aids are stored in Air Canada's computer and given out to pilots across the country wh a special code is dialled on teletype machines. A third-generation computer installed f CNT in 1968 is performing major store and forward message switching functions for t Canadian Meteorological Service. When the computer finds a weather report from a one of the 175 DOT weather stations throughout Canada, it will tell the station equipme to transmit the report into the computer and it then determines where and at what ti of the day the information is to be sent.

Commercial telegrams are switched across the country by CNT's third-generati message switching computer. This undoubtedly is the most important development telegraph service since Morse.

A new service, introduced by CN-CP Telecommunications in 1970 and called TeleN uses central message switching computers. The TeleNet system concept is a number subscriber networks controlled by these central computers. The message switching co puter centres will handle many customers but each customer's network will be complete private. In its initial phase, TeleNet offerings will be confined to message switching a related features such as speed and code conversions, message storage and retrieval, hig speed data handling, interface with customer-owned computers and message refile. A sing message may be transmitted for delivery to as many as 64 destination stations by one gro routing indicator at one time. Two levels of priority are recognized by the computer Messages marked "quick" are handled immediately by the system.

Message switching computers are located at CNT offices in Toronto and CPT offic in Montreal and all Canadian subscribers' switching requirements will be routed by o of these centres. Future plans call for switching computer centres at Vancouver, Edmo ton, Winnipeg and Halifax. Three classes of service will be offered with TeleNet betwe customers with light, medium or heavy traffic volume requirements. Subscribers usi the heavy and medium classes will have full access to the Telex network. Various optio and capabilities of TeleNet will enable CN-CP to custom design a system to meet speci needs of individual subscribers.

Domestic Commercial Satellite Communications Facilities.—Increasing activit in the Canadian Arctic and sub-Arctic, where communities are being expanded and ne ones formed, as well as forecasts of the telecommunications needs of all of Canada, prompte the telecommunications industry and the Federal Government to consider a domest satellite system. In 1966, a proposal from Niagara Television Limited and the Pow Corporation of Canada Limited was submitted to the (then) Board of Broadcast Governo for a satellite system to distribute television programs for a third national television ne work. In March of 1967, the Trans-Canada Telephone System and CN-CP Telecommun cations proposed to the Government a domestic satellite telecommunications system carry television, telephone calls, data and other telecommunications services. In th same year RCA Victor Company Limited issued a proposal giving definite design criter for a communications satellite within the capabilities of Canadian industry. In 1968, t Northern Electric Company announced an agreement with Canadair Limited and Hugh Aircraft of California, to form a group interested in designing and building equipment f satellite communications. For some time this subject was also under study by the Depar ment of Transport and the result of this study was presented to the Government in 196 By July of 1967, an intense interest had developed in the potential of a domestic satelli system and the Prime Minister announced the creation of a Task Force, under the directio of the Science Secretariat, to advise on satellite policy in general and, in particular, on t use of satellite technology for domestic communications.

Following the release, on Mar. 28, 1968, of a White Paper based to a large extent on e recommendations of the Task Force on satellite policy, the Government of Canada tablished Telesat Canada by Act of Parliament (SC 1969, c. 51), which came into force proclamation on Sept. 1, 1969, to establish Canadian Domestic Satellite Telecommunica- n Systems providing telecommunications services on a commercial basis. Telesat Canada not a Crown corporation but is designed to be a commercial company to be owned jointly the Government of Canada, the Telecommunications Common Carriers, and the general blic, according to the provisions of the Act. The annual report of the company is tabled the House of Commons by the Minister of Communications.

Plans are proceeding for a target launch date in 1972 of the first satellite, to be named *nik*, an Eskimo word meaning "brother". The initial system, consisting of some 36 ound stations and two satellites, will be designed to provide television distribution in th English and French to many parts of Canada not now served by terrestrial facilities; provide telephone communications in Northern Canada; and to supplement existing icrowave systems serving Southern Canada. The satellites will be capable of simultaneous ansmission of all these services from stationary orbital positions to virtually all of Canada association with the ground stations. Present plans are to lease services to the Trans- nada Telephone System, CN-CP Telecommunications and the Canadian Broadcasting rporation.

When present plans materialize, Canada will be among the first nations in the world to erate a domestic commercial satellite communication system. The whole of Canada is sible in space from that part of the equatorial orbital plane lying between 96° and 116° est Longitude. This forms a 20°-arc and contains the satellite positions most desirable r Canadian domestic service. The satellite or satellites maintain a stationary orbit at altitude of 22,300 miles which means that they will rotate with the earth every 24 hours d therefore at any particular time of the day be over the same spot on earth.

Basically, satellite communication is just one long microwave link. The clarity and rength of transmission provided by a satellite will be comparable to that of existing icrowave systems; only with respect to time required for transmission from an originating rth station to a satellite and back to another receiving earth station will there be a notice- le difference. Because of the 22,300-mile altitude of the satellite, the two-way transit me will be about 600 milli-seconds or six tenths of a second. This delay will be of no ncern for one-way transmission services such as television, but it must be taken into ac- unt in the case of two-way voice circuits. To minimize the time effects, there must be avoidance of tandem connections on space facilities and, wherever possible, the operation voice circuits with one direction via satellite and the other via ground facilities.

These first-generation satellites will end their life cycle about five years after they are t into operation and undoubtedly additional satellite capacity will be required by then. e scope, capacity and design of the second-generation Canadian satellite will depend on chnical developments and traffic requirements during the intervening years. Canada's icrowave, land-line and troposcatter systems will continue to be the backbone of tele- mmunications services for many years to come but satellite communications, properly tegrated with land facilities, will make it possible to reach all areas to which service has t yet been economically feasible.

International Satellite Communications.—Since the *Telstar* satellite was launched 1962, Canada has made use of international satellites to connect to broadcast systems other continents. In 1964, Canada became one of the 20 charter members of *Intelsat*, e International Telecommunication Satellite Consortium, which now numbers 68 coun- es. Thus, Canada is a joint owner of *Intersat* satellites and participates in the global tellite system established by *Intelsat*.

Acting through the Crown-owned Canadian Overseas Telecommunication Corpora- n, Canada is currently using the *Intelsat* satellites for intercontinental telephone, data d television relays to and from the domestic communications systems of CN-CP Tele- mmunications and the Trans-Canada Telephone System.

Public and Private Commercial Microwave Facilities.—Canada, because of population distribution and the vast areas served by microwave communication links, ran second highest among the world's users of microwave communications systems on a capita/per mile basis. Increasing demand for television outlets has necessitated the tension of microwave routes to provide interconnections for the CBC English and Fren and private networks and these routes have been extended to permit the transmission colour television. With the use of more automated equipment by industry and vario services, associated data and control information must be transmitted at rapid speeds ov microwave radio-relay to widespread areas throughout the country.

Railways.—The Telecommunications Departments of the Canadian National a Canadian Pacific Railway Companies have placed in operation a microwave system e tending from Montreal to the Pacific Coast, which is used for television, telephone and da relay purposes. They also operate microwave facilities linking the Province of Quebec wi the Maritime Provinces and Newfoundland, and a major expansion of microwave faciliti in Newfoundland has been undertaken by Canadian National Telecommunications (CNT In addition, CNT has installed a microwave system between Alberta through the Yuk Territory to Alaska which carries telephone and data traffic and serves both civil and milita organizations in the area. In co-operation with Alberta Government Telephone, a co bination microwave and tropospheric scatter system connects Alberta and the Northwe Territories. This system also provides communication for civil and military use. $3,000,000 construction program was undertaken in 1970 by CNT which will provide combination microwave-scatterwave system linking the Yukon Territory with the Nort west Territories. Microwave will be used from Whitehorse to Keno and a tropospher scatterwave system will bridge the Richardson Mountains from Keno to Arctic Red Rive from there, microwave will be used north to Tuktoyaktuk. A scatterwave system hur transmissions up to the troposphere where they are bounced back to the next station son 600 miles away.

The Quebec North Shore Labrador Railways has developed a microwave system e tending into northern Quebec to provide communication for mining operations and to ser some civil communication purposes. Ontario Northland Railways operates a microwa installation connecting northern Ontario and James Bay, also for purposes of military an civil communication. The Pacific and Great Eastern Railway makes extensive use of 6,0 Mc/s microwave facilities linking Vancouver with Prince George and Dawson Creek B.C.

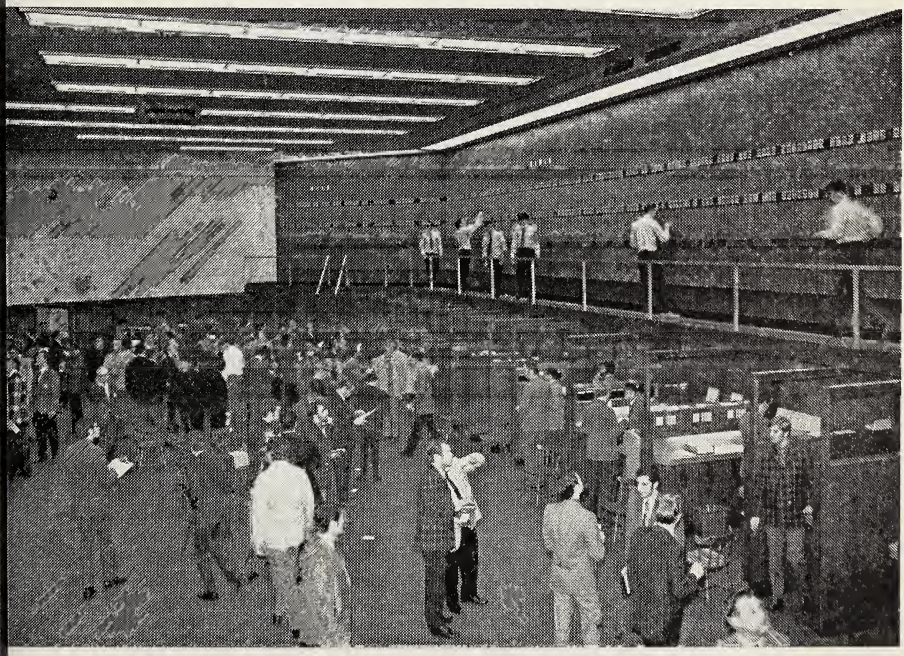
Telephones.—The Trans-Canada Telephone System consists of eight provincial an private systems collectively providing a transcontinental microwave system for the purpo of carrying telephone, television, data and other types of communication services. E tensive microwave systems are utilized within the respective provinces for civil and militar communications or television relay purposes. Major expansion has taken place in eac province, greatly increasing the number of areas served and system capacity for all type of communication requirements. Tropospheric scatter systems are employed to provid beyond-line-of-sight transmissions, especially to the Far North; these are used for bot civil and military applications.

The telephone companies of the three Prairie Provinces are constructing a major micr wave system extending from Winnipeg to Edmonton, to form part of a projected secon transcontinental microwave system operated by the telephone companies. The Britis Columbia Telephone Company has installed a major trunk system from Prince Rupert t Prince George, which is linked through Prince George with the transcontinental syste in the southern part of the province. A microwave system links Mill Village communica tion satellite earth station, near Liverpool, N.S., with the trunk route system of the Mari time Telegraph and Telephone Company.

Television.—The two main television interests in Canada—the CBC and CT Television Network Limited—lease private microwave facilities for the relay of televisio

ograms from coast to coast. In addition, studio transmitter links are used by various evision stations where the television transmitter is situated some distance from the studio d interconnection is required. In sparsely populated areas, off-the-air pick-up signals m primary television stations are sometimes relayed via microwave to rebroadcasting es. Microwave facilities are also used in connection with portable and mobile television k-up where program material is intended for the main studio. Both network facilities d local studio transmitter links have been upgraded to enable the transmission of colour evision.

Industrial.—Although many firms utilize public communication facilities on a lease sis, some organizations have installed private microwave systems to provide voice, etype and control data for various purposes. The British Columbia Hydro and Power thority, the Calgary Power Corporation, The Hydro-Electric Power Commission of tario, the Quebec Hydro-Electric Commission and Manitoba Hydro use a considerable mber of microwave relay systems for important control and communication purposes. r example, Hydro-Quebec has greatly expanded its hydro power generating capacity d new microwave routes have been added to permit a central control of the various generat- g stations. The British Columbia Hydro and Power Authority has installed facilities link the Vancouver area with Peace River, Mica Creek and the Bonneville Power Administration in the State of Washington, and also for system control in the Vancouver area. tario Hydro is constructing an extensive microwave system to provide important ntrol, monitoring and communications with all their facilities in southwestern Ontario.



Expanded facilities at the Vancouver Stock Exchange, prompted by recent record-breaking trading, included the installation of ultra-modern sophisticated electronic communications equipment which provides a greater amount of information more accurately and much faster than was previouly possible. Transaction information is now available only seconds after the trade takes place on the floor.

Instructional.—The Department of Communications has opened the 2,600 M microwave band for use by the various educational authorities in Canada for an instructi al TV system. Some systems have now been licensed and others are being planned. largest system is located at Calgary and it provides TV communications to 24 schools.

Miscellaneous Radio Communication Services.—In addition to radio communi tion services provided by the Federal Government, extensive radio communication syste have been established in the provinces and territories, mainly for police, highway forestry protection purposes. Municipal government departments continue to incre their use of radio to facilitate operations, particularly as a medium of communication w vehicles—police, fire, engineering, hydro, etc. Such services as taxi, heavy constructi ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medi also make extensive use of radio for communication purposes.

Public utilities, power companies, provincial power commissions, oil exploration a mineral development organizations have expanded considerably their use of radio in b mobile and point-to-point radio fields.

The telecommunication companies provide an extension of land telephone service, radio, to suitably equipped vehicles. This service is available in all major cities in Cana and along many of the nation's arterial highways. Restricted common-carrier mob radio service (which does not permit interconnection with the over-all telephone system b only with specific dispatchers) is available in most major cities in Canada as well as i number of smaller urban centres. It is provided by telephone companies as well as by oth organizations. Low-power radio stations may be licensed to permit short-distance perso and private business radio-telephone communications.

Subsection 2.—Telephone and Telegraph Statistics

Telephone Statistics.—In 1969 there were 1,888 telephone systems operating Canada compared with 2,067 in 1968; of these systems, 1,618 reported in 1969 and 1,7 in 1968. Co-operative systems in rural districts decreased in number from 1,615 to 1,4 in the same comparison and incorporated companies from 109 to 92. The largest of t incorporated companies, Bell Canada, which operates throughout the greater part Ontario and Quebec and in Newfoundland and the Northwest Territories, served 62 p. of all the telephones in Canada in both years and the British Columbia Telephone Compan also shareholder-owned, served 9.9 p.c. of the total in 1969. The number of telephones use continues to increase at the rate of about 6 p.c. annually.

1.—Pole-Line and Wire Mileage and Number of Telephones in Use, 1960-69

Year	Systems Reporting	Route Mileage	Length of Wire	Telephones in Use			
				Business	Residential	Total	Per 100 Populatio
	No.	miles	miles	No.	No.	No.	No.

Telegraph Statistics.—There were nine telegraph and cable companies operating i Canada during 1967 but, as already stated, telegraph service is provided mainly by th telecommunications departments of the two major railway companies (see also p. 964 The number of telegrams sent continues to decline year by year, giving way to other typ of message transmission, but the number of cablegrams sent has been rising. The busine of telegraph and cable companies appears to be changing from one of handling messag directly to one of leasing equipment for the transmission of messages by others. Revenu from the latter source have been rising over the past several years and have been th main factor in the steady advance in total operating revenues. Total cost of propert and equipment for all telegraph and cable companies was $545,694,618 in 1969, increasi from $519,949,814 in 1968.

[1] Excludes commission operators. [2] Includes wireless messages and transatlantic Telex messages.

Subsection 3.—Federal Control over Telecommunications and Federal Civil Telecommunications Services*

deral Control over Telecommunications

The Department of Communications was established on Apr. 1, 1969, under the au-rity of the Government Organization Act of that year. The duties, powers and func-ns of the Minister of Communications extend to and include all matters relating to ecommunications over which the Parliament of Canada has jurisdiction, not by law igned to any other department, branch or agency of the Government of Canada; and development and utilization generally of communications undertakings facilities, tems and services for Canada. He is responsible for the administration of the Telegraphs t, the Radio Act, and the Canadian Overseas Telecommunication Corporation Act.

Telephone and telegraph companies incorporated under the Federal Parliament are ject to the jurisdiction of the Canadian Transport Commission in the matter of rates l practices under the provisions of the Railway Act. Previously the CTC regulated es only in those cases in which a charge was made to the general public; recent amend-nts to the Railway Act extend the jurisdiction of this body to cover rates charged for vate wire services as well. International telegraph and telephone communications are ndled subject to the International Telecommunication Convention and its Regulations, under regional agreements, or both. Overseas cables landed in Canada are subject to External Submarine Cables Regulations under the Telegraphs Act.

Radiocommunications in Canada, except for those matters covered by the Broad-ting Act, are regulated under the Radio Act and Regulations, and the Canada Shipping t and Ship Station Radio Regulations. Amendments to the Radio Act in the past year vide for the licensing of Canadian earth and space stations engaged in space communica-ns services. Radiocommunications in Canada are administered in accordance with the ernational Telecommunication Convention and Radio Regulations annexed thereto; International Civil Aviation Convention; and the International Convention for the fety of Life at Sea. A number of Canadian–United States conventions and agreements also in effect, such as: the Convention for the Promotion of Safety on the Great Lakes by ans of Radio; the Convention relating to the operation by citizens of either country of tain radio equipment or stations in the other country; the Agreement relating to the -ordination and Use of Radio Frequency above Thirty Megacycles per Second; and the levision and FM Agreements. In addition, Canada is a party to the North American gional Broadcasting Agreement.

*Prepared by the National Telecommunications Branch, Department of Communications, Ottawa.

Under the Broadcasting Act of 1968, the Canadian Radio-Television Commiss issues licences for broadcasting undertakings. However, the licences are not issued unl the Minister of Communications certifies to the Commission that the applicant has satisf the requirements of the Radio Act and regulations thereunder, and has been or will be issu a Technical Construction and Operating Certificate under that Act. Broadcasting und takings include radio (AM and FM) and television broadcasting stations, commun antenna television (CATV) systems, and network operations. The technical rules a procedures for the allocation of frequency channels and installation and technical operat of broadcasting station facilities are set forth in the Department's *Broadcast Procedu and Radio Standards Specifications*. These documents form the basis for determining acceptability of applications for Technical Construction and Operating Certificates a for the control of the technical operation of broadcasting undertakings. The availabil of the technical facilities for broadcasting is subject to the terms of the North Ameri Regional Broadcasting Agreement, the Canadian–U.S.A. Television Agreement and Canada–U.S.A. FM Agreements.

Telesat Canada, a Corporation created by an Act of Parliament, June 27, 1969, responsible for Canada's proposed domestic communications satellite. It has a unic form of financing—the Government, designated Common Carriers, and the general pub will each be offered about one third of its shares. The Corporation reports to Parliam through the Minister of Communications. (See also p. 969.)

Licensing and Regulation of Radio and TV Stations.—Licensing is the Fede Government's method of maintaining control over radiocommunications in Canada. Un the Radio Act, radio stations (other than those used in broadcasting undertakings) e ploying any form of Hertzian wave transmission, including television and radar, are quired to be licensed by the Department of Communications, unless exempted by regulati There are six classes of radio station licence: Coast, Land, Mobile, Ship, Earth and Spa Various categories of service may be authorized under each of these classes; for examp Public Commercial Service, Private Commercial Service, Amateur Experimental, etc. T number of licences in force for radio stations in Canada in the year ended Mar. 31, 19 was 229,785 compared with 219,590 in 1967-68. These figures include stations opera by federal, provincial and municipal government departments and agencies, stations ships and aircraft registered in Canada and stations in land vehicles operated for b public and private purposes, but they do not include stations in the broadcasting serv Following are comparative figures for the licensing periods 1967-68 and 1968-69:—

Item	*1967-68*	*1968-69*
New applications received	30,878	28,823
Authorization granted	28,279	27,454
Licence amendments	34,985	24,431
Licence cancellations	10,970	17,093
Total licences in force	219,590	229,785
Net increase in licences in force over preceding year	27,741	10,195

Radio Standards in general are drawn up in consultation with the electronic indus and users of radio, taking into account such technical factors as those which affect f quency spectrum utilization, reliability of apparatus, and compatibility under conditi of service. To facilitate the development of standard specifications, and for test necessary to determine whether apparatus complies, the Department of Communicati maintains an engineering laboratory.

Licensing involves the assigning of specific frequencies to each station. Bands frequencies are allocated for various types of services, often on a shared non-interfere basis. Frequency selection, compatibility evaluation, recording and notification with International Frequency Registration Board (IFRB) of the International Telecommuni tions Union at Geneva are carried out to ensure efficient use of the spectrum. Assignme are made in keeping with international and domestic statutes and regulations, regio

eements and domestic policies. The IFRB is notified of frequency assignments for hnical examination and for inclusion, with appropriate "in-service" dates, in the inter- ional frequency list so that Canadian assignments will receive international recognition l be given protection from interference by foreign stations. "In service" dates are essary when determining prior right to the use of particular frequencies.

The enforcement activities of the Telecommunications Regulation Branch, Depart- nt of Communications, include the technical inspection of all radio stations including monitoring and measurement of their radiated signals to ensure compliance with the ulations and conditions of licensing; the location and suppression of radio interference; technical examination of candidates for the various classes of certificates of proficiency radio which must be held by the operators of radio stations; and the direction of prosecu- ns in the courts. These functions are carried out through personnel located at 34 radio ulations inspection offices, 10 fixed monitoring stations, seven mobile monitoring vehi- s, and six regional spectrum observation centres across Canada. Through decentrali- ion, the six regional offices share with headquarters in the direction of day-to-day acti- ies of the Telecommunications Regulation Branch, and the development of suitable grams and facilities for the recruitment and training of necessary technical personnel the Department.

deral Civil Telecommunications Services

The Department of Communications is made up of the Communications Research ntre formed from the Department of Defence Research Telecommunications Establish- nt, the Telecommunications Management Bureau transferred from the Ministry of ansport, and the Policy, Plans and Programs Branch. The work of the Research Centre nges from fundamental studies on materials and circuits to the design of advanced high- iability avionics and aerospace electronic systems. The Telecommunications Manage- nt Bureau is responsible for: (1) development of policy and plans with respect to national d international telecommunications by satellites, cables and other media including ations with the Canadian Overseas Telecommunications Corporation and participation the work of the International Telecommunications Union and its subsidiary organs; establishment and review of the telecommunications requirements of the Federal Govern- nt departments and agencies throughout Canada, and co-ordination of the planning d provision of faculties to meet these needs; (3) planning of emergency measures and ministration of the Emergency National Telecommunication Organization (ENTO); development and maintenance within the Bureau of a centre of competence in the latest ecommunications technology; and (5) administration of the Radio Act and Regulations luding allocation and assignment of radio frequencies, radio provisions of the Canada ipping Act, Ship Station Radio Regulations, the Telegraphs Act and the Regulations reunder covering the licensing of transoceanic cables.

Radio Aids to Marine and Aeronautical Navigation.—Federal services in aid of rine and aeronautical navigation are outlined in the following paragraphs; details may be tained on request from the Ministry of Transport, Ottawa. Six regional offices, located Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., d Moncton, N.B., carry out the construction and operations of the facilities.

Marine Navigation.—Radio aids to marine navigation are provided for radio-equipped nadian vessels and foreign ships using Canadian waters. This safety and communications vice for shipping covers the East and West Coasts, the Great Lakes, the St. Lawrence ver and Gulf, Hudson Bay and Hudson Strait and includes regularly broadcast weather orts, storm warnings and notices of danger to navigation. Ships at sea may obtain dical advice from any coast station. The stations carry out communications by radio- egraph and/or radiotelephone and most of them provide connections to land telephone

lines. Halifax (VCS) and Vancouver (VAI) stations provide long-range radiotelegr and radiotelephone services to ships. Coast stations on Hudson Bay and Hudson Str in addition to their regular services, provide commercial communications for posts of Hudson's Bay Company and various prospecting and development organizations, m weather observations, handle administrative traffic and assist aircraft with informati landing conditions, etc.

Automatic radiobeacon stations are maintained on the East and West Coasts, the Lawrence River and Gulf, the Great Lakes and Hudson Bay and Strait, giving navigatio aid to mariners by transmitting signals on which bearings may be taken. These stati are arranged, where possible, in groups up to a maximum of six stations transmitting sequence on a common frequency, the sequence being repeated continually regardless weather conditions.

Loran is a long-range radio aid to marine and air navigation providing accurate fi at distances up to 750 miles by day and 1,500 miles by night. Two Loran stations oper in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, conjunction with Loran stations of the United States Coast Guard, give service to sh and aircraft plying the North Atlantic and Pacific Oceans. *Decca* is a short-range ra aid to navigation providing accurate fixes at distances up to 250 miles. Four chains Decca stations are in operation—the Newfoundland chain, the Nova Scotia chain, t Anticosti chain, and the Cabot Strait chain—giving service to ships off Newfoundla and Nova Scotia and in the St. Lawrence River and Gulf.

It has become general practice to equip merchant ships with radar and import buoys are fitted with radar reflectors to increase their radar visibility. A shore-based rac installation is in operation on the Lion's Gate Bridge across the entrance of Vancou Harbour. A radar transponder beacon is in operation during the navigation season Tuktoyaktuk, N.W.T. Low power transceivers are provided for use in emergencies lighthouses, particularly at locations that would otherwise be completely cut off fr assistance in case of illness.

Aeronautical Navigation.—Radio aids to air navigation are provided by the Minist of Transport from coast to coast and from the United States border to the Arctic regio for use by Canadian aircraft and foreign air carriers flying over Canadian territory.

Low frequency radio aids operating on the frequency band 200-415 KHz are genera located within a distance of 50 to 100 nautical miles of each other to form the low frequen airways system. A few are located "off airways" in remote regions and a number of l power radiobeacons serve major airports as terminal and landing aids. The Ministry Transport operates 275 en route, low frequency aids (28 of which are the older type rad range class) and 56 low power terminal radiobeacons. These facilities are used primari in association with airborne direction finding equipment. Voice channels on a number low frequency aids are also used for aircraft communications and weather broadca purposes.

Operating on the higher frequency bands VHF (very high frequency) and UHF (ult high frequency), the Ministry of Transport operates 55 VHF Omni-directional Rang (VOR), 56 Instrument Landing Systems (ILS) and 30 Tactical Air Navigation Syste (TACAN).

The VOR stations form the VHF airways system which closely parallels the older lo frequency airways system. Use of the VOR permits a pilot to select any desired cours Additional VOR stations are being constructed on a continuing basis. TACAN stations a collocated with the VOR at 30 locations. The TACAN provides the pilot with a readou of the distance of the aircraft from the VOR station. The complete station is called VORTAC.

Instrument Landing Systems (ILS) provide radio signals which permit aircraft landin during periods of low visibility. Radio transmitters provide lateral and slope guidance the approach end of the runway and also provide an indication of the distance to the runwa

reshold. For air traffic control purposes, there are three main classes of radar in operation Canadian airports consisting of: 16 airport and airways surveillance radars (AASR) h a range of 150 nautical miles; seven airport surveillance radars (ASR) with a range of nautical miles; and nine precision approach radars (PAR), which are short-range radars d for landing at major airports.

Radiotelephone communications are provided by 117 ground stations. From these tions, a pilot may obtain weather data, air traffic control instructions and other informa- n concerning flight safety. These stations operate for the most part on the very high quency (VHF) band but in the north and on international routes high frequency (HF) utilized to provide the necessary long-range coverage. Fourteen of the 117 stations gage in international communications services for Canadian and foreign air carriers. these ground stations are connected to a fixed teletype network with over 48,000 circuit les provided to meet aeronautical communications needs.

Meteorological Communications.—Weather stations operated by the Canadian eteorological Service of the federal Ministry of Transport are linked coast-to-coast by eans of teletype and, in the remote northern areas, by radio or radioteletype. These d other services provided by the Meteorological Service are described in detail at pp. 30-34.

Subsection 4.—Overseas Telecommunications Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to aintain and operate external telecommunication services for the conduct of public com- unications by cable, radiotelegraph and radiotelephone and any other means of tele- mmunication between Canada and overseas points; to make use of all developments in ble and radio transmission and reception for external telecommunication services; and conduct investigation and research with the object of improving and co-ordinating such ecommunication services with the telecommunication services of other nations.

The services currently being provided are as follows: direct telegraph, telephone and ex communications between Canada and Argentina, Australia, Austria, Barbados, lgium, Bermuda, Brazil, Britain, Chile, Cyprus, Denmark, Finland, France, Germany, reece, Hong Kong, the Irish Republic, Iceland, Israel, Italy, Jamaica, Japan, the Nether- nds, New Zealand, Norway, Peru, the Soviet Union, Sweden, Switzerland and Trinidad d Tobago; direct telephone and telegraph services with the Islands of St. Pierre and iquelon; direct telephone with Antigua, South Africa and Spain; and direct telex with rtugal and the Philippines. Datel 600 service is in operation between Canada and itain and Switzerland. International telex service is provided with 160 countries.

The first transatlantic telephone cable, a joint project with the British Post Office, the merican Telephone and Telegraph Company, Eastern Telephone and Telegraph Company d the Corporation, was brought into service in 1956. Since 1961, the following cables ve been brought into service: the Canada–Greenland–Iceland 24-circuit telephone cable CECAN)—a two-party enterprise of the Great Northern Telegraph Company of Denmark d COTC; the Canada–Britain 80-circuit telephone cable (CANTAT); the Common- alth Trans-Pacific 80-circuit cable—a four-party enterprise of Canada, Britain, New aland and Australia, connecting Vancouver and New Zealand and Australia via Hawaii d Fiji (COMPAC); the South East Asia Commonwealth 80-circuit cable—a six-party terprise of Canada, Britain, New Zealand, Australia, Malaysia and Singapore, connecting ustralia, Hong Kong, Singapore and Kuala Lumpur via New Guinea and Guam (SEA- OM), the CANTAT, COMPAC and SEACOM cables collectively forming part of the und-the-world Commonwealth Telephone Cable System; and a number of circuits for

Canadian purposes have been acquired in telephone cable systems connecting Bermuda a the United States and Jamaica and the United States. Currently under construction i large-capacity telephone cable between Nova Scotia and Bermuda (CANBER).

The Corporation also operates direct circuits via the Atlantic satellite with Argenti Austria, Belgium, Brazil, Britain, Chile, Denmark, France, Germany, Greece, Italy, t Irish Republic, Israel, the Netherlands, Peru, Spain and Switzerland. The earth stati constructed for the Ministry of Transport at Mill Village, N.S., for research and expe mentation with respect to satellites was brought into service in 1966 for commercial use a carried 240 telephone circuits for North American–European traffic via INTELSAT (Early Bird). The Corporation's own earth station, Mill Village 2, came into service March 1969 and operates with the larger capacity satellites of the INTELSAT III seri which have replaced INTELSAT I. The experimental station serves as a standby f commercial operation purposes. The Corporation at present operates direct circuits v the Pacific Satellite with Australia, Hong Kong and Japan through the American-own earth station at Jamesburg, California, pending the erection of its own earth station Vancouver Island.

Apart from normal use of its system for public telephone, telegraph message traffic a telex service, capacity is available for private leased circuits.

Canada, represented by Canadian Overseas Telecommunication Corporation, is member of the Interim Communications Satellite Committee (ICSC) set up by the parti pating nations for the development and operation of a global communications satelli system. The Corporation also represents Canada on the Commonwealth Telecommunic tions Council.

The Corporation, under a long-term agreement, has under charter from the Ministry Transport the CCGS *John Cabot*, a combined ice-breaker/cable repair ship, used mainly f repairing the cables in the western North Atlantic Ocean. The Corporation also operat a cable depot at St. John's, Nfld.

Increased use of all types of overseas telecommunication services resulted in th COTC reporting a net profit of $6,132,444 for the year ended Mar. 31, 1970. Income f the year amounted to $33,155,103.

Section 2.—Radio and Television Broadcasting*

Since the opening program from the first radio station was beamed into a few Montreal mes in 1918, radio and television programming has become a prominent part of daily life almost every Canadian. To have become such a force in the life of the nation, broadsting had to learn the needs of the people and how to serve them. Two official languages rming two distinct cultures had to be served independently and dozens of other smaller ups, distinct in culture and frequently dwelling in the same radio or TV coverage area t in separate communities and with divergent program interests, also had to be served. ysical problems of distance and geography had to be overcome. It requires some ndreds of radio transmitters and TV stations and satellites to reach a population disuted across a 4,000-mile southern frontier, through seven time zones and a variety of ographical and climatic regions, and scattered northwest through thousands of square es to the shores of the Arctic Ocean. Not only do these people have local service that a reflection of life in their own districts but, by means of thousands of miles of land-lines radio networks and microwave circuits for television, nearly every Canadian may, at e same time, listen or watch as an event of national or international interest takes place.

The broadcasting system in Canada comprises public and private components. The ic principles for broadcasting, both radio and television, are laid down in the Broadting Act of 1968, with the direction of broadcasting in the hands of the Canadian Radioevision Commission (CRTC). The Commission, established in 1968 to replace the ard of Broadcast Governors, regulates and supervises all aspects of the broadcasting tem, except for technical matters relating to the planning for and the construction of adcasting facilities for which the Minister of Communications is responsible. An licant for licence to establish and operate an AM, FM or TV broadcasting station, a mmunity antenna television system (CATV) or a network files completed application ms with the Secretary of the CRTC. If found technically acceptable by the Commission, ublic notice is issued in the *Canada Gazette* and in one or more newspapers of general culation within the area served or to be served by such station or system. The same cedure applies to an application for renewal or amendment of an existing licence. The TC is composed of five full-time Commissioners and ten part-time Commissioners resentative of the various regions of Canada.

The Canadian Broadcasting Corporation, a publicly owned corporation established by of Parliament, provides the national broadcasting service in Canada. Its radio and evision facilities extend from Atlantic to Pacific and into the Arctic Circle. The CBC, ated in 1936 to replace an earlier public broadcasting agency that had operated since 2, is financed mainly by public funds voted annually by Parliament but supplementary enue is obtained from commercial advertising (see p. 986). Head office is in Ottawa the main production centres are in Toronto for English networks and in Montreal for nch networks. Regional centres operate across the country.

Radio.—Despite the impact of television, radio remains an important means of comnication for Canada's population, although its role has changed considerably. The C networks continue to provide a wide variety of programming to a national audience much of the listening is concentrated on the large number of private local stations. The us of attention has shifted from the group-listening that prevailed in pre-television days he individual listener in the home, the automobile or out-of-doors. Programming has changed, much attention now being given to music, news and weather and to a style t is intimate, relaxed and spontaneous.

Of all households in Canada, 97.4 p.c. are equipped with radio. In about half of them re is more than one set and often, in addition, there is a radio in the car and one or more table transistor sets. It is estimated that there is about one radio set for every two sons. To serve this audience, there is an English-language and a French-language radio work, both operated by the CBC, and also a considerable number of privately owned

* Prepared by the Canadian Radio-Television Commission.

radio stations, some affiliated with the CBC networks and some serving an entirely loc function. Of the 312 AM stations in operation, 34 are owned by the CBC and 278 a privately owned. The English network consists of 26 CBC stations and 61 private statio affiliated with it; the French network is made up of seven CBC stations and 34 priva affiliates. The more than 200 unaffiliated private radio stations perform a basically loc community service. Of the 77 FM stations, six are operated by the CBC and 71 a privately operated. The private stations are financed entirely from advertising revenu

In addition to a coast-to-coast English network and a French network that reaches large proportion of the country's French-language population in eight of the ten provinc the CBC provides regional and local services. Its networks extend over more than 21,0 miles. It has its own news service and offers a wide variety of programs in informatio public affairs and entertainment. Three special services—the international service, t northern service and the Armed Forces service—are outlined on pp. 984 and 985.

Television.—Television programming began in Canada in 1952. Of 5,460,000 hous holds in the country, 5,250,000 are equipped with one or more television sets. Colo broadcasting, which began in 1966, is rapidly gaining in popularity. Of three televisi networks, two are operated by the CBC, one in English and one in French. The 5,000-m microwave network that links St. John's in Newfoundland to Vancouver Island and t Pacific Northwest is one of the longest in the world. The second English network, CTV, composed of 16 privately owned stations and 30 affiliated stations; it reaches over half the homes that have television in Canada and continues to increase its coverage.

As of June 1970, Canada had 128 originating stations, including 18 frontier packa stations, and 232 rebroadcasting transmitters. The CBC owned and operated 59 statio and 52 rebroadcasting transmitters and provided a substantial proportion of its nation programming service through 48 privately owned stations which, with their 144 rebroa casting stations, were affiliated with it. Six private stations are not affiliated with a network.

From the start, the development of Canadian television was complicated by geograp cal and language factors. About 50 p.c. of the people of Canada live near the United Stat border and have available to them programs broadcast by one or all of the major Unit States networks. This fact and the need to maintain a Canadian identity and to articula Canadian interests contributed to the rapid development of Canadian television servic It was also important that French-language television services be quickly developed f that considerable portion of the Canadian population whose mother tongue is French. a result of this rapid development, Toronto and Montreal rank among the world's princi television production centres in the English and French languages, and Vancouver, Winnip Ottawa, Quebec, Halifax and St. John's have become regional production centres. Of t 17 CBC stations, 12 broadcast in English and five in French. Of the 59 private statio 33 English-language and nine French-language stations are affiliated with the CBC. Th are 12 private English-language stations affiliated with the CTV network and one Englis language and three French-language stations operate independently.

Canadians at present view live television programs from overseas by means of Unit States communication satellites but in 1969 Telesat Canada, an organization jointly own by the Government, the common carriers and the public, was established for the purpose putting a Canadian satellite in space (see p. 969).

Cable.—Basically, cable television is an antenna system linked to the individu subscriber's set by cable through a series of amplifiers, making it possible to bring the su scriber signals he could not otherwise obtain. Cable systems are also capable of carryi FM and AM radio signals. For this service the subscriber customarily pays an installati fee and a monthly rental of about $5 a month. Systems range from those with a f hundred subscribers to several with more than 30,000. Annual revenues of the cab systems at present run between $50,000,000 and $60,000,000 a year and are growing rapid

Cable television is recognized as part of the Canadian broadcasting system and policies l regulations that concern it must take into account the effects on other aspects of the tem. Cable systems (CATV) are operated by private companies each of which must be roved technically by the Department of Communications and licensed by the CRTC. e Commission recently decided to not license broadcasting receiving undertakings based the use of microwave or other technical systems for the wholesale importation of pro- ms from distant United States stations and thereby the enlargement of the Canadian ience and market areas of United States networks or stations, but to give particular ntion and help develop original programming. This decision rested on the conviction t there is in Canada the talent and the ability in the various fields of expression and wledge to make effective use of a complex communication system.

According to CRTC policy, cable television systems must give priority to Canadian work signals, independent Canadian stations and locally originated programming, uding educational broadcasts. Non-Canadian channels have a lower priority. Adver- ng is not permitted on cable systems, except advertising that is part of TV station adcasts picked up by the system. The expenses of local programming must come from scriber revenue.

As of Sept. 1, 1969, there were 317 cable television systems operating in Canada, ving 22.6 p.c. of all urban households in the country. This coverage represented a p.c. increase over the preceding year.

erations of the Canadian Broadcasting Corporation, 1969-70*

Programming.—In 1969-70 the CBC began to implement plans for an increase in adian programming. Although CBC schedules had always been predominantly adian, the rising costs of television had led to a greater dependence on commercial enue, and thus to prime-time scheduling on the English network of many of the mass- eal United States entertainment programs which are attractive to advertisers. The 0 schedules of the CBC's English television network included an additional seven hours eek of Canadian production, more than meeting the new "Canadian content" require- nts announced by the CRTC. The CBC planned to continue providing additional adian programs throughout its schedules over the next five years.

Among programs of particular interest during 1969 and 1970 were sports events such he NHL hockey playoffs, CFL football, the Canada Summer Games, Montreal Expos eball and the Commonwealth Games in Edinburgh; wildlife and conservation programs n in regular series and in specials such as "The Dying Waters"; news and documentary ures on China, Viet-Nam, the Canadian North, the Quebec Liberal leadership convention the Quebec provincial election; live coverage from Japan of Canadian participation in o 70; and programs on the Manitoba Centennial celebrations and the Royal visit to the thwest Territories and Manitoba. Special events relayed through other broadcasters uded the Apollo moon missions and landings, and the investiture of the Prince of Wales. our telecasting was increased during the year to an average of 55 hours weekly on the lish network and 51 hours weekly on the French network.

In radio, the CBC conducted a comprehensive study of its French and English services, recommendations for changes to meet the needs of the 1970s were submitted to the C Board of Directors.

The CBC continued to be the major employer of Canadian talent. During 1969, the poration's programs involved almost 30,000 Canadian artists, musicians, commentators, rs, actresses, and other performers. For these engagements the CBC paid out about 500,000 in talent fees.

The CBC Northern Service continued its medium and shortwave radio service to the ple of the Canadian North, and steadily increased its special programming for Indians

*Revised by the Supervisor of Audience Services of the Canadian Broadcasting Corporation.

and Eskimos, much of it in their own languages. Television in the North remained limi to the larger communities, served by means of videotaped program packages until t launching of the first Canadian communications satellite, *Anik*, expected to take pl within a few years (see p. 969). The CBC Board of Directors visited Northern Serv stations at Inuvik and Yellowknife in July 1970 and held public meetings to discuss t CBC service with local residents.

The CBC Armed Forces Service provided radio and television programs for Canadi forces personnel in Europe, Cyprus, Northern Canada and ships at sea, and arrange number of visits to Canadian Forces bases in Canada and abroad by groups of Canadi entertainers. Parts of the stage shows presented at these concerts were recorded a filmed for later broadcast.

Facilities and Coverage.—Nearly all Canadians are within reach of the CB national broadcasting service; CBC radio is available to about 98.6 p.c. of the populati and CBC television to about 96.6 p.c. The total number of public and private statio making up the CBC radio networks was more than 360 at Mar. 31, 1970. Outlets for t CBC television networks totalled more than 300. In those communities still unserv the CBC hopes to provide service as quickly as financial and technical resources permit.

During 1969-70, the CBC put into operation 17 new television transmitters, includi nine Frontier Coverage Packages providing taped service to isolated northern communiti and 19 new radio transmitters. Privately owned television stations were purchased Moose Jaw and Regina, enabling the CBC to provide full English network service and so local programming in southern Saskatchewan. Stereo broadcasting was introduced CBO-FM, the Ottawa station of the CBC-FM network. French-language television serv was extended to Edmonton with the opening in March 1970 of CBXFT, which also leas part of its program time for local educational programming in English. French-langua radio service was introduced in the Windsor area of Ontario through CBEF, which open in May 1970. A licence was granted for the CBC to provide and operate the techni facilities for a UHF television station in Toronto, opening in the fall of 1970, which wo transmit educational programs supplied and paid for by the Ontario Department of Ed cation.

Transmission and studio facilities were improved at a number of CBC locations, a work was in progress on a new production centre at Moncton. Construction was w advanced at Place de Radio Canada, future site of the CBC's scattered Montreal faciliti Plans for the expansion of shortwave transmission facilities at Sackville, N.B., were chan in the light of financial circumstances, and only two of the planned five new transmitt were expected to be operational by the original target date of 1971.

Negotiations were pursued with the newly created corporation Telesat Canada regardi the technical and financial aspects of CBC use of the planned Canadian domestic satell system.

Organization.—As part of a gradual administrative reorganization, CBC began t consolidation of its domestic broadcasting operations into two main language divisions: t French Services Division, centred in Montreal and responsible for domestic French-langua operations in all locations; and the English Services Division, centred in Toronto a responsible for all domestic operations in English. Formal implementation of the chan began in April 1970. The heads of these two divisions, and of the External Services Divisi formed earlier, report to the Executive Vice-President at the CBC head office in Ottaw Another organizational change in progress was the design of a computer-based Manageme Information System and a complementary PPBS (planning, programming and budgeti system) to increase the efficiency of CBC operations. In March 1970, CBC employe numbered about 8,950, a reduction from the previous year.

External Services.—During 1969-70, the CBC International Service (IS) marked its n anniversary. Daily shortwave broadcasts in 11 languages and totalling about program hours a week were beamed to Eastern and Western Europe, Africa, Australasia, in America, the United States and the Caribbean. They attracted an increasing ume of audience mail, and the quarterly program schedule was distributed to some ,000 listeners. For the third consecutive year, the German broadcasts of the IS were ed the most popular in the world by the Association of German Shortwave Listeners. rk was in progress on the Sackville development project, which provides for the eventual allation of five new 250-kw. transmitters. Recorded and taped programs of Canadian sic, documentaries and drama were distributed to radio organizations in more than countries. About 49,000 program hours of music were distributed by the transcription artment of the IS and some of these recordings were also released on the commercial rket in co-operation with various recording companies.

Sales of CBC programs to other countries included drama and ballet productions to T television in the United States; programs from the radio series "The Art of Glenn ld" to stations of the Educational Radio Network in the United States and to New land; popular drama and science series to television networks in Holland and Sweden; umber of music and drama programs to Britain, and the historical drama series Iberville" to various French-speaking countries. "Cinderella", a 1968 CBC television duction with the National Ballet of Canada, won a United States Emmy Award as the t classical music program of the year after its 1970 showing on the National Educational evision network in the United States.

During 1969 and 1970, the CBC was represented at the annual meeting of the Asian adcasting Union, was host for meetings of the Communauté des télévisions francophones the Communauté radiophonique des programmes de langue française, and participated he 8th Commonwealth Broadcasting Conference held in Jamaica. Radio and television productions were arranged with several foreign broadcasters in the areas of children's gramming, variety, music, opera, drama and documentary. A number of training achments with the CBC, some of them in co-operation with the Canadian International velopment Agency, were arranged for foreign broadcasting students.

The CBC acted as broadcasting consultant to the Canadian delegation attending a ESCO world meeting on satellite broadcasting in 1969, and continued to contribute to the t studies on satellites being prepared for the United Nations by Canada and Sweden. C liaison continued with other broadcasting organizations engaged in satellite broadting projects.

Finance.—Total operating expense for the year ended Mar. 31, 1970 was $208,033,000, increase of $11,500,000 or 5.9 p.c. over the previous year; this amount included ,182,000 for depreciation and amortization not recoverable from the Parliamentary ment. An amount of $48,909,000 was obtained from revenue (mostly advertising enue which grossed $47,033,000), a significant increase over the previous year. Of the l Parliamentary payment of $166,000,000, an amount of $148,942,000 was applied to et net operating expenditures, and $5,065,000 was applied to repayment of capital loans; surplus of $11,993,000 was carried forward to meet future operating expenditures. pital assets, after accumulated depreciation, totalled $115,000,000.

As a Crown corporation, the CBC was affected by Government budget restraints ing 1969 and 1970. The Parliamentary payment for operating the national broadting service in 1970-71 was frozen at the 1969-70 level, leaving commercial revenue as CBC's only means of increasing its income to meet rising costs and provide for additional

Canadian production. The problem was partly eased when the Government agreed to wording in the Appropriation Act for 1969-70 which made it possible for the Corporation carry over into 1970-71, as a reserve, the $12,000,000 it was able to save in 1969-70.

Statistics of the Broadcasting Industry*

Financial and other statistics of the radio and television broadcasting industry ar obtained by the Dominion Bureau of Statistics in co-operation with the Canadian Radi Television Commission; summary figures for private and CBC sectors are given in Table for the year 1969.

In 1969, 329 private radio stations and 67 television stations reported to DBS. Th operating revenue of the broadcasting industry for the year amounted to $252,506,891, a increase of 12.0 p.c. over 1968. Of the total, radio broadcasting accounted for $110,066,43 or 43.6 p.c. and television broadcasting for $142,440,456 or 56.4 p.c.; in 1968, radio receive $97,543,936 or 43.2 p.c. and television $127,987,695 or 56.8 p.c. Revenue from nation and network time sales represented 61.4 p.c. of the total broadcasting revenue and revenu from local time sales 38.6 p.c.; national and network time sales increased by 11.1 p.c local time sales by 15.5 p.c. and other incidental operating revenue by 1.0 p.c. over 196 Operating expenses in 1969 at $381,953,728 were 11.9 p.c. higher than in 1968. The growth revenues exceeded the growth of expenses and resulted in an operating profit of $36,623,16 in 1969 compared with one of $29,901,202 in 1968. After adjustment on account of othe income and expenses and income taxes, the final net profit of the private sector of the broad casting industry in 1969 was $17,744,962 compared with $17,107,000 in 1968.

[1] After deducting advertising agency commissions and trade discounts. [2] After deducting line and service arges. [3] The CBC charges its operations with depreciation. The charge so made has been added to the rliamentary grants.

Statistics of the Community Antenna Industry.—In 1967, for the first time, th Dominion Bureau of Statistics published statistics on the CATV industry in Canad summary results of which are given in Table **10**. The industry registered an increase i revenue in 1969 over 1968 of 19.5 p.c. from $31,285,513 to $37,379,909. Of the 1969 tota revenue from monthly service charges accounted for $33,440,283 or 89.5 p.c. A $4,844,25 increase in operating expenses in the later year was attributable mainly to an increase o $2,178,136 for salaries, wages and bonuses. However, operating revenue exceeded expense resulting in an operating profit of $6,101,492 as compared with a profit of $4,851,348 in 196

10.—Revenue, Expense and Employee Statistics of the CATV Industry, 1967-69

Section 3.—The National Film Board*

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950—its function "to initiate and promote the production and distribution of films in the national interest" The Board's films are produced in Canada's two official languages and, during the thirty years of production, have made a considerable contribution to the country's culture and to the national identity.

* Statistics relating to the over-all motion picture industry in Canada are given in Chapter XXI, pp. 1019-1021.

In addition to 35mm and 16mm films, the Board produces and distributes other visual s materials—filmstrips, 8mm loop films, slide sets, overhead projectuals, multi-media s and photo stories.

The growing sophistication of film audiences and the increasing importance of film as neans of communication are reflected in the nature of films produced—features, documen-ies, informational films, films for the specific needs of government departments, and films signed for particular social purposes. The Board strives to serve as innovator of new ema techniques, as well as a recorder of the nation's day-to-day evolution. Thus, new eds and greater public sensitivity have encouraged the Board's film-makers to explore w filmic styles and to experiment in new areas of film production. There have been responding new departures in the distribution and use of films, as more people turn to ns as a matter of course for information and assistance in many activities.

In Canada, the Board's productions are distributed through community outlets, ools and universities, television stations, theatres and commercial sales. In all of these as annual figures show a steady, in some instances a marked, increase. A large part of 16mm community film audience is reached through film libraries, film councils and special erest groups. The growing appetite for films can be attributed to the wide range of oject matter available. The Board's catalogue, produced by its Publicity Division, lists ne sixty main and sub-categories. Original films are shown regularly over English-guage and French-language television networks in Canada as well as in cinemas, mainly ough the Columbia Pictures chain.

Distribution outside Canada has also continued to increase. Films abroad may be ained through the Board's offices in London, Paris, New Delhi, Tokyo, Buenos Aires, w York, and from posts of the Departments of External Affairs and of Industry, Trade l Commerce. Recent figures show a total world audience exceeding 60,000,000 from latter sources alone, and exhibition in cinemas in over 100 countries. Films are sioned in more than 40 languages to increase their usefulness in foreign countries. Part he Board's external distribution program is in support of Canada's tourist industry and this end it distributes, particularly in the United States, films produced by provincial vernments and companies engaged in the travel industry.

The Board, in its mandate to "interpret Canada to Canadians and to the rest of the rld", seeks to reflect the interests of the Canadian people and those shared with other ple around the world. That demand for the Board's films grows by about 33 p.c. a r would indicate that this mandate is being fulfilled.

Section 4.—Postal Service

The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal tter with speed and security, for which duties it maintains thousands of post offices and lizes air, rail, road and water transportation facilities. Associated functions include the e of stamps and other articles of postage, the registration of letters and other mail for patch, the insuring of parcels, the accounting of COD articles and the transaction of ney-order business. Also, because of its transcontinental facilities, the Post Office sts other government departments with such tasks as selling unemployment insurance mps and hunting permits, collecting government annuity payments, distributing income forms and Public Service employment application forms, and displaying government ters.

Post offices are established wherever the population warrants. Those in rural areas l small urban centres transact all the functions of a city office. In larger urban areas, tal stations have full functions similar to the main post office, including general delivery vice, lock-box delivery and letter-carrier delivery. Much sophisticated automatic ipment has been installed in Canada's larger post offices, which could be described as

complex semi-automated plants. Such devices include conveyors and chutes, parcel and bag sorting machines, photo-electric counters, intercom systems, observation gallery telephone systems and industrial music. Outside the post office building, mailmobiles, automatic stamp-vending machines and curbside mail boxes are in use.

The operating service of the Post Office Department is organized into four regions, each headed by a General Manager reporting directly to the Deputy Postmaster General. The regions are further divided into districts, each headed by a District Director. The operating and support functions required in the provision of postal service to the public are the responsibility of the local postmasters who receive technical and administrative assistance from district and regional offices at strategic points.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont., in the south, to settlements and missions far into the Arctic. Canada's airmail system utilizes most transcontinental flights, supported by many branch and connecting lines, and links up with the United States domestic and other international airmail systems. First class domestic mail is carried by air between Canadian points, whenever delivery can thus be expedited. Air stage routes provide an all-class mail service to many northern areas which can only be served by air. There are over 46,000 miles of airmail and air stage routes.

At Mar. 31, 1970, there were 9,575 post offices in operation; letter-carrier delivery was being provided in 245 urban areas and 5,220 private contractors were delivering mail to 731,544 rural and suburban households. In 1970, there were 644 city mail services transporting mail between post offices and postal stations, collecting mail from street letter boxes and delivering parcel post, and some 441 side services were transporting mail between post offices and railway stations, wharves and airports. Intercity transportation of mail by highway motor vehicles was being conducted by 626 major services, complemented by 1,117 feeder or stage services operating to and from smaller centres. Although many of the highway services have replaced rail for the transportation of mails, rail remained the principal mode for long-distance movements of other than first-class matter.

Revenue and expenditure of the Post Office Department for the five years ended Mar. 31, 1970 are shown in Table **11**; gross revenue receipts are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions.

11.—Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1966-70

Year Ended Mar. 31—	Revenue	Expenditure	Deficit
	$	$	$
1966	285,100,000	315,800,000	30,700,000
1967	305,400,000	353,100,000	47,700,000
1968	337,023,000	404,214,000	67,191,000
1969	374,902,000	465,233,000	90,331,000
1970	444,069,000	497,017,000	52,948,000

In the year ended Mar. 31, 1970, post office money orders, issued for any amount not exceeding $100 and payable in almost any country of the world, were sold at 9,078 post offices and money orders payable in Canada only, for amounts not exceeding $15.99, were

l at some 427 additional post offices. During the year, 50,656,428 money orders were ıed having a value of $1,005,774,964, of which $978,491,340 was payable in Canada and ,283,624 was payable in other countries. The value of money orders issued in other ntries and payable in Canada was $8,234,306.

Section 5.—The Press*

The freedom of the public in Canada is strenuously exercised by an omnipresent press. ily newspapers published in the country in 1970 numbered 120, counting morning and ning editions separately. Combined circulation was about 4,572,000—84 p.c. in glish and 16 p.c. in French. Publishers' surveys show that each newspaper is read by average of three persons.

Daily newspaper advertising revenue in 1968 was $260,072,060 and circulation revenue s $97,259,000. By comparison, advertising revenue of 319 private radio stations in nada in 1968 was $93,389,000 and of 68 private television stations $88,566,000. In 1970, re were 14 daily newspapers with circulation in excess of 100,000, accounting for about p.c. of total circulation. There were 12 dailies published in the French language, 10 of m located in Quebec. Although the circulation of daily newspapers blankets the more ɔulous areas well beyond publishing points, smaller cities and towns and rural areas also served by 818 weekly newspapers catering to local interests and exercising important al influence. The Canadian society is also enriched by 89 ethnic daily or weekly news- ɔers published in many languages, often sprinkled with English.

About 60 p.c. of Canada's daily newspapers are privately owned or independent. ere are three major newspaper chains in the country, owned by Southam Press Ltd. dailies), Thomson Newspapers Ltd. (27 dailies) and FP Publications Ltd. (eight dailies). th Southam and Thomson Newspapers are publicly owned companies with shares traded Canadian stock exchanges. Papers in the Thomson chain are concentrated in the smaller es. FP accounts for about 19 p.c. of total daily circulation, Southam for 18 p.c. and omson for about 8 p.c.

In addition to their own news-gathering staffs and facilities, Canadian newspapers ɔscribe to a number of syndicated agencies and wire services, the largest being The nadian Press which is a co-operative agency owned and operated by Canadian dailies. rgely by teletype and wirephoto transmission, it provides its 102 member newspapers with rld and Canadian news and also serves weekly newspapers and radio and television tions. CP has its own news-gathering staff and each member newspaper provides the ency with important local news for transmission to fellow members and members share e cost in ratio to their circulations.

CP carries world news from Reuters (the British agency), from Associated Press (the ited States co-operative) and from Agence France-Presse (of France) and these agencies e offered CP news on a reciprocal basis. CP maintains a French-language service in ebec.

United Press International of Canada, the second major news wire service in Canada, private company and a part of United Press International World Service. It provides nadian and international news and pictures to about 40 subscribers in Canada and is an let for Canadian news through United Press International facilities throughout the world. tain foreign newspapers maintain bureaus in Ottawa and elsewhere in Canada to collect l interpret Canadian news.

* An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 circa) 1900. A second article appearing in the 1959 edition brings that account up to 1958.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising*. Circulation figures are given for daily English-language and French-language newspapers only. Such circulation figures are relatively easy to obtain because, in their own interest, newspapers qualify for and subscribe to the Audit Bureau of Circulation. For these, ABC 'net paid' figures have been used; 'controlled' (free) distribution newspapers are not included. On the other hand, circulation data for foreign-language newspapers, weekly newspapers, weekend newspapers and magazines are incomplete and therefore not usable.

Revenue from Printing and Publishing.—One of the industrial groups for which formation is collected by the DBS in its annual Census of Manufactures is the printing, ıblishing and allied industries group which includes establishments engaged primarily in ıe publishing and printing of newspapers, magazines, periodicals, books, almanacs, maps, ıides and the like, as well as establishments printing such publications for publishers, ıblishing firms that do no printing, and engraving, stereotyping and allied industries. f interest in connection with press statistics is the amount of revenue received by these dustries from advertising and from subscriptions or sales, which is given for the years 967 and 1968 in Table **16**. Additional data on manufacturing activity of this industrial roup are included in Chapter XVI on Manufactures.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad in terms of scope, complex in terms of activity, and volatile in the forms it takes. It encompasses all values added to commodities by agencies and services connected with the warehousing, distribution and sale of goods within each province as well as between provinces. Domestic trade is engaged in or facilitated by manufacturers, wholesale and retail establishments, mail-order houses, service trades, warehouse operators and other distributors, and by such "outside" agencies as banks, insurance companies, railway and trucking companies, advertising agencies and market research houses.

In recent years, a considerable degree of interest and speculation has been focused on the service trades, which embrace a wide spectrum of activities engaged in by professional, business and personal service establishments. Included also are the amusement and recreation services, which include regular and drive-in movie theatres, bowling alleys, health clubs, golf courses, race tracks and other sports activities, and the fast-growing accommodation and food service fields, comprising hotels, motels, tourist facilities, restaurants and drive-in "fast food" outlets.

The degree of interest being shown in the services field is further indicated by the number of trades to be surveyed for the first time in the 1971 Census. These include, in the amusement and recreation services group, marinas, ski facility operators, driving ranges and miniature golf courses; and, in the business services group, computer services, media representatives, architects, professional engineers and other engineering and scientific services, lawyers and notaries, and management and business consultants. However, services provided by doctors, dentists, nurses, hospitals and educational institutions remain outside the scope of the Census of Merchandising and Services.

Only certain phases of the broad and ever-widening field of domestic trade (mainly e retail, wholesale and service trades) are covered in this Chapter but, wherever possible, ferences are given to related material appearing elsewhere in this publication. The rangement of material in a volume such as the Year Book is governed by the necessity interpretation from various perspectives. The Index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

Data on merchandising and service establishments are derived principally from a riodic census (or full-coverage survey) of such business establishments. The first census as taken in 1931, followed by similar censuses in 1941, 1951 and 1961. The reports for 61, which provided a wider range of data than any previous census, contained information sales, inventory and credit; gross margins and operating expenses; small geographic area ta; and, for "establishments" only (definition below), an analysis of sales by commodities.

The 1961 Census marked the end of the decennial census program. Commencing with 66, the censuses of merchandising and service establishments became part of a quin- ennial series in order to provide more frequent survey benchmarks and to enable publi- tion of more up-to-date statistics than was previously possible. Subsection 1 gives mmary results of the 1966 Census, covering retail and service trades.

Each census, as it is completed, forms a new base for the various intercensal (monthly, arterly and annual) surveys of retail, wholesale and service trades; some are sample rveys and others are carried out on a full-coverage basis. Subsection 2 contains current tercensal information obtained as a result of these surveys, relative not only to the dis- butive trades but to other statistical series (i.e., consumer credit) as well. It should be ted that most of these data have now been converted from a 1961 to a 1966 base. Where visions have not yet been completed, the data may be secured, as they are compiled, from e Merchandising and Services Division.

Subsection 1.—1966 Census of Merchandising and Services

etail Trade†

The results of the 1966 retail trade census, particularly in the smaller geographic areas, flect the changes—both institutional and definitional—that took place between 1961 and 66 in the structure of retailing. The advent of new shopping areas, whether in the form planned multi-purpose establishments or as single, highly diversified stores, had a signifi- nt effect on retail trade. So, too, did urban redevelopment and the construction of new tail outlets outside the corporate boundaries of cities and towns.‡

Although no classification changes were made during the 1961-66 period which could ve altered the scope of retailing, there were a number of definitional changes *within* e retail universe that affected the comparability of certain statistical series (see Table 1) 1966. In addition, two new classifications were created, further complicating e problem of direct comparison with earlier data. Details of the changes are as follows:—

1. In order to more accurately describe the realignment of activities that had taken place within retail food stores during the mid-1960s, a new classification of "grocery, confec-

* Prepared in the Merchandising and Services Division, Dominion Bureau of Statistics.

† *1966 Census of Canada*, Vol. VI, *Retail Trade* (location series, Catalogue Nos. 97-602 to 97-606; establishment es, Catalogue Nos. 97-607 and 97-608). For the purpose of the census, a *location* is defined as "a recognizable place usiness in which the principal activity is the display and sale of goods to the general public for personal or house- d consumption". In other words, the location series provides aggregate data on the physical locations in which iling activities actually take place. The *establishment*, on the other hand, is "the smallest unit which is a separate rating entity capable of reporting those elements of input and output necessary to the calculation of gross margin, well as employment, wages and salaries". The location is *not* dependent on the system of accounting; the estab- ment is.

‡ For purposes of analysis and research, the reader is referred to DBS *Market Research Handbook*, 1969 ed. (Cata- ue No. 63-514), published by the Merchandising and Services Division. This volume contains detailed informa- , particularly for small geographic areas, on population, housing, income, agriculture, manufacturing, and the il and service trades.

tionery and sundries stores" was introduced. This classification largely replaced the o "confectionery stores" category (the remainder of which was then combined with "canc and nut stores") and encompassed as well an unknown number of stores formerly classifi as "grocery stores, without fresh meat". Although this change affected the internal distr bution of "food stores", the group as a whole remains comparable with the 1961 results.

2. A major change in definition occurred in the department store category, details of whi may be found in *1966 Census of Canada*, Vol. VI, "Retail Trade: Introduction and Gener Review", Catalogue No. 97-601. Briefly, the data now reflect a "pure" department sto concept, both at the *location* and *establishment* levels. All non-department store activitie including mail order and catalogue sales offices, have been reclassified to more appropria kinds of business, i.e., general merchandise stores, women's clothing stores, etc. An i portant change in treatment was accorded the sales of concessions located in departme store outlets. Prior to 1966, concessions were tabulated and counted as separate "stores" their own kind of business; as a result of the new definition, however, sales of concessio were generally included *in the total business of department stores in which they were situate* These changes make direct comparison with related trade results in 1961 either difficult impossible.
3. Another new census classification introduced in 1966 was "home and auto supply stores", which no one commodity group can account for more than 50 p.c. of total sales. The stores can be added to the more specialized classification from which they stemme "accessories, tire and battery stores", in order to achieve comparability with 1961.

Table 1 shows the growth in retail trade from 1961 to 1966, stratified by kind-o business groups (used in intercensal surveys) and giving a comparison of 1966 data (when calculated using 1961 definitions, (2) as published, and (3) with post-censal corre tions included. Table 2 gives summary data on retail trade by kind of business in 196 figures for urban centres of 30,000 population or over are published in DBS Bulletin *196 Census of Canada, Retail Trade,* (Catalogue No. 97-602).

The establishment series, as noted earlier, is based upon record-keeping and the capa bility at the reporting unit to provide certain minimum types of information not normall available at the location level. Because it is based on the accounting entity rather than o the existence of a certain number of physical retailing locations, the establishment serie is related to other series within DBS and can be utilized as part of the system of nationa accounting. Table 3 provides information on sales of retail establishments by class c customer for kind-of-business groups and selected trades.

Service Trades*

Changes within the service sector of the economy can best be measured and analysed by comparing the results obtained in each census of merchandising and services because, at present, intercensal surveys provide only partial coverage of this large and diversified field. Consumer expenditures on services—at least, those considered within the scope of the census—have increased rapidly in recent years. Examination of the 1961-66 rates of change within the following key economic areas shows that the service trades have developed at a faster rate than most other important indicators:—

Indicator	*Rate of Change 1961-66*
	p.c.
Gross national product	+ 57.2
Personal income	+ 55.4
Service trades (location series)	+ 53.9
Personal disposable income	+ 50.7
Personal consumer expenditure	+ 43.5
Per capita personal income	+ 41.6
Retail trade (location series)	+ 41.1
Per capita personal disposable income	+ 37.3
Per capita personal consumer expenditure	+ 30.8

At their present rate of growth, the receipts of service trades covered by the census will have more than doubled in the period 1961-71. The areas showing the greatest potential for growth during this decade (Table 4) include services of business management, amusement and recreation services, and the hotel and restaurant group.

* *1966 Census of Canada*, Vol. VIII, "Service Trades" (location series, Catalogue Nos. 97-642 to 97-645; establishment series, Catalogue No. 97-647). For explanation of the terms "location" and "establishment", see footnote † p. 997.

Subsection 2.—Intercensal Surveys of Retail, Wholesale and Service Trades

tail Trade

The trend of retail trade is one of the most accurate barometers of the economic health d well-being of the nation. In 1969, retailers accounted for 54.2 p.c. of personal dis- sable income available to Canadians and 58.8 p.c. of total personal expenditure on sumer goods and services. The value of retail sales, estimated from intercensal sample veys (and revised every five years to a new census base*), increased by 20.4 p.c. during period 1966-69.

The current retail trade series shown in Table 5 reflects the many definitional changes opted for use in the 1966 Census. The new classification, "grocery, confectionery and dries stores", is included in the "grocery and combination stores" series; on the other nd, "home and auto supply stores" and "accessories, tire and battery stores" remain part the "all other stores" category. In addition, as described earlier, the department store inition was changed and this affected the variety store and general store series. Also, a v kind of business—general merchandise stores—was taken out of the miscellaneous res grouping and established as a separate series, commencing in 1966.

* Details of intercensal revisions may be found in *Retail Trade, Intercensal Revisions, 1961-66* (Catalogue No. 17—Part 1) and in *Retail Trade, Post-censal Revisions, 1966-69* (Catalogue No. 63-517—Part 2).

Chain* and Independent Stores.—Within the framework of retail trade, chains and independent retailers compete to achieve or retain a viable share of the total market. In some kinds of business, such as motor vehicle dealers, service stations and garages, food stores other than grocery and combination stores, and men's clothing stores, independent merchants have maintained a dominant position; in others, such as department stores, variety stores and general merchandise stores, chains account for the largest proportion of sales. In recent years, changes in market share have been most pronounced among women's clothing stores, grocery and combination stores, hardware stores, general merchandise stores and family clothing stores. The constantly shifting balance between chain and independent stores is shown in Tables 6 and 7.

* A retail chain is defined by DBS as "an organization operating four or more retail stores in the same kind of business under the same legal ownership". A concession located in a department store is *not* considered to be a store location for the purpose of this definition.

Department Stores.—In 1969, department stores accounted for a higher proportion total sales than most other kinds of retail businesses—exceeded only by grocery and mbination stores and motor vehicle dealers. Their sales of $2,723,200,000 represented rly 10 p.c. of *total* retail trade and 13.2 p.c. of the business done by competing firms (all des other than motor vehicle dealers, fuel dealers and parts of the "all other stores" ssification). Department store sales in 1969 were 38.0 p.c. higher than in 1966, the

largest increase among the 18 specified kinds of business (see Table 5). However, growt among the various departments within department stores has not been consistent, a Table 8 shows.

8.—Department Store Sales by Departments, 1966 and 1969

Voluntary Group Stores.—In order to stem the continuing encroachment of chain and department stores on their share of the market, independent retailers have turne increasingly in recent years to affiliation with a voluntary group organization. Throug such group affiliation, independent businessmen were afforded the opportunity to enjo many, if not all, of the benefits accruing to chain store firms—mass purchasing powe centralized buying, lower per-unit advertising costs and a number of important managemen services. As sponsors and/or suppliers of many voluntary groups, wholesalers also bene fited, particularly through the streamlining of their selling and order-filling systems.

The effects of voluntary group participation on the sales of retail store owners durin the 1967-68 period are shown in Table 9. For a number of reasons, affiliated retailer

net with widely varying degrees of success (as measured by sales comparisons with non-affiliated independent and chain store organizations) in the course of these years. Although independent variety stores in voluntary groups registered a decline of 3.3 p.c. in sales, the over-all experience of affiliated stores—both chain and independent—was far better than the results recorded by their non-affiliated competitors. In three of the four specified trades, non-affiliated independent stores showed the largest drop in sales and, in two of the four trades, affiliated independent stores showed the largest rise. The most dramatic changes occurred in the affiliated chain store sector, where sales increased at a faster rate than in any previous period—particularly in the drug and hardware kinds of business.

New Motor Vehicle Sales.—The largest homogeneous group of commodities sold within the confines of retail outlets is embodied in the classification "new motor vehicles". In the only current* survey of retail trade carried on at the commodity level (all others are based on "kind of business"), new motor vehicles are taken to include private passenger cars and taxis, trucks, buses, and other commercial vehicles sold at retail. As shown in Table **10**, sales of new motor vehicles in 1969 reached a new high of $3,322,879,000, based on the actual cost to purchasers (prior to 1967, the data were based on manufacturers' suggested list prices).

* DBS also produces—on an occasional basis (at present, once every five years)—a comprehensive report on *all* commodities sold in retail outlets. The most recent publication, *Retail Commodity Sales, 1968* (Catalogue No. 63-18), was released in February 1971.

10.—Retail Sales of New Motor Vehicles, 1960-69

Year	Passenger Cars		Trucks and Buses		Totals	
	No.	$	No.	$	No.	$
1960	447,771	1,289,073,000	75,417	285,754,000	523,188	1,574,827,000

1969	760,803	2,603,835,000	156,702	719,044,000	917,505	3,322,879,000

In recent years, the sales of overseas-manufactured vehicles—both passenger cars and trucks—have been increasing at a faster rate than those of Canadian and United States manufacture. In addition, the share of the new motor vehicle market held by overseas manufacturers has been rising apace; 1969 marked the third consecutive year of growth in the market share of new overseas vehicles. Table 11 shows new motor vehicle sales, by type of vehicle and by source of origin, for 1968 and 1969. It will be noted that one out of every seven new vehicles sold during 1969 was an overseas-built model, and that nearly one tenth of Canadian sales dollars went toward the purchase of such models.

11.—Retail Sales of New Motor Vehicles, by Type and Source, 1968 and 1969

Direct Selling.—Consumer goods, in addition to being sold in retail stores, often reach the household user through other more direct channels of distribution—commonly described as "direct selling". These channels are characterized by the fact that the commodities handled bypass the retail outlet completely in moving from manufacturer to distributor to household consumer. The DBS periodically carries out surveys of two distinct forms of direct selling: merchandise sales of vending machine operators, and of manufacturers* and distributors specializing in direct-sales methods.

Vending Machine Operators.—This survey is designed to measure the value of sales made through automatic vending machines owned or operated by vending machine firms, including soft drink bottlers engaged in vending activities on a regular year-round basis. In 1969, such sales reached a new high of $142,909,600, 12.5 p.c. above the 1968 total of $127.058,600. Although exact information on the number of vending machines and ancillary equipment used during 1969 is not available, the sample survey of that year indicated a possible total of 97,500 vending machines in operation—1,633 more than in 1968. It may be of some interest to note that there were 981 microwave and infra-red ovens, as

* See Manufactures Chapter, Sect. 2, pp. 794-799.

ell as 1,843 coin and bill changers, in use during 1968; if these numbers remained constant tween 1968 and 1969, the total of all machines in 1969 would have exceeded, for the first ne, the 100,000 mark.

12.—Vending Machine Operators, 1960-69

Year	Firms	Machines	Sales
	No.	No.	$
60	521	47,770	38,710,800
61	579	65,028	44,959,700
62	600	73,397	57,799,200
63	673	78,477	67,580,000
64	651	75,392	78,561,800
65	764	85,091	89,815,400
66	769	85,880[1]	107,539,600
67	790	93,441[1]	119,650,900
68	791	98,691[1]	127,058,600
69	[2]	[2]	142,909,600

[1] Includes microwave and infra-red ovens and coin and bill changers. [2] Not available; see text above *re* nple survey for 1969.

Although vending machines can be used to distribute many types of commodities, the gest proportion of sales has been accounted for consistently by three main lines: tobacco oducts; hot drinks; and cold drinks vended in bottles, cans, cartons and disposable cups. 1969, sales in these three product areas amounted to $114,049,200, an increase of 10.6 p.c. er the 1968 total. However, the over-all importance of tobacco products, hot drinks d cold drinks is declining. In 1960, these commodities accounted for 87.4 p.c. of all erchandise sold in vending machines; by 1969, this proportion had fallen to 79.8 p.c. mong commodities sold in vending machines, canned hot foods and canned soups, fresh ods and pastries showed the largest increases in market share during 1968-69.

13.—Value and Percentage Distribution of Sales by Vending Machine Operators, by Product, 1968 and 1969

Product	1968		1969

Direct Selling by Manufacturers and Specialist Agencies.—The first annual survey of rect selling, covering manufacturers and selected agencies specializing in direct-sales ethods, was taken in 1966. Table 14 shows that, over the four-year period 1966-69, such rect sales increased by more than 15 p.c., rising from $617,089,000 to $712,088,000. mong the industries surveyed, the largest share of sales was accounted for by manufac-rers and distributors of dairy products (23.6 p.c.); newspapers and magazines (18.0 p.c.); smetics (9.5 p.c.); books (8.2 p.c.); bakery products (7.2 p.c.); and electrical appliances

(7.0 p.c.)—nearly three quarters of all direct sales covered. The greatest growth, however occurred primarily in other areas: direct sales of kitchenware and appliances rose 62.4 p.c clothing, 55.4 p.c.; nursery seeds, stock and fertilizer, 42.9 p.c.; and cosmetics, 34.4 p.c.

The channels of distribution employed by direct sellers in 1969 were very similar those utilized in earlier years. As shown in Table **15**, door-to-door sales in that ye accounted for 72 p.c. of total sales, mail-order requests (excluding the mail-order busine of Canadian department stores) amounted to 19 p.c., and sales from manufacturers' premis were 6 p.c.; the remaining 3 p.c. was sold by various other methods of contacting the cu tomer.

Campus Book Stores.—As a supplement to its current retail trade series, the DBS s recently initiated a survey of book stores located on the campuses of universities and her post-secondary educational institutions. The pilot study was undertaken in the ring of 1969, covering the academic years 1966-67 and 1967-68, and a subsequent survey oduced a full range of data relating to the 1968-69 year. Table **16** provides summary ta on the sales of campus book stores for the three years.

holesale Trade

The sales of wholesale merchants,* as estimated in the course of a monthly sample vey of such establishments, have increased consistently over the past several years. 1969, they reached a new high of $18,046,000,000, nearly 6 p.c. above the $17,038,000,000 orded during 1968. Consumer goods wholesalers experienced a 6.9-p.c. increase in es, compared with a 5.1-p.c. rise for wholesalers of industrial goods. Only in the latter egory were there declines in any specific trades; the sales of coal and coke, grain and farm chinery wholesalers were all lower in 1969 than in the previous year.

Table **17** shows the annual sales of wholesale merchants in 26 kind-of-business groups during the period 1965-69. These data reflect changes in the wholesale trade series ught about by revisions to a 1964 benchmark, updating the figures from the previous 61) base. The intercensal revisions, parts of which are included here, were published a special report released by DBS in April 1969 entitled *Wholesale Trade, 1951-1968* talogue No. 63-515).

* Excludes manufacturers' sales branches, agents and brokers, primary product dealers, and petroleum bulk ts and distributors; see *Wholesale Trade*, December 1969 (Catalogue No. 63-008).

17.—Sales of Wholesale Merchants, by Kind of Business, 1965-69

In addition to the major monthly survey of wholesale merchants, two annual surveys of wholesale sales at the commodity level are also undertaken by DBS—farm implements and equipment, and construction machinery and equipment. It should be noted that estimates of farm implement and equipment sales are also published monthly, in aggregate form, based on the data reported by a panel of major-line companies.

Farm Implements and Equipment.—Sales of farm implements and equipment (valued wholesale prices) declined in 1969 for the second consecutive year. The sales total of 4,309,000 was 8.9 p.c. lower than the comparable 1968 figure of $378,131,000. However, es declines were limited to the three Prairie Provinces of Manitoba (−21.9 p.c.), Sas-chewan (−25.7 p.c.) and Alberta (−11.0 p.c.). Saskatchewan, which formerly ac-unted for the largest share of farm implements and equipment sales (in 1969, it was tario), experienced the greatest decline for the third consecutive year. Table 18 gives a on sales for 1965-69; sales of repair parts, not shown, were $65,751,000 in 1969, 2.8 p.c. her than the record $63,955,000 reached in the previous year.

—Sales of Farm Implements and Equipment, by Province and by Major Group, 1965-69

NOTE.—Data are based on a commodity survey and therefore exclude sales of other products and receipts from ndary activities, including repairs, carried out by respondents. The figures are not comparable with those given able 17.

Construction Machinery and Equipment.—This survey, which was first undertaken for year 1967 and since repeated for 1969, was designed to measure the sales of Canadian tributors and direct sales of manufacturers to end-users in the construction machinery l equipment field and to assess the revenue derived from rentals. As shown in Table 19, al sales and rental revenue amounted to $705,724,000, almost 80 p.c. of which was lized through the sale of new machinery and equipment. The 1969 survey for the first e produced additional information on the disposal of new construction machinery and ipment to end-users through such arrangements as first rental, demonstration or loan; value of such machinery and equipment reached $52,366,509 in 1969.

Service Trades

Hotels.—In addition to its annual hotel survey (Catalogue No. 63-204), DBS als reports semi-annually on the trend of hotel receipts in Canada, based on results obtaine from a panel of hotels having 50 or more rooms. Table **20** shows that the receipts of suc hotels increased by more than 31 p.c. during the 1965-69 period. The best results we experienced in British Columbia and Alberta, and the poorest in Newfoundland and Prin Edward Island (combined) and in Saskatchewan. On a year-to-year basis, the greate rise took place between 1966 and 1967, as Canada's Centennial-year celebrations produce a significant volume of hotel business. The let-down from 1967 to 1968 was most acutel felt in Quebec, which had shown the greatest increase in the previous year. From 196 to 1969, hotel receipts in most provinces (except New Brunswick and Saskatchewa increased at a faster rate than in the previous year. Alberta and Quebec, in particula registered sizable increases during 1969. In contrast, hotel receipts in Saskatchewa have been trending downward, with successively smaller rates of growth each year fro 1966 onward.

20.—Percentage Change in Hotel Receipts, by Province, 1965-69

[1] Includes the Yukon and Northwest Territories.

Restaurants.—The same forces that shaped hotel business during recent years were evident in another large area of the service trades—restaurants and other eating places. was these forces that produced the largest year-over-year increase in Quebec between 6 and 1967, and that resulted in the largest decline in the same province between 1967 1968. As indicated in Table **21**, restaurant receipts rose by more than $200,000.000 0 p.c.) over the 1965-69 period. The largest percentage growth took place in Alberta 2 p.c.) and British Columbia (34.1 p.c.) and the smallest in Newfoundland and Saschewan. An absolute decline was recorded in only one province—Saskatchewan.

Motion Picture Theatres.—In 1968,* the receipts of motion picture theatres, both ular and drive-in, reached their highest level in the past 14 years—and the highest level for drive-ins alone. The total of $113,697,252 received was 9.8 p.c. higher than in 7 and the amount of amusement taxes collected rose to $8,199,630, up 13.6 p.c. over the vious year. The increase in revenues was not evenly split; drive-in theatre receipts v at a somewhat faster rate (+14.9 p.c.) than those of regular motion picture theatres .1 p.c.). In contrast to the revenue and tax increases, the number of admissions for ypes of theatres declined in 1968 for the fourth successive year, dropping 0.4 p.c. to 88,785. As in previous years, the decline in admissions was restricted to regular thea-, which lost nearly 600,000 customers between 1967 and 1968.

* Latest data available at time of writing.

22.—Summary Statistics of Motion Picture Theatre Operations, 1967 and 1968

Film Exchanges.—During 1968,* films were distributed by 56 companies throu 120 offices located across Canada. These exchanges had total receipts of $64,653,2 compared with $56,551,239 in 1967 and paid $4,733,799 in salaries and wages to 761 e ployees. (The activities of the National Film Board of Canada are not included here; th are covered in the Board's Annual Report, available from Information Canada, Ottaw

Receipts from the rental of films increased by $8,087,642 (14.4 p.c.) during 1968 reach a new high of $64,186,740. Revenue derived from rentals for theatrical use amoun to $43,624,234, for television use $19,682,511 and for other (non-theatrical) use $879,9 In addition, $25,893 was derived from the sale of advertising and $440,585 from ot sources. New films released for theatrical bookings numbered 1,047, of which 649 w feature films, 114 cartoons, 166 newsreels and 118 other short subjects. Of the 649 feat films, 314 originated in the United States, 121 in France, 80 in Italy, 52 in Britain, eight Canada and 74 in other countries.

Motion Picture Production.—In 1969, there were 89 private (non-governme firms engaged principally in the production and printing of motion picture films and fil strips for industry, government, education and entertainment purposes. These fir employed 1,127 persons, paid $7,680,062 in salaries and wages, and had a gross revenue $26,864,914, slightly lower than in 1968. Excluded from these data are television stati and two private firms engaged only partially in motion picture production; the lat produced 21 commercial advertising films, all for television use.

* Latest data available at time of writing.

Table **25** shows the motion picture production records of both private industry and overnment agencies during 1968 and 1969. Of the 5,515 films produced in Canada in 969, 5,429 were in the English or French languages. During that year, Canadian motion cture production fell significantly below the 1968 level of activity; production by private rms declined 31.7 p.c. and by government agencies, 13.6 p.c. In total, private and governent film producers printed 4,005,200 ft. of 8mm film, 49,320,793 ft. of 16mm film and 006,987 ft. of 35 mm film in black and white; and 1,201,925 ft. of 8mm film, 47,389,572 ft. 16mm film and 9,702,797 ft. of 35mm film in colour. Included in these figures were 13 und motion pictures of five minutes or longer duration made for other than Canadian onsors.

Power Laundries, Dry Cleaning and Dyeing Plants.—In 1968,* the combi receipts of laundries and dry cleaning and dyeing plants increased by 2.1 p.c. over previous year's level, reaching a new high of $270,628,560. Power laundries repor revenues of $108,714,737, 3.3 p.c. higher than in 1967, and dry cleaning and dyeing pla reported $161,913,823, an increase of 1.4 p.c. In total, 2,554 laundries, dry cleaners a dyers employed 34,488 people and paid out $124,605,691 in salaries and wages. The c of materials and supplies used in their operations amounted to $26,328,214—1.4 p.c. m than in 1967. The upward trends reflected in these statistics provide further evidence the increasingly important role that such "personal service" trades have assumed in t economic life of the nation.

Advertising Agencies.—Billings of advertising agencies declined marginally durin 1968* to $426,144,921; commissionable billings (for advertising placed in publications, radi television and other media) and those for market surveys, research and other fees we moderately lower than those for 1967, but billings for production work done by agenc staff increased 9.1 p.c. Although both gross and net revenues fell below their comparab 1967 levels, the major decline was in net revenue (before income tax) which dropped 21. p.c.; gross revenue fell only fractionally.

* Latest data available at time of writing.

Table 28 shows the way in which commissionable billings of advertising agencies were located among the various media during 1965-68. Although radio's share remained ore or less constant over this period, the amount devoted to television advertising increased from 27.4 p.c. to 30.4 p.c. At the same time, billings for advertising in publications clined from 39.5 p.c. to 35.6 p.c. and for other visual advertising forms from 3.7 p.c. to 8 p.c.

Funeral Directors.—A survey of funeral directors was undertaken for 1968 as a llow-up to a similar enquiry carried out four years earlier. It will be continued on an casional basis to provide the industry (and other users of these statistics) with ratios d averages on the costs of funeral services. In 1968, there were 1,392 firms covered in e survey, with total receipts of $97,056,229. Average funeral costs ranged from a low $371 in Newfoundland to a high of $689 in Quebec.

Credit Statistics

Sales Financing.—During 1969, for the second consecutive year, the value of ne financial paper purchased by Canadian sales finance companies rose markedly. Tl $1,933,000,000 of new paper purchases—the highest value ever recorded—was 19.6 p. above the previous year's total. The increase was felt mainly in the commercial ai industrial goods field, both for new and used commercial vehicles (up $97,000,000 or 42 p.c.) and for other commercial goods (up $132,000,000 or 44.6 p.c.). In the consumer goo field, new paper purchased on new passenger cars and other consumer goods rose by 11 p.c. but, for used passenger cars, purchases declined 2.1 p.c.

With the addition of a number of new companies for the first time, the outstandi balances of sales finance companies reached a new high in 1969 of $2,180,000,000—22 p. above the year-end 1968 total. As shown in Table **30**, the increases in balances outstan ing reflect those registered under "paper purchased". The greatest area of growth (simil to purchases) was in the commercial and industrial goods field, where outstanding balanc reached $916,000,000, an increase of 38.4 p.c. over 1968.

Consumer Credit.—Although the total volume of credit extended to consumers b retail stores and selected financial institutions has grown progressively from the early 1950 to its record high level of $10,831,000,000 in 1969, the annual rates of increase have show a tendency to decline during periods of credit restraint and weakness in buyer demand The annual rate of increase in balances outstanding since 1963 averaged 12.7 p.c. Durin 1966, 1967 and again in 1969, however, "tight money" resulted in annual growth rates o 8.8 p.c., 10.8 p.c. and 13.0 p.c., respectively, compared with over 14 p.c. in other years The chartered banks, consumer loan companies and credit unions have been the most activ financial institutions engaged in this sphere of financing and have exhibited the larges propensity to growth in recent years. The figures in Table **31** are exclusive of variou forms of service and personal credit on which no detailed information is available.

[1] Credit on consumer goods only. [2] Includes personal loans other than secured loans, home improvement ns and mortgages. [3] Includes Quebec savings banks loans and oil company credit card balances.

Retail Credit.—This segment of consumer credit, comprising the value of accounts tstanding on the books of Canadian retailers (including department stores and their aptive" acceptance companies), has undergone a significant change during the 1960s in relative position among institutions that extend credit to consumers. At the end of 63, retail credit amounted to 20.6 p.c. of all consumer credit extended; by the end of 1969, wever, this share had declined to 13.1 p.c. The latter figure reflects the relatively slower nual growth rate (4.5 p.c.) which has characterized retail credit during the past decade, compared with the rate of 12.7 p.c. for all other selected credit holders in aggregate.

As shown in Table **32**, retail store credit—including the charge accounts of motor hicle dealers—amounted to $1,550,000,000 at the end of 1969. Of this amount, the eivables of department stores, furniture, television, radio and appliance stores and motor hicle dealers accounted for over two thirds. The 1969 total was 6.3 p.c. higher than year-end 1968.

32.—Retail Credit, 1960-69, and by Kind of Business, 1969

Year	Accounts Receivable (at end of period)	Kind of Business	Accounts Receivable (at end of period)

[1] The charge accounts of motor vehicle dealers are not normally included as "consumer" credit (Table **31**) since y are extended mainly to businesses rather than to consumers.

Section 2.—The Marketing of Agricultural Products*

Subsection 1.—The Grain Trade, 1968-69 and 1969-70

The 1968-69 Crop Year.—Estimated domestic supplies of wheat, oats, barley, ry flaxseed and rapeseed totalled 2,285,300,000 bu. in the crop year 1968-69, 12 p.c. above th 1967-68 total of 2,036,100,000 bu. Marketings of these grains in the Prairie Provinc during the 1968-69 crop year amounted to 583,200,000 bu., which was a 4-p.c. decrease fro the 1967-68 level of 609,000,000 bu. and an 8-p.c. decrease from the ten-year (1957-5 1966-67) average of 632,800,000 bu. Marketings of wheat at 423,200,000 bu. were dow 7 p.c. and accounted for 73 p.c. of the total deliveries. Marketings of the other maj grains, with totals for 1967-68 and ten-year averages, respectively, in brackets and millions of bushels, were: oats, 41.6 (30.8, 45.8); barley, 81.8 (87.3, 93.7); rye, 3.8 (6.9, 7.3 flaxseed, 15.3 (7.9, 16.8); and rapeseed, 17.6 (20.0, 9.7).

As in the preceding year, an initial quota of 100 units was in effect at local deliver points at the beginning of the marketing year. Permit holders were entitled to deliver maximum of 400 bu. of wheat or 1,000 bu. of oats or 600 bu. of barley or 600 bu. of rye any combination of these grains which, when calculated on a unit basis, did not exceed 10 This initial unit quota was followed by general quotas based upon bushels per specified acr [Specified acreage consisted of each permit holder's acreage seeded to wheat (includi Durum), oats, barley and rye, the summerfallow acreage and the acreage seeded to eligib grasses and forage crops.] The first general quotas were established on Sept. 9, 1968.

Unfavourable weather during the fall season resulted in a substantial volume of th 1968 crop being harvested in damp condition. To assist producers holding large stocks damp grain, and to maximize the use of drying facilities in terminals, the Canadian Whea Board authorized, on Oct. 31, 1968, an advance quota delivery privilege for damp whea oats, barley and rye in excess of the established quotas, provided that the total quantit of grain delivered under the specified acreage quota plus this advance did not exceed quota of 3 bu. per specified acre.

Stocks in commercial positions were relatively high throughout the 1968-69 crop ye and the movement of grain into country elevators was therefore directly related to sal in both the export and domestic markets. The heavy farm supply of wheat, made up of wheat carryover of 233,000,000 bu. and a 1968 production of 629,000,000 bu., resulted i large volumes being marketed at each quota level. For these reasons the general quota advanced slowly throughout the crop year.

In the spring it appeared that, based on a normal delivery pattern, it would be possibl to accept delivery of a 6-bu. quota. However, because of large-scale abuse of quotas, i became evident that it would not be possible to reach this goal and that some station could not reach even a 5-bu. quota without additional car supply. The Board, therefor entered into an agreement with the railway companies, under which cars were placed a delivery points where space was needed to enable most producers to complete delivery the 5-bu. quota by the end of the crop year. On July 31, 1969, 12,406 cars were under-loa to Thunder Bay compared with a normal under-load for that time of year of about 7,50 cars. This movement of grain from country positions should have been more than sufficien to permit delivery of a 5-bu. quota but, even with the additional effort by the railways an the grain companies, there were still 159 delivery points on the 4-bu. quota at the end the crop year.

In July 1969, the Board instituted a policy to equalize delivery opportunities fo producers who were not able to complete the full 5-bu. quota in the 1968-69 crop yea Under this policy, referred to as the Deferred Delivery Permit Policy, eligible produce received additional delivery privileges during the 1969-70 crop year.

Effective Aug. 1, 1968, a delivery quota of 5 bu. per acre seeded or 250 bu., whicheve was greater, was established for flaxseed and for rapeseed. As in previous years, the produce

* Prepared in the Agriculture Division, Dominion Bureau of Statistics.

ıld deliver flaxseed or rapeseed within the existing quota to any delivery point at which ıce was available. On Oct. 31, 1968, the Board authorized an advance delivery quota damp flaxseed and damp rapeseed in excess of the established quota, provided it did not ceed 8 bu. per seeded acre or 400 bu., whichever was larger. On Feb. 17, 1969 the rape- d quota was increased to 8 bu. per seeded acre or 400 bu. The flaxseed quota was lared open at all delivery points for the balance of the 1968-69 crop year on Jan. 17, 1969 d for rapeseed on Mar. 4, 1969.

*Wheat.**—Domestic supplies of wheat in 1968-69 were at an all-time high of 1,315,400,000 ., 12 p.c. above the 1967-68 total of 1,169,700,000 bu. and 5 p.c. more than the previous ord of 1,247,500,000 bu. in 1966-67. The 1968 production of wheat was 649,800,000 bu. mpared with 592,900,000 bu. in 1967 and carryover stocks were 665,500,000 bu. com- red with 576,800,000 bu. Exports of wheat and flour in terms of wheat, at 305,800,000 ., were 9 p.c. below the 336,000,000 bu. exported in 1967 and 24 p.c. less than the ten-year erage of 402,900,000 bu., but surpassed the long-term average of 304,600,000 bu.

During the crop year 1968-69, marketing of western Canadian wheat was again con- cted by the Canadian Wheat Board on a one-year Pool basis, the initial payment being .70 per bu. basis No. 1 Northern in store Thunder Bay or Vancouver. There were no justment or interim payments on the 1968-69 wheat Pool but a Government payment on ırum wheat amounting to $6,555,614 was announced on May 12, 1970.

The International Grains Arrangement (IGA) came into effect on July 1, 1968, replac- the International Wheat Agreement (IWA), which had been in effect since Aug. 1, 1962. e IGA consists of two legal instruments—a Wheat Trade Convention and a Food Aid nvention. The International Wheat Council established under the IWA remains for the rpose of administering the Wheat Trade Convention and of providing service to the od Aid Committee.

At the start of the 1968-69 crop year, export prices were generally at or slightly above A minimum levels, but came under severe pressure as the third successive bumper wheat)p was harvested in 1968, resulting in extreme competition for available markets from th IGA member exporters and non-member suppliers. Thus, there was a general decline the prices of soft wheat which were in the heaviest supply position. In addition, quality eats from Australia and the Soviet Union came on the European market in quantity for e first time, on a guaranteed protein basis at prices well below prices for comparable eats as set out in the IGA schedule.

Efforts were made in the Prices Review Committee to stabilize the market and prevent e erosion of prices below IGA minimum levels. The Committee was asked to establish nimum prices for new grades and qualities coming into prominence which were not listed the schedule to the Convention, and to establish related prices for wheats available from n-member countries. This latter procedure is implicit in the agreement to enable im- rters to fulfil their commitment to purchase wheat from non-member countries at prices nsistent with the price range established under Article 6. It proved impossible within e Committee to reach a consensus on such price levels for unscheduled wheat and, con- quently, there was further deterioration in soft wheat prices due to competitive factors d, in the quality wheats, the new types began to take over a substantial share of the com- rcial market. This development affected Canada, particularly in Britain and Western rope, and in March 1969 Canada informed the Prices Review Committee that it could longer strictly observe the IGA minimum prices as established for Canadian grades but st meet competition in the marketplace. In subsequent months, there were successive wnward movements in the export prices of most wheats to the extent that by the end of e crop year wheat was generally trading at levels substantially below IGA minima.

Following on the failure of the Prices Review Committee to cope with this situation, exporters multilaterally began a series of detailed technical discussions to identify cific technical difficulties in price determination and to co-ordinate their policies so as to

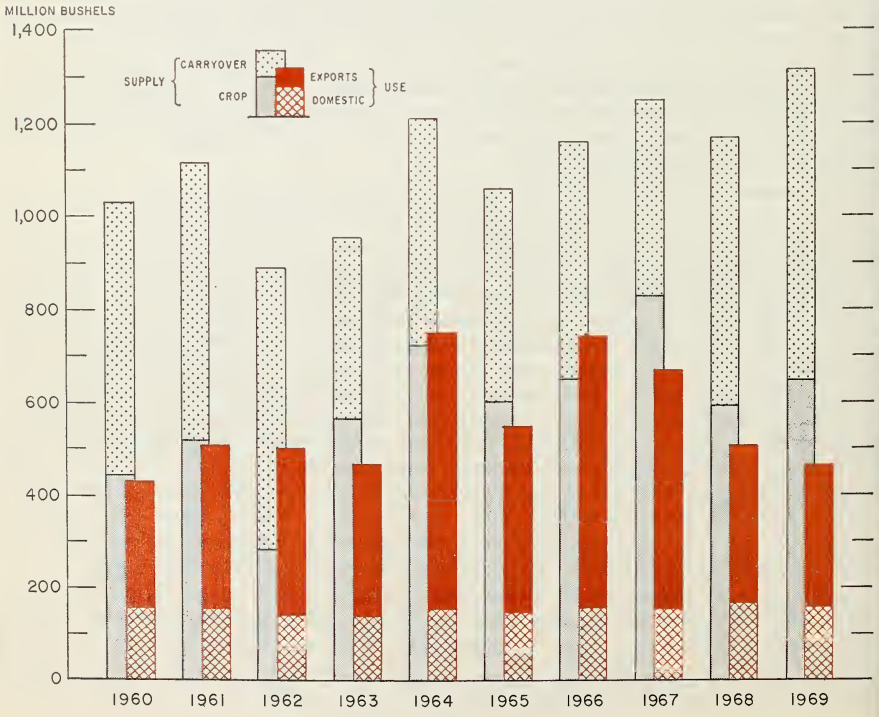
* The data dealing with the operation of the International Grains Arrangement was taken from the 1968-69 ual Report of the Canadian Wheat Board.

stabilize and strengthen the price situation to the degree possible. These meetings co tinued into the new crop year, outside the venue of the IGA, and by mid-September h been successful in achieving a high degree of stability in the international market and greater degree of co-operation and understanding of mutual problems among the maj exporters.

The 1968-69 exports of bulk wheat, at 280,500,000 bu., were below the preceding yea total of 310,700,000 bu. and also lower than the recent ten-year average of 362,900,000 b During the 1968-69 crop year, the People's Republic of China became Canada's princi wheat customer, importing 82,000,000 bu.; Britain was Canada's second largest whe market with imports of 55,700,000 bu. and Japan third with purchases of 43,300,000 b Other leading markets during 1968-69, with quantities in millions of bushels (1967- figures in brackets), were: India, 15.3 (22.4); Italy, 15.2 (10.2); Federal Republic of Ge many, 12.8 (17.5); Belgium and Luxembourg, 7.5 (9.9); Netherlands, 5.8 (5.0); Switzerlan 5.7 (2.6); France, 4.4 (0.9); Poland, 3.4 (5.8); and Venezuela, 3.0 (3.1).

The export movement of Canadian wheat flour during the 1968-69 crop year amount to 10,700,000 cwt. (24,600,000 bu. of wheat equivalent), unchanged from the 1967-68 tot Cuba was Canada's major customer for wheat flour, taking 5,400,000 cwt., or 12,500,000 b of wheat equivalent, and accounting for 51 p.c. of the crop year total; Britain, with impor equivalent to some 2,500,000 bu., accounted for 10 p.c. of the crop year total and Gha imported 1,300,000 bu.

SUPPLY AND DISPOSITION OF CANADIAN WHEAT
CROP YEARS ENDED JULY 31, 1960-69



Other Grains.—During the 1968-69 crop year, initial payments for oats, basis No. 2 W. in store Thunder Bay, and barley, basis No. 3 C.W. Six-Row in store Thunder Bay, re 65 cents per bu. and 106 cents per bu., respectively, the same as in 1967-68. There re no final payments on the 1968-69 oats and barley Pools.

Combined exports of oats, seed oats, barley, rye, flaxseed and rapeseed (including stoms exports of oatmeal and rolled oats, and malt in terms of grain equivalent) amounted 61,100,000 bu. during the crop year 1968-69. This figure was below the comparable 67-68 level of 74,600,000 bu. and the ten-year (1957-58—1966-67) average of 89,900,000 bu.

Exports of Canadian oats in bulk totalled 2,300,000 bu. during 1968-69 compared with 00,000 bu. during the previous year. The major market for this grain was the United ates which imported 900,000 bu., and other shipments went to the Netherlands, 400,000 ; Egypt, 300,000 bu.; Ireland and Switzerland, 200,000 bu. each; Britain and Belgium d Luxembourg, 100,000 bu. each. Exports of Canadian oatmeal and rolled oats amounted the equivalent of 79,000 bu. in 1968-69 against 95,000 bu.

Barley exports, at 21,200,000 bu., declined sharply from the 1967-68 level of 36,100,000 . Britain was Canada's major customer, increasing its imports in 1968-69 to 10,900,000 from 1,900,000 bu. in 1967-68 and replacing Japan which reduced its purchases from 400,000 bu. in 1967-68 to less than 1,000,000 bu. The United States purchased 7,700,000 , compared with 4,400,000 bu. in 1967-68 and Israel took 1,300,000 bu., Ireland, 500,000 and U.S. Oceania, 100,000 bu. Shipments of malt were the equivalent of 5,200,000 bu. mpared with 5,300,000 bu. in 1967-68; they went to 21 different destinations, the major rkets being Japan, 1,100,000 bu.; United States, 1,000,000 bu.; and the Philippines and nezuela, 700,000 bu. each.

Exports of Canadian rye amounted to 4,200,000 bu. in 1968-69 compared with 4,800,000 in the previous year. The principal markets were Japan, 1,600,000 bu.; Norway and the ited States, 900,000 bu. each; Britain, 500,000 bu.; and the Netherlands, 300,000 bu.

During 1968-69, clearances of Canadian flaxseed moving overseas amounted to 400,000 bu. against 12,600,000 bu. in the previous year. Japan was the leading market, porting 4,900,000 bu., followed by the Netherlands and Britain with 2,200,000 bu. each l the Federal Republic of Germany with 1,400,000 bu. Smaller shipments went to some other overseas destinations. Most of the exports of linseed oil, equivalent to about),000 bu. of flaxseed, went to Britain. Trade in rapeseed amounted to 14,300,000 bu., all-time high for this oilseed; Japan purchased 10,900,000 bu. Mustard seed exports, at 60,000 bu., were also above the 1967-68 level of 2,200,000 bu. and went mainly to the ited States, the Netherlands, Belgium and Luxembourg, Japan and the Federal Republic Germany.

The 1969-70 Crop Year.—The 1969-70 crop year opened with carryover stocks of the major grains (wheat, oats, barley, rye, flaxseed and rapeseed) at 1,199,000,000 bu. cks of wheat at Aug. 1, 1969 amounted to 851,800,000 bu., significantly higher than the ,500,000 bu. held in storage a year earlier. Aug. 1 stocks of the other major grains in lions of bushels (1968-69 figures in brackets) were: oats, 128.7 (77.0); barley, 199.4 0.9); rye, 8.7 (7.5); flaxseed, 4.9 (4.7); and rapeseed, 5.1 (9.9).

Domestic production of the six major grains reached 1,511,500,000 bu. in 1969-70. eat increased to 684,300,000 bu. from 649,800,000 bu. in 1968-69, resulting in a total pply for the 1969-70 crop year of 1,536,100,000 bu., an all-time high. Oats rose to ,400,000 bu. from the previous crop-year total of 362,500,000 bu., resulting in a supply 500,000,000 bu. in 1969-70. An estimated 378,400,000 bu. of barley were produced ich, combined with opening stocks, resulted in a supply for 1969-70 of 577,800,000 bu. e production rose to 16,500,000 bu. from 13,000,000 bu. in 1968-69, resulting in a supply 1969-70 of 25,200,000 bu. Flaxseed and rapeseed production also increased to 27,500,000 and 33,400,000 bu., respectively, the supplies amounting to 32,500,000 bu. and 38,500,000 , respectively.

Farmers' marketings of the six grains during the 1969-70 crop year amounted 659,300,000 bu., an increase of 13 p.c. over the 1968-69 total of 583,200,000 bu. Deliveri of wheat and oats were lower than in 1968-69, but the other grains registered increas Marketings of wheat at 411,800,000 bu. were down by 2.7 p.c. and accounted for 62.4 p. of all deliveries. Marketings of the other major grains in millions of bushels (1968- totals in brackets) were: oats, 21.0 (41.6); barley, 168.4 (81.8); rye, 7.6 (3.8); flaxsee 22.1 (15.3); and rapeseed 28.5 (17.6).

During 1969-70, Canada exported 476,900,000 bu. of the six major grains, includi 27,000,000 bu. of wheat flour in terms of wheat equivalent. Export clearances of whe rose to 317,700,000 bu., some 13 p.c. above the 1968-69 total of 280,500,000 bu. but near 14 p.c. below the ten-year (1959-60—1968-69) average of 369,200,000 bu. Exports of oa at 4,800,000 bu. were more than double the 1968-69 total of 2,300,000 bu. Barley expo rose to 82,700,000 bu. from the 1968-69 level of 21,200,000 bu. and rye exports declined 3,800,000 bu. from 4,200,000 bu. Flaxseed and rapeseed exports both registered lar gains in 1969-70, rising to 18,600,000 bu. from 13,400,000 bu. and 22,200,000 bu. fro 14,300,000 bu., respectively.

Total domestic consumption of wheat in Canada rose to 178,600,000 bu. in 1969- from 157,700,000 bu. in 1968-69, largely as a result of increased use of wheat in livesto feeding. Domestic utilization of oats rose to 352,500,000 bu. from 308,100,000 bu., barley to 287,700,000 bu. from 230,500,000, of rye to 10,600,000 bu. from 7,600,000 bu., flaxseed to 8,000,000 bu. from 6,000,000 bu. and of rapeseed to 12,600,000 bu. from 9,900,0 bu.

Stocks of wheat at the close of the crop year on July 31, 1970 stood at 1,011,000,000 b 19 p.c. above the closing stocks of the previous year. Year-end stocks of the other maj grains in bushels, were: oats, 142,300,000 bu.; barley, 201,800,000 bu.; rye, 10,700,000 b flaxseed, 5,800,000 bu.; and rapeseed, 3,700,000 bu.

Licensed Grain Storage.—Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 700,349,000 bu. at Dec. 1, 1968, the increase over the same date of 1967 being 6,975,000 bu. Greater capacity in Western country elevators and Pacific Coast elevators more than offset decreases in interior private and mill, and Georgian Bay and upper Lake ports. Table 37 gives the amount in storage at three dates during the year. On July 31, 1969, 77.3 p.c. of the licensed storage capacity was occupied as compared with 70.8 p.c. on the same date of 1968.

[1] Wheat, oats, barley, rye, flaxseed and rapeseed.

Production and Exports of Wheat Flour.—Production of wheat flour in the 1968-69 crop year amounted to 37,621,000 cwt. and wheat milled for flour totalled 85,049,000 bu., the figures being little changed from those for 1967-68. Of the wheat milled for flour, approximately 71,010,000 bu. were Western Canadian spring wheat (other than Durum) and the remainder was made up of 8,309,000 bu. of Ontario winter wheat, 4,572,000 bu. of Durum wheat and 1,158,000 bu. of other types. Utilization of milling capacity, based on a daily operating potential of some 174,000 cwt., averaged 73.9 p.c. in 1968-69 compared with 80.2 p.c. in the previous year. Exports of wheat flour in 1968-69 amounted to 10,705,000 cwt. compared with 10,735,000 cwt. exported in 1967-68.

Subsection 2.—Livestock Marketings*

The main feature of the livestock market in 1969 was the rise in prices in all departments of the trade to produce an all-time record value of commercial marketings at $1,422,000,000, an increase of 10 p.c. in sales revenue over the previous year. Reduced production, heavier weights and somewhat better quality contributed to the rise in prices and strong domestic demand ensured good weekly clearances despite limited export trade.

Marketings of cattle sold through public stockyards, shipped directly to packing plants, in export and to country points in another province numbered 3,330,729 head, down 4 p.c. from the total of the previous year. All western provinces contributed to the decline, British Columbia and Saskatchewan showing the sharpest reductions at 14.6 p.c. and 14.3 p.c., respectively. On the other hand, all eastern provinces except Newfoundland had heavier marketings, Quebec recording the greatest increase at 20 p.c. Calf marketings followed a similar pattern. The volume of sales at 1,206,685 head was 10.4 p.c. lower than in the previous year and the lowest in the previous five years, with Quebec establishing an all-time record output of 415,867 head. Cattle slaughtered in federally inspected establishments averaged 566 lb. per carcass, more than 6 lb. heavier than the 1968 average; 62.5 p.c. graded choice and good quality compared with 56.8 p.c. in the previous year, representing the best quality turnout since the inception of official beef grading. Prices for all classes and grades of cattle at $26.65 averaged $3.45 per cwt. higher than in 1968; choice steers and heifers rose $2.45 and $2.25, respectively, with corresponding gains in lower grades of both classes. Throughout the year demand was keen for fed cattle which, coupled with an abundance of feed grain available in Western Canada, resulted in a strong market on all classes of replacements. Good feeder steers at $31.20 showed an increase of $4.50 over 1968, and good stock steer calves, which made up 24.5 p.c. of total calves marketed through public stockyards, at $37.55 were $7.55 above the 1968 price. Prices for veal and butcher calves were also sharply higher—$4.00 to $5.00 above the previous five-year averages—with supplies usually not sufficient to meet the demand.

Marketings of hogs in 1969 at 7,481,479 were 8 p.c. lower than in 1968. Of the western provinces, only Manitoba showed an increase in production with 3.5 p.c. over the previous year, and Alberta had the sharpest reduction at 16.6 p.c.; all Atlantic Provinces recorded minor increases but production in both Ontario and Quebec also declined. There was a complete change in hog classification in 1969, so that quality figures for that year given in

* More detailed information is available from DBS annual report *Livestock and Animal Products Statistics* (Catalogue No. 23-203), and the Canada Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry production and disappearance are given on pp. 582-585.

Table 39 cannot be compared with those of previous years; however, indications are tha it was at least equal to that of 1968. Manitoba had the lowest quality grading and th Atlantic Provinces, following the pattern of recent years, produced the highest percentag in the top grades. The average price for hogs with an Index of 100 was $35.20 in 1969, a increase of $6.40 per cwt., and the value per carcass was correspondingly higher at $57.4 compared with $46.35 in 1968.

Sheep and lambs shipped to public stockyards, packing plants and on export durin 1969 totalled 267,098, a reduction of 19.3 p.c. from the previous year, the lowest eve reached since collection of these statistics was begun in 1920. Although quality remaine relatively equal to the previous year's grading and the average price of good lambs wa $30.45 compared with $26.85 in the previous year, prospects for improvement in the shee and lamb trade are not indicated.

Section 3.—Co-operative Organizations*

Business volume of co-operatives dropped during 1968 with the slowdown of Canadian heat exports. Total revenue of 2,469 local co-operatives amounted to $2,132,900,000, decline of $47,000,000 or 2 p.c. from 1967, and included farm product marketings ,332,700,000, sale of merchandise and supplies $720,100,000, service revenue (trucking, old storage, grazing, etc.) $66,100,000 and miscellaneous income (rent, interest, dividends, c.) $14,100,000. Total assets of the co-operatives amounted to $1,177,200,000 and embers' equity therein was 45 p.c. Continuing the trend toward consolidation of units, e number of associations declined during the year to 2,469 while reported membership se by 35,000 to 1,723,000. Marketing and purchasing co-operatives, which market embers' produce and retail merchandise and supplies to members, have always been the ominant types of co-operatives and have for many years accounted for more than 90 p.c. co-operatives' business volume, with service and fishermen's co-operatives contributing e remainder.

Total revenues of marketing and purchasing co-operatives at $2,039,900,000 eased by 51,000,000 or 2 p.c. in 1968, due to a decline in western grain marketings which more than fset gains in most other revenue items. Total revenues consisted of: farm product market- gs, $1,285,600,000; retailing of merchandise and supplies, $715,000,000; service revenue, 7,100,000; and miscellaneous income, $12,200,000. Farm product marketings declined $87,000,000 or 6 p.c., with a sharp decline of $104,000,000 or 19 p.c. in Prairie grain arketings far outweighing a modest aggregate gain of $17,000,000 in marketings of other rm products. Livestock marketings were down slightly due to a substantial decline in

* Prepared in the Economics Branch, Canada Department of Agriculture, Ottawa.

Ontario, while a mixture of higher poultry meat prices and lower egg prices resulted in negligible over-all gain of less than 1 p.c. in co-operative marketings of these products i 1968. Co-operative dairy marketings rose 3 p.c. to $344,000,000, although Canadia dairy production and producer returns were almost unchanged during the year. Fru and vegetable marketings rose 6 p.c. to $51,000,000 based on a combination of record appl production and good prices for the crop year 1967-68. Wool and miscellaneous marketing declined but honey and tobacco registered increases. Sales of merchandise and supplie by co-operatives were up a modest 5 p.c. in 1968 as compared to a jump of 12 p.c. in th previous year. Machinery sales were down in the Prairie Provinces and feed sales slippe in Ontario where a bumper grain crop lessened purchases of western feed grains. All othe sales categories rose including food products and petroleum which posted their usual stead gains while the growth rate of fertilizer levelled off somewhat as compared to the precedin four-year period in which sales more than doubled. Assets of the marketing and purchasin co-operatives recorded a huge increase of $154,000,000 or 18 p.c., attributable mainly t the accumulation of Prairie grain inventories, a stepped-up program of modernization an expansion of facilities by the wheat pools, and a rationalization of the dairy industry i Quebec involving the consolidation of plants into a smaller number of larger, more efficien units. Three quarters of the increase in assets were financed by liabilities to the publi almost all of it in the form of short-term loans.

Service co-operatives provide services to their members such as trucking, cold storag grazing, medical insurance, rural electrification, etc., and, in conjunction with their mai function, some service co-operatives are engaged in the marketing of farm products an the sale of supplies. For 1968, total business volume of 1,071 service co-operatives with membership of 316,000 amounted to $65,100,000 and included service revenue of $38,427,000 sales of farm products and supplies of $24,971,000 and miscellaneous income of $1,727,000 Assets of the service co-operatives totalled $129,709,000 at year-end of which member equity represented 62 p.c. Fishermen's co-operatives, of which there were 86 reportin for 1968 with membership of 8,000, had a total business volume of $28,302,000, includin fish marketings of $24,220,000, fishing and other supplies of $3,191,000, and service revenu and other income of $891,000. Assets amounted to $17,600,000.

Wholesale co-operatives are federations of local co-operatives which act as centra marketing agencies and distributors for the farm products and supplies of the local co operatives. Their sales are reported separately from those of the local co-operatives, sinc they are largely a duplication of the sales made by the locals. Sales volume of the eigh co-operative wholesales for 1968 was $560,200,000, a modest increase of $18,000,000 or 3 p.c over the previous year. Supply sales came to $363,100,000, of which the largest items wer food products $106,000,000, feed $80,800,000, and petroleum $63,900,000. Marketing o farm products totalled $197,100,000 including livestock $88,200,000 and dairy product $52,200,000. Assets for the eight wholesales and one wholesaler for the other wholesale amounted to $213,700,000 at year-end 1968.

The first Eskimo co-operative in Canada was incorporated in 1959. Twenty-seve co-operatives and two credit unions have since been formed in the Northwest Territories with another nine co-operatives and a caisse populaire in northern Quebec. Primarily production organizations, they have helped to preserve and to promote native arts an crafts, and are now engaged in a multiplicity of activities. Their combined trading figur in 1968 approximated $2,500,000 and their assets were valued at $2,136,000, of which members held a 42-p.c. equity built up within ten years from literally nothing. Over the same period an additional $5,000,000 was earned by members in wages and by marketing their products through co-operatives. These amounts probably represent a more substantial return to local people than that generated by any other business organization in the North. The transfer of the responsibility for the co-operative development program from the Federal Government in Ottawa to the Northwest Territories Government in Yellowknife in 1969 brought supervisory and advisory services much closer to the co-operatives in the Territories. Since 1967, co-operatives in northern Quebec have been serviced through their own federation, which was formed in that year.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.—Controls Affecting the Marketing of Farm Products

Subsection 1.—Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board o Grain Commissioners for Canada which, since 1912, has administered the provisions o the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadia Wheat Board Act, 1935.

The Board of Grain Commissioners for Canada.—The Board of Grain Commis sioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RS 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body o three—a chief commissioner and two commissioners—reporting to the Minister of Agr culture.

The Canada Grain Act has been called the Magna Charta of the Canadian grai trade or, more particularly, of the Canadian farmer, and the Board's chief duties are t ensure that the rights conferred on the different parties by the provisions of the Act ar properly protected. Transportation of grain is restricted except from or to licensed ele vators, and restriction is placed on the use of established grade names. The Act does no provide for any control or supervision of grain exchanges and the Board of Grain Com missioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadia Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonto and Calgary, Alta., and Prince Rupert, B.C. The Executive Offices of the Board an other principal offices are situated at Winnipeg, Man., but branch offices are maintained a numerous points from Montreal in the east to Victoria in the west. Total personnel i approximately 1,000, including Canadian Government elevator staff.

On a fee basis, the Board provides official inspection, grading and weighing of grai and registration of warehouse receipts. All operators of elevators in Western Canad and of elevators in Eastern Canada that handle western-grown grain for export, as we as all parties operating as grain commission merchants, track buyers of grain, or as grai dealers, are required to be licensed by the Board annually and to file security by bon or otherwise as a guarantee for the performance of all obligations imposed upon them b the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquir into and is empowered to give direction regarding any matter relating to the grading o weighing of grain; deductions made from grain for dockage; shortages on delivery of grai into or out of elevators; unfair or discriminatory operation of any elevator; refusal o neglect of any person to comply with any provision of the Canada Grain Act; and an other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces, the Board maintains four assistant commissioners—one i Alberta, two in Saskatchewan and one in Manitoba. These assistant commissioner investigate complaints of producers and inspect periodically the country elevators in thei respective provinces; all elevators with their equipment and stocks of grain are subjec to inspection by officials of the Board at any time.

The Board sets up, annually, Committees on Grain Standards and also appoint Grain Appeal Tribunals to give final decisions in cases where appeals are made agains the grading of grain by the Board's inspection officials. To assist in maintaining th uniform quality of the top grades of Red Spring wheat handled through terminal elevators the Canada Grain Act provides that wheat of these grades shall be stored with grain o like grade only.

The Board's Research Laboratory, located at Winnipeg, is the main centre of research
the chemistry of Canadian grains. It is well staffed and equipped to provide the service
quired to help maintain and expand domestic and foreign markets for all types of grain.
he Laboratory collects and tests samples to obtain information on the quality of the
rious grain crops grown each year and on the quality of grain shipped. Basic research
also undertaken, the program being directed toward better understanding of what
nstitutes quality in cereal grains and toward improvement in the methods of assessing
ality.

In addition to its duties under the Canada Grain Act, certain other duties are per-
rmed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC
52, c. 153), the Board maintains records of rates for the carriage of grain from Thunder
y, Ont., by lake or river navigation and is empowered to prescribe maximum rates for
ch carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213
amended), the Board collects from licensees under the Canada Grain Act 1 p.c. of the
rchase price of wheat, oats, barley, rye, flaxseed and rapeseed purchased by such licensees.

The Canadian Wheat Board.—The Canadian Wheat Board was established under
e Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly
anner, in interprovincial and export trade, of grain grown in Canada" and now operates
der RSC 1952, c. 44 as amended. The Board accomplishes its objective through regula-
n and agreement. It owns no grain handling facilities but, by entering into agreements
th the owners of these facilities, it attempts to bring about an orderly flow of grain through
ch of the steps involved in merchandising the grain from the producer to the domestic
overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters.
its sales operations, the Board endeavours to meet the wishes of overseas buyers and,
occasion, enters into direct contracts. When an exporter completes an export sale,
his capacity as an agent of the Board, he is responsible for the transaction; he completes
e transaction with the buyer and settles with the Board for the purchase of the wheat
m the Board.

When the commercial storage facilities are inadequate to handle all the grain pro-
ced, it is necessary for the Board to regulate the flow of grain from the producer to these
rward positions. The first step is accomplished by the use of producer's delivery permits
ued annually by the Canadian Wheat Board. Every delivery of grain made to country
vators by a producer is entered in his permit book. By regulating the amount of grain
livered by the producer to the country elevator by the use of a quota system and, by
portioning shipping orders to country elevators according to the needs created by sales
mmitments, the Wheat Board regulates the amount of grain coming into the marketing
annel.

The next step is the handling of the grain by the country elevator. The maximum
arges for the handling and storing of the grain are set by the Board of Grain Commis-
ners, but the actual charges are subject to negotiation between the elevator companies
d the Wheat Board.

The third step in the marketing process—transporting the grain from the country
vators to large terminal elevators in Eastern Canada, Churchill or on the West Coast—
carried out by the railways. The Wheat Board determines the kinds and grades of grain
at are required at the different terminal destinations to meet its sales commitments and
orms the elevator companies and the railways of these needs. The maximum tariffs are
by an agreement between the railways and the Government of Canada.

The fourth major step—storing and handling of the grain at terminal elevators—
done in privately or co-operatively owned elevators. Maximum charges are established
this service by the Board of Grain Commissioners.

In the case of oats and barley, the Board's operations are less extensive than those
ating to wheat. These two grains are sold in store positions at the terminal elevators

at Thunder Bay and Vancouver. Oats and barley are marketed either on a straight ca basis at prices quoted daily by the Board or on the basis of exchange of futures conclud through the facilities of the Winnipeg Grain Exchange. The Board controls the moveme of coarse grains to Thunder Bay. The private trade is responsible for the movement oats and barley from Thunder Bay or Vancouver positions.

The producer receives payment for his wheat, oats and barley in two or three stag An initial payment price is established early in the crop year by Order in Council. T initial payment price less the cost of handling grain at the local elevator and the tra portation costs to Thunder Bay or Vancouver is the initial price received by the produc This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, d not realize this price and the necessary marketing costs, the deficit is borne by the Fede Treasury. However, with very few exceptions, the Wheat Board has operated witho financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wh Board can confidently foresee a surplus accumulating and if authorized by Order in Coun an interim payment is made to producers. This interim payment is the same amount p bushel to all producers of the same grade of grain. When the Board has sold all the gr or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Boa if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, p ducers may receive, through their elevator agents, cash advances on farm-stored grain accordance with a prescribed formula. The purpose of this legislation is to make ca available to producers pending delivery of their grain under delivery quotas establish by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Boa receives, less its operating costs including carrying charge, and the general level of pri received by the Board is determined by competitive conditions in world markets. T only subsidy received by the farmer in the Canadian wheat marketing system is the pa payment of storage costs for wheat made by the Government of Canada. Under provisio of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidat Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the e of the crop year in excess of 178,000,000 bu.

Subsection 2.—Controls Over Farm Products Other Than Grain*

The Government of Canada and provincial governments have, through legislati and in other ways, given marketing aids such as those related to research, educatio information, inspection, grading and many other service measures of this type, design to assist in making adjustments in marketing within agriculture and between agricultu and the remainder of the economy. Closely related is regulatory action designed to prote the consumer.

Producers have been concerned about another type of market control, namely th which will give either their organizations or a government agency influence over the pri received. In a highly specialized commercial agriculture such as Canada now has, t producer is dependent on the price of his product for his livelihood. Canadian farme have long attempted to obtain some measure of market control through voluntary orga zations, mainly marketing co-operatives. All provinces have made provision for t incorporation of such co-operatives and most, if not all, have provided other assistan to them. In the federal field, the Agricultural Products Co-operative Marketing A encourages marketing under a co-operative plan.

Other legislation provides for legal control over the marketing of agricultural product either by a producer board or a government agency. Legislation of this type includ

* Prepared in the Economics Branch, Canada Department of Agriculture, Ottawa.

nat pertaining to milk control boards, to producer marketing boards and to industry narketing commissions. Measures pertaining to grain marketing have been reviewed in ubsection 1, pp. 1036-1038, and the Agricultural Stabilization Act, which provides price ipport for certain key products is discussed in the Agriculture Chapter, pp. 557-558.

Product Controls.—The federal and provincial departments of agriculture co-operate n establishing and enforcing grades of quality standards for various foods. Some control ver size and type of containers used for distribution of agricultural products is exercised y the Canada Department of Agriculture and the Department of Consumer and Corporate ffairs enforces regulations pertaining to weights and measures (see p. 1050).

Controls related to health and sanitation in food handling are developed and enforced t all three levels of government—municipal, provincial and federal. Examples of pro- incial and municipal action include laws pertaining to the pasteurization of milk, inspection f slaughter-houses and sanitary standards in restaurants. At the federal level, inspection y the Health of Animals Branch of the Department of Agriculture of all meat carcasses nat enter into interprovincial trade is required. The Food and Drug Directorate of the Department of National Health and Welfare has wide control over the composition of oods and over misleading advertising of foods and drugs.

Marketing Controls.—*The Agricultural Products Co-operative Marketing Act.*— n the late 1930s, the Federal Government decided to assist orderly marketing by encourag- ig the establishment of pools which would give to the producer the maximum sales return or his product, less a maximum margin for handling expenses agreed upon in advance. Thus, the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agri- ultural Products Co-operative Marketing Act, which covers the marketing of all agricultural roducts, except wheat produced in the Canadian Wheat Board area, has served agricultural roducers continuously since 1939.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products y guaranteeing initial payments and thus assisting in the orderly marketing of the product. he Government may undertake to guarantee a certain minimum initial payment to the roducer at the time of delivery of the product, including a margin for handling; sales eturns are made to the producer on a co-operative plan. The guaranteed initial payment ay be up to a maximum of 80 p.c. of the average price paid to producers for the previous ree years, the exact percentage to be recommended by the Minister of Agriculture who nters into an agreement with the selling agency for the product. During 1969, agreements ere made for the marketing of apples for processing in Quebec and beans in Ontario.

Milk-Control Legislation.—Most of the provinces enacted milk-control legislation prior o 1940. Most provinces finance these milk-control agencies partly from public funds and artly through the collection of licence fees and assessments from those engaged in the uid milk industry. The Ontario board is now financed wholly through licence fees. Milk-control agencies have the authority to license those engaged in the fluid milk industry nd can revoke licences for failure to conform with the orders of the milk-control board.

In all provinces with such boards, the milk-control board or similar agency sets the inimum price which distributors in specified markets may pay producers for Class I milk, nat is, milk actually sold for fresh fluid consumption. In British Columbia, a formula is sed as a guide in determining minimum prices to producers. Most provinces set either inimum or maximum wholesale and retail prices for fluid milk. Quebec sets a minimum nd maximum price range. Saskatchewan sets minimum prices applicable to all retail ilk sales and maximum prices applicable to milk sales from retail wagons, as well as a inimum-maximum price range at the wholesale level. Minimum prices are in effect in lberta, Nova Scotia and New Brunswick. Maximum prices are set in Manitoba and no

control is exercised over milk prices at the wholesale and retail levels in Ontario and Britis Columbia. In these three provinces some degree of price competition has develope between store sales and home delivery.

The powers given to or requirements made by milk-control boards include: (1) autho ity to inquire into all matters pertaining to the fluid milk industry, to define market area to arbitrate disputes, to examine the books and records of those engaged in the industry, t issue and revoke licences, and to establish a price for milk; and (2) authority to require bond from distributors, periodic reports from distributors, payments to be made to pro ducers by a certain date each month, distributors to give statements to suppliers, distrib utors to give notice before ceasing to accept milk from any producer, and producers to giv notice before ceasing to deliver milk to any distributor.

The Ontario Milk Marketing Board, a producer-controlled agency, was officiall established by the Milk Commission of Ontario on Nov. 1, 1965. The Board was delegate certain powers by the Commission in respect to the production, marketing and transporta tion of milk and has the power to set the price that milk distributors must pay to thei suppliers.

The Canadian Dairy Commission.—The Canadian Dairy Commission was establishe by Federal legislation and commenced operations on Apr. 1, 1967. This is a new departur in the area of agricultural marketing because it is the first national marketing board to b established since the Canadian Wheat Board was created in 1935. The Commission ha the power to purchase any dairy product and package, process, store, ship, insure, import export, or sell or otherwise dispose of any dairy product purchased by it. The Commissio may also make payments to producers of milk and cream for the purpose of stabilizing th price of these products.

The objects of the Commission are to provide producers of milk and cream with th opportunity of obtaining a fair return for their labour and investment, and to provid consumers with a continuous and adequate supply of high-quality dairy products. Th Federal Government, through the Canadian Dairy Commission, supports the income o manufacturing milk and cream producers by means of "offer-to-purchase" programs fo certain dairy products and direct subsidy payments.

In the 1967-68 dairy support year, the Federal Government introduced a global subsidy eligibility quota which was directly related to the domestic consumption of milk markete by manufacturing milk and cream shippers. Individual quotas were allocated on the basi of the shipper's deliveries during the previous dairy support year, with certain exceptions. The quota policy, with slight modifications, remained in effect through the dairy support years 1968-69 and 1969-70.

Producer Marketing Boards.—During the 1930s strong support developed for legislatio whereby agricultural producers could exercise legal authority under certain conditions t control the marketing of their produce. The Natural Products Marketing Act of 1934 attempted to provide this power at the federal level but proved *ultra vires*. The Natural Products Marketing (British Columbia) Act, 1936 was *intra vires* of provincial government powers and provided the model from which marketing board legislation has evolved in all 10 provinces.

While marketing board legislation has been revised from time to time on the basis of experience and there are variations in detail from province to province, the same basic powers are given to producers in all provinces. These powers include authority for a duly constituted producer board to control the marketing of 100 p.c. of a specified commodity produced in a designated area. A producer board, in at least some provinces, may set production quotas for each farmer. One producer board may control the marketing of several related commodities and the designated area may be either the whole or part of a province. A producer vote is usually required to establish a producer marketing board whose powers are delegated either by a provincial marketing board, which has certain supervisory authority, or by the Lieutenant-Governor in Council.

The powers of a producer marketing board provided by provincial legislation are necesrily limited to intraprovincial trade. Under the Agricultural Products Marketing Act, ıe Federal Government may delegate to a marketing board with respect to interprovincial ıd export trade similar powers to those obtained with respect to intraprovincial trade ıder provincial authority. This Act also gives the Governor in Council the right to ıthorize a provincial marketing board to impose and collect levies from persons engaged in ıe production and marketing of commodities controlled by it for the purposes of the board, ıe creation of reserves and the equalization of returns.

In 1968, there were 119 producer marketing boards operating in Canada, including the anadian Wheat Board which was established at the federal level. All of the provinces :cept Newfoundland had one or more boards established under their jurisdictions, with uebec accounting for 64 and Ontario 22. It is estimated that approximately 46 p.c. of 968 farm cash income was received from sales made under the control of producer market-g boards. Commodities sold through the boards included wheat, hogs, milk for factory-ade dairy products, fruits, potatoes and other vegetables, tobacco, poultry, wool, soy-eans, honey, maple products and pulpwood. As at Nov. 1, 1968, 55 of the provincial oards had received an extension of powers for purposes of interprovincial and export trade om the Federal Government; six boards had received authority with regard to ten com-odities to collect levies in excess of administrative expenses.

Section 2.—The Department of Consumer and Corporate Affairs

Legislation that received Royal Assent on Dec. 21, 1967 (SC 1967-68, c. 16), transrmed the former Department of the Registrar General of Canada into the new Departent of Consumer and Corporate Affairs. The duties, powers and functions of the Minister tend to and include all matters over which the Parliament of Canada has jurisdiction, t by law assigned to any other department, branch or agency of the Government of anada, relating to consumer affairs; corporations and corporate securities; combines, ergers, monopolies and restraint of trade; bankruptcy and insolvency; and patents, copy-ghts and trade marks.

The Department has three main divisions—the Bureau of Consumer Affairs, the ıreau of Corporate Affairs, and the Office of the Director of Investigation and Research ıder the Combines Investigation Act. The Bureau of Consumer Affairs co-ordinates vernment activities in the field of consumer affairs. Branches within the Bureau include nsumer Services, Consumer Research, Operations and Standards. Regional Offices have en established at Halifax, Montreal, Toronto, Winnipeg and Vancouver. Branches of the ıreau of Corporate Affairs include Bankruptcy with Regional Offices in Montreal, Toronto d Vancouver, Corporations, Trade Marks, the Patent and Copyright Office, the Registran Division, and the Corporate Research Branch. Branches under the direction of the fice of the Director of Investigation and Research under the Combines Investigation Act clude the Combination Branch, the Merger and Monopoly Branch, the Trade Practices anch and the Research Branch. The Director also has special investigators in each of e five Regional Offices whose job is investigation of cases of misleading advertising. The estrictive Trade Practice Commission (Combines Investigation Act) is also domiciled in e Department and reports directly to the Minister.

Branches which serve the Department as a whole are Financial and Administrative rvices, Personnel and Information and Public Relations.

mbines, Mergers, Monopolies and Restraint of Trade

The purpose of Canadian anti-combines legislation is to assist in maintaining free d open competition as a prime stimulus to the achievement of maximum production, tribution and employment in a system of free enterprise. To this end, the legislation ks to eliminate certain practices in restraint of trade that serve to prevent the nation's nomic resources from being most effectively used for the advantage of all citizens.

By amendments that came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2, 32, 33, 33A, 33B, 33C and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960. On July 31, 1969, Sect. 306 of the Criminal Code prohibiting false or misleading advertisements was transferred to the Act as Sect. 33D.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. Although Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canadian competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger that has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly that has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any service he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 33D makes it an offence to publish an advertisement containing a statement that purports to be a statement of fact but is untrue, deceptive or misleading or is intentionally so worded or arranged that it is deceptive or misleading if the advertisement is published to promote a business or commercial interest or the sale or disposal of property.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused or counselled the refusal of supplies to a merchant if there were reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "loss-

ders" or as bait advertising or was making a practice of engaging in misleading adver-ng in respect of such articles or of not providing services that purchasers of such articles ght reasonably expect.

The Director of Investigation and Research is responsible for investigating combines l other restrictive practices, and the Restrictive Trade Practices Commission is respon-le for appraising the evidence submitted to it by the Director and the parties under estigation, and for making a report to the Minister of Consumer and Corporate Affairs. nen there are reasonable grounds for believing that a forbidden practice is engaged the Director may obtain from the Commission authorization to examine witnesses, rch premises, or require written returns. After examining all the information available, he Director believes that it proves the existence of a forbidden practice, he submits tatement of the evidence to the Commission and to the parties believed to be respon-le for the practice. The Commission then sets a time and place at which it hears argu-nt on behalf of the Director in support of his statement, and hears argument and receives dence on behalf of any persons against whom allegations have been made in the state-nt. Following this hearing, the Commission prepares and submits a report to the nister of Consumer and Corporate Affairs, ordinarily required to be published within rty days.

Under the provisions of the Act, general inquiries may be made into restraints of de which, although not forbidden or punishable, may affect the public interest. The rts, including the Exchequer Court of Canada,* in addition to imposing punishment a contravention of the legislation, may make an order restraining persons from em-king on, continuing or repeating a contravention or directing the dissolution of a merger monopoly as the case may be. Application also may be made to the courts for such order in lieu of prosecuting and convicting for a contravention of the legislation. Pros-tions for offences against the substantive provisions of the legislation (other than t. 33C which is punishable only on summary conviction) may be taken either in the vincial courts or with the consent of the accused in the Exchequer Court of Canada.*

In July 1969, following a reference by the Government, the Economic Council of nada submitted its Interim Report on Competition Policy which recommended substan-l changes in the Combines Investigation Act. The recommendations are under study ore revisions to the Act are introduced to Parliament.

In the period Jan. 1, 1967, to June 30, 1970, the following reports of inquiries under the islation were published:—

(1) "Specials" in Eggs, Kingston Area, Ont.
(2) Glued-Laminated Timbers.
(3) Cast Iron Soil Pipe.
(4) Resale Prices of Corning Glassware.
(5) Dairy Products, Montreal.
(6) Resilient Flooring, Toronto.
(7) Prices of Gasoline, Sudbury.
(8) Road Paving in Ontario.
(9) Business Forms.
(10) Business Forms, Quebec.

These reports and copies of the annual reports under the Act may be obtained from ormation Canada or the office of the Director of Investigation and Research, Combines vestigation Act, Department of Consumer and Corporate Affairs, Ottawa.

tents

Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203, amended) and Patent Regulations have been proclaimed to carry into effect the objects the Act. By an amendment that came into effect on July 1, 1969, an abstract of the closure of the application is required with each application for patent; by an amend-

* Now the Federal Court of Canada.

ment effective June 27, 1969, Rules were added dealing with applications for licence unde Sect. 41 of the Act; and by an amendment effective Oct. 1, 1969, all fees previously foun in Sect. 75(1) of the Act and Schedules B and C of the Rules were consolidated into a ne Schedule B of the Rule, and certain fees were changed. Applications for patents and re quests for information about patents should be addressed to the Commissioner of Patent Ottawa.

The number of patents granted each year has increased steadily from 4,522 at th beginning of the century to 28,981 in the year ended Mar. 31, 1970. Approximatel 5.0 p.c. of the patents granted resulted from inventions made by residents of Canada 7.5 p.c. by residents of Britain and other Commonwealth countries and 66.0 p.c. by resi dents of the United States.

Printed copies of Canadian patents issued from Jan. 1, 1948 to date are available at nominal fee. The *Patent Office Record*, published every week, contains an abstract of eac patent, information about the services available in the Patent Office, and information fo the patent profession.

Canadian and foreign patents may be consulted at the Patent Office Library. Britis patents and abridged specifications thereof from 1617 to date and United States patent from 1845 to date are available, as well as many patents, indexes, journals and report from Australia, India, Ireland, New Zealand, Pakistan, South Africa, Austria, Belgium Colombia, Czechoslovakia, Egypt, France, Germany, Italy, Japan, Mexico, the Nether lands, Norway, Sweden, Switzerland and Yugoslavia. A list of the foreign patents avail able is published in the *Patent Office Record.*

Copyrights, Industrial Designs and Timber Marks

Copyright protection is governed by the Copyright Act (RSC 1952, c. 55) in force since 1924. Protection is automatic without any formality, although a system of voluntary registration is provided. Application for registration should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Canada belongs to the Universal Copyright Convention. This means that the works of Canadian authors are protected in the United States without formality of compulsory registration or the obligation of printing in the United States, provided that, from the first publication, the work bears in a prominent place the following identification: ©, followed by the name of the proprietor and the year of publication.

Copyright protection is extended to records, perforated rolls, cinematographic films, d other contrivances by means of which a work may be mechanically performed. The tention of the Act is to enable Canadian authors to obtain full copyright protection in nada, in all parts of the Commonwealth, in foreign countries of the Copyright Union d in the United States. Protection of industrial designs and of timber marks is afforded der the Industrial Design and Union Label Act and the Timber Marking Act. Registers such designs and marks are kept by the Copyright Branch of the Patent Office.

rade Marks

The Trade Marks Office, a Branch of the Consumer and Corporate Affairs Department, inisters the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning e registration and use of trade marks and supersedes from July 1, 1954, former legislation acted under the Unfair Competition Act, the Union Label Act and the Shop Cards egistration Act. Correspondence relating to an application for registration of a trade ark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the *Trade Marks Journal*, a eekly publication that also gives particulars of every registration of a trade mark and ery registration of a registered user. The required fee payable on application for regration of a trade mark is $35, for advertisement of an application $25 and for registration a person as a registered user of a trade mark, $35.

Section 3.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most these liquor control authorities to the consumer or to licensees for resale. However, in me provinces beer and wine are sold directly by breweries and wineries to consumers or licensees for resale. During the year ended Mar. 31, 1969, provincial government uor authorities operated 1,208 retail stores and had 197 agencies in smaller centres of pulation.

Government revenue specifically related to alcoholic beverages and details of sales by lue and volume for each province are given below. DBS report, *The Control and Sale Alcoholic Beverages in Canada* (Catalogue No. 63-202) shows further detail as well as

volume figures of production and warehousing transactions, the value and volume of imports and exports and the assets and liabilities of provincial liquor commissions.

4.—Revenue of Provincial and Territorial Governments Derived Specifically from the Control and Sale of Alcoholic Beverages, Years Ended Mar. 31, 1968 and 1969

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from general retail sales taxation with the exception of the 1969 figures for Quebec, which include $10,140,000 in sales tax collected at outlets.

Section 4.—Miscellaneous Aids or Controls

The National Energy Board

The National Energy Board was established under authority of the National Ener Board Act, 1959 (SC 1959, c. 46), for the broad purpose of assuring the best use of ener resources in Canada. The Board is responsible for adjudicating upon applications licences to export and to import natural gas, applications to construct and operate int provincial and international pipelines for the transportation of petroleum and its produ and of natural gas, and applications for licences to export electric power and energy, a for certificates to construct and operate international power lines. It is responsible regulating the rates, tolls and tariffs of oil and gas pipelines under its jurisdiction, a fi in which it is becoming increasingly active. The Board reports to Parliament through t Minister of Energy, Mines and Resources.

In addition to its regulatory responsibilities, the Board has an advisory role. In t capacity it is required to keep under review all matters relating to energy within the ju diction of the Parliament of Canada and to recommend to the Minister any measu that the Board considers necessary or advisable to undertake in the public interest to e sure proper use and development of energy and its sources.

In early 1970 the National Energy Board Act was amended, bestowing on the Boa certain additional responsibilities. The Board was given jurisdiction over internatio power lines constructed and operated for the purpose of importing power into Canada a basis comparable to the jurisdiction it had exercised previously over export power li only. The existing authority of the National Energy Board to license the import of g was extended to include the licensing for import of liquefied natural gas. Certain oth amendments dealing with the construction of pipelines through municipal and priva farm areas provided the Board with the authority to direct the pipeline company to dive relocate or otherwise reconstruct the appropriate portions of its pipeline so as to remo an existing interference or impairment or to otherwise facilitate reconstruction or relocati of drainage systems. In addition, because of the increase in the Board's workload arisi out of its existing regulatory and advisory functions, the membership of the Natio Energy Board was increased from five to seven.

Also in 1970, as a result of certain regulations made under Part IV of the Natio Energy Board Act, the Board is responsible for the licensing of the importation into Cana of motor gasoline or motor gasoline blending components.

The Board is also charged with the administration of the federal Oil Policy, which had ts initial short-term aim the attainment of higher production targets for oil, including ıral gas liquids. The basic intent of this policy has not changed.

The National Power Policy, announced in 1963, encourages the development of large- e power sources at lowest possible cost; the distribution of the benefits thereof as widely ossible through interconnections between power systems within Canada; and the long- n export of large blocks of power where such exports will induce early development of ıadian power resources. This policy also encourages the export of various classes of er under suitable interconnection agreements to provide for mutual assistance in emer- cies and for other economic benefits that can be derived by both parties through co- inated operation and development. In pursuance of these aims, the Board co-operates n other agencies in the consideration of interprovincial and international interconnec- s of electric power systems. In this context it is worthy of note that now almost all trical utilities in Canada and the United States are interconnected with neighbouring ems and are operating as part of one vast power network.

The Board is empowered to regulate the tolls charged by oil and gas pipeline companies, ject to its jurisdiction to ensure that such tolls are just and reasonable. To date, this er has not been invoked but, in anticipation of the commencement of formal rate rings, the Board has ordered into force Part IV of the National Energy Board Act ch concerns such matters.

The unique characteristics of regulated enterprises, of which pipelines form a part, essitate specialized accounting procedures to enable the Board to create uniform stand- s for the measurement and control of financial and rate matters. Accordingly, Uniform ounting Regulations are a prerequisite to any systematic regulation of rates, tolls and ffs and provide the means by which financial information can be compared. Regular its and investigations are conducted of pipeline companies' accounting records to en- e that Board regulations are followed and to extract essential financial information t is not disclosed in periodic financial statements. In carrying out its statutory respon- ities, the Board must be satisfied that the rates of a company under its jurisdiction are and reasonable and, in addition, that a pipeline's revenues will provide a fair rate of rn on its capital.

The Board conducts continuing studies of energy matters in order to maintain a bank current knowledge which is necessary for the Board to perform its regulatory and ad- ry functions. Energy supply and demand forecasts are a continuing function of the rd's work. Studies include both the Canadian and foreign markets since fuels and, to ore limited extent, electric power are traded internationally.

During 1969, a long-term energy forecast produced by the Board's staff was published tled *Energy Supply and Demand in Canada and Export Demand for Canadian Energy— 5 to 1990*. Copies are available from Information Canada.

e Standards Council of Canada

The Standards Council of Canada was established by Act of Parliament (SC 1969-70, 3), which received Royal Assent on Oct. 7, 1970. The Council will act as a national rdinating institution through which organizations concerned with voluntary standard- ion may co-operate in recognizing, establishing and improving standards in Canada and elop a broader and more energetic Canadian standards program to meet both national international responsibilities. Its structure is intentionally designed to make maximum of those organizations already in existence and functioning efficiently. The aim is to aden the range of activities and to co-ordinate them in order to obtain a more complete erage of standards needs.

The objects of the Council are to foster and promote voluntary standardization in s relating to the construction, manufacture, production, quality, performance and ty of buildings, structures, manufactured articles and products and other goods, in- ling components thereof, not expressly provided for by law, as a means of advancing

the national economy, benefiting the health, safety and welfare of the public, assisting a protecting consumers, facilitating domestic and international trade and furthering int national co-operation in the field of standards. It will be responsible in the private sec for encouraging preparations for change to the metric system in a manner to achieve op mum benefits at minimum cost and will ensure that, in the process of rewriting standar to metric terms, there will be an opportunity to update the standards themselves wh appropriate.

The Council will consist of not more than 57 members, headed by a president and vice-president. The seats of the Council, other than the 16 assigned to government rep sentatives (six federal and ten provincial), will be occupied by representatives of natio organizations. Membership will be broadly representative of all levels of governme (federal, provincial and municipal), primary and secondary industries, distributive a service industries, trade associations, labour unions, provincial associations, consum associations and the academic community.

Trade Standards and Regulations

In its consumer program, the Department of Consumer and Corporate Affairs is sponsible for the administration of broad legislation which affects the business communit Policies and programming are determined by the Standards Branch, and the necessa field supervision by the Operations Branch.

Hazardous Products.—General regulations issued under the Hazardous Produc Act provide for the banning or the regulated sale of a variety of dangerous products whi are toxic, flammable, explosive, or corrosive. These relate largely to household produc Toy Regulations are directed to eliminating dangerous toys.

General Commodity Field.—The National Trade Mark and True Labelling A provides a framework for the development of National Standards and true labelling order to prevent deception in labelling and advertising. The Garment Sizing Regulatio were developed as a National Standard for sizing of childrens' garments. The labelli provision has been used for regulation for fur garments, watch jewels, textiles, etc. Textil will be subject to special new requirements which are being established under a new Text Products Act. (See p. 1345.)

Control of marking of precious metal articles is maintained under the Precious Met Marking Act. This Act will shortly be replaced by a revised statute passed by Parliame

In the packaging and labelling field, a Packaging and Labelling Bill is before Parli ment for consideration (December 1970). This is umbrella legislation to give uniformi to packaging practices in Canada, to reduce packaging and advertising deception, and control proliferation.

Food.—In areas of health, grading, standards and composition, the Food and Dr Act, the Canadian Agricultural Products Standards Act and the Fish Inspection Act a generally applicable. The Consumer and Corporate Affairs Department is charged wi administration of the economic fraud aspects in distribution. This area is concern mainly with labelling, and advertisement in any segment of the news media.

Advertising.—Most legislation has particular requirements to ensure against mi leading advertising. Notice should be taken of Sections 33(c) and (d) of the Combin Investigation Act administered in the Corporate activity of the Department; these inclu general provisions against misleading advertising practices.

Measurement.—The Weights and Measures Act prescribes the legal standards weight and measure for use in Canada; it also requires control of the type of all weighi and measuring devices used for commercial purposes and their periodic verification an surveillance directed toward the elimination of sales by short weight or short measure.

placing Bill is at present (December 1970) before Parliament. The fundamental objec-ves of existing legislation are unchanged. The new Bill is an updating, and complements ie proposed packaging and labelling legislation.

The Electricity Inspection Act and the Gas Inspection Act control the approval before le and use of devices used for the sale of electricity and gas. It also provides a frame-ork for continual in-use inspection.

overnment Financial Assistance for Coal*

The Canadian coal mining industry is faced with the problem that the producing mines re not located near the main consuming markets in Ontario and Quebec, which markets e in close proximity to the more economic United States coals. Transportation subven-ons, which have been maintained in varying degrees since 1927, were designed to further ie movement of Canadian coals by equalizing as far as possible the laid-down costs of nported coals in various market areas and, since 1962, the laid-down costs of imported sidual oil in the Atlantic Provinces and Quebec. From inception in 1927 to Mar. 31, 969, $320,999,665 was paid in subvention aid by the Federal Government.

As a result of federal-provincial agreements and the establishment of the Cape Breton evelopment Corporation in Nova Scotia and the Grand Lake Development Corporation New Brunswick, subvention aid was discontinued in 1968 in Eastern Canada. In Vestern Canada, authority for paying subventions expired on Mar. 31, 1970, with the xception that a one-year extension (to Mar. 31, 1971) was continued with respect to aid n two export contracts with Japan.

As a result of these changes, subvention payments were reduced from $12,800,000 in 968 to $3,500,000 in 1969. Of the latter figure, $3,200,000 was used to assist British olumbia and Alberta mines exporting coal to Japan and $250,000 was used to move ritish Columbia, Alberta and Saskatchewan coals to Ontario. Consequently, after Iar. 31, 1971, subvention payments will cease entirely.

Although the Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one the recommendations of the Royal Commission on Maritime Claims (1926), was de-gned to assist the Canadian steel industry, it also was of benefit to the Canadian coal dustry, particularly in Eastern Canada. It provided for the payment of 49.5 cents per n of bituminous coal mined in Canada and converted into coke to be used in the Canadian anufacture of iron and steel. Payments by the Dominion Coal Board under the Canadian oal Equality Act ended on Mar. 31, 1968, and the Act was withdrawn on May 1, 1970 by roclamation of the Governor in Council. Payments were made on 54,768 tons in the mount of $27,108 during January, February and March 1968. Shipments to which these ayments applied were made during the latter part of November 1967 through March 1968.

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

Two series of figures are included in this Part which, although closely related as far s subject matter is concerned, cover different aspects of the field of bankruptcies and com-ercial failures. The first, under the heading of "Administration of Bankrupt Estates" limited to the supervision, by the Superintendent of Bankruptcy, of the administration bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrange-ent Act); it gives information on the amounts realized from the assets as established by ebtors and indicates that values actually paid to creditors are invariably very much lower an such estimates alone would imply. It can therefore be assumed that this applies in ven greater degree to the more extended fields covered in the second section under the eading of "Returns under the Bankruptcy and Winding-Up Act" which is compiled by ie Dominion Bureau of Statistics. This series is limited to bankruptcies and insolvencies ade under federal legislation and includes business failures only (see p. 1053).

* Prepared by the Mines Branch, Department of Energy, Mines and Resources, Ottawa.

Administration of Bankrupt Estates.*—The Bankruptcy Act, which was last revised in 1949, was amended by SC 1966, c. 32. These amendments were instigated by exposures and suggestions of illegal and improper practices in connection with bankruptcy proceedings or administration. They do not constitute a complete revision of the Bankruptcy Act but were designed rather to provide, as an interim measure, remedies to the most urgent areas of complaints. They provide the Superintendent of Bankruptcy with direct and immediate authority in the field of investigation and inquiry, and tighten the procedures and requirements in a number of areas, such as that of proposals which an insolvent person may make to his creditors. In other words, these amendments were intended to provide remedies in situations where it had been shown by experience that abuses of the bankruptcy process are most likely to occur. The amendments also contain a new Part X entitled "The Orderly Payment of Debts" which may come into force in any province at the request of the provincial authorities concerned. This Part came into force in Alberta on Apr. 17, 1967, and in Manitoba on June 1, 1967.

A report issued annually by the Superintendent of Bankruptcy gives statistics and comments on various activities in the field of bankruptcy, such as prosecution for offences, issue of licences for trustees in bankruptcy, number of estates reported and closed during the year, and costs of bankruptcy administration in Canada.

* Revised by the Superintendent of Bankruptcy, Ottawa.

PART IV.—PRICES*

Price statistics primarily take the form of indexes which express prices in each period as a percentage of prices in a designated base period. The indexes measure the movement of prices from period to period. Another less frequent type of price index expresses prices in one location as a percentage of prices in a base location, which is set equal to 100, and measures the comparative levels of prices between places (Table **13**) at a point in time. In addition to indexes, price statistics may take the form of price averages (Table **10**). Price averages reflect the structure of prices at a given period of time.

Summary tables of available price statistics are presented herein relating to general wholesale prices, prices of capital goods and construction, consumer prices, and prices of

* Prepared in the Prices Division, Dominion Bureau of Statistics.

mmon and preferred stocks. In addition, statistics on patterns of family expenditure, income group, are provided in Section 5. For further details, including indexes of selling es of each of some 100 Canadian manufacturing industries, the reader is advised to sult the monthly DBS publication *Prices and Price Indexes* (Catalogue No. 62-002). addition, price indexes relating to merchandise exports and imports (Chap. XXII) are lished monthly in Catalogue No. 65-004 and No. 65-007, respectively. Similarly, licit price indexes for gross national product and its main components (Chap. XXIV) published quarterly in Catalogue No. 13-001.

Section 1.—Index Numbers of Wholesale Prices

The term "wholesale prices" refers to transactions that occur below the retail level. has more of a connotation of bulk purchase and sale than of any homogeneous level of tribution. Wholesale price indexes and individual price series have numerous uses, of the most important of which is in escalator clauses of contracts where prices quoted linked to movements of specified price indexes. They are also of major importance in dies of replacement and construction costs in investment projects; analyses of price vements of both individual items and commodity groups in relation to purchases and es; industrial planning and market analysis; valuations for tax purposes and inventory lysis; and studies of changes in physical volume. Foreign companies also utilize the exes in assessing the competitive position of Canadian goods.

General Wholesale Index.—The general wholesale index mainly includes manufac-rs' prices but also incorporates those of wholesalers proper, assemblers of primary ducts, agents and operators of other types of commercial enterprises which trade in mmodities of a type, or in quantities characteristic of primary marketing functions. es are grouped according to a commodity classification scheme based on chief com-ent material similarities. Indexes classified according to degree of manufacture are available. In Table **1**, the general wholesale index is presented for the period 1946-69. is index is used as a conventional summary figure against which to observe the behaviour particular price groups such as farm products, raw materials and building materials, for ich separate price indexes have been constructed. Table **2** gives, for the years 1960-69, general wholesale price index and two of its integral classifications—raw and partly nufactured goods, and fully and chiefly manufactured goods; also presented are two ted systems—industrial materials and Canadian farm products.

1969	282.4	260.0	294.9	267.7	184.0p	357.9p	271.

The "Economic White Paper" tabled in the House of Commons on Mar. 12, 197 stated that inflation was the most pressing economic problem in 1969. Throughout tl year, demand had fluctuated around a high level while monetary and fiscal policies ha been directed toward restraint. The year was marked by a notable acceleration in tl rate of price increase, as measured by the general wholesale price index. For exampl this index rose by 4.3 p.c. through the year in contrast to an increase of 2.8 p.c. a ye earlier. The gross weighted index of industry selling prices displayed a similar patter having increased by 4.2 p.c. between December 1968 and December 1969 and by 2.3 p. in the earlier 12-month period ended December 1968.

Major groups of the general wholesale price index showed diverse movements durin 1969. Non-ferrous metals rose 18 p.c., while chemical products increased by 4 p.c., no metallic minerals 2 p.c., animal products 8 p.c. and iron products 7 p.c. Wood produc prices, influenced by the trend in housing starts, reached a peak in March 1969 after climb ing steeply but declined for the remainder of the year so that, on balance, there was only fractional increase. Vegetable products also increased fractionally but textile produc showed a slight decline.

World Wholesale Price Indexes.—Price changes within different countries hav varied widely during the years. Comparisons of Canadian wholesale price indexes wit those of other countries are given in Table 3.

Section 2.—Price Index Numbers of Construction and Capital Goods

This Section covers price indexes currently available for residential, non-residential ilding, and engineering construction. Further details concerning these series or de- opments under way in other areas are available from the Prices Division of DBS.

Residential and Non-residential Building Construction Indexes.—Two series indexes are produced by DBS measuring price changes for residential and non-residen- l building construction. These are base-weighted indexes of materials and labour, and presented in Table 4 for the years 1956-69 (figures from 1935 are available in the May 70 issue of *Prices and Price Indexes*).

The building materials price indexes are drawn from the system of industry selling ce indexes (*Industry Selling Price Indexes 1956-1968*, Catalogue No. 62-528) and relate a selection of building materials derived from a sample of buildings surveyed after the cond World War. Some modifications have since been introduced into the series (de- ibed in *Prices and Price Indexes* for March 1969 and May 1970) and the federal sales has been added to the materials indexes as appropriate. The wage rate component derived from surveys conducted by the Department of Labour for construction trades various centres; these are base rates and usually reflect union scale or collective agree- nts. The combined indexes of materials and wage rates do not reflect changes in profit rgins or in productivity; implicit price indexes from gross fixed capital formation re- ting these factors are available from the National Income and Expenditure Division DBS.

-Price Indexes of Residential and Non-residential Building Materials and Wage Rates, 1956-69

(1961=100)

NOTE.—Figures from 1935 are available in the May 1970 issue of *Prices and Price Indexes*.

Year	Price Indexes of Building Materials		Construction Wage Rates	Composite Indexes of Materials and Wage Rates	
	Residential	Non-residential		Residential	Non-residential
	100.1	97.7	75.4	88.2	87.6
	100.1	99.2	79.9	90.4	90.6
	99.2	99.0	85.7	92.7	93.0
	101.3	100.5	91.1	96.4	96.3
	100.7	101.0	97.0	98.9	99.2
	100.0	100.0	100.0	100.0	100.0
	100.7	99.1	104.4	102.5	101.5
	104.1	101.8	108.1	106.0	104.6
	109.5	106.6	113.1	111.2	109.5
	115.8	111.5	118.6	117.1	114.7
	120.5	115.4	128.1	124.2	121.1
	125.3	117.8	140.8	132.8	128.2
	132.1	120.7	152.8	142.0	135.1
	139.2	126.1	164.5	151.4	143.3

Highway Construction Indexes.—The price indexes of highway construction in nada express prices paid by provincial governments each year in contracts awarded for hway construction as a percentage of price paid in 1961. The base-weighted indexes asure the effect of price change on the cost of specified programs of new highway con- uction represented by contracts of approximately $50,000 or more awarded by provincial ernments.

The all-items indexes and their components are useful in planning and budgeting for hway construction programs, in updating previously costed projects, in estimating

replacement cost of previously completed road work and in measuring historical price trend Prices contained in the index are for units of construction work put in place, such as a cub yard of earth excavation or a ton of bituminous hot-mix paving. Also included are pric of some materials, such as culvert pipe, usually supplied to the contractor by the highwa department. (*Prices and Price Indexes* for December 1967 contains details of the proble of estimating price change for highway construction.)

5.—Highway Construction Price Indexes for All-Items and Major Components, Seven-Province Composite, Years Ended Mar. 31, 1956-69

(1961=100)

Year Ended Mar. 31—	All-Items	Major Components		
		Grading	Granular Base Courses	Surface Courses
1956	131.6	139.1	126.1	126.1
1957	122.1	123.2	117.6	127.5
1958	111.1	114.3	105.2	114.8
1959	112.2	113.7	109.5	113.7

1968	120.8	119.9	101.8	151.5	140.8	124.9	126.6
1969	116.5	123.1	102.2	154.0	144.6	132.1	143.2

[1] Direct comparisons should not be made between this index and the highway index published by the Ontar Department of Highways; the item content is substantially different.

Electrical Utility Construction Indexes.—The price indexes of electrical utilit construction, which include those of distribution systems, transmission lines and tran former stations, give some idea of the impact of price change on the cost of material labour and equipment used in constructing and equipping electrical utilities in a specifie base period. The index provides an estimate of how much more, or less, it would cost t reproduce the base-period program of construction in another period, using the same co struction technology as in the base period and assuming rates of profit and productivit in construction are the same in both periods.

Major uses of the index relate to the estimation of reproduction costs or the deflation capital formation. Fixed-weighted national input indexes have deficiencies for this urpose which may be alleviated by the use of detailed deflation techniques and through he utilization of specifically appropriate productivity adjustments. (These problems are iscussed in DBS Occasional Paper *Price Indexes of Electric Utility Construction*, Catalogue o. 62-526.)

Prices used in the indexes are, for the most part, selling prices reported monthly by anufacturers for materials or equipment. The price reported is for units and terms of le representative of the volume sales of the manufacturer. Federal sales tax changes e reflected in the index but no adjustments have been made for provincial tax changes. ntil December 1964, wage rate data were supplied by the Department of Labour and rep-sented minimum hourly rates paid to construction workers in major cities employed on ederal Government contracts. In 1965, union basic wage rates reported by major utilities id some contractors were incorporated into the index. The sample selected provides an timate of wage rate change for urban own-account and contract electrical utility con-ruction.

7.—Price Indexes of Electrical Utility Distribution Systems, Transmission Lines and Transformer Stations, 1956-69

(1961=100)

Year	Distribution Systems			Transmission Lines	Transformer Stations		
	Construction	Equipment	Total	Total	Structures and Improvements	Equipment	Total

Section 3.—Consumer Price Index*

The purpose of the consumer price index is to measure the movement from month month in retail prices of goods and services bought by a representative cross-section of e Canadian urban population. For a particular article or service, a price index number simply the price of the article in one period of time expressed as a percentage of its price a reference period, usually called a base period. However, indexes for individual goods ay be combined to form indexes representing prices of broad groups of goods and services. hus, the consumer price index relates to the wide range of goods and services bought by anadian urban families. The index expresses the combined prices of such goods each onth as a percentage of their prices in the base period 1961.

The group of goods and services represented in the index is called the index "basket" id "weights" are assigned to the price indexes of individual items for purposes of com-

* A comprehensive description of the index is contained in the publication *The Consumer Price Index (1949=100) Revision Based on 1957 Expenditures* (Catalogue No. 62-518). A description of the change in the base period from 49 to 1961 appears in the January 1969 issue of *Prices and Price Indexes* (Catalogue No. 62-002).

bining them into an over-all or composite index. The weights reflect the relative impo tance of items in expenditures of middle-size urban families with medium incomes. Th basket is an unchanging or equivalent quantity and quality of goods and services. Onl prices change from month to month and the index, therefore, measures the effect of changin prices on the cost of purchasing the fixed basket. The basket and weights now used in th index are based on expenditures in 1957 of families of two to six persons, with annu incomes of $2,500 to $7,000, living in cities of 30,000 population or over.

8.—Consumer Price Index Numbers, 1946-69

(1961=100)

Year	Index	Year	Index	Year	Index	Year	Index
1946	60.0	1952	90.2	1958	96.8	1964	104.8
1947	65.6	1953	89.4	1959	97.9	1965	107.4
1948	75.0	1954	89.9	1960	99.1	1966	111.4
1949	77.4	1955	90.1	1961	100.0	1967	115.4
1950	79.6	1956	91.4	1962	101.2	1968	120.1
1951	88.0	1957	94.3	1963	103.0	1969	125.5

The behaviour of the consumer price index during the years of almost continuou economic growth following the end of the Second World War up to 1959 is discussed in th 1962 Year Book at pp. 928-929, and the movement during 1959-68 in subsequent editions Between 1968 and 1969, the annual consumer price index rose 4.5 p.c., marking the larges annual increase since the Korean War. In the five-year period ended 1969, the annua index advanced 19.8 p.c., which represented a drop of 16.5 cents in the purchasing powe of the consumer dollar.

The 4.5-p.c. rise in the index between 1968 and 1969 compares with an average in crease of 3.7 p.c. over the period 1964-69. Since 1964, the average annual increase of th two most important components—food and housing—paralleled closely the advance in th all-items index by rising, on average, 3.6 and 3.7 p.c., respectively. The other major com ponents registered five-year average increases of from 3.3 p.c. for clothing to 4.4 p.c. fo health and personal care.

9.—Consumer Price Indexes for Specific Groups, 1960-69

(1961=100)

Year	Food	Housing	Clothing	Transportation	Health and Personal Care	Recreation and Reading	Tobacco and Alcohol	Composite Index
Group weight as a percentage of total	27	32	11	12	7	5	6	100
1960	98.5	99.6	98.6	99.8	99.5	98.8	99.6	99.1
1961	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
1962	101.8	101.2	100.9	99.9	102.0	100.8	101.3	101.2
1963	105.1	102.3	103.4	99.9	104.6	102.2	101.5	103.0
1964	106.8	103.9	106.0	101.0	108.0	103.9	103.4	104.8
1965	109.6	105.8	107.9	104.8	113.0	105.6	105.1	107.4
1966	116.6	108.7	112.0	107.3	116.5	108.6	107.6	111.4
1967	118.1	113.4	117.6	111.8	122.5	114.1	110.4	115.4
1968	122.0	118.6	121.1	114.7	127.4	119.7	120.4	120.1
1969	127.1	124.7	124.5	120.0	133.6	126.8	125.0	125.5

Between 1968 and 1969, annual average food prices rose 4.2 p.c., food at home increasing 4.0 p.c. and restaurant meals 6.8 p.c. The housing index advanced 5.1 p.c. over the same period, which was the largest of five progressive increases made by this component

nce 1964. Clothing, on the other hand, after registering a peak rate of increase of 5.0 p.c. tween 1966 and 1967, showed an annual rise of 3.0 p.c. in the subsequent years; its ad- nce of 2.8 p.c. between 1968 and 1969 was the smallest among the major components. he recreation and reading index advanced 5.9 p.c. between 1968 and 1969, which was the ghest rate of increase among the major components; health and personal care prices in- eased 4.9 p.c., transportation prices 4.6 p.c., and average tobacco and alcohol prices 8 p.c.

Table **10** gives single-commodity price relatives for a number of important items enter- g into the food component of the consumer price index.

10.—Urban Average and Relative Retail Prices of Staple Foods, 1960-69

Table **11** presents regional consumer price indexes for ten cities or city combinations. hese indexes do not show whether it costs more or less to live in one city than in another d should not be used for such comparisons. Their function is to measure percentage anges in retail prices—over a certain time in each city or city combination—of a fixed sket of goods and services representing the level of consumption of a particular group families. Indexes which compare price levels among major Canadian cities are shown p. 1063.

World Retail Price Indexes.—In order to place movements in Canadian retail prices into perspective, they should be compared with price changes occurring elsewhere in the world. This is done in Table **12**, which indicates the percentage changes over the previous year in the consumer price index for each country specified. For purposes of comparison, countries are listed, alphabetically, by region. It should be noted that all percentages are rounded to the nearest whole number.

Section 4.—Intercity Retail Price Differentials*

As noted on p. 1061, the regional city price indexes given in Table **11** measure the *movements* of consumer prices from month to month *within each city* and cannot be used to compare levels of prices between cities. Indexes that do compare levels of prices among 11

* A fuller explanation of the study from which these indexes were derived, including more details of the price comparisons, is given in the November 1969 issue of *Prices and Price Indexes*.

major Canadian cities are given in Table **13**. These indexes express prices in each city as a percentage of prices in Winnipeg at May 1969, with Winnipeg prices at that date set equal to 100. The selection of Winnipeg as the base city has no special significance; the indexes may be expressed on the base of any of the individual cities included. The selected commodity groupings shown make up about three quarters of the average urban consumer budget, the most important omissions, for technical reasons, being shelter (rented and owned), fuel, light and water, and restaurant meals.

The retail prices from which the indexes were derived are largely those collected in each city for production of the consumer price index. Comparability between cities was achieved by matching, as far as possible, quotations for similar qualities of goods and services and types of retail outlets. Since prices compared include sales and excise taxes as applicable, variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining intercity price differentials for these items.

3.—Intercity Indexes of Retail Price Differentials for Selected Groupings of Commodities and Services, as at May 1969

(Winnipeg, May 1969=100)

Commodity Grouping	St. John's, Nfld.	Charlottetown, P.E.I.	Halifax, N.S.	Saint John, N.B.	Montreal, Que.	Ottawa, Ont.	Toronto, Ont.	Regina, Sask.	Edmonton, Alta.	Vancouver, B.C.

[1] Excludes fuel and lighting.

Section 5.—Consumer Expenditure

Household surveys of family expenditure provide information on consumer spending that can be related to family characteristics, such as geographical location, family size, income level, etc. A primary purpose of such surveys is to provide information for constructing, reviewing and revising the weights of consumer price indexes. Initially, the small-scale sample surveys carried out in Canadian urban centres since 1953 were designed to follow changes in the spending patterns of a well-defined group of middle-income urban families known as the target group of the consumer price index. However, in the years from 1953 to 1968, during which seven survey programs were conducted, a growing demand for expenditure statistics to serve other needs of government, business, welfare organizations and academic research resulted in a widening in the scope and size of the surveys in recent years, and in a decision to expand the 1969-70 survey programs to provide a large-scale national survey for the first time since 1948-49.

The more restricted surveys (1953, 1955, 1957 and 1962) consisted of two phases—the collection by means of monthly record-keeping surveys throughout the reference year of detailed information on food expenditures, and the collection of information by annual recall of all family expenditure, income and change in assets and liabilities. In the other three surveys (1959, 1964 and 1967), the monthly surveys were omitted and the annual recall surveys were enlarged in scope to refer to all families and individuals, regardless of family type or income. The sample size was doubled in order to obtain about 2,000 usable annual records. The 1959 survey was unique in the series in that it was designed to represent population in all urban centres of 15,000 or over, whereas the 1964 and 1967 surveys were identical in city coverage, referring to 11 major regional cities.

Detailed results of the surveys have been published in two series of occasional publications covering food expenditure and all family expenditure, respectively: *Urban Family Food Expenditure 1962* (Catalogue No. 62-524), *Urban Family Expenditure 1962* (Catalogue No. 62-525), *Urban Family Expenditure 1964* (Catalogue No. 62-527), and *Urban Family Expenditure 1967* (Catalogue No. 62-530).

The family expenditure survey program undertaken for 1969 was national in scope, with considerably larger samples than previously. In monthly surveys throughout 1969, approximately 10,000 families and individuals kept detailed records of expenditures on food and selected non-food items, including quantities acquired. Early in 1970, the same time period was covered in an annual recall survey of all family expenditures and income. About 17,000 family records were obtained which are expected to yield at least 15,000 usable schedules. Both surveys will produce information for small urban, rural non-farm and farm populations as well as for the urban population and individual urban centres. Initial results are expected from the food expenditure survey in late 1970 and from the complete expenditure survey in late 1971.

Table **14** presents a summary of family expenditure patterns in 11 Canadian cities in 1967, classified by family income for families of two or more.

Camping is a ple and economical w spend a summer ho and therefore or the most popular of family recreati Canada. The ave expenditure of a f on recreation, re less of size of in and number of pe is estimated at a over $300 a ye

Section 6.—Security Price Indexes

Security price indexes measure, through time, the effect of price change on the value a portfolio of stocks bought and held by a hypothetical investor (as opposed to the re speculative trader). The portfolio represents stocks of Canadian companies listed the Toronto, Montreal and Canadian stock exchanges. In the case of the mining ex, eligible issues are for producing mines only. The number of shares held for each ue is in proportion to the total number of shares outstanding. Prices in the common ck indexes (investors and mining indexes) are Thursday's closing quotations each week, eraged over weeks. For the monthly preferred stock indexes, prices are monthly weighted erages of the daily closing prices in which weights are daily total sales. The indexes press current prices as a percentage of prices in 1961. Monthly and certain weekly in-xes appear in the DBS monthly publication *Prices and Price Indexes* (Catalogue No. 002) and a weekly DBS report gives indexes on a weekly basis for all groups and sub-ups.

The investors index is comprised of three major groups, with relative importance icated by percentage weights as follows: industrials, 67.5; utilities, 18.6; and finance, 9. Each major group is further divided into industry sub-groups corresponding to the ndard industrial classification. The mining index is composed of two groups: base tals with a weight of 64.6 p.c. and golds with a weight of 35.4 p.c. The index of pre-red stocks is not divided into component groups.

Part IV.—Travel Between Canada and Other Countries	1119

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

The subject of foreign trade covers more than the treatment of exports and imports commodities, important though this is. In its broader sense, foreign trade is made up of e total international interchange of goods, services, securities and other financial transacns, all of which are presented in their appropriate relationship in this Chapter and in ction 4 of Chapter XXIV. Part I contains specially prepared information on Canada's de with the Pacific Rim Countries. Part II gives detailed statistics of total foreign trade. rt III outlines the various ways in which the Federal Government promotes and en urages trade relationships, and contains a brief review of the Canadian tariff structure. rt IV contains a review of the extent of travel between Canada and other countries in 69, with estimates of the amount of money expended for that purpose.

PART I.—CANADA'S TRADE WITH THE PACIFIC RIM COUNTRIES*

The "New West", as Prime Minister Trudeau has called the Pacific Rim† area, has erged as one of primary interest in Canada's trade. The Federal Government's recent ite paper on foreign policy places as much emphasis on the Pacific as on Latin America.

Canada has been experiencing shifts in trading partners in recent decades, as a result of fering rates of economic growth, the alignment of countries into regional trading blocs d the evolution of transportation facilities such as air freighters, bulk carriers and conerization. The major shift has been toward expansion of Pacific trade. Even though s should greatly broaden Canada's trade in the 1970s and provide balance and outlets for

* Prepared by Dr. M. P. Mathew, External Trade Division, Dominion Bureau of Statistics.

†"Pacific Rim", as defined here, includes all the countries in East Asia, Southeast Asia and Oceania, but excludes United States, the Soviet Union and Latin America which border on the Pacific Ocean.

more of its products, Pacific trade involves several important facets to be considere First, it involves products requiring specifications different from those Canada is accusto to produce for the North American and European markets. Secondly, there are two k of customer countries—those which are industrializing rapidly and have consumers v rising incomes and new tastes to satisfy, and those which require food but have shrinl opportunities for trade owing to inadequate resources and products. Thirdly, there customers like the People's Republic of China, the requirements of which fluctuate gre because of such factors as internal crop conditions or trading and political considerati

Half the world's population borders on the Pacific Ocean. The world's fastest grow country (Japan) and its most populous country (China) are members of the Pacific l A growing and balanced trade means prosperity, independence, stability and impro quality of life in the whole region. Trade between Canada and the Pacific area has incre phenomenally during the past decade (Tables 1 and 2) and that area is now Canada's t largest market, after the United States and Western Europe, and its third largest supp Canada has also been an important net direct investor in the region, having invested s $500,000,000 more there than Pacific investors have placed in Canada.†

In the period following the conclusion of World War II, Canada, particularly Wes Canada, has benefited from growing merchandise trade with the Pacific area, especi with Japan. Of the 54 principal commodities of Canada selling in Japan in 1969, w accounted for some 93 p.c. of Canada's exports to that country, as many as 48 were marily of western Canadian origin. A similar development has occurred in trade v certain other Pacific countries.

The value of exports to the Pacific countries in 1969, at $1,100,000,000, was do that of 1962 and represented 7 p.c. of Canada's total exports; imports at $857,000,000 w more than double the value in 1965. The favourable balance provided foreign excha with which to offset Canada's payments deficits with the rest of the world, especially United States. Canada is an important supplier of foodstuffs needed by countries v rapidly growing populations, and also in recent years of industrial materials and cap goods. Sales of wheat and wheat flour continue to dominate export figures, followed such raw materials as copper, aluminum, wood pulp, newsprint and lumber. Japan t the major portion of these exports in 1969, followed by Australia, the People's Republi China, New Zealand, the Philippines, Hong Kong, Malaysia, South Korea and Taiwa

Canadian trade relations with several Pacific Rim countries—Japan, Hong Kong South Korea—are governed by the General Agreement on Tariffs and Trade (GAT In addition, Canada has bilateral agreements with Japan and South Korea providing the exchange of most-favoured-nation (MFN) treatment, but the latter maintains con on many imports. In Japan, licences are required for most imports and quota restricti are maintained on a substantial group of items. Canada grants MFN facilities to H Kong and receives preferential treatment on a small range of products, but imports i Hong Kong are admitted relatively freely. A *modus vivendi* signed in 1946 governs Cana trade relations with the People's Republic of China. Canada's trade with Australia New Zealand is governed by the Commonwealth preference system. Canada and Philippines provide MFN treatment to each other without any contractual agreem Although the Philippines import regulations are quite liberal, credit restrictions are exten and provide an effective barrier to imports. From one Pacific country to another, composition of Canadian exports and imports, the opportunities for their growth, and problems of access tend to vary widely. Canada's trade relations and the exchang important commodities with the individual countries of the region are discussed bel Canada's principal exports and imports to and from the region as a whole are giver Tables 3 and 4.

ast Asia

Japan.—A notable development in the Canada–Pacific Rim trade has been the growth the Japanese market. Immediately following World War II, Japan's trade was preonderantly with the United States. In the 1960s, however, that country turned more nd more to Canada, becoming third in importance to Canadian exporters, after the United tates and the United Kingdom. Even though Japan is Canada's largest market and pplier in the Pacific, Canadian sales to that country are limited to industrial raw materials nd foodstuffs, while finished goods make up the bulk of Japanese sales to Canada. A large roportion of the shipments of unprocessed materials is derived from direct Japanese inestment, particularly in Western Canada, where more than $100,000,000 has been invested ensure sources of supply for rapidly growing industry. Work is also being done in lberta to foster economic co-operation in the development of coal, copper and other ommodity resources. Although this investment is advantageous to the development of anadian resources, it still involves the export of these materials in the crudest and leastrofitable form.

Domestic exports to Japan rose 250 p.c. from $179,000,000 in 1960 to $626,000,000 in 969, and imports rose 350 p.c. from $110,000,000 to $496,000,000. Canada's access to ie Japanese market for manufactured goods, as well as opportunities for investment, is nited by a broad range of direct and indirect restrictions, notwithstanding a movement ward liberalization in stages. Further efforts are required to lower or remove the existing on-tariff barriers to Canadian manufactures and to open up fully opportunities for Canaan investment. In the meantime, Japan's demand for all types of goods, especially dustrial raw materials, continues to grow. Shipments of many Canadian goods rose gnificantly in 1969, particularly of commodities such as flaxseed, copper, aluminum, iron e, wood pulp and newsprint.

Japan must import much of the raw materials required by industry and prefers, like ie United Kingdom at a similar stage of economic development, to import these in the udest possible form. In consequence, basic foodstuffs (mostly grains) and unprocessed aterials (ores, fuels and forest products) have accounted for something like 94 p.c. of anada's exports to Japan in recent years. Minerals alone accounted for 42 p.c. of total mmodity shipments in 1969 of $626,000,000 to Japan, compared with 26 p.c. a decade go. The rise in mineral exports to Japan contrasts with the diminished importance of anadian grain shipments—13 p.c. in 1969 against over 40 p.c. ten years previously.

Canada's relative proximity to Japan and the construction of new port facilities a encouraging low-cost bulk commodity exports, and Canadian political and econom stability has encouraged Japanese customers to enter into long-term contracts for the d velopment and supply of mineral resources.

At $133,000,000, following a 21-p.c. rise over 1968, copper concentrates represente the largest single commodity in Canadian exports to Japan in 1969. It should be noted th while Canadian copper exports to the Japanese market showed a sixfold increase in valu from $20,000,000 in 1962, they rose by considerably less than three times in volume, ind cating a more than doubling in the price of copper during the 1962-69 period.* The sha of Canada's total copper production that is shipped to Japan almost doubled during th 1962-69 period from 10 p.c. to nearly 20 p.c. Despite the increase in projected copp exports to $570,000,000 (350,000 tons) by 1973, it is expected that Canada will still ran second in importance to the Philippines. In addition to copper, Canada also supplie 40 p.c. of Japan's requirements of zinc concentrates as well as substantial quantities molybdenum, uranium, iron ore, lead and aluminum.

Impressive improvements in the standard of living are changing Japan from tradition to contemporary consumption patterns. For example, the per capita rice consumptio dropped from over 200 lb. in 1960 to 160 lb. in 1969, but that of fruits and vegetables an prepared foods increased considerably and bread has become an important consumptio item. Thus, Japan has recently had a surplus of home-grown rice and has had to impo 15 p.c. more food yearly. In addition, internal production of some agricultural commod ties like rapeseed is being abandoned in favour of imports. During the past decad Canada's three largest agricultural product markets—the United Kingdom, the Unite States and the European Economic Community—grew little, whereas exports to Japa doubled and those to other countries tripled.† Currently, annual exports of agricultur products to Japan are only slightly behind those to the United States and are well ahead o those to the EEC. Wheat and flour exports going to that country have amounted t almost $100,000,000 yearly for several years and it has become Canada's leading market fo rapeseed and flaxseed; 300,000 tons of rapeseed were shipped to Japan in 1969, a tenfol increase in the decade. Japan's per capita meat consumption, including poultry, whil still less than 30 lb. a year, is rising rapidly so that, because of its limited supply of arabl land, the importation of large quantities of feed grains will become necessary. Canad already an important supplier of barley, has an opportunity to expand its exports of tha grain in competition with other producers such as France. Prospects also exist for in creased shipments of Canadian beef and pork.

Canada has become one of Japan's fastest growing overseas markets, increasing 38 p.c in 1969 over 1968. As stated previously, almost all major Canadian exports to Japan t date have been primary commodities and imports have been mostly processed goods, in cluding capital equipment for the power and oil industries, commodities for transportatio requirements, and consumer goods. The wide variety of manufactured goods importe from Japan in 1969 included: communication and related equipment, $74,600,000 ($7,700,00 in 1960); motor vehicles and parts, $71,400,000 ($300,000); textile materials, $51,900,00 ($14,800,000); iron and steel products, $45,200,000 ($6,400,000); apparel and accessories $31,600,000 ($20,300,000); non-farm machinery, $19,900,000 ($1,000,000); photographi goods, $12,200,000 ($3,400,000); plywood, $9,100,000 ($3,500,000); footwear, $8,300,00 ($5,700,000); games and toys, $7,300,000 ($4,000,000); and sporting and recreation goods $7,100,000 ($1,300,000).

Although total imports into Canada from all countries increased 159 p.c. from 196 to 1969, those from Japan rose 349 p.c. from $110,400,000 to $495,700,000; automotive

* The Canada–Japan Trade Council, *Canadian Minerals and the Japanese Market* (Ottawa: 1970), p. 3.

†*Canadian Agriculture in the Seventies*, Report of the Federal Task Force on Agriculture (Ottawa: Informatio Canada, 1969), p. 46.

ducts and equipment showed the most spectacular increase. Canada has had a sub-ntial trade balance with Japan for many years, rising irregularly from $69,000,000 in 0 to $130,000,000 in 1969.

The People's Republic of China.—Foreign trade, a monopoly of the State, is ducted through China's 13 State trading corporations. In recent years, China, with opulation of 750,000,000, has been a major market for Canadian wheat under a long-term eement which came into force in August 1966. In 1968, sales of $158,000,000 represented p.c. of Canada's total wheat exports, and in 1969 wheat accounted for over 98 p.c. of nada's total exports to China. While the Canadian Wheat Board concluded a contract ate 1969 for the sale of 2,200,000 tons for delivery up to October 1970, valued at approxi-ely $135,000,000, the outlook for continued sales beyond 1970 is difficult to assess on ount of dramatic advances in China's agricultural productivity. Other commodities orted to China in 1969 were scrap iron and steel, totalling $2,000,000.

Canada's imports from the People's Republic of China amounted to only $27,000,000 969 and consisted of a wide range of products including: apparel and accessories, 200,000 ($200,000 in 1960); green peanuts, $4,600,000 ($300,000); house furnishings, 300,000 ($600,000); cotton fabrics, $2,800,000 ($45,000); and walnuts, $2,500,000 700,000). Thus, the favourable trade balance with the People's Republic rose from 000,000 in 1960 to $95,000,000 in 1969.

Korea.—The South Korean economic boom which continued in 1969 was reflected reater demand for imports. Even though the internal economy has been under restraint some time, the real growth rate in gross national product exceeded 15 p.c. Although United States and Japan continue to be the main suppliers to South Korea, Canadian s have risen considerably in the past few years from $7,800,000 in 1967 to $13,200,000 968 and $15,700,000 in 1969. The major exports in 1969 were: sulphur, $4,600,000; estos, $3,000,000; potassium chloride, $1,800,000; pulp and cattle, $1,500,000 each; and sprint $450,000. Imports from South Korea also increased from $4,600,000 in 1967 $12,200,000 in 1969. The latter included: apparel and footwear $7,800,000; textile ics, $1,500,000; plywood, $600,000; tungsten, $300,000; and transistor radios, $200,000. ada's trade balance with South Korea improved from $2,000,000 in 1968 to $3,500,000 969. Trade with North Korea has been marginal; exports, mostly of pig iron, amounted nly $253,000 in 1969.

Taiwan.—Bolstered by heavy foreign investment and energetic drive, the industriali-on and real economic growth of Taiwan, with its highly concentrated population of 00,000, ranked among the highest in the world in the postwar period. As a consequence, nternational trade expanded rapidly. At present, food processing, textiles and elec-ics are the key sectors of the economy. Canada's trade with Taiwan is buoyant in lstuffs, raw materials, certain manufactures and capital equipment. Of the total orts to Taiwan of $12,700,000 in 1969 ($2,900,000 in 1960), sulphur accounted for 00,000; wheat, $2,000,000 ($100,000 in 1960); rapeseed and wood pulp, $1,500,000 each; aluminum $500,000. There were substantial exports of potash in 1967 and 1968.

Of the total imports from Taiwan of $42,500,000 in 1969 ($1,100,000 in 1960), veneer plywood accounted for $12,600,000 ($300,000); apparel and accessories, $12,000,000 0,000); footwear, $5,500,000; canned vegetables, $2,500,000; and communications and ed equipment, $2,400,000.

Generally, throughout the 1960s, Canada has had an unfavourable trade balance with wan, the mounting deficit reaching nearly $30,000,000 in 1969.

Hong Kong.—Essentially a free port with no tariffs except on liquor, tobacco, petro-n products and motor vehicles, Hong Kong with its population of 4,000,000, has enjoyed d indu strial expansion and a profitable tourist trade.

The pattern of Canada's trade with Hong Kong is somewhat similar to that w Taiwan, providing growing opportunities for Canadian exports as well as problems w respect to the importation of textiles, which continue to rank among the colony's m important manufactures. Canada had a trade surplus with Hong Kong in 1961 and 19 but has since been running a deficit which amounted to $54,000,000 in 1969. Canad exports to Hong Kong ranged between $17,000,000 and $19,000,000 in the three ye 1967-69, somewhat below the level of $22,000,000 in 1960. The principal exports inclu wheat and flour, aluminum, newsprint, plastic materials, pharmaceutical products a medicinal plants.

Imports in 1969, valued at $72,900,000 against $15,500,000 in 1960, included: appa and accessories, $34,200,000 ($7,600,000 in 1960); toys, games and dolls, $7,000,0 ($500,000); communication and related equipment, $2,300,000 ($100,000); cotton fabri $2,100,000 ($41,000); artificial and ornamental flowers, $1,900,000 ($33,000); footw $1,800,000 ($900,000) and jewellery, $1,600,000 ($100,000).

Oceania

Australia.—Trade between Canada and Australia is based on the Canada–Austra Trade Agreement of 1960. There are no major barriers to trade, both countries admitti specified goods at preferential rates of tariff. In the past decade, the course of total tra has been characterized by growth—nearly doubling from $135,000,000 in 1960 to $265,00 000 in 1969.

Exports to Australia, Canada's second largest market in the Pacific area, grew by average of 6½ p.c. a year over the decade. Domestic exports in 1969 amounted to $168,6 000 and imports to some $96,000,000, compared with $99,800,000 and $36,000,000, spectively, in 1960. Nearly 85 p.c. of the 1969 exports represented manufactured a semi-manufactured goods, the principal items being: motor vehicles and parts, $30,700,0 newsprint, $22,300,000; lumber, $15,800,000; non-farm machinery, $13,500,000; wo pulp, $9,300,000; asbestos, $7,800,000; sulphur, $7,400,000; aircraft and parts, $4,700,0 nickel and alloys, $3,100,000; plastics, $3,000,000; and steel, $2,100,000. In all, Cana supplied some 4 p.c. of Australia's import requirements in 1969.

Canada, on the other hand, imports less than 1 p.c. of its requirements from Austral The more important imports include primary products, mainly processed meats, can and dried fruits, sugar, wine and wool, and products of agriculture and ranching.

Canada's substantial trade surplus with Australia rose moderately from $64,000,0 in 1960 to $72,000,000 in 1969. Canadian technology has been of considerable interest Australians in their drive for industrialization in such fields as communications, nucl power, nickel refining, natural gas pipelines, fisheries and forest fire fighting. Canadi companies engaged largely in mining and manufacturing have invested more than $35 000,000 in Australia.

New Zealand.—The trade between Canada and New Zealand has been mutua advantageous to the two countries. Canadian exports in 1969 amounted to $37,800,0 and imports to $41,200,000. Except for a small trade deficit in 1969, Canada maintai a surplus with New Zealand during the 1960s ranging from $14,000,000 to $27,000,0 The main exports to New Zealand in 1969 were: aluminum, $7,100,000; sulphur, $5,300,0 non-farm machinery, $4,500,000; plastics, $2,500,000; aircraft and parts, $2,000,0 potassium chloride, $1,900,000; copper and alloys, $1,800,000; and asbestos, $1,100,0 The chief imports were: beef, $29,700,000; sausages, $3,300,000; wool and animal ha $3,000,000; and mutton and lamb, $2,100,000.

Future exports to Australia and New Zealand could be affected not only by the dustrialization policies of these countries but also by the possible entry of Britain into t European Economic Community. Such a development could bring about adjustments the Commonwealth preference system, together with a change in the importance of th trade with countries such as Japan and the United States.

Other Oceania.—Canada's exports to British, French and U.S. Oceania, which in 69 were valued at $2,600,000, consisted mostly of wheat flour, barley, canned fish, lumber, wsprint and machinery; imports from these islands were valued at $2,800,000. Total ports to and imports from Fiji were $900,000 and $5,700,000, respectively.

utheast Asia

There is considerable diversity among the countries of Southeast Asia. On a per capita sis, the national product of Singapore is perhaps ten times that of Burma, whereas the NP growth rate, calculated at constant prices, ranges from more than 8 p.c. in Singapore 2 p.c. in Burma. Again, while manufactured goods account for half of Singapore's ports, primary products—including minerals—constitute the major portion of exports ewhere. Improved strains of rice and wheat have produced remarkable results, creating w difficulties for Canada as an exporter of grains.

Canada's trade relations with several southeast Asian countries—Malaysia, Singapore, rma, Cambodia and Indonesia—are governed by the General Agreement on Tariffs d Trade. In addition, Canada grants most-favoured-nation treatment to Laos and et-Nam, and exchanges MFN treatment with the Philippines. Preferential treatment exchanged between Canada and both Singapore and Malaysia but the latter maintains ensing control on many imports. Imports are admitted relatively free into the Philip- nes, Singapore and Thailand. In Indonesia, Laos and Viet-Nam most goods require ences.

The ten independent countries in the southeast Asian region provided a $70,000,000 rket for Canada in 1969. Imports from the region consist mostly of a wide variety of pical raw materials and consumer goods. Aid programs financed by the Canadian ternational Development Agency create many openings for exports, as well as private restment programs by Canadian mining interests in the Philippines and Indonesia.

The Philippines.—Canada's exports to the Philippines, with a total population of 000,000, rose from $18,800,000 in 1966 to $32,500,000 in 1969, making this country one the Philippines' leading trading partners. Among the leading exports from Canada : capital equipment, especially communications equipment; construction, mining and estry machinery; motor vehicles and parts; raw and semi-processed industrial materials h as aluminum, zinc, copper, chemicals and synthetic rubber; insulated wire and cable; wsprint; wood pulp; and brewer's malt. The presence in the Philippines of subsidiaries General Motors, Ford and International Harvester has led to a substantial growth in ports of knocked-down motor vehicles, chassis and parts; the value of automotive ducts imported from Canada rose from only $23,000 in 1960 to $9,100,000 in 1969, presenting some 28 p.c. of all Canadian exports to the Philippines.

The Philippine national economy relies heavily on the exports of raw materials, in- ding coconut products, sugar, lumber, natural fibres and minerals. Canadian imports m the Philippines in 1969 included: desiccated coconut, $1,200,000; pineapple products, 100,000; chrome ores and concentrates, $600,000; and veneer and plywood, $400,000. nada's trade surplus with the Philippines nearly doubled during the 1960s to $28,000,000 1969.

Indonesia.—Canada's trade with Indonesia, which has a population of 110,000,000, till limited. Exports to that country rose from $400,000 in 1966 to only $3,100,000 in 9, the main items being: wheat flour, $1,200,000; newsprint, $400,000; electric lighting equipment, $300,000; industrial machinery, $300,000; and skim milk and milk powder, 0,000. Current imports from Indonesia remained insignificant at only $284,000 in 9 compared with $448,000 in 1968. The major items were: spices, $118,000; tea, ,000; natural rubber, $36,000; and sisal and agave fibres, $28,000.

Malaysia.—Even though a wide range of commodities is subject to import duty and port licences are issued on a quota basis, the outlook in Malaysia is promising. Total nadian exports to Malaysia rose from $5,100,000 in 1960 to $16,000,000 in 1969, when

they included aircraft, asbestos, newsprint, aluminum and wheat. Aircraft and part valued at $7,800,000, were shipped in 1969 under a special assistance program. Canadia imports from Malaysia, valued at $32,800,000 in 1969 ($28,400,000 in 1960), included: ti $13,200,000; natural rubber, $9,300,000; palm oil and coconut oil, $2,300,000 each; lumbe $1,400,000; and raw sugar, $1,000,000. Canada's trade deficit with Malaysia, which wa $16,800,000 in 1969, ranged between $8,000,000 and $31,000,000 in the 1960s.

Singapore.—Although Singapore is a city state of 220 sq. miles and 2,000,000 peopl Canada's exports to that country amounted to $5,000,000 in 1969, mainly in the followin categories: wheat, other foodstuffs, tobacco, asbestos, metals, potassium chloride, sulphu newsprint, non-farm machinery, motor vehicles, and communication and related equipmen Imports from Singapore, valued at nearly $22,000,000 in 1969, included: crude rubbe $13,600,000; canned pineapple, $3,100,000; and apparel and accessories, $2,500,000. Canada' trade deficit with Singapore rose from $8,300,000 in 1967 to $17,000,000 in 1969.

Viet-Nam.—Because of the unsettled political situation in Viet-Nam, trade betwee Canada and that country is of minor importance. Exports to that country in 1969 wer valued at $2,100,000, comprising: newsprint, $515,000; whisky, $439,000; cod, $299,00 asbestos, $255,000; milk powder and skim milk, $205,000; medicinal and pharmaceutic products, $132,000; and sugar, $117,000. Imports were negligible.

Cambodia and Laos.—Canada's trade with Cambodia and Laos has been insignif cant. Exports to that area were valued at $204,000 in 1969 compared with $60,000 in 196 and consisted mainly of: newsprint, $162,000; asbestos, $24,000; and building pape $10,000. Imports were again negligible.

Thailand.—Canada's export trade to Thailand increased from $2,700,000 in 1960 t $8,700,000 in 1969, the latter including foodstuffs, metals, asbestos, newsprint, machiner motor vehicles, electrical equipment, hand tools, and aircraft. Imports changed littl during the 1960s, being only a shade under $1,000,000 in 1969, and including lumber, kapo jute, and sago and cassava starch. Canada's favourable trade balance with Thailan accordingly rose from $1,900,000 in 1960 to $7,700,000 in 1969.

Burma.—Commercial links with Burma have been rather tenuous. Canada exporte $1,500,000 worth of goods to that country in 1969, consisting of: wheat flour, $646,00 pens and mechanical pencils, $383,000; asbestos, $264,000; and hoisting machinery an parts, $25,000. Imports in the same year amounted to only $55,000, accounted for mainl by hardwood veneer. Canada's trade surplus with Burma was $1,400,000 in 1969 agains $664,000 in 1968.

Conclusion

While trade development was oriented toward the Atlantic area during the immediat post-World-War-II period, there has been a recent shift in emphasis to the Pacific where in the past ten years, exports increased by 190 p.c. compared with an increase in tot exports of 175 p.c. An important element in this expansion has been trade with Japa Raw materials—comprising coal, metallic concentrates, forestry products, and other bul commodities—will probably remain most prominent among Canadian exports to Japan, bu opportunities are appearing in relatively new fields, and increases may be expected in pro cessed foods, breeding stock, consumer goods and a variety of manufactures.

Investment will become an increasingly important factor in the growth of Canada' trade with the Pacific Rim countries. Canadian business, including a number of Canada based multi-national corporations, is evincing considerable interest in the opportunities fo investment and the promotion of engineering services in the Pacific, especially in Australi and Southeast Asia. The Government of Canada has initiated a Foreign Investmen Insurance Program for developing countries and is examining possibilities for the extensio of these guarantee arrangements to Pacific countries.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanatory Notes on Canadian Trade Statistics

Sources.—Canadian foreign trade statistics are compiled from information recorded customs documents received by the Dominion Bureau of Statistics from the various oms ports in Canada, supplemented with energy data obtained through other channels. hould be noted that trade figures reflect the physical movements of goods across Canada's onal and customs boundaries, but do not always represent the financial transactions for nges in ownership of these goods.

Coverage.—Total Canadian exports are the sum of domestic exports and re-exports. nestic exports or exports of Canadian produce include shipments abroad of goods wholly luced in Canada together with exports of previously imported goods which have been nged in form by further processing in Canada. Re-exports or exports of foreign produce ude only goods previously included in import statistics which are exported from Canada he same form as when imported. Minor operations such as cleaning, sorting or re-king are not considered as changing the condition of imported goods. Following the oduction in January 1964 of the "General Trade" system of compilation, re-exports e also included outward movements of goods previously imported but stored in customs houses.

Likewise, imports, as from January 1964, include all goods cleared by customs imme-ely on arrival in Canada together with goods that are entered into customs warehouses. earlier years, imports under the "Special Trade" system of presentation included goods red immediately on arrival plus goods cleared for consumption out of customs ware-es. This meant that those goods, which crossed the national boundary into and out of oms warehouses without crossing the customs boundary, were excluded.

Certain commodities have, since January 1960, been excluded from both export and ort trade statistics but have been published monthly under "Special Transactions—-trade". This category includes commodity movements which either have no inter-onal financial implications or are better considered as non-merchandise transactions e statistics of Canada's balance of international payments. These are: unrefined gold, products where the gold content is 80 p.c. or more of the total value, and gold coin, ot collections; settlers' effects; private donations and gifts; tourist purchases; goods ed back and forth across the national boundary by the diplomatic and military per-el of Canada and of foreign countries posted abroad and in Canada, respectively; orary movements for exhibition or competition, including films for processing; bunker lies and stores sold to foreign vessels or aircraft in Canadian ports or purchased by dian carriers abroad; military grants to NATO member countries; ships of British truction and registry imported for use in Canada, and ships purchased for use as national carriers but not used to carry goods between points in Canada; and generally, emporary exports and imports and goods merely moving in transit through Canadian tory.

The series "New Gold Production Available for Export", which has been published as plement to external trade statistics, is deleted. Being an item of non-merchandise actions in the current account, it is described in Chap. XXIV, Sect. 4, on the Canadian ce of international payments.

Valuation.—The basic source documents require the reporting of exports at transac-values, f.o.b. place of lading (i.e., exclusive of inland freight, insurance, handling and charges). Declarations denominated in foreign currency are converted to Canadian rs for publication. The value of goods imported is usually that as determined for ms duty, and the Canadian Customs Act generally requires the valuation of goods point of shipment in the country of provenance. However, continuing effort is made

*Prepared in the External Trade Division, Dominion Bureau of Statistics.

to prevent the inadvertent filtering through during document processing of c.i.f. valu in particular for free goods or goods subject to specific rates of duty.

Classification.—Beginning with statistics for January 1961, a new export commod classification was used, based on the Standard Commodity Classification developed by t DBS as a tool for integrating statistical series derived from different sources. Where the classification previously used classified commodities primarily according to the mater of which they were chiefly composed, the new classification places commodities in sectio mainly according to stage of processing and purpose, as follows: Live Animals; Food, Fe Beverages and Tobacco; Crude Materials, Inedible; Fabricated Materials, Inedible; E Products, Inedible; and Special Transactions—Trade. For most of the commodities major importance in Canadian exports, the classes of the new commodity classification substantially identical with those of its predecessor.

As from January 1964, a new commodity classification was also introduced for imp statistics, based on concepts similar to those embodied in the export commodity classifi tion, so that there has been a closer correspondence between the two sets of statistics. T import commodity classification is more extensive than the export commodity classificati and in its new form gives a comprehensive coverage of those commodities which constit the bulk of Canada's import trade. The grouping system employed in the new classifi tion also makes easier the identification of other commodities which may merit separ specification; continuing study is being made to keep the classification both meaning and up to date in the dynamic environment in which commodities entering internatio trade are becoming more sophisticated and complex.

Trade is credited to countries on the basis of consignment. For exports from Cana the country of consignment is that country to which goods are, at the time of export, tended to pass without interruption of transit except in the course of transfer from one me of conveyance to another. For imports into Canada, the country of consignment is t country from which the goods came without interruption of transit except in the course transfer from one means of conveyance to another. This is not necessarily the country actual origin, since goods produced in one country may be imported by a firm in anot country and re-sold to Canada; in such cases the second country is the country of consi ment to which the goods are credited. There is one exception to this rule; an attempt made to classify by country of origin goods produced in South America, Central Ameri Bermuda and the Antilles and consigned to Canada from the United States. The eff of this procedure is to reduce slightly the imports credited to the United States and increase those credited to South and Central American countries.

The country sub-totals include trade with Commonwealth and other countries (Republic of Ireland and the Republic of South Africa) entitled to Preferential rates of du Trade with Alaska and Hawaii is included in the United States statistics in all the relev tables of this Chapter, even though these two areas were separately classified prior January 1959 and January 1960, respectively.

Discrepancies in Trade Statistics Between Canada and Other Countries. Canada's statistics of exports are rarely in exact agreement with the import statistics of customers and parallel differences occur with Canadian imports. Major factors contrib ing to these discrepancies include:—

(1) Differences in the system of valuation used by Canada and those of other countries, w respect to the treatment of transportation charges, fair market and transaction values.
(2) Differences in the statistical treatment of special categories of trade, such as military s plies, government-financed gifts of commodities, postal and express shipments, tou purchases, bunkers and warehouse trade.
(3) Differing definitions of territorial areas.
(4) Differing systems of crediting trade by countries, notably the consignment system used Canada and the actual origin or ultimate destination system in use in some other countr
(5) Differences in the time at which trade is recorded in the statistics of partner countr caused by the time required for goods to move from one country to another.

Section 2.—Total Foreign Trade

In considering the figures in Sections 2 to 5, it should be noted that exports and imports gold are excluded from among other commodities in all tables. There are, in the main, ee sets of tariff rates in operation in Canada: British Preferential, Most-Favoured-Nation l General Tariff as described at pp. 1109-1110. Generally, the Canadian tariff imposes ies on a greater proportion of manufactured goods than of raw or semi-processed prod- s.

1.—Value of Total Foreign Trade of Canada, 1955-69

NOTE.—An adjustment has been made for "Special Transactions—Non-trade" to present figures on "general e system" throughout.

Section 4.—Trade by Commodity

This Section provides detailed information on the composition of Canada's exports and imports for 1968 and 1969. Table 7 shows exports and re-exports to and imports from all countries, the United Kingdom and the United States, classified by commodity section; Table 8 gives detailed statistics of all commodities of any importance exported from Canada to all countries, to the United Kingdom and to the United States; and detailed statistics for imports into Canada by section and commodity appear in Table 9.

7.—Exports to and Imports from All Countries, the United Kingdom and the United States, by Section, 1968 and 1969

Section 5.—Trade by Section and by Stage of Fabrication

Tables **10** and **11** present historical series of Canada's external trade for the period 50-69 by section and by stage of fabrication with a view to throwing light on the changes in anatomy of Canada's international trade. The estimates for the years prior to 1958 subject to some limitations because of the introduction of the revised commodity trade ssifications in the early 1960s.

Methodology.—To allocate exports and imports into the statistical framework based stage of fabrication, viz., crude materials, fabricated materials and end products, requires econdary classification of the commodities in certain sections of the Standard Commodity ssification (SCC). Live Animals (Section I), being a natural product, are considered crude materials. Section II (Food, Feed, Beverages and Tobacco) is distributed as ows: crude materials include natural products not processed beyond cleaning or prepara- n for shipment, such as fresh fruits and vegetables, raw sugar, etc.; fabricated materials lude commercial feed stocks and commodities which are further processed rather than d for direct consumption; end products comprise prepared pet feeds and commodities ich require no further processing but are used directly for consumption, such as cheese, ned foods, whisky, cigars and cigarettes. Sections III, IV and V are as they are defined the SCC. Thus, Section V (Inedible End Products) consists of articles rather than terials, that is to say, finished commodities which have attained their final degree of ocessing together with specific parts and accessories of machinery which are classified h the machinery. Section VI (Special Trade Transactions), which contains compara- ely few classes, has been distributed on the basis of special studies.

Exports.—Canada's exports followed a generally upward trend during the two decades m 1950, with a steady increase from 1954. The value of domestic exports advanced re than 4½ times up to the end of 1969 to $14,442,000,000, with the major sections show- varying rates of change. This growth was reflected in all sections except Live Animals ere exports in 1969 were only about two thirds of the value in 1950. Exports of Food, ed, Beverages and Tobacco increased some 73 p.c. to $1,410,000,000. Inedible Crude aterials were up roughly 7½ times to $2,463,000,000 and Inedible Fabricated Materials re than tripled to $5,163,000,000. Inedible End Products, where the growth rate was st pronounced, were 20 times higher at $5,316,000,000. In 1969, domestic exports were .c. above those in 1968. Inedible Fabricated Materials rose 6 p.c. and Inedible End oducts continued their uptrend by rising 24 p.c.; the remaining sections recorded year- r-year declines.

Analysis by stage of fabrication shows that 1969 exports of crude materials at $3,330,- 0,000 were 3½ times those of 1950. Over the same period exports of fabricated materials bled to $5,345,000,000, and end products were up 13 times to $5,766,000,000. Whereas orts of crude materials in 1969 were 6 p.c. below the peak level of $3,540,000,000 in the vious year, those of fabricated materials and end products showed increases of 6 p.c. d 23 p.c., respectively.

Over the 1950-69 period, the importance of end products in Canada's exports gain relatively to crude and fabricated materials. The relative contribution of crude materi to domestic exports declined from 30 p.c. to 23 p.c., and that of fabricated materials fr 56 p.c. to 37 p.c. On the other hand, the share of end products increased from 14 p.c. 40 p.c. Newsprint maintained its predominant place among fabricated materials, wh commodities ranging from motor vehicles and aircraft to wearing apparel contributed the rising importance of end products.

The key importance of the United States among Canada's export destinations advanc from 65 p.c. of the annual total in 1950 to some 71 p.c. in 1969. The proportion of domes exports of crude materials and fabricated materials going to that country declined fr 53 p.c. and 77 p.c. to 48 p.c. and 68 p.c., respectively, whereas that of end products rose fr approximately 42 p.c. to 86 p.c. The United Kingdom's share of Canadian domes exports declined from 15 p.c. to less than 8 p.c. in the same comparison but the represent tion of end products in the exports was only fractionally lower in the later year.

Imports.—Imports also advanced more than 4½ times in the 1950-69 period to rea $14,202,000,000. Between 1960 and 1969, however, imports rose 159 p.c. against an i crease of 175 p.c. in exports. Thus, while expanding imports reflected the increasing pr perity of Canadians during the 1960s, the rise in exports was more vigorous. During t whole period, imports of Food, Feed, Beverages and Tobacco nearly tripled to $1,044,000,0 Inedible Crude Materials rose 42 p.c. to $1,055,000,000, and Inedible Fabricated Materi increased 3½ times to $2,905,000,000. About an eightfold rise was recorded in imports each of the following: Live Animals to $19,000,000, Inedible End Products to $8,987,000,0 and Special Trade Transactions to $192,000,000 in 1969. The proportion of total impo represented by Inedible End Products rose from 37 p.c. to 63 p.c., the corresponding duction being borne by other sections. Food, Feed, Beverages and Tobacco and Inedi Crude Materials, each of which accounted for about 7 p.c. of total imports in 1969, h represented 12 p.c. and 24 p.c., respectively, in 1950. Proportionally, Inedible Fabricat Materials narrowed from 26 p.c. to 20 p.c.

From the viewpoint of the stage of fabrication, imports of crude and fabricated m terials accounted for a steadily decreasing proportion of total imports, dropping from p.c. each in 1950 to 12 p.c. and 22 p.c., respectively, in 1969. On the other hand, impo of end products raised their relative importance from 39 p.c. to 66 p.c. Thus, t thirds of Canadian imports are currently end products, and prominent among these a heavy machinery, equipment and tools, required in the construction, development a operation of Canadian industries, together with automotive products.

From an already commanding position of 67 p.c. in 1950, the share of Canada's to imports from the United States rose to about 73 p.c. in 1969. The proportion of cru materials imported from that country declined from 57 p.c. to some 47 p.c., whereas share of fabricated materials and end products rose slightly from 63 p.c. to 64 p.c. and fr 77 p.c. to 80 p.c., respectively. The share of the United Kingdom in Canadian impo fell from 13 p.c. in 1950 to less than 6 p.c. in 1969, all stages of fabrication contributing the decline. Canada has recently been importing rapidly rising quantities of fabricat materials and end products from the European Economic Community and some Paci Rim countries, notably Japan.

Conclusion.—It is apparent that the Canadian economy has been in a rapid proc of diversification and that primary products are becoming progressively less important Canada's foreign trade. End products, in contrast, have expanded their proportion both exports and imports, due in particular in recent years to the increased two-way fl of automotive products arising from the Canada–United States Automotive Agreement 1965. Canada has obviously attained a high degree of sophistication in its industri development and the home market, too, has grown sufficiently to support a fairly bro spectrum of industrial activity.

PART III.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Federal Foreign Trade Services*

Canada's economy continues to be vitally dependent on external trade. Trade brings rosperity, and with it the key to developing and expanding social programs, upgrading ducational, medical and cultural standards, and narrowing regional disparities. But export rowth is not easy to achieve. Competition among industrial nations is intense and will ecome more so. Although there is no panacea for this problem, a successful export trade an be assured by combining good products, efficient production, and aggressive, intelligent arketing with government support.

Federal Government support is provided through the Department of Industry, Trade nd Commerce and the Export Development Corporation. The Department assists Cana- ian industry throughout the complete cycle—from research and development through roduction to marketing of the finished product. The Export Development Corporation, Crown agency which reports to Parliament through the Minister of Industry, Trade nd Commerce, provides insurance, guarantees, loans and other financial facilities to help anadian exporters.

Industry, Trade and Commerce Units Involved in Export.—These units are: the eneral Relations and Area Relations Offices, the Industry, Trade and Traffic Services, airs and Missions, International Defence Programs Branches, and the Trade Commissioner ervice. The Publicity Branch and the Office of the Industrial Policy Adviser have both nternational and domestic responsibilities. The Department's nine line branches, divided nto Commodity Sectors, are concerned with promoting growth and efficiency in Canadian anufacturing (see Chap. XVI, Sect. 4), in addition to being active in trade development.

The *Office of General Relations* includes a General Trade Policy, a Commodity Trade olicy and an International Financing Division. The Office is responsible for advance lanning of Canada's external trade policies and general trade policy affecting both primary nd secondary manufacturing. It is also responsible for the planning, negotiation and dministration of intergovernmental commodity agreements requiring close contact with epresentatives of Canadian producers, importers and industry associations. The Office articipates in the development of policies and procedures for external aid, export credits nd other export financing arrangements. It keeps Canadian exporters informed about the ange of financing facilities provided by the Canadian Government and those available hrough international organizations.

The *Office of Area Relations* protects and improves the access of Canadian goods to xport markets. It participates in the development and conduct of Canada's external rade relations, and in the formulation of Canadian trade policy. It assures that Canada's rading relationships with individual foreign countries and trading blocs are taken into ccount when domestic economic programs are being worked out. It is concerned with ariffs and other government activities which affect international trade. As a service to anadian exporters, it supplies details on rates of duty, import restrictions, documentation equirements, and other foreign government measures affecting Canadian exports. In ddition, Canadian businessmen may obtain from this Office information on economic and rading conditions in all parts of the world as well as assistance in planning visits to such arkets.

The *Industry, Trade and Traffic Services Branch* consists of four Divisions: Industrial raffic Services, Export and Import Permits, Market Analysis (Import) and Industrial nd Trade Inquiries. The Industrial Traffic Services Division conducts a continuing tudy of shipping problems which affect trade, unitized cargo concepts, air and ocean freight ates and services, and air cargo utilization by geographic areas. The main purpose of the tudies is to find reliable transportation at competitive rates for external trade. Another

*Prepared in the Canadian Division of the Publicity Branch, Department of Industry, Trade and Commerce, ttawa.

objective is to help exporters select the most advantageous routes for moving their goods. The Division participates in international forums dealing with the movement of goods by sea.

The Export and Import Permits Division administers trade controls under the authority of the federal Export and Import Permits Act. The intention of the Act is to ensure, by export control, an adequate supply and distribution in Canada of goods necessary for defence or other needs. The Act also prevents any commodity sale that might be detrimental to the security of Canada. Other functions of this Division are to advise exporters on interpretation and requirements of the Export Control List and Regulations, to study the economic implications of the Export and Import Permits Act and to review control lists and practices.

The Industrial and Trade Inquiries Division provides foreign-based Canadian officers and trade development officers in Canada with appropriate information about Canadian products and companies. It maintains a multi-purpose data bank of Canadian companies and their export products. The Division provides guidance in matters not related to a particular commodity, such as the licensing of manufactures abroad, and assists businessmen unfamiliar with the operations of government by directing them to the appropriate department or agency.

The *Fairs and Missions Branch* co-ordinates all departmental activities designed to promote the sale of Canadian products and services abroad. This is done through participation in international trade fairs and in-store promotions, arranging trade missions to and from Canada and organizing visits to this country by individual buyers. Canadian products are displayed in both the Eastern and Western Hemispheres, and at recent trade fairs they have ranged from electronics equipment to cattle, from mining equipment to processed foods and from hospital equipment to electrical supplies. The Department of Industry, Trade and Commerce provides promotional publicity and first-class exhibits. It pays shipping costs for display items from Ottawa to the site of the fair. Incoming and outgoing trade missions are designed to overcome such problems as distance, language and unfamiliar market practices. Although immediate sales are the goal of most missions, future sales and foreign sales outlets are also important objectives. Some missions are of a fact-finding nature, examining new techniques or new products that could be made in Canada.

The *International Defence Programs Branch* promotes defence export trade through marketing programs aimed at the sale of Canadian defence equipment to friendly countries and the establishment of arrangements with Canada's allies for co-operative defence industrial research, development and production. A major activity is the Canada–United States defence-development and production-sharing program, which entails the joint development and reciprocal procurement of defence items. To ensure maximum Canadian industrial participation in United States defence programs, the Branch has offices in major American cities. Through specialists at Canadian missions abroad—including missions in London, Paris, Bonn and Rome and the Canadian Delegation to NATO—the Branch obtains access for Canadian defence products and technology to foreign markets.

The *Trade Commissioner Service* has 76 trade offices in 55 countries.* It promotes Canada's export trade and protects commercial interests abroad; acts as an export market consultant; secures market and credit information; brings foreign buyers in contact with Canadian sellers; recommends suitable agents; and supplies up-to-date information on export opportunities, terms of payment, tariffs, and import and exchange controls. It also maintains direct contact with individual companies and processes inquiries from Canadian businessmen.

If a Canadian firm is considering a market abroad for the first time, the trade commissioner can supply information on: (*a*) whether a particular commodity, or one similar to it, is in use in the area; (*b*) who uses it and for what purpose; (*c*) whether the country's

* Listed at intervals in the official publications *Foreign Trade* and *Commerce extérieur* of the Department of Industry, Trade and Commerce.

uirements are met by local production, by imports or by both; and (*d*) the probable son why a commodity is not in use, the possibilities of developing a market for it, and v this might be done.

The scheduled return of trade commissioners for official tours of Canada is an effective ans of imparting information to Canadian firms interested in export trade. Trade as- iations are informed well in advance of these visits so that appointments can be arranged. ring his tour, the trade commissioner can discuss export problems with firms interested exporting to his territory. Businessmen wishing to interview any trade commissioner tour may arrange to do so by communicating with the Trade Commissioner Service, Canadian Manufacturers' Association, the local Chamber of Commerce or Board of ade, or one of the Department's regional offices.

The *Publicity Branch* supports foreign trade promotion programs by creating foreign nsumer acceptance of, and demand for, Canadian products. The program of the In- national Division is geared to attract buyers to Canadian exhibits at trade fairs. Trade olicity officers, each a trade promotion specialist responsible for publicizing a group of mmodities, co-ordinate a sales-oriented promotion program on behalf of Canadian manu- turers. Their techniques include providing stories and pictures to foreign news media resentatives, placing advertising in foreign publications and sending promotion material, h as booklets and brochures, to trade commissioners for distribution to businessmen in ir territory. In addition, a public relations firm is employed in Paris.

Another service is *Canada Courier*, a tabloid-size periodical which features articles and tures about Canadian goods and services. It is published in six languages, with a cir- ation of approximately 225,000, mailed to potential buyers throughout the world. o other publications, *Foreign Trade* and *Commerce extérieur* feature articles about ort opportunities, changing conditions in foreign markets and how to gain access to se markets. *Foreign Trade* is published every two weeks, in English, and has a cir- ation of about 5,000; an annual subscription costs $5 in Canada and $7 outside the ntry. *Commerce extérieur* is published monthly, in French; an annual subscription ts $2 in Canada and $5 abroad.

The *Office of the Industrial Policy Adviser* is involved with policies and programs that e a bearing on industrial development. These include the effective adjustment of nadian industry to changing conditions abroad as well as at home. The Office develops l maintains an up-to-date reservoir of intelligence on industrial policies in Canada and oad and participates in the work of interdepartmental and international committees ling with industrial policy matters.

The *Operational Branches* within the Department are Aerospace, Marine and Rail; riculture, Fisheries and Food Products; Apparel and Textiles; Chemicals; Electrical l Electronics; Machinery; Materials; Mechanical Transport; and Wood Products. ch line branch employs a group of commodity specialists who are responsible for assisting nadian manufacturers to improve the quality and quantity of their production, and for moting the sale of these products in domestic and world markets.

Each of these industry sector branches has responsibilities in the areas of export trade motion and domestic industrial development. They lend assistance to Canadian com- ies already engaged in export activities and at the same time encourage companies h export potential to enter the highly competitive arena of international trade. Their ustrial development responsibilities include conducting relative efficiency studies to termine the competitive capacity of Canadian manufacturers, and assisting companies participate in the Federal Government's various incentive programs aimed at expanding earch development and innovation activities in Canadian industry.

Office of Tourism.—The Office of Tourism comprises the Canadian Government vel Bureau and the Travel Industry Branch. The Bureau is charged with promoting

travel to Canada from other countries; the Branch is concerned with the study and analy of the Canadian travel industry, including Federal Government activities in support tourism.

Canadian Government Travel Bureau.—To accomplish its primary function of attra ing visitors to Canada, the Bureau undertakes extensive tourist advertising and promot campaigns abroad, provides tourist publicity material for foreign newspapers, magazin radio and television and film outlets, and works closely with travel agents and tour operat on three continents. It also maintains an extensive travel counselling service, provid brochures and information to about 2,000,000 potential visitors annually. Offices operated in New York, Chicago, San Francisco, Minneapolis, Los Angeles, Boston, Phi delphia, Cincinnati, Rochester, Indianapolis, Cleveland, Detroit, Washington, Pittsbu and Seattle in the United States; the Bureau also has representation in London, Pa Frankfurt, Amsterdam, Mexico City, Tokyo and Sydney.

Travel Industry Branch.—The Branch is concerned primarily with the domestic tra industry. Its duties entail close examination of the nature and extent of tourist facilit and services in Canada and appraisal of their adequacy to meet visitor expectations; t study of federal, provincial and private programs and policies related to the growth a development of the travel industry; assessment of industry strengths, weaknesses a problems; and the preparation of advice to the Minister on ways and means to aid t industry. Close liaison is maintained with federal and provincial departments and agenc having activities related to travel and tourism and with major elements of the private sec of the Canadian travel industry.

The Branch also keeps under review the tourism and travel policies and practices other countries, studies trends and developments in international tourism, and concer itself with the activities of international organizations and agencies that affect Canad travel industry.

Export Development Corporation (EDC).—This Corporation, under authority the Export Development Act (SC 1968-69, c. 39), succeeded the 25-year-old Export Cred Insurance Corporation on Oct. 1, 1969. Its purpose is to facilitate the development Canada's export trade by providing insurance, guarantee, loan and other financial faci ties that enable Canadian firms to meet international credit competition. It reports Parliament through the Minister of Industry, Trade and Commerce. Its affairs are a ministered by a 12-man board of directors. The chairman and seven of the directors a appointed from among persons employed in the Public Service of Canada and the remaini four from private business.

EDC functions are: to insure Canadian exporters against non-payment by foreig buyers due to credit or political risks over which neither buyer nor seller has any contr to issue guarantees to persons in respect of the financing of exports; to make loans to foreig buyers or to issue guarantees in respect of the purchase of capital goods or major servic from Canada involving extended credit terms; and to insure Canadian investments abro against non-commercial risks such as war or revolution, expropriation or confiscation, the inability to repatriate capital or earnings.

Export credit insurance is available to all persons or corporations carrying on busine in Canada to cover export sales made on customary credit terms. It provides protecti against risks involved in the export, manufacture, treatment or distribution of goods, the rendering of engineering, construction, technical, or similar services. Insurance also available for a sale involving the manufacture, treatment or servicing of goods for, the leasing of goods to, a foreign customer; the sale or licensing of any rights in a paten trademark or copyright to a foreign customer; or the rendering to a foreign customer of ar managerial, construction, technological, marketing or other such service.

The main risks insured include: insolvency or protracted default on the part of t buyer; exchange restrictions in the buyer's country preventing the transfer of funds

nada; cancellation of an import or an export licence or the imposition of restrictions on the port or export of goods not previously subject to restrictions; the occurrence of war tween the buyer's country and Canada, or of war, revolution, etc., in the buyer's country ne insurance is available under the main classifications of general commodities and capital ods and services.

General commodities policies cover a policyholder's export sales to all countries for a riod of one year, and are renewable. Two types are available: the contracts policy, nich insures an exporter against loss from the time he books an order until payment is eived; and the shipments policy, obtainable at lower rates of premium and covering the porter from the time of shipment until payment is received.

Capital goods policies cover specific transactions involving such goods as plant equipent, heavy machinery, ships, aircraft, etc., where extended credit up to a maximum of e years may be necessary. Such transactions are one-time sales, and specific policies e tailored to each, but the general terms and conditions are the same as those applicable policies for general commodities. Specific policies are also issued to cover engineering, nstruction, technical or similar service contracts entered into between Canadian firms d persons in foreign countries who have agreed to purchase such services. EDC may o extend unconditional guarantees to any person who agrees to provide non-recourse ancing in respect of an insured export sale of capital equipment on medium-term credit.

EDC insures exporters on a co-insurance basis, the exporter retaining a small percentage the risk involved. The same principle operates in the distribution of recoveries obned after the payment of a claim. EDC is authorized to make loans to foreign buyers capital equipment or services from Canada for which commercial financing is not availle. In such transactions, the Canadian exporter applies for the loan on behalf of the yer. The loan must normally be $1,000,000 or more, and the credit terms required over e years. Guarantees may be given in respect of financing provided to a foreign importer Canadian capital goods and services. EDC may also guarantee and, under certain cumstances, finance a portion of local costs involved in capital projects for which it has ovided a loan or guarantee.

Foreign investment insurance may be provided with approval of the Governor in uncil. Coverage is limited to investments in developing countries; it is restricted to a ximum of 15 years and to new investments only.

Section 2.—The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, adopt the policy of confining any detail regarding commodities and countries to tariff ationships in force at present and to summarize as much as possible historical data and ails of preceding tariffs.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferial, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They applied to imported commodities from British countries, with the exception of Hong ng, when conveyed without trans-shipment from a port of any British country enjoying benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth ntries have trade agreements with Canada that provide for rates of duty, on certain cified goods, lower than the British Preferential rates.

*Information relating to rates of duty, value for duty and anti-dumping duty is available from the Department ational Revenue, Customs and Excise, which administers the Customs Act, the Customs Tariff and the Anti-ping Act.

Most-Favoured-Nation rates are usually higher than the British Preferential rates a lower than the General Tariff rates. They are applied to commodities imported fro countries with which Canada has trade agreements. These rates would apply to Britis countries when they are lower than the British Preferential Tariff rates. The most in portant trade agreement concerning the effective rates applied to goods imported fro countries entitled to Most-Favoured-Nation rates is the General Agreement on Tari and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with whi Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tari or under both the British Preferential and the Most-Favoured-Nation Tariffs, or und all Tariffs.

Valuation.—In general, the Customs Act provides that the value for duty of import goods shall be the fair market value of like goods as established in the home market of t exporter at the time when and place from which the goods are shipped directly to Cana when sold "(*a*) to purchasers located at that place with whom the vendor deals at arm length and who are at the same or substantially the same trade level as the importer, a (*b*) in the same or substantially the same quantities for home consumption in the ordina course of trade under competitive conditions". In cases where like goods are not sold f home consumption but similar goods are sold, the value for duty shall be the cost of pr duction of the goods imported plus an amount for gross profit equal in percentage to th earned on the sale of similar goods in the country of export. The value for duty ordinari may not be less than the amount for which the goods were sold to the purchaser in Canad exclusive of all charges thereon after their shipment from the country of export. Intern taxes in the country of export (when not incurred on exported goods), the cost of shippi goods to Canada and similar charges do not normally form part of the value for dut There are, of course, further provisions for determining value for duty under the A

Anti-dumping Act.—Canada's Anti-dumping Act (SC 1968-69, c. 10) provides, brief, that where goods are dumped, i.e., the export price is less than the normal value, a such dumping has caused, is causing, or is likely to cause material injury to the producti of like goods in Canada, or has materially retarded or is materially retarding the establis ment of the production in Canada of like goods as determined by the Anti-dumping T bunal, there shall be levied, collected and paid an anti-dumping duty. This anti-dumpi duty is in an amount equal to the margin of dumping of the entered goods.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repa ment of a portion of the duty, sales and/or excise taxes paid on imported goods used the manufacture of products later exported. The purpose of these drawbacks (as the repayments are called) is to assist Canadian manufacturers to compete in foreign marke with foreign producers of similar goods. A second class of drawback, known as "hon consumption" drawbacks, is provided for under the Customs Act and the Customs Tar and applies to imported materials and/or parts used in the production of specified goo to be consumed in Canada.

The Tariff Board.—The organization and functions of the Tariff Board are describ at pp. 150-151 of this volume.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at June 30, 1970

Canada's tariff arrangements with other countries fall into three main categori trade agreements with a number of Commonwealth countries; the General Agreement Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements providing f exchange of preferential rates are: Australia, the Bahamas, Barbados, Bermuda, Guyan

tish Honduras, Jamaica, the Leeward and the Windward Islands, Trinidad and Tobago, w Zealand, Britain and its dependent territories, and Malawi. Canada also exchanges ferences with Ceylon, Cyprus, Malaysia and Malta and accords preferences to India, kistan, Ghana, Nigeria, Kenya, Tanzania, Uganda, Zambia and Sierra Leone. Many hese countries are also members of the GATT. In addition, Canada has trade agreents with Ireland and South Africa under which preferences are exchanged.

Canada signed the Protocol of Provisional Application of the General Agreement on riffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1948. The Agreement provides for scheduled tariff concessions and the exchange of st-favoured-nation treatment among the contracting parties, and lays down rules and ulations to govern the conduct of international trade.

At the end of June 1970, there were 77 full members in the GATT. These couns and the effective dates of their accession are indicated in the following list. In addition, nisia was a provisional member. The GATT is applied on a *de facto* basis to a number newly independent states—Algeria, Botswana, Democratic Republic of the Congo, otho, Maldive Islands, Cambodia, Mauritius, Mali, Singapore and Zambia—pending isions as to their future commercial policies.

Trade relations between Canada and a number of other countries are governed by de agreements of various kinds, by exchange of most-favoured-nation treatment under lers in Council, by continuation to newly independent states of the same treatment ginally negotiated with the countries previously responsible for their commercial relas, and by even less formal arrangements.

Tariff and Trade Arrangements with Commonwealth Countries as at June 30, 1970

Country	Agreement	Tariff Treatment
TRALIA	Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and margins and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BADOS	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Nov. 30, 1966.	The parties exchange specified tariff preferences.
SWANA	GATT: *de facto* application pending Botswana's decision on commercial policy.	Canada and Botswana exchange preferential tariff treatment.
TAIN	Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 20, 1947. GATT effective Jan. 1, 1948.	Various concessions are granted by each country including exchange of preferential tariff rates. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trusteeships.
LON	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
MONWEALTH CARIBBEAN AHAMAS, BERMUDA, RITISH HONDURAS, E LEEWARD ISLANDS, D THE WINDWARD LANDS). PART IV.—TRAVEL BETWEEN CANADA AND OTHER COUNTRIES*

International travel between Canada and other countries in 1969 involved a total of 500,000 border crossings and an estimated $2,400,000,000 in travel expenditures. Visitors m other countries to Canada numbered 36,200,000, of whom 35,800,000 were non-immi- nts entering from the United States and 463,000 were visitors from overseas countries. the same year, Canadians visiting other countries numbered 36,300,000, of whom 400,000 were residents who returned from the United States and 900,000 who returned m overseas. A high proportion of persons travelling between Canada and the United tes entered and returned on the same day.

Expenditures of Canadians travelling abroad were estimated at $1,300,000,000, of ich amount $892,600,000 was spent in the United States and $399,100,000 was spent in erseas countries. Visitors to Canada from all countries spent an estimated $1,100,000,000, which $961,300,000 was received from United States visitors and $112,600,000 from over- s visitors. Thus, the excess of Canadian expenditures over receipts resulted in a deficit $218,000,000, as compared with a deficit of $188,000,000 in 1968. The 1969 deficit was de up of a $68,800,000 surplus account with the United States and a $286,000,000 deficit h overseas countries. The larger deficit in 1969 over 1968 may be attributed in part to reased travel by Canadian residents to overseas countries but, more important, to the aller surplus earned on the United States account, as Canadian spending outstripped the rease in United States spending in Canada. Heavier Canadian expenditures abroad re affected by the increase in charter flights and special excursions abroad which enabled dents, young people and lower-income groups to travel more than in the past. It is also ely that the price inflation experienced in the major tourist centres of the world, which ied in intensity from country to country, added to the expenditures on foreign travel.

Travel Between Canada and the United States.—During 1969, some 35,765,600 ited States residents spent an estimated $961,300,000 in Canada; included in this number re 23,453,300 persons entering and leaving on the same day (excursionists and com- ters) who spent $121,100,000. The latter short-term traffic formed about 66 p.c. of the al entries but contributed only about 13 p.c. of the total expenditures. Travellers aining one or more nights, who may be referred to as tourists, numbered 12,312,300 d spent an estimated $840,200,000—34 p.c. of the volume but 87 p.c. of the expenditures.

In 1969, 12,200,000 non-resident automobiles entered Canada from the United States rying some 31,000,000 persons, an increase of 2.1 p.c. in the number of persons compared h 1968. Of the total, 10,200,000 stayed one or more nights in Canada and during their its spent $561,500,000, almost 60 p.c. of the total receipts from the United States. The

* Prepared by the Travel Statistics Section, Economic Accounts Branch, Dominion Bureau of Statistics.

number of persons travelling by aircraft and bus increased but rail and boat traffic decrea (Table 2). Persons entering by air spent an estimated $161,700,000; by bus $80,100,0 by rail $29,700,000; and by boat $12,500,000.

Travel payments to the United States (excluding Hawaii) by Canadian visitors to t country amounted to $851,600,000 in 1969. Canadian residents made 35,441,700 visits the United States, 4.4 p.c. more than in 1968. Those entering and leaving on the same d increased by 2.5 p.c. but their spending was estimated to have increased 10.4 p.c. Trav lers remaining for one or more nights in the United States numbered 9,300,000, an incre of 10 p.c., whereas their spending amounted to $795,000,000, an increase of 26 p.c. over 19

Response to a voluntary questionnaire used to secure information on travel habits Canadians travelling in the United States in 1969 (excluding motorists leaving and returni on the same day and "other travellers") indicated that 36.9 p.c. of those replying w residents of Ontario and their expenditures made up 44.9 p.c. of the total payments to t country. Quebec accounted for 35.3 p.c. of the travellers and 28.2 p.c. of their expenditu Some 58.7 p.c. stated holiday or recreation as their main reason for visiting the Uni States, 25.5 p.c. visited friends or relatives and 8.7 p.c. went for business reasons. Que reported the highest percentage of holiday trips (65.8), the Atlantic Provinces reported t highest proportion of visits to friends or relatives (35.3), and Alberta the highest proporti of business trips (13.6).

Travel Between Canada and Overseas Countries.—Overseas visitors to Cana entering both directly and by way of the United States numbered 463,200 during 1969, a estimated receipts from these visitors amounted to approximately $113,000,000, includi transportation fares paid to Canadian carriers. The expenditures of these visitors wh in Canada was estimated at $80,000,000, an increase of 44 p.c. over the preceding year; t number of visits increased 28 p.c. However, the base figures are rather small compar with the United States travel figures and the percentage increases must be viewed with t in mind. Although the number and expenditures of overseas visitors to Canada in 19 showed relatively large gains over the preceding year, they both represented declines fr the record number of visitors and expenditures that marked Centennial year. The numb of overseas visitors to Canada was almost 22 p.c. below the record 590,300 visitors in 19 and expenditures were $34,000,000 or 30 p.c. below the $114,000,000 spent in 1967; bo figures exclude transportation fares paid to Canadian carriers.

In 1969, 199,300 overseas visitors entered Canada direct and via the United Stat through the principal ports in Ontario, an increase of 50,200 over the figure for the previo year. Principal Quebec ports reported that 169,600 overseas visitors entered in 1969, increase of 31,000 over 1968. The largest absolute gains were recorded at Toronto, Mo real and Vancouver airports, which had increases of 40,100, 24,900 and 9,900, respectivel over 1968. The area of residence reported by almost one third of the overseas visitors w the United Kingdom and residents of the countries comprising the OECD in Euro accounted for another 35 p.c.; of the latter, France and Germany accounted for 42 p.c. T main province of destination for overseas visitors was Ontario which attracted 41.8 p. followed by Quebec with 28.8 p.c., British Columbia 13.1 p.c., the Prairie Provinces 6.2 p and the Atlantic Provinces 2.5 p.c. The remaining 7.6 p.c. were classified as "touring

The average length of stay of overseas visitors during 1969 was estimated at 19 nigh compared with 20 nights in 1968 and 16 nights in 1967. Visitors from the Netherlan stayed longer than those from other countries, averaging 28 nights in 1969 and 29 in 19 Visitors from the United Kingdom stayed an average of 23 nights in 1969 and 24 in 196 those from Germany stayed an average of 22 nights in 1969 and those from France 15 nigh

Canadians returning from visits to overseas countries in 1969 numbered 851,700, a their estimated net expenditure amounted to $399,000,000, including payments to overse carriers for transportation. A classification by area shows that $145,000,000 was spent the United Kingdom, $153,000,000 in other OECD countries in Europe, $52,000,000 other Commonwealth countries, and $49,000,000 elsewhere. Gross expenditures by Can

Malak

ans travelling overseas in 1969, including fares paid to domestic carriers, amounted to 80,000,000. The average outlay per person was $680, compared with $697 in 1968.

The response to questionnaires distributed to Canadians returning from overseas in 69 indicated that 54.0 p.c. resided in Ontario and 18.3 p.c. in Quebec. About 57 p.c. the travel overseas was for recreation or holiday, 32 p.c. for visiting friends or relatives d 10 p.c. for business. The average length of stay was estimated at 26 nights. A total 731,700 Canadians returned direct from overseas countries and 120,000 re-entered Canada way of the United States.

Section 6. Municipal Government Finance	1170

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Consolidated statistics of revenue and expenditure for all governments in Canada—deral, provincial and municipal—are presented in Section 1 of this Chapter and Section 2 vers the incidence of taxation at the three levels. More detailed information for each el of government is given in Sections 3, 5 and 6. Section 4 gives information on joint deral-provincial programs and on the extent of federal financial participation in such grams.

Section 1.—Consolidated Government Finance Statistics

Tables 1 and 2 provide details of the federal and provincial-local government com-nents of consolidated government revenue by source, and consolidated government penditure by function. The object of these consolidations is to reflect the relationship tween government and the public in respect of revenue raised and services provided. e consolidated net general figures were arrived at by eliminating from the gross revenue d the corresponding functionalized expenditure of each level of government, the follow-: conditional grants (grants-in-aid and shared-cost contributions); institutional revenue; d interest, premium, discount and exchange revenue. In addition, transfers of uncondi-nal grants such as subsidy payments of the Federal Government to provincial govern-nts have also been eliminated from the gross revenue of the receiving government and m the gross expenditure of the paying government. Because of the differing accounting actices of governments and the variations in fiscal year-ends, some discrepancies appear tween amounts recorded as intergovernment transfers received and those recorded as paid.

* Except as otherwise indicated, revised in the Governments Division, Dominion Bureau of Statistics.

Section 2.—Taxation in Canada*

Canada is a federal state with a central government and ten provincial governments. n 1867, the principal colonies of the British Crown in North America joined together to rm the nucleus of a new nation and the British North America Act of that year became s written constitution. This statute created a central government with certain powers hile continuing the existence of political subdivisions called provinces with powers of eir own.

Under the British North America Act, the Parliament of Canada has the right to raise money by any mode or system of taxation" while the provincial legislatures are restricted o "direct taxation within the province in order to the raising of a revenue for provincial urposes". Thus, the provinces have a right to share only in the field of direct taxation hile the Federal Government is not restricted in any way in matters of taxation. The ritish North America Act also empowers the provincial legislatures to make laws regard- g "municipal institutions in the province". This means that the municipalities derive eir incorporation with its associated powers, fiscal and otherwise, from the provincial overnment concerned. Thus, municipalities are also limited to direct taxation.

* Revised (July 1970) in the Tax Policy Division, Department of Finance, under the direction of F. R. Irwin, irector of the Division, and by the provincial authorities concerned.

A direct tax is generally recognized as one "which is demanded from the very perso who it is intended or desired should pay it". This conception has limited the provinci governments to the imposition of income tax, retail sales tax, succession duties and a assortment of other direct levies. In turn, municipalities, acting under the guidance provincial legislation, tax real estate, water consumption and places of business. Th Federal Government levies taxes on income, on gifts and on the estates of deceased person as well as excise taxes, excise and customs duties, and a sales tax.

Starting in 1941, a series of federal-provincial tax agreements were concluded t promote the orderly imposition of direct taxes. The duration of each agreement wa normally five years. Under the earlier agreements, the participating provinces undertoo in return for compensation, not to use or permit their municipalities to use certain of th direct taxes. Under the present arrangements, the federal income tax otherwise payab in all provinces and the estate tax otherwise payable in three provinces are abated by certai percentages to make room for provincial levies.

The current arrangements became operative on Apr. 1, 1962 and were originall scheduled to terminate on Mar. 31, 1967, but have been extended subject to terminatio on due notice being given. They amount to a partial federal withdrawal from the fiel of direct taxation and a re-entry of all provinces into the vacated area. The federa personal income tax otherwise payable on income earned in a province and on incom received by a resident of a province is reduced by the following percentages: 16 p.c. fo 1962 income, 17 p.c. for 1963 income, 18 p.c. for 1964 income, 21 p.c. for 1965 income 24 p.c. for 1966 income and 28 p.c. for income in 1967 and subsequent years.* The abate ments in respect of income earned in Quebec or received by a resident of Quebec are 44 p.c for 1965 income, 47 p.c. for 1966 income and 50 p.c. for income in 1967 and subsequen years. The additional points of abatement in Quebec are to allow that province to collec revenue to pay for certain programs that are paid for in whole or in part by the Federa Government in other provinces. The Federal Government also reduces its rate of corpo ration income tax on taxable income of corporations earned in the provinces. The reduc tion was 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. o taxable income earned in Quebec for the years from 1962 to 1967. The additional 1-p.c reduction in respect of taxable income earned in the Province of Quebec for these yea was to compensate for the additional tax levied by the province during this period o corporation income to provide grants to universities. These provincial grants replace federal grants which in other provinces were paid to the universities by the Federal Govern ment through the Canadian Universities Foundation. Starting in 1967, with the termina tion of direct federal financial assistance to universities, the abatement of the federal rat of corporation income tax is 10 p.c. of taxable income in all provinces. The Federa Government also abates the federal estate tax otherwise payable by 75 p.c. in respect o property situated in a province that levies its own death tax.†

These reductions in federal income tax and estate tax do not apply to the Yuko Territory or the Northwest Territories or to income earned outside Canada. The Yuko and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawa The constitutional position of the provinces permits them unlimited use of direct taxe for the raising of revenue for provincial purposes. However, in three provinces (Princ Edward Island, Nova Scotia and British Columbia), the provincial rates of income ta do not exceed the federal abatement.

* The original agreement provided for abatements of 19 p.c. for 1965 income and 20 p.c. for 1966 income. How ever, in 1964 the provinces were granted an additional two percentage points for 1965 income and four percentag points for 1966 income and in 1966 they were granted an additional four percentage points for 1967 and 1968 incom

† The original agreement was for a 50-p.c. abatement but at the conclusion of a federal-provincial conference i late 1963 it was increased to 75 p.c. in respect of deaths occurring after Mar. 31, 1964. Currently, only the estat of domiciliaries of British Columbia qualify for the full 75-p.c. abatement. Quebec and Ontario estates are ten porarily eligible for only 50 p.c. because these two provinces have elected for the time being to take a payment fro the Federal Government on account of the additional 25-p.c. abatement rather than to increase their succession dut rates.

As part of the current fiscal arrangements, the Federal Government has entered into x collection agreements under which it collects the provincial personal income taxes for provinces except Quebec and the provincial corporation income taxes for all provinces cept Ontario and Quebec.

Subsection 1.—Federal Taxes

dividual Income Tax

Personal income taxation in Canada is on the basis of residence rather than citizenship. very individual who is resident in Canada at any time during a year is liable for the yment of income tax on all his income. Every non-resident individual who is employed carries on business in Canada during a year is liable for tax on his income earned in nada. The term "residence" is difficult to define simply but, generally speaking, it taken to be the place where a person resides or where he maintains a dwelling ready at times for his use. There are also extensions of the meaning of Canadian resident to clude a person who has sojourned in Canada for an aggregate period of 183 days in a xation year, or a person who was during the year a member of the Armed Forces of Canada an ambassador, a high commissioner, or an officer or servant of Canada or of any one its provinces, or the spouse or dependent child of any such person. The extended eaning of residence also includes employees who go from Canada to work under certain ternational development assistance programs.

The Canadian tax law uses the concepts "income" and "taxable income". The income a resident of Canada for a taxation year comprises his revenues from all sources inside outside Canada and includes income for the year from all businesses, property, offices d employments. It does not include capital gains unless they arise out of the conduct a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, es, annuities, pension benefits, allowances, interest, alimony, maintenance payments and her miscellaneous sources of income. On the other hand, war service disability pensions id by Canada or an ally of Her Majesty at the time of the war service, unemployment surance benefits, compensation in respect of an injury or death paid under a Workmen's mpensation Act of a province and family allowances do not have to be included in the mputation of income.

In computing his income for a taxation year, an individual who is carrying on business ay deduct business expenses including depreciation (called capital cost allowances), terest on borrowed money, reserves for doubtful debts, contributions to pension plans or ferred profit-sharing plans for his employees, bad debts, and expenses incurred for ientific research. In general, no deductions are allowed in computing income from salary d wages, although there are exceptions such as travelling expenses of employees who ve to travel as they perform their work (such as employees on trains), union dues, mony payments and contributions to registered pension plans. Individuals may deduct, thin limits, amounts set aside to provide a future income under registered retirement vings plans. Students attending universities, colleges, high schools, public schools or rtain other certified educational institutions in Canada may deduct their tuition fees if ey exceed $25 per annum. Students in full-time attendance at universities outside nada may deduct their tuition fees.

Having computed his income, the individual then calculates his taxable income by ducting certain exemptions and deductions. These exemptions and deductions are as lows: for single status, $1,000; for married status, $2,000; for dependent children under e 16, $300 per child; for other dependants (as defined in the law), $550 per dependant; here the taxpayer is 70 years of age or over, an additional $500; where the taxpayer is

blind or confined to a bed or a wheelchair, an additional $500; charitable donations, up 10 p.c. of income; and medical expenses, in excess of 3 p.c. of income. In lieu of claimi deductions for charitable donations and medical expenses, an individual may claim standard deduction of $100.

As already stated, an individual who is resident in Canada is taxed on his income fro both inside and outside Canada. An individual who is not resident in Canada at any tin during the year but who carries on business in Canada or who earns salary or wages Canada is taxed only on the income earned in Canada. In computing taxable incon earned in Canada, such a non-resident individual is allowed to deduct that part of th exemptions and deductions that may reasonably be attributed to the income earned Canada. (A non-resident who derives investment income from Canada is taxed in different way described on p. 1131.) An individual who ceases to be a resident of Canad during the year or who becomes a resident during the year so that he is resident for on part of the year will be subject to income tax in Canada on only that part of his incon for the year received while he is resident in Canada. In these circumstances, the deductio from income permitted for determining taxable income will be the amount that may re sonably be considered as applicable to the period during which he is resident in Canad

A progressive schedule of rates is applied to taxable income, beginning at 11 p.c. the first $1,000 of taxable income and increasing to 80 p.c. on taxable income in excess $400,000. In addition, an old age security tax is levied on taxable income at the rate 4 p.c. with a maximum of $240 reached at $6,000 of taxable income. Starting in 1969, a additional tax, called a social development tax at the rate of 2 p.c. of taxable income wi a maximum of $120, is imposed. For the years 1968, 1969 and 1970, there is also a temp rary surtax of 3 p.c. of the amount of basic tax in excess of $200. ("Basic tax" is person income tax, excluding the old age security tax, the social development tax and the temporar surtax and after deduction of the dividend tax credit but before the abatement for provinci income tax or the general tax reduction of 20 p.c. with a maximum of $20.)

An individual is allowed to deduct certain amounts from his tax otherwise payabl These deductions are as follows: (1) *Dividend Tax Credit*—to partially eliminate the doub taxation of corporate profits and to encourage participation in the ownership of Canadi companies, Canadian resident individuals are allowed to deduct from their income tax, b not from old age security tax or social development tax, an amount equal to 20 p.c. of th net dividends they receive from Canadian taxable corporations. (2) *Foreign Tax Credit*- foreign taxes paid on income from foreign sources may be deducted from Canadian incon tax but the deduction may not exceed the Canadian tax related to such income. (3) *Abat ment under Federal-Provincial Arrangements*—the federal basic tax otherwise payable c income of a resident of a province and on income earned in a province is reduced by 28 p. in all provinces except Quebec and by 50 p.c. in Quebec. (4) *General Tax Reduction*- all individuals may deduct from their tax an amount equal to the lesser of 20 p.c. of the basic tax or $20.

To a very large extent, individual income tax is payable as the income is earned. Ta payers in receipt of salary or wages have tax deducted from their pay by their employ and in this way pay nearly 100 p.c. of their tax liability during the calendar year. Th balance of the tax, if any, is payable at the time of filing the tax return on or before Apr. 30 the following year. Persons with more than 25 p.c. of their income from sources not subje to tax deductions must pay tax by quarterly instalments throughout the year and retur must be filed on or before Apr. 30 in the following year. Farmers and fishermen pay tw thirds of their tax on or before Dec. 31 each year and the remainder on or before Apr. 3 in the following year.

The following statement shows what taxpayers pay (1970) at various levels of income. calculating these taxes it has been assumed that all taxpayers take the standard deduction $100 and no allowance has been made for the 20-p.c. dividend tax credit.

Status	Income	Income Tax including Social Development Tax and Surtax	Old Age Security Tax
	$	$	$
Single taxpayer—no dependants	1,200	11	4
	1,500	43	16
	2,000	97	36
	2,500	174	56
	3,000	255	76
	5,000	661	156
	10,000	1,989	240
	20,000	6,094	240
	50,000	21,688	240
	100,000	52,475	240
Married taxpayer—no dependants	2,200	11	4
	2,500	43	16
	3,000	97	36
	5,000	447	116
	10,000	1,684	240
	20,000	5,630	240
	50,000	21,121	240
	100,000	51,805	240
Married taxpayer—two children under age 16	2,800	11	4
	3,000	32	12
	5,000	330	92
	10,000	1,524	240
	20,000	5,352	240
	50,000	20,782	240
	100,000	51,403	240

The income taxes shown above are the combined federal and provincial taxes in ovinces where the provincial tax is the same as the federal abatement (i.e., in Nova Scotia, rince Edward Island, Ontario and British Columbia). In Quebec, the provincial tax pproximates the amount of the federal abatement; in Newfoundland, New Brunswick, anitoba, Saskatchewan and Alberta, the provincial tax exceeds the abatement.

orporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of rporations resident in Canada and upon the income attributable to operations in Canada non-resident corporations carrying on business in Canada. In computing their income, rporations may deduct operating expenses including municipal real estate taxes, reserves r doubtful debts, bad debts, and interest on borrowed money. They may not deduct ovincial income taxes other than provincial taxes on income derived from mining opera- ons. (For this purpose "income from mining operations" is specially defined.)

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct er a period of years the actual cost of all depreciable property. The yearly deductions normal capital cost allowances are computed on the diminishing balance principle. axpayers engaged in farming and fishing may choose between this and the straight-line ethod.) Published regulations establish a number of classes of property and maximum tes. There is provision for recapture of any amount deducted in excess of the ultimate t capital cost of any asset.

Accelerated depreciation (full write-off in two years) is allowed in respect of structures d equipment acquired in the period Apr. 27, 1965 to Dec. 31, 1973 to prevent water llution and in the period Mar. 13, 1970 to Dec. 31, 1973 to prevent air pollution. Accel- ated depreciation (full write-off in four years) is also allowed in respect of new buildings or her structures for storing grain on a farm and in respect of machinery designed for drying ain on a farm acquired in the period July 1, 1969 to Dec. 31, 1969. Accelerated deprecia-

tion is also allowed for the capital cost of a new manufacturing or processing facility respect of which a development grant is paid under the Area Development Incentives A To be eligible, facilities must be brought into commercial production by the end of 197 The capital cost allowances that could otherwise be claimed in respect of commercial buil ings constructed during the period June 4, 1969 to Dec. 31, 1970 are deferred. For proje commenced between Mar. 12, 1970 and the end of 1970, the deferment will apply to t construction costs incurred up to the end of 1971. The deferment applies in the taxati year in which the costs are incurred and in the next taxation year. Housing, buildin constructed for operation of public utilities or transportation services other than offi buildings, and buildings for manufacturing and for farming or fishing are excluded.

Expenditures on scientific research related to the business of the taxpayer may written off for tax purposes in the year when incurred.

Taxpayers operating mines, oil wells, gas wells and wells for extracting potash by t solution method are allowed a depletion allowance, usually computed as a percentage profits derived from mineral, oil or gas production, which continues as long as the mine well is in operation. This allowance is in addition to capital cost allowances on building machinery and similar depreciable assets used by the taxpayer and the deduction of explor tion and drilling expenses. Taxpayers operating timber limits receive an annual allowanc sometimes called a depletion allowance. This is a ratable proportion of the amount i vested in the limit and is based on the amount of timber cut in the year. When the amou invested in the limit has been recovered, no further allowance is given.

In computing taxable income, corporations may deduct dividends received from oth Canadian taxpaying corporations and also from foreign corporations in which the Canadia corporation has at least 25 p.c. stock ownership. Business losses may be carried back o year or forward five years and deducted in computing taxable income. Corporations m also deduct donations to charitable organizations up to a maximum of 10 p.c. of their incom

The general rates of tax on corporate taxable income are 18 p.c. on the first $35,000 taxable income and 47 p.c. on taxable income in excess of $35,000. Corporations deriv more than one half of their gross revenue from the sale of electric energy, gas or steam pa tax on their taxable income from such sources at the rate of 18 p.c. on the first $35,000 taxable income and 45 p.c. on taxable income in excess of $35,000.* Corporations th qualify as investment companies pay a tax of 18 p.c. on their taxable income. In additi to these rates, all corporations pay an old age security tax of 3 p.c. of taxable income, brin ing their rates up to 21 p.c. and 50 p.c. (21 p.c. and 48 p.c. for the public utility compani and 21 p.c. for investment companies).

On profits earned in 1968, 1969 and 1970, corporations must also pay a surtax of 3 p. of the amount of federal tax excluding old age security tax but before the abatement und federal-provincial fiscal arrangements referred to below. Starting in 1969, life insuran corporations have to pay a special 15-p.c. tax on a base related to their investment incom This is in addition to the normal corporation income tax.

Corporations are allowed to deduct certain amounts from their tax otherwise payabl These deductions are as follows: (1) *Foreign Tax Credit*—foreign taxes paid on income fro foreign sources may be deducted from Canadian income tax but the deduction may n exceed the Canadian tax related to such income. (2) *Abatement under Federal-Provinci Fiscal Arrangements*—corporations may deduct from their tax an abatement equal to 10 p. of their taxable income attributable to operations in each Canadian province. This abate ment is to make room for the provincial income tax levied by each province. (3) *Provinci Logging Tax*—corporations may deduct from their tax an amount equal to two thirds of provincial tax on income from logging operations not exceeding two thirds of 10 p.c. the corporation's income from logging operations in the province. (At present only Ontari Quebec and British Columbia impose logging taxes—see p. 1138.)

* 95 p.c. of the federal tax collected from these corporations is remitted to the provinces.

Income from the operation of a new mine, including income from wells for extracting tash by the solution method, is exempt from income tax during the first 36 months after ming into commercial production.

Corporations are required to pay their tax (combined income, surtax and old age secu- y tax) in monthly instalments. For taxation years starting after Nov. 30, 1969, corpora- ns have to begin their monthly tax payments in the first month of their taxation year d make their twelfth instalment by the last day of that year. Each monthly remittance ll be equal to (*a*) one twelfth of the tax as estimated by the corporation at the rates for e year on its estimated taxable income for the year or, (*b*) in each of the first two months the year an amount equal to one twelfth of the tax as estimated by it at the rates for the ar on its taxable income for the second taxation year preceding the year, and in each of e next 10 months in the year an amount equal to one tenth of the amount remaining after ducting the amount paid in the first two months from the tax as estimated by it at the es for the year on its taxable income for the immediately preceding year. Any balance tax outstanding has to be paid by the last day of the third month following the close the taxation year and the return for the year has to be filed by the last day of the sixth nth following the close of the taxation year.

xation of Non-residents

A non-resident is liable for payment of income tax if he was employed or was carrying business in Canada during a taxation year. The expression "carrying on business in nada" includes (1) maintaining a permanent establishment in Canada, (2) processing ds even partially in Canada, and (3) entering into contracts in Canada. The taxable ome of a non-resident individual derived from carrying on business in Canada or from ployment in Canada is taxed under the same schedule of rates as Canadian resident ividuals. Profits earned in Canada by a non-resident corporation carrying on business Canada are taxed at the regular rates of corporation income tax and are also subject to additional tax of 15 p.c. This additional tax is imposed on profits attributable to the nch after deducting therefrom Canadian federal and provincial income taxes and an wance in respect of the net increase in capital investment in property in Canada. (Tax aties with some countries provide certain exemptions from tax for remuneration for vices performed in Canada by residents or employees of these countries. They also hibit Canada taxing profits of a non-resident enterprise unless that enterprise has a rmanent establishment in Canada.)

Furthermore, the Income Tax Act imposes a tax at the rate of 15 p.c. on certain forms ncome paid by residents of Canada to non-resident persons. It applies to interest (other an interest on government bonds issued after Apr. 15, 1966, interest on certain bonds ued before Dec. 20, 1960 and interest paid to certain exempt lenders), dividends, rentals, alties, income from a trust or estate and alimony, and applies whether the income is paid non-resident individuals or to corporations. The rate is reduced to 10 p.c. in the case dividends paid by a company that has a degree of Canadian ownership* and is also p.c. on royalties from motion picture films. This non-resident tax is withheld at the rce by the Canadian payer. Non-residents who receive only this kind of income from nada do not file returns in Canada.

ft Tax

The Income Tax Act levies a tax upon gifts. The Budget presented on Oct. 22, 1968 nounced an increase in the rates of gift tax and a change in the exemptions with respect gifts made after that date. The rates now apply to a cumulative gift sum. A "cumula- e gift sum" is the aggregate of the taxable value of all gifts made after Oct. 22, 1968, to the end of the year for which tax is being calculated. The rates of tax range from

* Generally, a corporation is regarded as having a degree of Canadian ownership where 25 p.c. of its equity and ng shares are owned by Canadians and/or corporations controlled in Canada, or where the voting shares of the oration are listed on a Canadian stock exchange and no more than 75 p.c. of its issued outstanding voting shares owned by a non-resident alone or in combination with related persons.

12 p.c. on a cumulative gift sum of $15,000 or less to 75 p.c. where the cumulative gift su exceeds $200,000. Gifts from a husband to his wife or from a wife to her husband a exempt. In addition, gifts up to $2,000 to any number of persons are exempt.

Estate Tax

The estate of a deceased person is subject to estate tax if its value exceeds $50,00 The tax applies to property passing, or deemed to pass, at death. Property "deemed pass" includes such property as gifts made by the deceased within three years of his deat pensions or death benefits payable in respect of his death, and annuities purchased by t deceased. All the property of persons who were domiciled in Canada before their dea must be taken into consideration no matter where that property is situated; for perso dying domiciled outside of Canada only their property situated in Canada is subject to ta

In computing the tax of a Canadian domiciliary, the value of the whole estate is fi determined. Then the estate debts and certain expenses, such as funeral expenses, a deducted. The remainder is "aggregate net value".

If the aggregate net value of an estate is $50,000 or less, no tax is exacted. Th figure of $50,000 is not a deductible exemption, but simply an amount at and below whi no tax is levied. If an estate is valued at more than $50,000, it may or may not be taxab depending on the amount of the deductible exemptions, but in no case must the tax redu the value of the estate, after tax, to less than $50,000.

Where the aggregate net value of an estate is more than $50,000 there may be deduct certain amounts in respect of bequests left by the deceased to his or her surviving spouse children, or to charitable organizations in Canada. There is a complete exemption of th value of property left by the deceased in the form of an outright bequest to his survivi spouse or in the form of a settlement under which only the surviving spouse is entitle during her (or his) lifetime, to receive all of the income of the settlement, or to receive period annual payments out of the income or capital, and under which only the surviving spou may, during her (or his) lifetime, use or receive the capital. In the case where the survivi spouse is to receive periodic payments, the exemption cannot exceed the value of a capit sum that is determined by regulation to be sufficient to yield the amount of the period payment. The exemption is granted only if it is established that the surviving spouse h an indefeasible right to the bequest.

There are also exemptions for bequests to children of the deceased. A bequest to child over age 25 (if he is not infirm) is exempt to a maximum of $10,000. A bequest to child aged 25 or under is exempt to the extent of a maximum of $10,000, plus $1,000 f each full year remaining until he is aged 26. If the average income of the child for the pr vious three years is in excess of $5,000, the additional exemption is reduced by the exce A bequest to an infirm, wholly dependent child is exempt to the extent of a maximum $10,000, plus $1,000 for each full year remaining until he is aged 71. In all these cases, th exemption cannot exceed the value of the bequest. An indefeasible bequest to a charitab organization in Canada is also completely exempt.

After these deductions from aggregate net value are made, the amount left is th "aggregate taxable value" to which the tax rates are applied. The first bracket of th rate schedule—from $0 to $20,000 of aggregate taxable value—has a zero rate, which i effect constitutes a basic exemption of $20,000. The next $20,000 of aggregate taxab value has a rate of 15 p.c. and so on up to the maximum rate of 50 p.c. on the aggrega taxable value in excess of $300,000. Gifts made by the deceased during his lifetime th were not included in the value of his estate but were in excess of the gift tax exemptions a added to the aggregate taxable value to the extent of the excess, as is the amount of gi tax that would be payable on this excess using rates in force at the time of his death. Th is only for purposes of setting the rates of estate tax and an allowance is made in recognitio of the gift tax paid on them.

From the tax so calculated may be deducted in the following order (1) a tax abatement respect of property situated in a province that levies a succession duty, or in respect foreign personal property transmitted in such a province, (2) a credit for gift tax paid gifts made by the deceased in cases where the value of the property comprised in the has been included in computing the aggregate net value (e.g., where the gift has been de within three years of the death of the donor), (3) a credit for foreign death taxes, and the "notch" credit. The "notch" credit has the effect of preventing the tax otherwise able on an estate whose aggregate net value is immediately in excess of $50,000 from ucing the value after tax to less than $50,000; it also reduces the tax otherwise payable an estate whose value falls in this "notch" area so that the tax actually payable will not eed 50 p.c. of the difference between the aggregate net value and $50,000. The abate- nt referred to above is in recognition of provincial succession duties. It is a deduction 75 p.c. from the federal estate tax otherwise payable in respect of property situated, or eign personal property transmitted, in British Columbia, and of 50 p.c. in respect of such perty in Ontario or Quebec (see p. 1126).

Where an exemption from gift tax or estate tax in respect of a gift or bequest from a son to his spouse in the form of a trust or other settlement has been allowed, the property he settlement at the time of the death of the spouse second to die is deemed to be prop- passing on her (or his) death. Where the estate tax on such property would have n abated in recognition of provincial succession duties at the time of the death of the use first to die, but was not abated because the property was exempt, an appropriate tement is given at the time of the second death.

In general, the provisions described above apply in respect of property passing on the th of a person who dies on or after Oct. 23, 1968. (For the provisions of the estate tax licable in respect of property passing on the death of a person who died before Oct. 23, 8, see the 1968 Canada Year Book, pp. 1015-1016.)

The property situated in Canada of a deceased person not domiciled in Canada is ject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed ue of such property except for debts specifically chargeable to it. However, there is a cial provision that exempts all such property of less than $5,000 value and also provides t the tax must not reduce the value of the property after tax to less than $5,000. (The ate Tax Convention between Canada and the United States increases this figure to ,000.) Where property is subject to provincial succession duty, the 15-p.c. tax is ted by 50 p.c. in the case of property subject to Ontario or Quebec duty and by 75 p.c. h respect to property subject to British Columbia duty.

ise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. These taxes levied on goods imported into Canada and on goods produced in Canada. They are levied on goods exported. The sales tax, which is at the rate of 9 p.c., is levied on the ufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid ue of goods imported into Canada. For alcoholic beverages and tobacco products, the price for purposes of the sales tax includes excise duties levied under the Excise Act p. 1134). An old age security tax of 3 p.c. is levied on the same basis as the 9-p.c. tax, ging the total sales tax to 12 p.c. (The total sales tax on most building materials l p.c.)

Some goods are exempt from sales tax. Foodstuffs, drugs, electricity and fuels for ting or heating are generally exempt, as are articles and materials used by public hos- ls and certain welfare institutions. The products of farms, forests, mines and fisheries to a large extent, exempt as well as most equipment used in farming and fishing. Ma- ery and equipment used directly in production and materials consumed or expended in duction are not taxed. Also, a number of items are exempt from sales tax when pur- sed by municipalities. These and other exemptions are set forth in schedules to the ise Tax Act.

A number of articles are subject to special excise taxes in addition to the sales t Where these are ad valorem taxes they are levied on the same price or duty-paid va as the general sales tax. Those levied at present are as follows:—

Cigarettes	3 cents per 5 cigs.
Cigars	17½ p.c. ad valorem
Jewellery, including clocks, watches, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink	10 p.c. ad valorem
Lighters	10 cents per lighter
Playing cards	20 cents per pack
Radios	the greater of $2 per radio or 15 p.c. ad valorem
Phonographs and television sets	15 p.c. ad valorem
Electron tubes, priced under $5 per tube, not including television picture tubes	10 cents per tube
Television set picture tubes	15 p.c. ad valorem
Slot machines—coin, disc or token-operated games or amusement devices	10 p.c. ad valorem
Matches	10 p.c. ad valorem
Tobacco—pipe tobacco, cut tobacco and snuff	90 cents per lb.
Tobacco pipes, cigar and cigarette holders and cigarette rolling devices	10 p.c. ad valorem
Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc	10 p.c. ad valorem
Wines—	
Manufactured in Canada—*	
Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume	25 cents per gal.
Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit	50 cents per gal.
Sparkling wines	$2.50 per gal.
Additional tax applying to all wines whether imported or produced in Canada—	
Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume	2½ cents per gal.
Wines of all kinds containing more than 7 p.c. absolute alcohol by volume	5 cents per gal.
Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or foreign companies	10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.)

All the foregoing items, except insurance premiums, are also subject to the gene sales tax of 9 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco subject to further taxes, referred to as excise duties (see below).

Excise Duties

The Excise Act levies taxes (referred to as excise duties) on alcohol, alcoholic bev ages and tobacco products produced in Canada. These duties are not levied on impor goods but the customs tariff on these products includes a levy to correspond with the dut levied on domestic production. These duties are not levied on goods exported.

Spirits.—The duties are on a proof-gallon basis. These duties do not apply to de tured alcohol intended for use in the arts and in industry, or for fuel, light or power, or any mechanical purpose. The various duties are as follows:—

On every gallon of the strength of proof distilled in Canada	$14.25
On every gallon of the strength of proof used in the manufacture of—	
Medicines, extracts, pharmaceutical preparations, etc	$1.50 per gal.
Approved chemical compositions	15 cents per gal.
Spirits sold to a druggist and used in the preparation of prescriptions	$1.50 per gal.
Imported spirits when taken into a bonded manufactory in addition to other duties	30 cents per gal.

* The customs tariff on wines includes a levy to correspond with these taxes on domestic production.

Canadian Brandy.—Canadian brandy, a spirit distilled exclusively from juices of native ts without the addition of sweetening materials, is subject to a duty of $12.25 per proof on.

Beer.—All beer or other malt liquor is subject to a duty of 42 cents per gallon.

Tobacco, Cigars and Cigarettes.—The excise duties make up nearly as large a part of the l tax on tobacco products as the special excise taxes already described. The rates are ollows:—

On manufactured tobacco of all descriptions, except cigarettes	35 cents per lb.
Cigarettes weighing not more than 3 lb. per thousand (nearly all of the cigarettes used in Canada are of this type)	$4.00 per thousand
Cigarettes weighing more than 3 lb. per thousand	$5.00 per thousand
Cigars	$2.00 per thousand
Canadian raw leaf tobacco when sold for consumption	10 cents per lb.

mbined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act the duties imposed under the Excise Act gives the following total taxes:—

Cigarettes	$10.00 per thousand (20 cents per pack of 20 cigarettes) plus the 12-p.c. sales tax on the manufacturer's sale price
Manufactured tobacco	$1.25 per lb. plus the 12-p.c. sales tax on the manufacturer's sale price
Cigars	$2.00 per thousand plus the 17½-p.c. special excise tax and the 12-p.c. sales tax on the manufacturer's sale price.

stoms Duties*

Most goods imported into Canada are subject to customs duties at various rates as vided by tariff schedules. Customs duties, which once were the chief source of revenue the country, have declined in importance as a source of revenue to the point where they provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, st-Favoured-Nation and General. The British Preferential rates are, with some exceps, the lowest rates. They are applied to imported dutiable commodities shipped ctly to Canada from countries within the Commonwealth. Special rates lower than ordinary preferential duty are applied on certain goods imported from designated mmonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been rded tariff treatment more favourable than the General Tariff but which are not entitled he British Preferential rate. Canada has Most-Favoured-Nation arrangements with ost every country outside the Commonwealth. The most important agreement prong for the exchange of Most-Favoured-Nation treatment is the General Agreement on iffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Prefatial or Most-Favoured-Nation treatment. Few countries are in this category and, in ns of trade coverage, are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on orts of materials used in the manufacture of products later exported. The purpose of e drawbacks is to assist Canadian manufacturers to compete with foreign manufacrs of similar goods. There is a second class of drawbacks known as "home consump" drawbacks. These apply to imported materials used in the production of specified ses of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the s that apply on any particular item may be obtained from the Department of National enue, which is responsible for administering the Customs Tariff.

* See also p. 1109.

Subsection 2.—Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the reven necessary for provincial purposes. All provinces levy a tax on the income of individua and corporations resident within their boundaries or deriving income from activities operations carried out therein. Only the Provinces of Ontario and Quebec impose speci taxes on corporations in addition to income tax and only the Provinces of Ontario, Queb and British Columbia impose a tax on property passing at death; the remaining provinc receive payment from the Federal Government of their 75-p.c. share of estate tax levi Under the terms of the existing federal-provincial fiscal arrangements, the Federal Gover ment makes "equalization payments" to some provinces in recognition of the fact th the potential tax yield in those provinces, measured on a per capita basis, is lower th the national per capita tax yield. For some provinces, the equalization payments constitu a very important source of revenue.

Some of the more important provincial levies are reviewed briefly on this and follo ing pages.

Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundari or who earn income therein. In nine of the ten provinces, these taxes are computed as percentage of federal "basic tax". As previously explained, "basic tax" is federal incon tax (excluding old age security tax and the social development tax) otherwise payable full federal rates before the abatement under the federal-provincial fiscal arrangemen and before allowance for the federal tax reduction passed in 1966. These provincial tax are collected by the Federal Government on behalf of these provinces. In Quebec, pr vincial income tax is levied at graduated rates that progress from 5.5 p.c. on the first $1,0 of taxable income to a maximum of 40.0 p.c. on the excess over $400,000. In additio a 6-p.c. surtax was levied for the taxation years 1968, 1969 and 1970. The determinati of taxable income for Quebec tax is based on exemptions and deductions which, with the e ception of deductions for dependent children eligible for family allowances,* are similar those for federal tax. Quebec taxpayers whose net income does not exceed $4,000 if marri or in a situation recognized as equivalent and $2,000 in other cases are exempt from pa ment of the tax. If the taxpayer's income exceeds such amounts, the tax to be paid w not reduce his income to less than $4,000 or $2,000 as the case may be. The Province Quebec collects its own tax.

The percentages that provincial income tax liability is of federal "basic tax" for 19 are: Prince Edward Island, Nova Scotia, Ontario and British Columbia each 28 p.c Newfoundland and Alberta 33 p.c., Saskatchewan 34 p.c., New Brunswick 38 p.c., Manitob 39 p.c. and Quebec approximately 50 p.c.

Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carri out within their boundaries. In all provinces except Ontario and Quebec, the provinci tax imposed on taxable income in the province is determined on the same basis as for feder income tax. In Ontario and Quebec, the determination of taxable profits for purposes provincial tax follows closely the federal rules. Six of the ten provinces levy corpora income taxes at rates in excess of the 10-p.c. abatement allowed by the Federal Governmen The rate that applies in Saskatchewan and Alberta is 11 p.c., in Ontario and Quebec, 12 p. and in Newfoundland and Manitoba, 13 p.c. All provinces except Ontario and Queb have signed agreements for the collection of the corporate income taxes by the Feder Government.

* Quebec has a family allowance program which supplements the federal program; it provides for half-year allowances that range from $15 for one child to $142.50 for six, and an extra $35 for each child after the sixth. T Quebec program is in lieu of exemptions for provincial income tax purposes for children eligible for family allowanc

(See also p. 390.)

xes on Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial ncies operating as boards or commissions which exercise monopolistic control over oholic beverages. The provincial mark-up over the manufacturer's price is the effective ans of taxation. Beer and wine may be sold by retailers or government stores, depending the province, but in all cases these sales contribute to provincial revenues. The Prov- e of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at ail, collected under authority of the Health Tax Act, and in Newfoundland a tax of .c. is imposed at retail level.

All provinces except British Columbia impose special retail taxes on the sale of tobacco ducts. The rates of tax on cigarettes are as follows: Newfoundland, $\frac{1}{2}$ cent per cigarette; nce Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario and Manitoba, s cent per cigarette; and Saskatchewan and Alberta, $\frac{8}{25}$ths cent per cigarette. In dition, the provinces impose special taxes on cigars and cut tobacco.

tail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the ailer. All provinces except Alberta levy this type of tax at rates as follows: Newfound- d, Prince Edward Island and Nova Scotia, 7 p.c.; New Brunswick and Quebec, 8 p.c.; d Ontario, Manitoba, Saskatchewan and British Columbia, 5 p.c. These direct levies ply to tangible taxable commodities sold, with varying exemptions, for consumption the province and to a few selected services, for example: to telephone services in all vinces; in Quebec, to telecommunications, meals and hotel and motel charges; in Prince ward Island, to laundry and dry cleaning services, to accommodations, and to repair and tallations labour; in New Brunswick, to telecommunications, to meals and hotel and tel charges and to laundry and dry cleaning charges; and in Manitoba, to a broad range services including dry cleaning, furniture repairs, motel accommodation, etc. The sales es do not apply to goods sold for delivery in other provinces or to exported commodities. provinces imposing sales taxes provide comprehensive exemptions for foodstuffs and igs; in Quebec, pharmaceutical products are exempt only when sold on prescription.

nusement Taxes

Each of the provinces with the exception of Newfoundland, Alberta, Saskatchewan d British Columbia has a tax on admission to places of entertainment. In Quebec, this is payable on race course admissions only. In addition, there is generally a licence fee posed on the operator or owner of these amusement places. The tax on admissions is hin the range of 5 p.c. to 15 p.c.

soline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and ckers. The rates vary from 13 cents per gallon in British Columbia to 21 cents in nce Edward Island and 25 cents in Newfoundland. The amount of tax borne by one lon of motor vehicle fuel in each province is as follows:—

	Gasoline	*Diesel Fuel*		*Gasoline*	*Diesel Fuel*
	cts.	cts.		cts.	cts.
Newfoundland	25	25	Ontario[2]	18	24
Prince Edward Island[1]	21	21	Manitoba[3]	17	20
Nova Scotia	21	27	Saskatchewan[4]	19	21
New Brunswick	20	23	Alberta	15	17[5]
Quebec[2]	19	25	British Columbia	13	15

[1] Gasoline and diesel fuel used by primary producers—farmers, fishermen, manufacturers and processors—are npt from tax as are also gasoline and motor fuel used by owners or operators of registered pleasure craft and ski- s, and that used by consumers engaged in the construction of the Northumberland Strait Crossing. [2] Some f from taxation is given where gasoline or fuel oil is used for farming, manufacturing, commercial fishing and in ionary engines. [3] Exemptions are allowed on purple fuel used in operating agricultural machinery, farm ks and municipal fire apparatus, and in trapping, fishing and prospecting. [4] Gasoline and diesel fuel used farmers in farm machinery and trucks are exempt from tax. [5] Three cents less for domestic heating. erally, fuel oil used for agricultural and industrial purposes is taxed at three cents per gallon.

The British Columbia net tax rate (after refund) on gasoline used in logging truc off highway, in power units of motor vehicles for stationary industrial use, and in vehicl used by amputees, paraplegics and certain war disability pensioners is one cent per gall Gasoline coloured purple for certain off-highway use (including marine) and motor fue being any fuel except gasoline not consumed on provincial highways, are also taxed at o cent per gallon. Fuel oil used for heating purposes is taxed at one half cent per gallo

Motor Vehicle Licences and Fees

Each province levies a fee on the annual registration of motor vehicles, which is co pulsory. Upon registration, a vehicle is issued with licence plates. The rates of fee va from province to province and, in the case of passenger cars, may be assessed on the weig of the vehicle, the wheel base, the year of manufacture, the number of cylinders of t engine, or at a flat rate. The fees for commercial motor vehicles and trailers are based the gross weight for which the vehicle is registered, i.e., the weight of the vehicle emp plus the load it is permitted to carry. Every operator or driver of a motor vehicle is r quired to register periodically and pay a fee for a new driver's licence. The licences a valid for periods of from one to five years and the fees vary from $1 to $7 a year.

Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mini operations. All provinces except Prince Edward Island and Alberta impose a tax on t income of firms engaged in mining operations in general or in specific kinds of mini operations. The Provinces of British Columbia, Alberta, Saskatchewan and Manitol (gas, oil and potash only) impose a tax on the assessed value of minerals or a flat rate p acre of mining property. Quebec levies a tax on the economic value of the ore at the p head, ranging between 9 and 15 p.c., depending on volume. Ontario imposes a tax on t profit on the assessed value of minerals and a flat rate per acre of mining property. Ma toba imposes a flat rate of 15 p.c. if mining income exceeds $50,000. The British Columb mining tax rate is 15 p.c. on net income from mining in excess of $10,000.

Tax on Logging Operations

The Provinces of Quebec, Ontario and British Columbia levy a tax on the income fro logging operations of individuals, partnerships, associations or corporations engaged in th activity. In Quebec and Ontario the rate is 10 p.c. and in British Columbia 15 p.c. on n income where in excess of $10,000 (in Quebec and British Columbia if the net income greater than $10,000 the whole amount is taxable with no basic exemption). In Ontar and Quebec one third and in British Columbia 20 p.c. of the tax is allowed as a deducti from provincial corporate income tax or, in Quebec, from the provincial income tax; tv thirds of the provincial tax is deductible from federal income tax.

Business Taxes

The Province of Quebec imposes a tax of one fifth of 1 p.c. on paid-up capital of corpor tions and Ontario levies a similar tax at the rate of one tenth of 1 p.c.

The Province of Quebec has a place-of-business tax, which is generally $50 but is r duced to $25 when the paid-up capital is less than $25,000; in the case of loan compani the tax is $100 when fixed capital exceeds $100,000.

Both Ontario and Quebec levy special taxes on certain kinds of companies such as bank railway companies, express companies, trust companies and sleeping-car, parlour-car a dining-car companies. In Ontario, these special taxes (except the tax payable by insuran corporations calculated on gross premiums) and the paid-up capital tax are payable ov and above the corporation income tax.

The Province of Prince Edward Island charges special annual licence fees to most urance companies, banks, acceptance companies, chain theatres and chain stores, steam- p companies, telephone, telegraph and electric light companies and brokers, as well as minal licence fees to other incorporated companies, the latter being similar to filing fees other provinces.

nd Transfer Taxes

Ontario levies a tax based on the price at which ownership of land is transferred; one h of 1 p.c. is imposed on the purchase price up to $25,000 and two fifths of 1 p.c. on any- ng in excess of that amount. In Alberta, a registration fee is charged proportional to assessed value of the land; $5 for the first $1,000 and $1 for each additional $1,000 up to 5,000 and two fifths of 1 p.c. in excess of that amount. In addition, there is an Assurance nd fee charged on transfers of mortgages on the difference between the old purchase ce and the new purchase price at the rate of $2 per $1,000 up to $5,000 and $1 for each ditional $1,000. British Columbia and Saskatchewan do not have a land transfer tax t have an equivalent in land title fees which are based on land values.

x on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities trans- red; the rates in both provinces are:—

Shares sold, transferred or assigned valued at—	
Under $1	1/10th of 1 p.c. of value
$ 1 to $ 5	1/4 cent per share
$ 5 to $ 25	1 cent per share
$25 to $ 50	2 cents per share
$50 to $ 75	3 cents per share
$75 to $150	4 cents per share
Over $150	4 cents per share plus 1/10th of 1 p.c. of value in excess of $150
Bonds and debentures	3 cents for every $100 or fraction thereof of par value.

x on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies ative to risks incurred in the province. Saskatchewan imposes a tax of 1 p.c. on the tor vehicle premium income of insurance companies to finance a comprehensive high ool driver-training program.

ccession Duties

Only the Provinces of Ontario, Quebec and British Columbia levy succession duties. ese duties are a tax upon the right to succeed to property and are assessed upon the erest or benefit passing at death to an heir or beneficiary. The three provinces impose ccession duties on all property situated in the province belonging to the deceased and ssing at his death whether the deceased was domiciled in the province or elsewhere. rsonal property, wherever situated, of a person dying domiciled within the province is o liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are generally governed by the value of the estate, the ationship of the beneficiary to the deceased and the amount going to any one person. British Columbia, exemptions allowed in determination of the estate value also vary cording to the relationship to the deceased. The rate of tax increases as the degree of ationship between the deceased and his successor becomes more remote.

Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Manito Saskatchewan and Alberta, while not imposing succession duties, each receives 75 p.c the Federal Government estate tax levied on property situated within its borders. In B Saskatchewan and Alberta the share of estate tax is rebated in full where the deceased w bona fide resident of the province and up to 75 p.c. of the share of estate tax for a dece domiciled out of the province whose beneficiary is domiciled in the province.

Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes varying rates according to class for provincial revenue. Improved forest and tree-f lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at $1\frac{1}{2}$ p.c. unorganized (non-municipal) areas, Ontario levies a property tax of $1\frac{1}{2}$ p.c. of asse value; the minimum annual tax in respect of any land is $6. New Brunswick levies a of $1.50 per $100 market value assessment on all land and buildings in the province an similar tax on business occupancy, to finance education, health, welfare and justice servi

Race Track Taxes

Ontario levies a tax on operators of race meets and on holders of winning tickets iss under the pari-mutuel system. Holders of winning tickets must pay a tax equal to 7 of the amount that would be payable to them if no percentage were deducted by the per holding the race meet. A number of other provinces levy a pari-mutuel tax on mo bet in the province on horse races; in Newfoundland the rate is 11 p.c., in Prince Edw Island $11\frac{1}{2}$ p.c., in Nova Scotia 11 p.c. on the first $400,000 wagered and a reduced perce age on any additional money wagered (some of this money is refundable to the individ race tracks), in New Brunswick 11 p.c. less commission of 8 p.c., in Manitoba 10 p.c. commission of 15 p.c., in Alberta 5 p.c., in Saskatchewan 10 p.c., and in Quebec 7 p.c. ordinary pools and 9 p.c. on special pools (quinella and daily-double). In British Colum the tax is 12 p.c. but the province returns $2\frac{1}{2}$ p.c. of money bet to horsemen and tr operators for purses, etc.

Miscellaneous Provincial Taxes

In Newfoundland a tax of 7 p.c. is levied on premiums paid for all types of insura except life, accident and sickness, and marine; and a telegraph tax is levied on compan operating cables or wireless stations between Newfoundland and points outside the provi at the yearly rate of $4,000 a cable or station.

In Prince Edward Island a fire marshal's tax is levied at the rate of $\frac{3}{4}$ of 1 p.c. premiums paid for fire insurance. In Nova Scotia a fire marshal's tax is levied at the r of one half of 1 p.c. on premiums paid for fire insurance in the province. A tax is a levied on long-distance telephone calls at the rate of five cents on the first 50 cents wit five-cent minimum and five cents on each additional 50 cents, applying only to calls ma within the province.

Subsection 3.—Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated wit their jurisdiction according to the assessed value of such property. Methods of determini assessed value vary widely but for taxation purposes it is generally considered to be percentage of the actual value or, as in Nova Scotia and New Brunswick, of the act market value. The revenues from such taxes are used generally to pay for street ma tenance, schools, police and fire protection, snow removal in certain communities and ot community services; in New Brunswick the municipal levy is used only for property servi Special levies are sometimes made on the basis of street frontage to pay for local impro

ents to the property, such as sidewalks, roads and sewers. Not only is there a widespread fference in the bases used for property tax but there is also a wide variety of rates applied, pending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the ater consumption of each property holder or a water tax based upon the rental value of the operty occupied. In New Brunswick, utilities (water, domestic sewerage and treatent, and electric power) must be financed on a user-charge basis; a part of the water dget may be transferred to the general budget on a hydrant-rental basis or a percentage the budget, depending on the size of the municipal population. There are no municipal come taxes although certain localities have retained the use of a poll tax. In Newfoundnd, Quebec and Saskatchewan, municipalities are empowered to levy an amusement x on the admission of persons to places of entertainment, although the amusement tax is nerally a provincial preserve (see p. 1137). Electricity and gas are taxed at the consumer vel in some western municipalities and in some New Brunswick municipalities, and coal d fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Teleone subscribers are subject to a special levy in Montreal and certain Ontario municilities impose a tax on the gross receipt of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a siness. In general, business tax rates are lower than those applying to property. In w Brunswick, business assessment is equal to the value of the real property occupied business purposes. Three bases of assessment are in use—a fraction of the property sessment, the annual rental value of the premises, or the area of the premises. Certain unicipalities may charge a licence fee instead of a business tax but others charge both a ence fee and a business tax.

Subsection 4.—Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

nemployment Insurance

A national program of unemployment insurance operates in Canada. Essentially, provides relief to those qualified persons who temporarily find themselves without work. is administered by a federal commission appointed for this purpose and financed by ual contributions from employers and employees plus a contribution from the Federal overnment. The amount paid into the fund by employee and employer is directly prortional to the weekly wages of the employee. The rates of contributions, together th statistics on the operation of the program, are given at pp. 880-884.

orkmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered workmen as a result of industrial accidents. In general, these provincial statutes ablish an accident fund administered by a Board to which employers are required to ntribute at a rate proportional with the hazards of the industry. See also pp. 884-885.

spital Insurance

A federal-provincial hospital insurance plan has been adopted by each of the ten nadian provinces. Under this arrangement, the Federal Government pays approxitely one half of the cost of hospitalization for patients who are participants under the an. The provinces meet the remainder of the cost. Provincial revenues for this purpose raised by various means. The Province of Quebec has increased its personal and rporation income tax. Certain provinces require the deduction of a monthly premium m the wages of their residents as a contribution or premium for the plan. In such

provinces non-salaried people must also pay the premium directly if they wish to be cove by the plan. In some other provinces the proceeds of a retail sales tax are earmarked whole or in part for the support of the hospital plan. See also pp. 335-337.

Canada and Quebec Pension Plans

In 1966, the Canada Pension Plan, a compulsory government-operated pension p gram, was introduced whereby each contributor builds up a right to a graduated pensi the amount of which is related to his earnings up to a certain level. This graduated ben supplements the universal old age security pension which is paid out of tax revenu It operates throughout the country except in the Province of Quebec where a similar pens plan is operated by the government of the province. Both plans have disability and s vivor benefits. They are described at pp. 374-378.

Section 3.—Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Governm prepared as far as possible in accordance with the classifications, concepts and definiti used in the preparation of provincial and municipal finance statistics. These tables di from the information presented in Subsection 2 in that the latter has been extracted direc from the *Canada Gazette*. Detailed reports published by the Dominion Bureau of Statist provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and The *Canada Gazette* presentation is included because there is interest in and use for inform tion on this basis.

Subsection 1.—DBS Statistics of Federal Government Finance

Revenue and Expenditure.—Table 3 shows details of net general revenue of t Federal Government for the years ended Mar. 31, 1968 and 1969.

Guaranteed Debt.—In addition to the direct debt already dealt with, the Gover ment of Canada has assumed certain contingent liabilities. The major categories of t indirect or contingent debt are the guarantee of insured loans under the National Housi Act, the guaranteed bonds and debentures of the Canadian National Railways and t guarantee of deposits maintained by the chartered banks in the Bank of Canada. T

ainder consists chiefly of guarantee of loans made by chartered banks to the Canadian eat Board, to farmers and to university students and of guarantees under the Export dits Insurance Act.

[1] Based on the official estimates of population for June 1 of the year indicated. [2] Based on the official ates of population for June 1 of the year immediately preceding the one indicated.

Subsection 3.—Revenue from Taxation

The incidence of Federal Government taxation is dealt with at pp. 1127-1135. Th Subsection includes statistical data on revenue received from individual income tax, co poration tax, estate tax, excise duties and excise taxes; customs receipts constitute a sing item in the *Public Accounts of Canada* and are not included here.

Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are mac and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or sala earners who have almost the whole of their tax liability deducted at the source by the employers. All other taxpayers are required to pay most of their estimated tax duri the taxation year. Thus, the greater part of the tax is collected during the same ye in which the related income is earned and only a limited residue remains to be collected wh the returns are filed. The collections for a given fiscal year include employer remittances tax deductions and Canada Pension Plan contributions and instalments for twelve month embracing portions of two taxation years, and a mixture of year-end payments for the fi of these years and for the preceding year; they cannot therefore be closely related to t statistics for a given taxation year. As little information about a taxpayer is received wh the payment is made and as a single cheque from one employer may frequently cover t tax payment of hundreds of employees, the payments cannot be statistically related taxpayers by occupation or income. Descriptive classifications of taxpayers are availab only from tax returns but collection statistics, if interpreted with the current tax structu and the above factors in mind, indicate the trend of income in advance of the final compil tion of statistics.

The statistics given in Table 13 pertain to revenue collections by the Department National Revenue, Taxation. The collections are for fiscal years ended Mar. 31.

13.—Revenue Collected by the Department of National Revenue, Taxation, Years Ended Mar. 31, 1961-70

NOTE.—All collection figures in this table are net of refunds.

Year Ended Mar. 31—	Income Tax[1]				Estate Tax	Total Collection
	Individual[2]	Corporation	Special Refundable Tax	Total		
	$'000	$'000	$'000	$'000	$'000	$'000

[1] Includes old age security tax and provincial income tax for all provinces except Quebec.

Succession Duties and Estate Taxes

From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec levied succession duties the other provinces having leased this field to the Federal Government under the terms of the federal-provincial tax agreements (see p. 1126). However, British Columbia re-entered the field, effective for all deaths occurring on or after Apr. 1, 1963. The incidence of the estate tax is discussed at pp. 1132-1133. Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1970 amounted to $100,630,908. In the same year, provincial revenues from succession duties in Quebec, Ontario and British Columbia were estimated at $42,000,000, $67,000,000 and $17,000,000, respectively.

Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1968-70 in Table **18.**

Totals	495,252,393	517,016,872	527,958,531

Section 4.—Federal-Provincial Conditional Grants and Shared-Cost Programs*

During the year ended Mar. 31, 1969, federal expenditures on joint federal-provin programs, which had increased rapidly over the previous decade, began to slow do These programs take three forms: (1) the Federal Government contributes financial sistance to a program administered by a province; (2) the federal and provincial gove ments each assumes the sole responsibility for the construction, administration and financ of separate aspects of a joint project; or (3) the province contributes financially to a jc program administered by the Federal Government.

* As at January 1970. Prepared in the Federal-Provincial Relations Division, Department of Finance, Ott

Federal-Provincial Relations Division, Department of Finance, *Fed Provincial Conditional Grant and Shared-Cost Programmes 1962*, Ottawa, Queen's Printer, October 1963, $3 (C logue No. F2-2563). Appendix to House of Commons Debates of Sept. 10, 1964. Statutes of Canada 1964-65, c

The first category of joint programs is by far the most common and such programs re commonly called conditional grant programs. They are characterized by the Federal overnment agreeing to make money available to a province on certain conditions, such onditions always specifying the field, service or project to which the money must be pplied. In addition to being entrusted with the administration of programs, the provinces ay be required to make financial contributions to such programs, to provide certain facili-ies, and to meet certain specified standards in operating them. The various programs in he field of social policy are good examples of conditional grant programs. Under the ospital insurance program, for instance, the Federal Government undertakes to contribute o participating provinces a specified share of the costs incurred by the provinces in respect f public hospital insurance programs. The federal contribution in each province is equal o 25 p.c. of the average per capita cost of in-patient services in Canada as a whole plus 25 .c. of the average per capita cost of in-patient services in the province multiplied by the verage for the year of the number of insured persons in the province.

Although the hospital insurance program, with its specifications of eligible hospitals, harable costs and the amount of the federal contribution, is characteristic of many condi-onal grant programs, there are others in which the conditions are nominal. For example, nder the Canada Assistance Plan the Federal Government undertakes to share one half f the cost of welfare paid to recipients in need, the scale and conditions of the assistance o be determined by the provinces. In general, it may be said that the hospital insurance rogram conforms to the traditional pattern of conditional grants, whereas the Canada ssistance Plan marks an approach in which flexibility and adaptability to local circum-tances is allowed to modify insistence on a national uniform standard.

Joint programs in the second category—those in which the federal and provincial overnments accept sole responsibility for portions of a total project—are not numerous nd are generally of a public works type. The irrigation projects carried out jointly by he Prairie Farm Rehabilitation Administration and the Province of Alberta on the St. Iary's and Bow Rivers in southern Alberta were of this nature. In the St. Mary's irriga-on project, the Federal Government undertook the responsibility for the construction f all main reservoirs, large dams and connecting works, and Alberta assumed responsibility or the construction of the distribution system and the development and colonization of he new irrigable areas.

Joint programs in the third category are also few in number and the sums of money nvolved are seldom large. The South Saskatchewan River dam was an example; Canada ndertook to pay the costs of the dam in the first instance, with Saskatchewan subsequently eimbursing Canada for one quarter of the federal expenditures (up to a maximum of 25,000,000) on the dam and reservoir. By Mar. 31, 1968, the full amount had been re-overed from Saskatchewan.

The federal transfers to the provinces in respect of the conditional grant and shared-ost programs increased from $75,000,000 in the year ended Mar. 31, 1954, to an estimated 1,626,000,000 in 1968-69. The increase was attributable largely to the introduction of he hospital insurance and diagnostic services program in 1958, medicare in 1968, increases the level of assistance, and the integration of welfare programs under the Canada As-stance Plan. In 1968-69, federal contributions to the programs in respect of hospital nd diagnostic services and welfare programs integrated with and into the Canada As-stance Plan were estimated at $798,125,000 and $446,902,000, respectively.

The increasing number and extent of conditional grant and shared-cost programs has ccasioned some provincial criticisms and misgivings. It has been argued that the pre-onderant occupancy of the direct tax field in the postwar years by the Federal Government ncouraged the growth of such programs, as the provinces were denied the revenues that ould have enabled them to provide equivalent programs themselves. At the 1964 ederal-Provincial Conference, the Province of Quebec proposed that a province be given he option to assume full administrative and financial responsibility for certain joint

programs upon the Federal Government making available to that province the necessa additional tax room. These proposals were referred to a federal-provincial committee officials for consideration. As a consequence of their consideration, the Prime Minis of Canada, in a letter to the provincial Premiers dated Aug. 15, 1964, proposed a tempora measure permitting a province for an interim period to assume full financial and administ tive responsibility in respect of certain programs pending the development of more perm nent arrangements. Parliament approved the necessary legislation—the Establish Programs (Interim Arrangements) Act—in April 1965. Under the Act, the Governme of Canada was authorized to enter into agreements with any province that wished assume full financial and administrative responsibility for certain programs in return f fiscal compensation. The nature and number of programs were itemized in the schedu to the Act.

Schedule I listed the major conditional grant programs of a continuing nature a Schedule II listed smaller and more transient programs. The Schedule I programs we (1) hospital insurance; (2) old age assistance, blind persons' allowances, disabled perso allowances, and the welfare portion of unemployment assistance; (3) the technical a vocational training programs for youths who were not yet members of the labour for and (4) the health grant program, except those elements that involved research and de onstration. The Schedule II programs were: (1) agricultural lime assistance; (2) t forestry programs; (3) hospital construction grants; (4) campgrounds and picnic are and (5) the roads to resources program. The Act was subsequently amended to inclu the Canada Assistance Plan.

If a province wished to avail itself of the provisions of the Established Progra (Interim Arrangements) Act in respect of a Schedule I program, it had to enter into supplemental agreement in which it undertook to assume full responsibility for the admi stration and financing of the program. The Federal Government undertook to ensu that the province received revenue equivalent to the fiscal burden it assumed. T Federal Government undertook to: (a) abate by a specified percentage the individu income tax on the income of residents of the province; (b) pay associated equalization; a (c) make an operating cost adjustment. The operating cost adjustment payment recovery was to ensure that a province did not suffer or benefit financially through assumi the financing of the federal share of the former joint program. Because of their small size and lack of continuity, the compensation associated with a Schedule II program d not provide for federal tax abatement or associated equalization payments. The compe sation for these programs was to be paid directly to the province by the federal Minister Finance.

The freedom of a province to vary the nature and condition of a program enumerat in the Established Programs (Interim Arrangements) Act differed between the Schedule and Schedule II programs. Under the Act, a supplemental agreement with respect to Schedule I program could vary the conditions of the original agreement only as to t manner in which Canada would contribute to the program and the manner in which a counts were submitted. A supplemental agreement for a Schedule II program mig require the program to be continued as in the original authority or it might allow a provin to substitute a provincial program having substantially similar objectives.

The Established Programs (Interim Arrangements) Act was designed to provide for a interim period during which a province might assume greater administrative and financi responsibility for the enumerated programs and during which time more permanent arrang ments governing joint programs might be devised. The length of the interim period w set out in the Act for each program and varied from Mar. 31, 1967 to Dec. 31, 1970. T tax abatement associated with Schedule I programs was also set out in the Act and vari from 1 p.c. for the health grant program to 14 p.c. for hospital insurance.

The Province of Quebec alone availed itself of the provisions of the above legislatio At the federal-provincial meetings in September and October 1966, the Federal Gover

18. Conditional Grants and Shared-Cost Programs as at January 1970

[1] Provinces excepted are shown in parentheses. [2] As here used, 50 p.c. may mean the province must contribute 50 p.c. of the cost of the project or must match the federal contribution. [3] F=a maximum limit set to the federal share; P=a maximum limit to the provincial share; and O=federal and provincial shares are open-ended. [4] SOURCE: *Public Accounts of Canada, 1969.* [5] Represents the provincial and/or municipal share. [6] Includes payments to municipalities. [7] Not uniform. [8] Provinces to provide administration, services, facilities, land, loans or to undertake a specific portion of the project, etc. [9] Quebec under the Established Programs (Interim Arrangements) Act received $8,584,000 for these programs. [10] Provinces to maintain existing level of expenditures or to bear residuary costs. [11] Share for provision of services only.

ment offered the provinces revised and more permanent arrangements. The Fede Government proposed to abate, for the period 1967-70, 17 p.c. of the personal income t in those provinces that would take over the financial responsibility for the hospital ins ance, welfare (i.e., Canada Assistance Plan) and health grant programs. To ensure fis equity, equalization and operating cost adjustment payments were to be associated w the abatement. As the technical and vocational program was being discontinued in existing form, the offer did not apply to that program. These proposals were re-offe again at the Nov. 4-5, 1968 meeting of the Ministers of Finance and Provincial Treasure Until the future responsibility for the joint programs, hospital insurance, Canada welfa and health grants is finally agreed upon, the contracting-out arrangement in the Establish Programs (Interim Arrangements) Act has been extended by the annual Estimates.

Section 5.—Provincial Government Finance

Provincial government accounting and reporting practices vary considerably so th certain adjustments to the *Public Accounts* figures are required in order to produce co parable statistics. For example, transactions relating to a specific function are sometim excluded from ordinary accounts; therefore special or administrative funds of this natu have been added to provincial ordinary account in the tables of this Section. The fis years of all provinces end on Mar. 31.

Revenue and Expenditure.—Table **20** shows net general revenue of and cost services provided by provincial governments for years ended Mar. 31, 1966-68. Table gives details of net general revenue, which is the total revenue received from all sour with the exception of enterprises and utilities adjusted where necessary to a comparati basis for all provinces, less (*a*) all revenue of provincial government institutions, (*b*) reven in the form of interest, premium, discount and exchange, (*c*) grants-in-aid and shared-c contributions. Table **22** reflects the "cost of services provided" by provincial governme and their agencies even though these costs may be shared by other levels of governme through conditional grants. Transfers from federal or municipal governments are n deducted from gross provincial expenditures. Table **23** gives details of the amou transferred to other governments by provincial governments, according to nature of pa ment.

20.—Net General Revenue of and Cost of Services Provided by Provincial Governmen Years Ended Mar. 31, 1966-68

[1] Includes expenditures for primary and secondary schools which are operated on a denominational basis in Newfoundland and by the Territorial Government, the Federal Government and religious organizations in the Northwest Territories. [2] Includes grants of $9,593,000 to conservation authorities. [3] Represents interest on debt assumed from the City of Montreal, the Montreal Metropolitan Corporation and the Village of Parent. [4] Nova Scotia—share of Crown land leases; Ontario—share of liquor licences; Alberta—share of liquor fines. [5] Represents compensation payable to municipalities in lieu of right to impose a sales tax. [6] Home-owners subsidies are not included in the total. It is considered that local governments merely act as agents for the provincial governments. See Table 22 for record of these payments. [7] Ontario—annuities and bonuses to Indians; Manitoba—water storage charges; Saskatchewan—transportation costs of certain immigrants and payments on South Saskatchewan River Dam agreement.

Debt of Provincial Governments.—Table 24 shows total bonded debt, by provin as at Mar. 31, 1966-68, Table 25 shows that the majority of bond issues are payable Canada, and Table 26 gives details of total direct and indirect debt of provincial gove ments as at Mar. 31, 1968.

24.—Gross Bonded Debt (exclusive of Treasury Bills) of Provincial Governments, as at Mar. 31, 1966-68

Direct and indirect debt included above held as identifiable provincial investments	—	—	—	314	—	288	45,707	23,130	107	—	—	—	69,546

[1] Includes bonds issued by the Ontario Junior Establishment Loan Corporation, $11,000,000, and by the Ontario Municipal Improvement Corporation, $21,000,000.
[2] Includes debts assumed by the province as follows: Metropolitan Boulevard, $56,251,000; loans of the Quebec Municipal Commission for the settlement of school debts in 1942, $8,034,000; loans contracted by certain university institutions, $47,362,000; loans of the Village of Parent, $337,000; and loan by the Institute of Microbiology and Hygiene of the Université de Montréal, $5,450,000. [3] Includes net liability of the province *re* Ontario Savings Office, $92,323,000, at Mar. 31, 1968. [4] Excludes debt of toll roads authority. [5] Amount authorized; information *re* amounts outstanding is not available. [6] In addition, the province has guaranteed the interest on school district debentures having a par value of $3,295,000, on sewage disposal and water supply systems debentures having a par value of $2,163,000 and on principal of mortgage loans under the Elderly Persons Housing Act of $1,271,000. [7] Excludes guaranteed interest under the School Borrowing Assistance Act and the School Buildings Assistance Act on principal borrowing of $7,435,000.

Section 6.—Municipal Government Finance

Municipal Taxation.—Table 27 shows, for the year 1967, local taxes levied b municipalities and by some school authorities and total taxes outstanding at the end of th year. Because of the considerable differences in the division of responsibility for servic between the provincial governments and their respective municipalities, these figures shoul not be used as a basis for interprovincial comparisons of the relative burden of municip taxation.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

In this Chapter various statistical statements and studies are presented in which br areas of Canadian economic activity are covered in a comprehensive but summary fo These integrated aggregative economic accounts provide an interrelated framework economic analysis and the observation of changes in the functioning of the Canad economy and its structure and in economic and financial relationships with other countr

Section 1.—National Income and Expenditure Accounts

The national income and expenditure accounts, which have recently undergon complete and comprehensive historical revision, constitute a subset of the system of natio accounts (also included in this system are the balance of international payments, inp output tables, indexes of real domestic product by industry and financial flow accoun The national income and expenditure accounts provide accounting summaries for the na as a whole and portray economic activity in terms of transactions taking place betw major groups of transactors, namely, governments, corporate and government busi enterprises, persons and unincorporated businesses and non-residents. By combining summarizing these operations into their various classes, information may be obtained the functioning of the economy, which is of particular interest to governments concer with problems of full employment, taxation and prices, and to businessmen concerned v programs of investment and marketing.

The tables on pp. 1179-1183 are based on the historically revised series of the nati income and expenditure accounts. The new accounts incorporate major statistical revis and changes in definitions and structural presentation. A full 1926-66 coverage of tables for national income and gross national product (Table 2) and for gross national

* Section 1 was prepared in the National Income and Expenditure Division, Sections 2 and 3 in the Nat Output and Productivity Division and Sections 4 and 5 in the Balance of Payments and Financial Flows Div of the Dominion Bureau of Statistics. Section 6 was prepared by the authorities concerned.

nditure in current and in constant (1961) dollars (Tables **3** and **4**) is available in a DBS nmary report *National Income and Expenditure Accounts, 1926-68*. Definitions are as lows:—

National Income.—Net national income at factor cost measures the current earnings Canadian factors of production (i.e., land, labour, capital) from productive activity. includes wages and salaries, profits, interest, net rent and net income of farm and non-m unincorporated business.

Gross National Product.—Gross national product, by totalling all costs arising in oduction, measures the market value of all final goods and services produced in the rent period by Canadian factors of production. It is equal to national income plus net irect taxes (indirect taxes less subsidies), plus capital consumption allowances and scellaneous valuation adjustments.

Personal Income.—Personal income is the sum of current receipts of income whether not these receipts represent earnings from production. It includes transfer payments m government (such as family allowances, unemployment insurance benefits and war vice gratuities) in addition to wages and salaries, net income of unincorporated business, erest and dividends and net rental income of persons. It does not include undistributed fits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate gross national product, namely, total production of final goods and services at market es, by tracing the disposition of production through final sales to persons, to governn-nts, to business on capital account (including changes in inventories) and to non-dents (exports). Imports of goods and services, including net payments of interest dividends to non-residents, are deducted since the purpose is to measure only Canadian duction.

nomic Activity in 1969

The Canadian economy maintained its momentum through 1969. The value of goods services produced rose by 9.9 p.c. to reach $78,537,000,000. This expansion, which npares with an 8.7-p.c. increase in the previous year, occurred despite the imposition of rictive fiscal and monetary measures and despite numerous labour disputes which were ected in a record number of man-hours lost. The rate of inflation accelerated during year; the rise of 4.7 p.c. in the implicit price deflator for gross national product, which the highest recorded since 1961, compares with increases of about 3.5 p.c. in the two ceding years. In real terms, gross national product rose by 5.0 p.c., about the same rate n 1968.

Widespread buoyancy of demand in the first quarter gave a strong initial impetus to economy. Although the rate of advance slackened in the second quarter, when the e of production rose only moderately, good advances were again shown in the summer fall quarters. For the year as a whole, two key developments were an acceleration in rate of consumer spending, and renewed high rates of business investment in plant and pment after two years of declines. With the economy performing vigorously, employ-t grew by 3.2 p.c. and the labour force increased by 3.1 p.c. As a result, the unemploy-t rate for the year declined from the 1968 level of 4.8 p.c. to 4.7 p.c.

Personal expenditure on consumer goods and services rose by 9.8 p.c. compared with .c. in 1968. This was the largest percentage increase shown in the current expansion. h of the increased expenditure reflected price movements rather than real gains, but constant dollar estimates also showed a sizable rise of 5.6 p.c.—the largest since 1965. s, consumer spending in 1969 was more than maintained in the face of sharply increasing me taxes (up over 20 p.c.) and historically high interest rates. The latter factor may, ever, have affected spending on automobiles which, with a 3-p.c. rise, was one of the few r items to show a substantially smaller rate of increase than in 1968, when it rose 0 p.c.

After the very high rates of increase in investment of 15 to 20 p.c. that prevailed the mid-1960s, business gross fixed capital formation registered small advances of about p.c. in both 1967 and 1968; in 1969 it rose by 9.4 p.c. Business residential constructi made a further impressive gain (18.4 p.c. versus 15.8 p.c. in 1968) and accounted for near half of the increase in the total. The upswing in activity in residential construction starti in the spring of 1967 and accelerating through 1968 slowed down in the second half of t year, as credit tightness in mortgage markets contributed to a sharp drop in the number starts in the spring. The acceleration in the rate of business gross fixed capital formati was due largely to the marked pick-up in business investment in plant and equipmer which rose by 6.3 p.c. compared with declines of 3.5 p.c. in 1968 and one half of 1 p.c. 1967. The increase of 3.5 p.c. in non-residential construction was considerably smal than the 15 p.c. indicated by the mid-year forecast of business intentions and, in fact, no residential construction declined in real terms by 2.6 p.c.

Canada's balance of transactions in goods and services deteriorated in 1969 from deficit of $193,000,000 to one of $866,000,000, as the rate of increase of imports accelerat while exports slowed somewhat. Although the rise in imports was very broadly base automotive products and capital goods accounted for about half of the increase in t merchandise account. Highlighting the increase in service imports was an exceptiona large rise of 26 p.c. in Canadian tourist and travel expenditures abroad. The rise in expor which was entirely oriented to United States markets, consisted very largely of automoti products, in line with the continuing rationalization of that industry resulting from t Canada–United States automotive trade agreement. Other exports rose only moderate

On the income side, wages and salaries rose by 12.2 p.c.; only the boom year 19 showed a larger gain in the current expansion. Most of the increase was due to high rates of pay. Within the year, there was a deceleration in the quarterly rate of increa in labour income, from a 3.6-p.c. increase in the last quarter of 1968 to one of 2.5 p.c. in t closing quarter of 1969. Corporation profits for the year 1969 rose by 5.5 p.c.; they r substantially in the first quarter of the year, declined in the following two quarters, especia in the summer, and showed little change in the fall quarter. This slow performance profits was due in part to the large number of strikes in 1969, but cost pressures combin with smaller productivity gains were probably additional factors. Among other inco components, the major movements were shown by interest and miscellaneous investme income which moved up 23.9 p.c., and by accrued net income of farm operators from fa production which increased 15.2 p.c.

Aggregate price change as measured by the implicit price index of gross national e penditure rose by 4.7 p.c. in 1969 compared to 3.5 p.c. in 1968. All major compone except personal expenditure on consumer goods and services showed higher rates of incre than in 1968. The decline in the rate of price increase of personal expenditure coupl with the increase in the price index of imports (which is a negative item) dampened t total price increase.

In personal expenditure, price deceleration occurred in durable and non-durable goo and prices of semi-durable goods rose at about the same rate as in 1968; service prices, the other hand, accelerated. Home furnishings, furniture and new cars contributed the slowdown in prices of durable goods. Within the non-durable group, there w offsetting movements, with higher rates of increase in the prices of food, women's and ch dren's clothing, drugs and cosmetics, auto parts and accessories, and newspapers a magazines, and lower rates in electricity, tobacco products, alcoholic beverages, me and boys' clothing and footwear. In services, increases were widespread, particularly personal services and care, transportation, domestic servants, communication, medi care and rents.

Strong increases occurred in the implicit price indexes of residential and non-resident construction; labour costs rose by about 11 p.c. and the materials component advanced about 5 p.c. Machinery and equipment prices increased by 2.5 p.c.

Components of Demand.—Personal expenditure on goods and services rose by ,171,000,000 to reach $46,531,000,000. This increase of 9.8 p.c.—compared with one 8.6 p.c. in 1968 which was the largest recorded since 1951—was very broadly based. real terms, however, the increase of 5.6 p.c. was smaller than the rates of increase in 4 and 1965 but larger than the 4.5 p.c. recorded in 1968.

There was an acceleration in the expenditure on most components. The sharp in- ases in the rates of furniture and home furnishings may be related to the high levels of idential construction in 1967 and 1968. In real terms, outlays on furniture rose by p.c. after a marginal decline in 1968. The accelerations in the rates of increase of enditure on shelter and household operations and in total transportation are also notable. e latter's increase of 7.0 p.c., however, was due entirely to price increases. A feature the year in consumer expenditure was a jump of 28 p.c. in travel expenditures by Cana- ns abroad. The only major items to show sharply reduced rates of increase in 1969 were acco and new and used cars. The former increased by 2.2 p.c. —much lower than the r 6-p.c. gains achieved in recent years. In real terms, however, tobacco consumption lined by 2.6 p.c. against a decline of 4.8 p.c. in 1968. The rise in outlays on new and d cars of 2.8 p.c. occurred after an exceptionally strong rise in 1968; the increase in new purchases in 1969 was heavily centred on cars of European manufacture.

Business capital outlays totalled $14,018,000,000 in current dollars in 1969, an increase $1,204,000,000 or 9.4 p.c. over the level of the previous year. Among the components, housing expenditures increased 18.4 p.c., adding $600,000,000, investment in new chinery and equipment rose 8.8 p.c. or $444,000,000 and non-residential construc- n, although its increase was markedly lower than that of the other components, added 0,000,000. Government capital outlays remained practically unchanged at a level of proximately $3,000,000,000, as increases in non-residential construction were offset by lines in machinery and equipment spending.

House-building activity set a new record in 1969 with starts of dwelling units numbering ,415 compared with the previous high of 196,878 starts in 1968. This increase was made sible in part by a large carryover of institutional mortgage loans which were approved 968 but did not lead to starts until 1969. Housing starts reached an annual total of ,300 in the first quarter but dropped off in each quarter to an annual rate of 186,000 in last quarter of 1969. New housing investment outlays, which follow developments in ts, rose throughout 1968 and until the last quarter of 1969.

Investment in non-farm business inventories was $534,000,000 in 1969 compared with 3,000,000 in 1968. The largest accumulation occurred in the first quarter—over 00,000,000 at annual rates. Manufacturing and retail trade each contributed about .c. and wholesale trade more than 40 p.c. to the total build-up in 1969.

In manufacturing, the accumulation of inventories was concentrated in the durable- ls-producing industries. Stock increases occurred in all groups except transportation ustries, which showed a depletion. Within non-durable-goods-producing industries, tting movements left on balance a nominal increase. The stock increases in both il and wholesale trade showed heavy strength in durable goods. In retail trade, the eases in the stocks of durables were widespread, whereas for non-durables the accumula- was almost entirely centred in the stocks of food.

Most of the increase in external trade* in 1969 took place in the first and fourth quarters. rchandise exports rose by almost 10 p.c., primarily spurred by sharp gains in automotive lucts and to a lesser extent in crude petroleum, pulp and newsprint. They increased $1,348,000,000, comprised of higher sales of $1,384,000,000 to United States markets, a in sales of $122,000,000 to United Kingdom markets, and a rise of $86,000,000 to all

* Based on data from DBS publication *Quarterly Estimates of the Canadian Balance of International Payments, First ter 1970* (Catalogue No. 67-001), with further adjustments for national accounts concepts.

others. Merchandise imports rose by 15.3 p.c., half of which was accounted for by machi ery and transportation and communication equipment (mainly automotive products The deficit on external account increased from $193,000,000 to $866,000,000. The me chandise trade surplus dropped by $508,000,000 to $868,000,000 which was accompanie by a deterioration of $165,000,000 in the non-merchandise deficit. The main element the larger service deficit was the worsening by $178,000,000 in the net balance on tourist a travel transactions; receipts increased by $87,000,000 but payments rose by $265,000,00

The Government Sector.—Total revenues of all levels of government combine including those from the Canada and Quebec Pension Plans, rose by just over 16 p.c. 1969 compared with somewhat smaller increases in 1968 and 1967. Almost half of the ri took place in revenue from personal income taxes and was partly associated with high rates of taxation, particularly the imposition of the social development tax at the feder level. Revenue from indirect taxes also rose substantially during the year and reflecte higher rates and broadened tax bases as well as greater sales. The other revenue categori registered smaller gains.

Total current expenditures of all governments rose by about 13 p.c., somewhat le than revenues. There were increases in all categories but more than half of the rise to place in outlays on goods and services, reflecting primarily higher wage and salary payment Transfer payments to persons rose sharply with roughly equivalent increases at the feder and provincial levels. Government capital expenditures declined slightly during the ye to the level of 1967.

With revenues advancing more rapidly than expenditures, the surplus of the gover ment sector, on a national accounts basis, more than doubled, moving from $994,000,0 in 1968 to $2,175,000,000 in 1969. A large part of the change took place at the feder level, as it moved from a deficit of $33,000,000 to a surplus of $775,000,000.

Components of Income.—Total labour income advanced by 12.2 p.c. during 1969 compared with rates of 9.1 p.c. in 1968 and 10.6 p.c. in 1967. Most of the advance result from increases in average weekly earnings. Wages and salaries in the goods-producin industries were 9.7 p.c. higher than in 1968, compared with gains of 5.7 p.c. in 1968 an 6.7 p.c. in 1967. Manufacturing increased by 10.7 p.c., construction by 9.0 p.c. and th primary industries, which were seriously affected by labour disputes in mining, by 4.8 p. In the service-producing industries, wages and salaries increased 14.2 p.c. as compared wit gains of 11.3 p.c. in 1967 and 13.7 p.c. in 1968. Transportation, communication and othe utilities increased 11.4 p.c., trade 13.1 p.c., finance, insurance and real estate 14.8 p.c public administration and defence 16.3 p.c. and service 15.5 p.c.

Corporation profits before taxes increased 5.5 p.c. in 1969 over 1968 to reac $7,852,000,000, partly reflecting their rapid rise during 1968. Within 1969, only the fir quarter showed a significant increase. Because of rising costs, tight money and labou they declined in the second and third quarters and increased only marginally in the closin quarter.

Accrued net income of farm operators from farm production increased over 15 p.c in 1969 above the 1968 level. The value of livestock production and the cash income fro the sale of other farm products were higher but the value of grain production declined reflecting a somewhat lower estimated value of the new crop and lower Canadian Whea Board profits as both exports and export prices continued to decline. Operating expense which had been rising at diminishing rates in the previous few years, showed little chang in 1969. Net income of non-farm unincorporated business, including rent, increase 4.6 p.c., one of the smaller increments in recent years. Lower than normal increases too place in the net income of the construction and retail trade industries, while normal increase occurred in the finance, personal and business service industries. Other industry group ings showed little change.

Section 2.—Industry Production Trends

Indexes of Real Domestic Product

The Dominion Bureau of Statistics in 1971 released a revised set of production d pertaining to the entire spectrum of Canadian industries. These data, in the form volume of production indexes, are measures of value added for each industry expressed the dollars of a base year. Technically, they are termed "indexes of real domestic prod (RDP) at factor cost originating by industry".* The value added, or RDP, volume inde can be regarded as an extension of the index of industrial production† to encompass remainder of the economy. Concepts and basic methods used to construct both inde are the same. Thus, industry production index coverage is extended from mining, ma facturing and electric power and gas utilities, for which volume indexes have been publis since the 1920s, to include all other major industrial divisions. The RDP indexes can a be regarded as an elaboration of the supply side of the national income accounts.*

In measuring the output of a single product such as steel, it is normal to think in ter of tons of steel when the question of quantity arises. When measuring the combi production of steel and natural gas, there is an obvious need for a common denomina and it is appropriate to use the average unit prices of a certain time period (chosen as t base) to value the quantities produced before adding them together. The result quantity, volume or real output measure can be subsequently left in its constant or b period dollar form or it can be expressed in index number form. The latter is accomplis by dividing the constant dollar aggregate of the current period by the dollar aggregate the base period and multiplying by 100. In constructing a quantity index for a combinat of industries where the output of one industry becomes the input of another, the port double-counted must be eliminated. This is accomplished by revaluing both intermedi input (materials, fuel, etc.) and total output in terms of the dollars of a common base y and subtracting the constant dollar value of the former from the latter to yield a consta dollar value added aggregate.* This aggregate is the quantity or volume measure rep sented by the indexes presented herein.

The annual indexes are well suited for studies of production trends, growth rates a inter-industry comparisons, but the quarterly indexes provide a much better tool for t study of the cyclical behaviour of industries, short-term changes in production and, in fa for most types of current analysis. Statistics computed for less than annual interv however, are frequently subject to strong seasonal influences, and variations in the numb of working days during a quarter may cause differences in the levels of output between t quarters which otherwise would not exist. Accordingly, the quarterly real output inde have been adjusted for both seasonal and calendar variation.

Factors Underlying Industrial Output Trends.—The early postwar period w marked by several major expansions. The first was based on satisfying the backlog war-deferred investment and consumer demand and on supplying the needs of the w devastated countries, especially for various materials. This was followed by some slowi down in production but the requirements of defence-supporting industries after the outbre of the Korean hostilities and stockpiling requirements at home and abroad introduce second expansionary period. The third was the investment boom of the mid-1950s duri which output reached a new high level. These strong demand influences combined make most of this period one of fairly rapid and sustained growth. During the late 19 the rate of increase diminished, as external sources of supply for many commodities mul

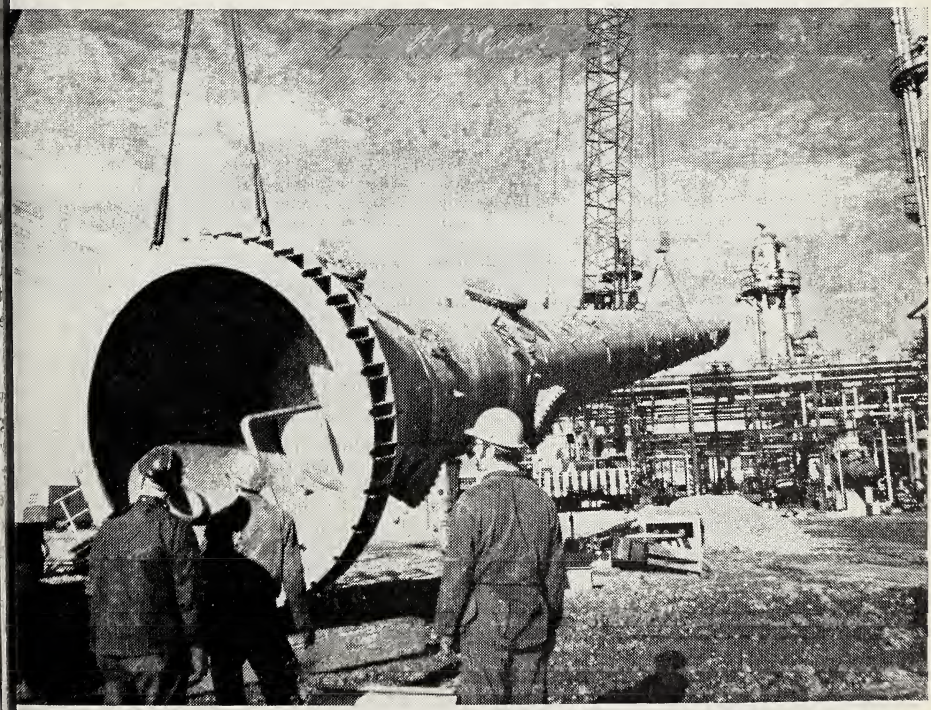
* *Indexes of Real Domestic Product by Industry, 1961-1969, 1961=100*, DBS Occasional Paper (Catalogue No. 510). For the period 1935-60, see *Indexes of Real Domestic Product by Industry, 1961 Base* (Catalogue No. 61-5 For a detailed explanation of concepts, methods and limitations, see *Indexes of Real Domestic Product by Industr Origin, 1935-61* (Catalogue No. 61-505). Current data on a quarterly or monthly basis are published in DBS mont *Index of Industrial Production* (Catalogue No. 61-005).

† See *Revised Index of Industrial Production, 1935-57* (Catalogue No. 61-502) and the current monthly publicat *Index of Industrial Production* (Catalogue No. 61-005).

d and as competition intensified. At the same time, there was an absence of strong nulants to domestic demand, such as the deferred demand and the population growth he preceding period.

During the 1960s, however, the first waves of the postwar generation exercised a wing influence on the demand for goods and services and this proved to be a sustaining tor throughout most of the period to date. There was particular strength in the durable nufacturing sector of the economy in response to both domestic and external demands. orts of goods and services advanced vigorously throughout most of the period, with s of wheat and motor vehicles and parts providing major thrusts. As a result of this yancy of foreign demand for Canadian goods and services, exports increased their share otal final demand. The underlying strength of the economy provided a healthy climate investment. Both residential and non-residential construction as well as investment nachinery and equipment made good gains, particularly up to 1966. Partially reflecting high import content of heavy investment in machinery and equipment and the impact he Canada–United States Agreement on Automotive Products, the growth of imports paced the increase in total final demand over most of the 1961-69 period. Government rent expenditure on goods and services also increased significantly during the 1960s.

Even more remarkable than some of the demand-induced changes were the striking nges brought about by the technological discoveries and innovations that transformed ble production processes and opened up previously unknown areas in the fields of manuturing, transportation and communication. Newer industries, such as air transport, umed major importance in a comparatively short time; entirely new industries, such as pipelines, appeared; and a profusion of new products were created, such as the petro-



ting into place the top section of a 238-foot propylene refining column, part of a $5,500,000 expan- to a Montreal East petrochemicals complex. The new facilities, to be completed in mid-1971, will permit the refining of propylene at rates in excess of 100,000,000 lb. annually.

chemicals of the chemicals industry and the television and other electronic products of telecommunication equipment industry. As was to be expected, the industries in a posit to benefit from such innovations were among the most rapidly expanding in the econo although the impact of the expansion spread through the entire economic system. changes in production and demand also influenced the level of employment in the vari industries; there was a considerable shift in employment during the postwar period f the goods-producing to the service-producing industries and most of the loss in the for took place in agriculture.

[1] No data are available prior to 1961 on a 1961 base due to a break in historical continuity resulting from implementation of the 1960 standard industrial classification and the 1961 weight and reference base for the inde

Although all the major industry groups expanded, development was not unifo throughout the postwar period. For example, there was a marked and fairly gene acceleration in output growth in Canada during the 1960s. Despite some deceleration the later years of that decade, total real domestic product grew at a rate of 5.8 p.c. in t 1961-69 period. In contrast, the average rate of growth in real domestic product for t 1946-61 period was 4.7 p.c. per annum. Three important types of factors affecting t expansionary paths of industries were in evidence at some point during the period. T first may be described as some special factor at work in a particular industry, the effe of which would be most noticeable in that industry—for example, the demand for urani which had an important influence on the mining industry during the latter half of the 195

ne opening up of new mineral resources such as the iron ore mines in Quebec–Labrador, nd certain technological innovations such as the development of synthetic materials or elevision. The second type of factor is much more general in its effects and in its causes. uch factors as increased demand for consumer goods resulting from a rising standard of ving and a growing population, shifts in world trading patterns or shortages causing in- eased demand for export goods, the surge of investment activity associated with replace- ent cycles, as well as attempts to broaden the base of economic activity through invest- ent in research, social overhead capital, education, improved management and marketing chniques, or a more efficient production process (or a confluence of all these factors) appear lie at the root of such postwar expansions as the investment boom of the mid-1950s or ne expansion in production since 1961. The third type of factor would be some unique nd far-reaching event, of which the Korean War might serve as a conspicuous example.

All three factors, jointly or in turn, have reacted on the various industries to result in ne upswings in aggregate production. The percentage growth of each of the main in- ustrial groups in the 1946-69 period was as follows:—

Industry	*Growth*
	p.c.
Agriculture	1.5
Forestry	2.5
Fishing and trapping	1.4
Mines (incl. milling), quarries and oil wells	8.2
Manufacturing	5.1
Construction	6.0
Electric power, gas and water utilities	8.9
Transportation, storage and communication	4.9
Trade	4.9
Finance, insurance and real estate	[1]
Community, business and personal service	4.7
Public administration and defence	[1]
Real Domestic Product	4.8

[1] For these industries the 1946-61 and the 1961-67 periods are not considered sufficiently comparable to have been ked following conversion to the 1960 standard industrial classification and the 1961 weight and reference base—see *dexes of Real Domestic Product by Industry, 1961 Base*, Appendix I (Catalogue No. 61-506). The 1961-69 growth rate Finance, insurance and real estate was 4.5 p.c. and for Public administration and defence 2.8 p.c.; the 1946-61 rates ere 5.0 p.c. and 4.6 p.c., respectively.

Foremost in growth was the electric power and gas utilities industry, followed by the ining and construction industries. All three were strongly affected by technological dvances, new discoveries and a fairly well sustained demand for their products. The emand in mining frequently came from abroad, resulting in relatively high export sales and oviding incentive for the opening up and developing of new mineral resource areas. me slackening in construction activity was evident following the unusually high levels ached during the mid-1950s but since 1963 the swing has again been upward, although ere was some flattening from the latter part of 1966.

Over the period as a whole, most of the other industry divisions (except agriculture, restry and fishing and trapping) expanded at roughly the same average rate of about 5 p.c. anufacturing, trade, and transportation, storage and communication industry divisions, hich together accounted for almost one half of the total output, also showed strikingly milar cyclical patterns. Within manufacturing it was the durables component that panded particularly rapidly during the cyclical upturns and that benefited from the need r machinery and equipment in the periods of heavy investment and from increased nsumer demand for such products as motor vehicles and electrical appliances during the 61-69 period. Non-durables maintained a fairly steady rate of expansion for most of e postwar period, largely in response to increased population and demand for industrial aterials. A similar pattern was observable in trade, with retail trade exhibiting a rela- vely smooth expansionary trend.

The community, recreation, business and personal service industry division w relatively insensitive both to cyclical and irregular influences but, along with some oth steadily expanding industries such as finance, insurance and real estate, non-durables an retail trade, it helped to sustain aggregate production and growth during periods of contra tion and expansion. Although this division as a whole showed an average rate of growt for the 1946-69 period, some of its components, such as business services and educatio were among the most rapidly expanding in the economy. During the 1960s, this resulte in a marked acceleration of the rate of expansion of the division, i.e., from 3.8 p.c. in 1946-6 to 6.9 p.c. in 1961-69.

The rates of growth in the forestry, agriculture, and fishing and trapping divisio were below average and were subject to pronounced irregular fluctuations in output– forestry because of the nature of its production processes and also, to some extent, becaus of its sensitivity to changes in world demand and price; agriculture because of marke year-to-year differences in output more often caused by weather conditions and simil factors than by changes in prices and demand conditions; and fisheries because of i dependence on the vagaries of nature.

Production of Goods-Producing Industries

The data contained in the tables under this heading are published in the DBS repo *Survey of Production*.* The scope of the survey of production is limited to industri engaged chiefly in the production of goods and it measures production in current dollar This is in contrast to the real domestic product series (p. 1184) which encompasses a industries and measures production in terms of the dollars of a base year.

Tables 13 and 14 give "census value added" production data, classified by provinc and industry, respectively. Census value added is derived by deducting the cost materials from the gross value (exclusive of excise and other sales taxes) of shipment (adjusted for change in inventory of finished goods and goods-in-process) or revenue. Th figures include interim classification and valuation changes in mining, manufacturing an forestry brought about by the adoption of the 1960 standard industrial classification establishments. However, the three industry aggregates continue to consist of censu value added accruing from their primary activity only.* Standard industrial classificatio changes have not yet been implemented for other industries.

* DBS Catalogue No. 61-202. See Appendix of the 1968 issue for census value added in mining, manufacturin and forestry on an all-activities basis.

[3] Included with British Columbia.

Section 3.—Aggregate Productivity Trends

Increasing interest in questions of economic growth, cost-structure and internatio competitiveness, and in the relationships between output, employment, earnings and pri has focused attention on productivity as a framework within which such problems c usefully be discussed. Recognizing this interest, the Dominion Bureau of Statistics n publishes annual indexes of output per person employed and per man-hour in Cana covering the commercial industries as a whole, with separate detail for agriculture and t commercial non-agricultural industries, manufacturing and the residual commercial no manufacturing industries. Similar indexes are also published for the total and non-ag cultural commercial goods-producing industries, and the commercial service-produci industries of the same aggregate.*

Although these measures relate output to a single input only, namely labour time, th do not measure the exclusive contribution of labour to output. Changes in indexes output per unit of labour input reflect the combined influence of a number of separate b interrelated factors such as the amount and quality of capital equipment, the extent utilization of available capacity, managerial efficiency and the impact of technologi progress, as well as the skill and effort of the work force.

Sources of Data.—The output components of the various indexes of output p unit of labour input referred to here are the historical indexes of "real domestic produ (RDP) by industry", described in Section 2, p. 1184. These indexes, which were develop within the conceptual framework of the national accounts and which measure in consta dollar terms the unduplicated contribution of each component industry to total outpu are considered basically suitable for productivity measurement when matched with t corresponding input measures.

The major sources for the employment and man-hour indexes were the monthly labo force and employment surveys, and these were supplemented by data from such sources the annual censuses of manufactures and mining and the decennial census of populati Since the data from these diverse sources varied considerably in their coverage, concep and methods of compilation, care had to be exercised in their selection, adaptation an combination into aggregate measures of labour input which would be conceptually an statistically consistent, both internally and in relation to the output data. Labour for survey data were used for the paid worker estimates of agriculture and of fishing an trapping, while those for manufacturing and mining were based on adjusted annual cens data. Estimates for most of the remaining industry divisions were derived from adjust employment survey data. Estimates of other than paid workers (own-account worke employers and unpaid family workers) were derived mainly from the labour force surve The estimates of average hours worked, which were needed for the indexes of output p man-hour, were also based on labour force survey data, except in the case of manufacturin where estimates of man-hours paid from the census of manufactures were adjusted to t man-hours worked concept.

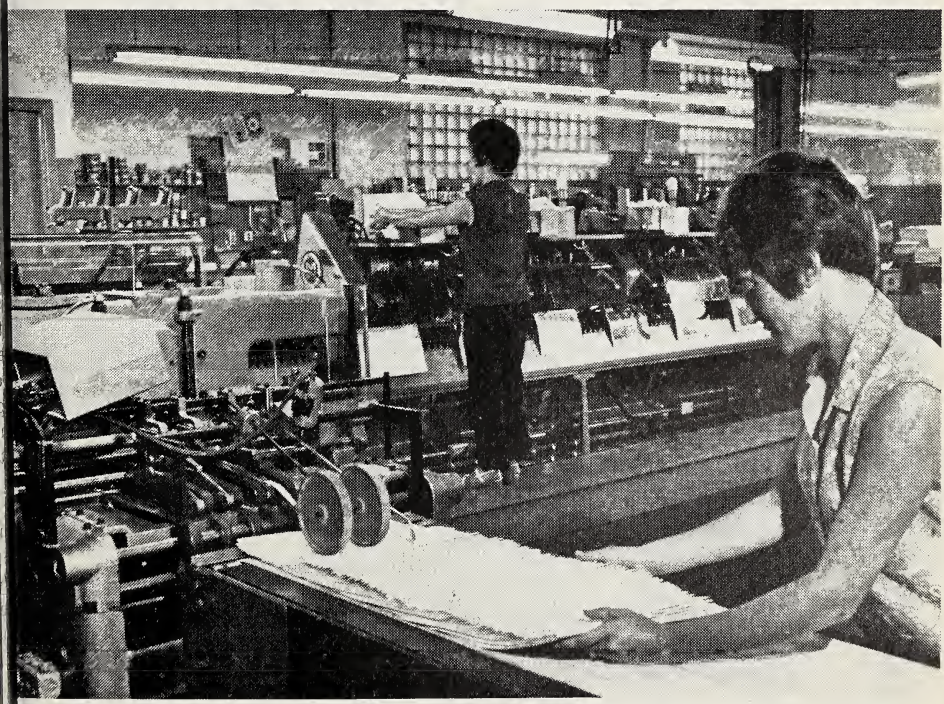
Growth Rates.—Output per person employed in the commercial non-agricultu industries grew at an average annual rate of 2.8 p.c. between 1946 and 1969. Because the decline in average hours worked per person, this was a lower rate of growth than th of output per man-hour which, during the same period, increased by 3.3 p.c. per annu Corresponding figures for manufacturing were 3.7 p.c. and 4.0 p.c. and those for the residu non-manufacturing industries of the commercial non-agricultural sector were 2.4 p.c. an 3.0 p.c., respectively.

* See DBS Reference Paper *Indexes of Output per Person Employed and per Man-Hour in Canada, Commerc Non-agricultural Industries, 1947-63* (Catalogue No. 14-501) and *Aggregate Productivity Trends, 1946-69* (Catalo No. 14-201).

In agriculture, the average annual rates of growth of output per person employed and er man-hour between 1946 and 1969 were 5.2 p.c. and 5.5 p.c., respectively. However, n view of the difficulties of measuring the number and especially the man-hours of persons mployed in agriculture, data presented for this industry division should be regarded as pproximate. In the commercial industries as a whole, output per person employed in- reased between 1946 and 1969 at an average annual rate of 3.4 p.c., and output per man- our increased by 4.2 p.c. per annum. Corresponding figures for the total commercial oods-producing industries were 5.0 p.c. and 5.6 p.c., respectively, per annum; for the ommercial non-agricultural goods-producing industries, 4.2 p.c. and 4.5 p.c.; and for the ommercial service-producing industries, 1.4 p.c. and 2.1 p.c.

Inter-industry Shift Effects.—In addition to measuring the changes in productivity ithin the component industries, the aggregate productivity indexes measure the effect of ifts in employment and production between industries having different levels of produc- vity. One of the most significant such shifts within the commercial industries of Canada uring the postwar years was from agriculture to the non-agricultural industries, where a igher level of output per unit of labour input prevails. The effect of this shift can be easured in various ways and a number of alternative calculations have been carried out r the 1946-65 annual publication,* all of which confirm, to a greater or lesser extent, at the decline in the relative importance of agriculture made a positive contribution to e total increase in output per person employed in the commercial industries during the ostwar period.

* DBS Catalogue No. 14-201.



oduction of printed matter has undergone great change in the past few years and investment in expensive, gh-speed, efficient machinery is necessary to keep a plant competitive. This new machine in an Ottawa printing plant automatically assembles, stitches and trims publications of all sizes.

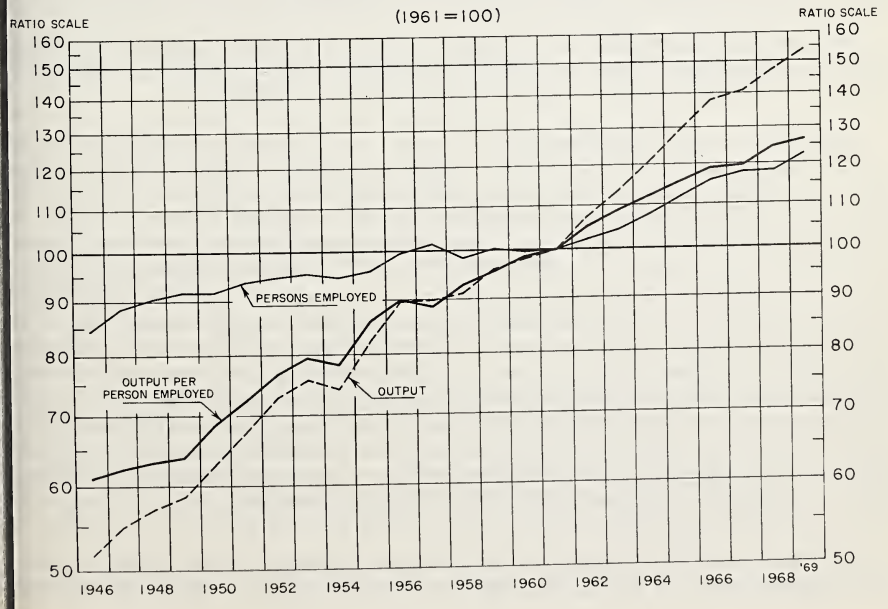
INDEXES OF OUTPUT PER PERSON EMPLOYED, COMMERCIAL INDUSTRIES, 1946–69



Section 4.—Canadian Balance of International Payments

The Canadian balance of international payments is a measure of the flow of goods services and capital between Canada and the rest of the world. It is normal practice allocate flows within three major accounts—current, capital and international reserves.

Merchandise trade, consisting of imports and exports, comprises a very significant ite in the current account section both in magnitude and in its over-all economic impact Canada. Although with decreasing emphasis in recent years, a favourable balance trade has long been regarded by many countries as a measure of economic strength. I recent years, Canada has been successful in achieving a merchandise trade surplus but tl increasing outflow of Canadian dollars in the form of interest and dividends (as foreig investment in Canada has risen), the cash requirements of Canadians travelling outsic Canada, the heavy freight and shipping expenses incurred in the transport of Canadia imports, and the official contributions to developing countries have assisted in creating heavy imbalance in the area termed "invisibles". Canada, of course, is the recipient of sul stantial revenues from invisibles, including among other items immigrants' cash resource returns on foreign investments, travel expenditures by foreigners accruing to Canadian and freight receipts.

The capital account includes the flows associated with long-term and short-term in vestment in the Canadian economy together with Canadian investment in foreign countrie Through the years, confidence in the Canadian market by foreign investors has encourage them to make significant purchases of long-term Canadian securities. On a yearly basis these investments have exceeded both Canadian investment abroad and the relinquishmen of investments in Canada by non-residents. In addition to heavy and sustained purchase of new security issues of governments, railways, utilities and other corporations, sizabl investments have been made by non-residents in corporations in which the investor acquire some degree of control.

Short-term capital flows are complex and extremely volatile. Accounts receivabl and payable of resident Canadian corporations with non-residents, holdings of foreign ban balances by Canadians and, similarly, Canadian dollar deposits of non-residents in Canad are some of the accounts for which flows are consolidated in the short-term capital secto

More detailed information on the structure of the Canadian balance of internationa payments is obtainable from the various publications produced by the Balance of Payment and Financial Flows Division of DBS, in particular the annual reports.

Summary of 1969 Transactions.—In a year of continuing expansion, resulting in more than 9-p.c. gain in the value of the nation's output, there was a sharp rise in inter national transactions in goods and services both demanded and supplied by Canada. Th total value of goods and services imported rose 14 p.c. and exports advanced 10 p.c. Re flecting these differing rates of growth in imports and exports, the current account defici in 1969 rose to $751,000,000, some $644,000,000 above the 1968 level. The major factor i this change was the $515,000,000 reduction in the merchandise trade surplus to $860,000,000 The export pattern was severely distorted by the curtailment of supplies from strike-boun industries and continued difficulties were also experienced in the marketing of commoditie such as wheat. Exchange rate changes for the deutschemark and French franc made i the second half of the year did not appear to have had any noticeable impact on Canadia trading patterns. As an anti-inflationary measure, the timing of tariff reductions under th Kennedy Round was accelerated by the Canadian Government and reductions introduce in mid-year had competitive effects for the products of certain industries. Non-merchan dise transactions led to a larger deficit of $1,611,000,000, principally due to increased ne disbursements on the travel account.

Inflows of capital in long-term forms increased by $603,000,000 to $2,257,000,000, a new Canadian issues sold to non-residents rose by $150,000,000 to exceed $2,000,000,00

the first time. Resort to foreign borrowing on this scale reflected the extreme tightness the availability of domestic funds and relatively lower interest rates prevailing abroad. e main factor in the increased inflow was, however, the swing in foreign security trans- ions from an outflow of $467,000,000 in 1968 to an inflow of $106,000,000 in 1969, as nadian investors, particularly institutions, adjusted their holdings in the light of their er-all portfolio requirements and current market conditions. Short-term capital out- ws rose by $243,000,000 to reach $1,441,000,000. Increases in Canadian holdings of nk balances and other short-term funds abroad produced an outflow of $1,604,000,000, interest rates in the Euro-dollar market rose appreciably above short-term rates in nada.

Canada's net official monetary assets increased by $65,000,000 over the year. Quar- ly fluctuations in these assets were not nearly as volatile in 1969 as in the previous year en the Canadian dollar came under speculative attack. Speculative interest centred re on the role of gold and the strengths of the deutschemark, French franc and sterling. the end of the year conditions in foreign exchange markets generally were settled, aiting the introduction of the Special Drawing Rights system of the International Mone- y Fund on Jan. 1, 1970.

Current Account Transactions.—Based on generally strong demand conditions in United States and in Canada, which persisted in the face of severe anti-inflationary asures, merchandise trade continued to expand in 1969. World trade rose sharply during year and Canadian exports and imports advanced at a pace more or less in line with this elopment, the former increasing 10 p.c. to $14,874,000,000, and the latter, 15 p.c. to ,014,000,000. A significant part of the increased levels reflected price rises. The export wth rate, which fell below that of imports, contrasted with the 1968 performance when orts rose much the faster. As a result of the slowdown in the growth of exports and eased growth of imports, the merchandise trade surplus fell by about $515,000,000 to 0,000,000. Except for 1968, however, this surplus was the highest recorded since the ond World War.

A combination of factors contributed to this change. In 1969, exports of metals tended low down due to the return to a more usual demand pattern following the settlement of our problems in the United States in 1968; moreover, supplies for export markets suffered ause of prolonged strikes in the Canadian iron, steel, nickel and copper industries in 9. Sales of wheat continued to decline, reflecting increased production in importing ntries and world oversupply. To meet the increasing competition which had driven es below the International Grains Arrangement minimum, Canadian wheat prices were uced in the second quarter of 1969. While there was a decline in the relative share of orts of crude materials from about 19 p.c. in 1968 to 17 p.c. in 1969, the share of end ducts rose by nearly five percentage points to about 37 p.c. of total domestic exports. st of the advance in exports consisted of increased sales of automotive products but stantial increases were also recorded for lumber, wood pulp, newsprint, petroleum and ious items of equipment. There were, however, significant reductions in exports of iron nickel and copper.

On the imports side, the high level of demand in Canada, the disruptive effects of our disputes on domestic supplies, the improvement in the export capability of Canada's pliers of imports and the continuing effects of industrial rationalization particularly in automobile industry gave new impetus to the upward trend in imports. The accelera- of the Kennedy Round tariff cuts introduced by the Canadian Government about middle of 1969 to increase price competition and help check inflationary price rises was a factor. Imports of automotive products increased briskly, although less than exports hese commodities. Increases were general but the more notable occurred in meat, raw ar, petroleum, chemicals, fabricated iron and steel, copper, nickel and machinery.

In 1969, there was a deficit of $1,611,000,000 on non-merchandise transactions, an ease of $129,000,000 over the 1968 deficit. Total receipts rose 15 p.c. to $4,221,000,000

and total payments went up about 11 p.c. to $5,832,000,000. The rise in the deficit o non-merchandise transactions was due principally to higher net disbursements on th travel account of $218,000,000 in 1969. Besides such factors as the increase in the numb of residents travelling abroad and a rise in their average expenditures, higher travel paymen to non-residents in 1969 also occurred as a result of the increased patronage by Canadia of foreign airlines during the Air Canada strike in the second quarter of the year. Risi prices in most of the major tourist centres were also a factor in the higher spending leve recorded in 1969.

Capital Movements.—The net inflow of capital into Canada almost doubled to 16,000,000 in 1969 from $456,000,000 in the previous year. Capital movements in ıg-term forms led to a net inflow of $2,257,000,000 for the year, as inflows of approxiıtely equal size occurred in each quarter while short-term transactions gave rise to outws in each quarter, totalling $1,441,000,000 in the year. Despite the large increase in the low from total capital movements in 1969, only $65,000,000 was added to Canada's icial monetary assets, as the year's current account deficit rose more sharply to 51,000,000.

Direct investment in foreign-controlled enterprises in 1969 gave rise to a moderately gher net capital inflow of $655,000,000, as sharply lower inflows from the United Kingdom re more than offset by higher investment from the United States and other countries. out 70 p.c. of the year's inflow came from the United States, and two fifths of it occurred the second quarter. By far the largest part of the inflow was allocated to the manufacring and petroleum and natural gas industries. Capital inflows for the takeover of sting Canadian enterprises, notably enterprises engaged in the manufacture of food and verages, forest products, electronics and steel, and in asbestos production, finance and insurance, were substantially higher.

The net outflow for direct investment abroad during 1969 reached a high of 55,000,000, compared with the 1968 outflow of $225,000,000. About three fifths of the 69 investment was in the United States, one fifth in Europe, and the remainder chiefly other Western Hemisphere countries.

At $1,832,000,000, the net inflow from portfolio transactions in long-term securities in 69 reached unprecedented proportions. The two main elements accounting for the size this inflow were the continued high level of sales of Canadian new issues abroad, which ceeded $2,000,000,000 for the first time, and a sharp turnaround of over $500,000,000 in ding in outstanding foreign securities. The net inflow of $106,000,000 from transactions foreign securities, after five years of successive annual outflows totalling $1,437,000,000, s largely attributable to transactions in United States equities. At a time when stockrket prices were depressed in Canada and the United States, Canadians became net lers of these securities (to the extent of $114,000,000) for the first time since 1963.

Buoyant economic conditions and exceptionally high interest rates, both in Canada d abroad, had a far-reaching impact not only on stock-market conditions but also on the rces and type of financing adopted by Canadian borrowers. Canadian interest rates, eady at very high levels at the end of 1968, continued to rise throughout 1969. In late cember, the yield on the index of 10 long-term industrial bonds produced by McLeod, ung, Weir had reached 9.29 p.c. Canadian borrowers took advantage of the relatively er rates abroad by continuing to raise large amounts of capital not only in the United tes but, for the second successive year, in Germany. (Of interest in 1969 was the entry municipalities into this market, which had been utilized almost exclusively by more senior vernments and their agencies in 1968.) Provincial governments again borrowed heavily Germany, so that total inflows from new issues of Canadian securities in continental rope rose from $491,000,000 in 1968 to $556,000,000 in 1969.

Capital movements in short-term forms in 1969 gave rise to a larger net outflow of 441,000,000 compared with $1,198,000,000 in 1968, which masked to some extent very ge opposing flows. The outflow for the acquisition by Canadians of foreign currency posits and other short-term funds abroad almost quadrupled in the year to $1,604,000,000. tially offsetting inflows resulted from increased non-resident holdings of Canadian ance company paper and other short-term obligations. A large year-to-year reduction outflows was evident in the "all other transactions" category. This account includes nges in loans and accounts receivable and payable as well as the balancing item repreting the difference between direct measurements of the current and capital accounts cluding the reserves).

Official Reserves.—Canada's net official monetary assets totalled U.S. $3,105,000,0 at Dec. 31, 1969, a rise of U.S. $60,000,000 over the year. A large increase of U. $150,000,000 in the fourth quarter more than offset the decreases that took place in t first three quarters of 1969. Total official monetary liabilities remained constant ov the year at U.S. $1,000,000. The annual change expressed in Canadian dollars showed increase in net official monetary assets of $65,000,000, all reflecting the rise in internation reserves, as changes in associated liabilities, noted above, were negligible in the yea

Section 5.—Canada's International Investment Position*

Canada's balance of international indebtedness reached a book value of ov $27,000,000,000 by the end of 1969, an almost sevenfold increase over the past two decad Long-term foreign investment rose by about $3,500,000,000, reflecting both an inflow long-term capital and an increase in earnings accrued to and reinvested by non-residen Other non-residents' claims on Canadians brought the total of Canada's external liabiliti to about $46,000,000,000. Total outflow of domestic long-term capital together with increase in earnings accrued to Canadians abroad caused the total book value of Canadi long-term investment abroad to rise to over $10,000,000,000 at the end of 1969. D mainly to the large rise in private holdings of foreign exchange, total Canadian assets abro registered an increase of about $2,000,000,000, well exceeding $18,000,000,000 at the e of 1969.

The balance of international indebtedness is a phrase generally accepted in balanc of-payments terminology to include equity investments as well as contractual borrowing Its size and character have a considerable influence on Canada's balance of payment This is true not only through the servicing of capital involving interest, dividends and mi cellaneous income payments but also through the influence of foreign investment on t Canadian economy and on the shape and direction of its external demands.

Canada has been among the world's largest importers of private long-term capita The very substantial capital formation which was a feature particularly since the 1950s w associated with an unprecedented growth in the country's external liabilities. These i vestments contributed to a rapid rate of growth in the Canadian economy, particular in the exploitation of natural resources, and added significantly to Canadian productio employment and income. At the same time they added substantially to the continuin burden of Canada's external debt and to the proportion of Canadian industry controll by non-residents.

* This review covers Canada's international investment position in 1967, although a few estimated totals f 1969 available at the time of writing are included in the first paragraph. An extended historical review appears DBS report *Canada's International Investment Position, 1926 to 1954* (Catalogue No. 67-503) and more recent statisti in the annual report *Canadian Balance of International Payments and International Investment Position* (Catalog No. 67-201), and in the *Quarterly Estimates of the Canadian Balance of International Payments* (Catalogue No. 67-00 Additional detailed material will be found in the annual report under the Corporations and Labour Unions Retur Act.

Canada's gross external liabilities amounted to $40,200,000,000 at the end of 1967; non-sident-owned long-term investments in Canada reached a book value of $34,700,000,000. he part of these investments in enterprises controlled outside of Canada totalled 20,700,000,000. Investments in other Canadian equities, although smaller, were also ıbstantial and there were periods in recent years of sharp increase in foreign holdings of anadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth Canada and to the heavy demands placed on capital markets by this factor and by the nancial needs of governments and municipalities. Large development projects have een initiated and financed by investors from other countries and the growth effects from is investment have, in turn, led to Canadian borrowing in capital markets outside Canada. hile capital inflows have been the principal source of the increased indebtedness abroad, nother substantial contributor has been the earnings from non-resident-controlled branches nd subsidiaries which were retained in Canada. New resource industries depending to large extent on non-resident financing include all branches of the petroleum industry, on ore, potash and other mining, aluminum, nickel, pulp and paper, and chemical in-ustries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled $15,000,000,000 at the end of 1967 and govern-ent-owned assets made up a substantial part of that total. Canada's net balance of ternational indebtedness, including equity investments, at the same date was estimated $25,200,000,000.

Foreign Investments in Canada.—Dependence upon external sources of capital for nancing in periods of heavy investment activity has been characteristic of Canadian evelopment. During the exceptional growth that occurred before World War I, non-sident investment was very high and the main source of that investment was London. owever, during the first part of the inter-war period, the United States became the prin-pal source of external capital and by 1926 the portion of Canada's international debt wned in that country exceeded that owned in the United Kingdom. With some interrup-on during the 1930s, United States investment in Canada continued to increase, partic-arly after 1947 when the period of intense activity in the petroleum industry got under way. t $28,030,000,000, United States long-term investments in 1967 represented about 81 p.c. all non-resident long-term investment in Canada. The main rise occurred in direct vestments in companies controlled in the United States.

United Kingdom long-term investments in Canada totalled $3,576,000,000 at the end 1967 and accounted for only about 10 p.c. of the total non-resident investments in Canada mpared with 36 p.c. at the end of 1939 before most of the wartime repatriations. After aching a low point in 1948, the value of United Kingdom investments in Canada increased ch year to 1962, declined slightly in 1963, partly as a result of Canadian repatriation of vestments in railways and further provincial takeover of other utilities, then increased gain in subsequent years.

Long-term investments of countries other than the United States and the United ingdom reached a record total of $3,096,000,000 at the end of 1967. About two and one lf times the 1957 figure, this represented a much higher rate of increase than had occurred either United States or United Kingdom investments, and large increases had taken place direct as well as in miscellaneous investments. At about 9 p.c. of the total, compared ith 7 p.c. in 1957, this group of countries, mostly in Western Europe, accounted for a ightly larger proportion of total foreign investments than in 1966. Over 85 p.c. of the rect investment, which totalled $1,547,000,000 in 1967, came from Europe; about one uarter was of Netherlands origin, with French, Belgian, Swiss and German investments aking up the next largest groups.

The degree of dependence on non-resident capital for financing Canadian investment has en relatively much less in the postwar period than in the earlier periods of exceptional xpansion, even though the rise in non-resident investments has been so great. Thus, from 950 to 1953 the net use of foreign resources amounted to about one seventh and direct

foreign financing to almost 30 p.c. of net capital formation in Canada. But from 1958 1961, when these ratios had increased considerably to 34 p.c. and 47 p.c., respectively, th were still less than the corresponding ratios in the 1929-to-1930 period when inter-war i vestment activity was at its highest point. In that shorter period, more than one half net capital formation was financed from outside of Canada, and in the period of heav investment before World War I an even larger ratio of investment was financed by extern capital. After 1961 these ratios declined somewhat; from 1962 to 1965 the net use of foreig resources comprised 19 p.c. of net capital formation in Canada and direct foreign financin 43 p.c. In considering these changes it should be noted that for a decade and a half, b tween 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abro have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident inves ments in all spheres of development including those where Canadian sources of financi predominate such as in merchandising, agriculture, housing, public utilities and other forn of social capital. Thus, non-resident financing of manufacturing, petroleum and mini has been much higher than the over-all ratios indicate and has provided the major portio of the capital investment in this field in the period since 1948. The most recent compr hensive calculation of the ratios of non-resident ownership in Canadian manufacturin mining and petroleum is for the year 1966. In that year the Canadian manufacturing in dustry was 53 p.c. owned by non-residents but capital subject to foreign control was 58 p. These proportions compared with 50 p.c. and 56 p.c., respectively, as recently as the end 1957. In the field of petroleum and natural gas, non-resident ownership and contr amounted to 63 p.c. and 74 p.c., respectively, at the end of 1966, whereas at the end of 195 non-resident ownership and control had amounted to 63 p.c. and 76 p.c., respectively; i mining and smelting, non-resident ownership and control amounted to 59 p.c. and 62 p.c respectively, compared with 56 p.c. and 61 p.c. in 1957.

However, resident-owned Canadian capital continued to play a leading role in th financing of such areas of business as merchandising, railways and other public utilitie Hence, non-resident ownership in a broad range of business activity, including manufactu ing, petroleum, mining, merchandising and railways and utilities, rose only slightly fro 32 p.c. in 1948 to 36 p.c. in 1966. But, in the same years, companies subject to non-residen control increased from 25 p.c. to 34 p.c. their share of the total capital even in this broa area of business, a trend also evident in many subdivisions of the manufacturing an extractive industries.

Another basis of judging the place of foreign-controlled business in Canadian industr is provided by a special study of production and employment in the larger Canadian manu facturing establishments controlled by non-residents. Enterprises having an investmen in Canada of $1,000,000 or more accounted for about 40 p.c. of Canadian manufacturin production in 1961 and 29 p.c. of employment in that field. About 33 p.c. of Canadia manufacturing production and 22 p.c. of employment originated with United States controlled plants. These ratios in United States-controlled plants were somewhat highe than in 1953—the previous year for which a study of this kind was made. In some in dustries the proportions of production and employment in plants controlled by non-resident were much higher than this. Automobiles, for example, are produced mainly in Unite States-controlled plants, but this is exceptional. Other industries in which well over on half of the production is in non-resident-controlled firms include the smelting and refinin of non-ferrous metals, petroleum refining, motor vehicle parts, aircraft and parts, an industrial chemicals. In several major industries like fruit and vegetable canning an preserving, and miscellaneous machinery and equipment manufacturing, the distributio of production between Canadian and foreign-controlled companies is more even. In suc industries as pulp, paper and miscellaneous food manufacturing, the non-resident share i large although less than one half of the total.

There are, however, many industries where the largest part of production is in Canadian controlled plants. Prominent among these are such important branches of industry as iro

d steel mills, sawmills, feed manufacturing, clothing, and such divisions of the food and verage group as bakeries, slaughtering and meat packing, pasteurizing and butter and eese plants.

Canadian Assets Abroad.—Although there has been a great growth in non-resident vestment in Canada and in the balance of Canadian indebtedness to other countries, it ll be noted that Canadian assets abroad (Tables **21**, **24** and **25**) have continued to rise value. These now equal a larger proportion of liabilities abroad than was the case fore World War II, but more than one quarter of the increase since then has been in vernment-owned assets such as the official reserves and the loans by the Canadian overnment to other governments which were extended during the war and early postwar ars. At the end of 1967, the government credits outstanding had a value of $1,406,000,000 hile official holdings of exchange and Canada's net International Monetary Fund (IMF) sition amounted to some $2,934,000,000 (Cdn.). Other official Canadian assets included nada's subscriptions to the capital of the International Bank for Reconstruction and evelopment, the International Development Association, the International Finance rporation and the Asian Development Bank. These assets were partly offset by liabilities these institutions.

The portion of the assets in private investments, particularly in the form of direct vestments abroad by Canadian companies, is still small in relation to the corresponding n-resident stake in equities in Canada. At the end of 1967, Canadian direct investment road totalled $4,030,000,000 and portfolio investment abroad by Canadians amounted to ,566,000,000. About two thirds of the privately owned investments were located in the nited States. Direct investments in that country by Canadian businesses have grown pidly and are found in many fields, among which the beverage and farm implement dustries are particularly noteworthy.

Private investments in overseas countries are widely distributed. Somewhat more an one half of the total in 1967 were located in Commonwealth countries, with the United ngdom accounting for nearly 50 p.c. of the total investment in the Commonwealth. ost of the direct investments in the United Kingdom were in manufacturing, while in her Commonwealth countries investments in mining were of almost equal importance th those in manufacturing. In other overseas countries the largest part was in the untries of South and Central America where Canadian holdings in public utilities are bstantial.

—Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1960-67

NOTE.—Totals are rounded and may not represent the sum of their components.

Section 6.—Government Economic Planning Agencies

Subsection 1.—The Economic Council of Canada

The Economic Council of Canada was established by Act of Parliament (SC 1963, 11) assented to on Aug. 2, 1963. The Council is an economic advisory body with broad ms of reference. The central feature of its duties is "to advise and recommend . . . how nada can achieve the highest possible levels of employment and efficient production in der that the country may enjoy a high and consistent rate of economic growth and that Canadians may share in rising living standards; to recommend what government policies will best help to realize the potentialities of growth of the economy; to consider means strengthening and improving Canada's international financial and trade position; . . . to dy how national economic policies can best foster the balanced economic development of areas of Canada; . . . ".

In addition, Parliament made provision for the Council to undertake special studies at request of the Government in areas that fall within the purview of its general terms of erence. The Council has had two such References. In its first Reference, the Governnt asked the Economic Council to launch an examination into prices, costs, incomes d productivity and their relationship to sustained economic growth. The Council orted to the Government and to the Canadian public on this Reference in its *Third nual Review*. A second Reference from the Government asked the Council: "In the nt of the Government's long-term economic objectives, to study and advise regarding: the interests of the consumer particularly as they relate to the functions of the Departnt of the Registrar General (now the Department of Consumer and Corporate Affairs); combines, mergers, monopolies and restraint of trade; (c) patents, trade marks, copyhts and registered industrial designs". An interim report under Sect. (a) of this Referce was published in July 1967; an interim report under Sect. (b) was published in the mmer of 1969; and a third and final report under Sect. (c) will be released in the winter 1971.

The Council has no operational responsibilities. It does not implement or administer policies or programs nor does it have the authority to make research grants, although it y make contractual arrangements with persons other than its staff for the purpose of vising and assisting the Council in the performance of its duties.

The Council consists of up to 28 members appointed by the Governor in Council, luding a chairman and two directors who serve full time in their professional capacity, and to 25 members who are selected from industry, labour, finance and commerce, agriculture l other primary industries, and the general public. The chairman and the directors e of whom is elected as vice-chairman by the Council) are appointed for seven-year terms. e other members are appointed for three-year terms "after consultation with appropriate resentative organizations" and are intended to reflect a very wide diversity of interests m the different private sectors of the economy and different regions of the country, but y sit on the Council as individuals and not as delegates of particular organizations or ups. The Council is therefore a mixed body rather than an expert professional body, hough it is served in its deliberations by an expert staff. There are no government mbers appointed to the Council. Under the Act, the chairman is the chief executive cer of the Council and has supervision over, and direction of, the work and staff of the ncil.

The publications policy of the Economic Council is based on two provisions of the , one that requires the Council to publish annually a review of the medium- and longn prospects and problems of the Canadian economy, and a second that empowers the ncil to publish, as it sees fit, such studies and reports prepared for its use. These visions enable the Council to carry out a most vital function, namely, the dissemination nformation to the public as a means of stimulating informed appraisal and discussion of nomic problems and policies.

The Council's publications* fall into three broad categories: (1) The Annual Revie which summarize the results of the Council's studies and present its conclusions and reco mendations (seven of which have been issued to date); (2) Staff and Special Studies whi provide more detailed statistical, technical, and analytical results of the various resear projects; and (3) Conference papers and other reports.

In its *First Annual Review* the Council stated its underlying philosophy of approa in this way:—

> We are concerned not with the question of inventing new forms of intervention, b rather with ordering and developing our policies and social programmes in a rational a coherent manner designed to accomplish consistently what the society has declared to its economic and social goals. For this purpose it is essential to bring to bear the needs the future on the decisions of today. This applies not only to decisions by governmer but also to decisions in the private sector of the economy.

Canada's Economic Potential

The Canadian economy since the Second World War has encountered at one time another inflation, higher unemployment, slow rates of economic growth, and even crises the balance of international payments. This experience serves well to demonstrate th the real problem is not how to achieve one particular economic or social objective, but rath how to attain all of them—consistently—at the same time. This is another way of sayi that the various goals are not always compatible with one another; there is always overriding requirement to reconcile conflicts.

Once there is general public agreement on the broad set of goals to be pursued, t next task is to define them quantitatively in accordance with Canadian circumstances a possibilities. This the Council has done, publishing "targets". These targets are n forecasts or prophecies but are intended to be measures of desirable performance of t economy—that is, concrete aims of public policy. These objectives or targets were fir set out by the Council in its *First Annual Review*, were revised and updated in the *Four Annual Review*, and again in the *Sixth Annual Review*.

Full Employment.—The Council believes that, over the medium-term futur economic policies should be actively directed toward achieving 97 p.c. employment—th is, no more than 3 p.c. of the labour force unemployed. But this is not regarded by t Council as an ultimate or satisfactory goal for all time; as it has stated, "We would ho that with sustained improvement in our economic performance it may eventually becon realistic to aim for an even better performance in the level of employment". The Counc also emphasized that the target rate is an average annual rate allowing for seasonal vari tion, and is a national average within which there will be some regional variation. Co

* The Reviews, like all Council publications, are available from Information Canada, Ottawa. They are: *Fi Annual Review: Economic Goals for Canada to 1970* ($2.50, Catalogue No. EC21-1/1964); *Second Annual Review: Towar Sustained and Balanced Economic Growth* ($2.75, EC21-1/1965); *Third Annual Review: Prices, Productivity and Emplo ment* ($2.75, EC21-1/1966); *Fourth Annual Review: The Canadian Economy from the 1960's to the 1970's* ($2.75, EC2 1/1967); *Fifth Annual Review: The Challenge of Growth and Change* ($2.75, EC21-1/1968); *Sixth Annual Review: Perspe tive 1975* ($2.75, EC21-1/1969); and *Seventh Annual Review: Patterns of Growth* ($2.50, EC21-1/1970). Each of the Reviews includes a chapter on economic performance in relation to medium-term goals. In 1970, the Council e panded this appraisal and published it under the title *Performance and Potential: Mid-1950's to Mid-1970's* (EC21- 1970-1).

Among other Council publications of more general interest are: *Business Cycles in Canada*, by Derek A. Whi ($2.25, EC22-1/17); *Perspective on Canada's International Payments*, by David W. Slater ($1.60, EC22-2/3); *Incom Policies—Some Foreign Experiences and Their Relevances for Canada*, by David C. Smith ($1.75, EC22-2/4); *Intern Migration in Canada, 1921-1961*, by Isabel B. Anderson ($1.60, EC22-1/13); *Enrolment in Educational Institutions, Provinces, 1951-52 to 1980-81*, by Z. E. Zsigmond and C. J. Wenaas ($3.00, EC22-1/25); *Population, Family, Househo and Labour Force Growth to 1980*, by W. M. Illing, *et al.* ($1.00, EC22-1/19); *Canadian Policies for Rural Adjustment- A Study of the Economic Impact of ARDA, PFRA and MMRA*, by Helen Buckley and Eva Tihanyi ($2.25, EC22-2/7 *National Conference on Labour-Management Relations, Ottawa, March 21-22, 1967* ($2.00, EC22-367); *Interregional Di parities in Income*, by S. E. Chernick ($1.75, EC22-1/14); *Scale and Specialization in Canadian Manufacturing*, b D. J. Daly, B. A. Keys, and E. J. Spence ($1.75, EC22-1/21); *Canadian Growth Revisited, 1950-1967*, by Doroth Walters ($1.50, EC22-1/28); *Science, Technology and Innovation*, by Andrew H. Wilson ($1.50, EC22-2/8); *Interi Report—Consumer Affairs and the Department of the Registrar General* ($.25, EC22-1067); *Medium-Term Capital In vestment Survey 1969*, by B. A. Keys, F. G. Thompson and M. Heath (available from the Economic Council c Canada). A complete list of Council publications is available from the Secretary, Economic Council of Canad P.O. Box 527, Ottawa. Also available from the Secretary are the Annual Reports of the Chairman, which includ the Act establishing the Council and the membership of the Council.

lering the rapid rate of increase in the numbers of people entering the labour force in nada—close to 240,000 persons a year, on average, between 1965 and 1975—this goal uld mean that the economy would have to grow fast enough to provide 2,400,000 new bs over that ten-year period.

A High Rate of Economic Growth.—In calculating a potential rate of increase in tal production (and thus incomes) the Council views economic growth as arising from:) increases in the *quantity* and *quality* of resources (for example, more manpower and pital, and higher levels of education and more efficient equipment); and (2) increases in oductivity or in the efficiency with which men and capital are used and combined.

For the period to 1975, the Council has projected an average annual growth of 5.5 p.c. the *volume* of production of all goods and services (*volume* in the sense that price increases e deducted from the value of production). Approximately two fifths of this gain in tput would come from the employment increase, with a slight increase in the average ucational level of the labour force. Another one fifth, roughly, would come from in- ased investment by government and industry. The remaining portion of the growth e, around one third, would stem from productivity gains. The potential growth rate of p.c. a year is high by both historical and international standards. It implies an increase the total volume of output from $66,000,000,000 in 1967 to about $100,000,000,000 by 75. This would mean an increase in the average standard of living in Canada—that is, al income divided by total population—of approximately one third.

Reasonable Price Stability.—In its projections to 1975, the Council assumed that GNP price index would rise at an average annual rate of 2 p.c. The Council said it uld regard this as consistent with the attainment of a satisfactory degree of price and st stability over the medium-term future, at least under conditions of reasonable price bility abroad, particularly in the United States. Such an average rate of price increase uld imply that some demand components—government expenditures, housing, and busi- ss investment in plant and equipment—would rise at a somewhat faster rate than the al and that the rate of advance in consumer prices and in export and import prices would somewhat less. The Council added:—

> We recognize that the achievement of this degree of price and cost stability will be extraordinarily difficult under conditions of high demand and high employment, as has been amply demonstrated by developments of the past three years. However, we continue to regard it as one of the basic goals towards which Canadians should continue to strive in the conduct of their economic affairs, with particular emphasis on longer-range policies designed to deal with basic structural and regional problems—that is, policies which would facilitate the consistent achievement of both our employment and price goals.

A Viable Balance of Payments.—After careful reappraisal in 1967, the Council ncluded that the balance-of-payments goal set out in 1964 was appropriately formulated terms of a current account deficit (and accompanying net capital inflow) at potential ut in 1970 in the order of $1,500,000,000 to $2,000,000,000 and that this goal is still evant.

From the mid-1950s to the end of the 1960s, the current account deficit (and the net ital inflow) declined from close to 5 p.c. of GNP to about 1 p.c. Changes in the mer- ndise trade balance mainly accounted for the large relative decline in the current account ance; the trade balance shifted from a deficit equivalent to 2 p.c. of GNP in the mid-1950s a surplus equivalent of about 2 p.c. of GNP by the end of the 1960s. Apart from 1967, services deficit remained in a range of 2 to 3 p.c. of GNP. Over this period, net inflows capital in long-term forms decreased significantly in relation to output (from about 4 p.c. GNP in the mid-1950s to about 2 p.c. in the latter part of the 1960s).

From early 1969 to early 1970, virtually all of the increase in real GNP went into anded Canadian exports. The floating of the dollar in June 1970 is attributed to Cana- s decision that it would not continue to finance a very rapidly increasing volume of hange reserves at the previous fixed rate of exchange, especially in the light of the possi-

bility of a massive speculative inflow of capital. The huge merchandise trade surplu (about $1,300,000,000 in the first half of 1970) and a strong capital inflow swiftly draine away the Canadian dollar balances of the Government of Canada that were required f purchasing foreign exchange accumulating in the official reserves. Policies of restraint i Canada tended to slow the growth of imports and thus contributed to the increased trad surplus.

Whether Canada could maintain medium- and longer-term balance-of-payments vi bility with the Canadian dollar at a level that was close to par with the U.S. dollar is a open question. The exchange rate is, in fact, a very important *price* in Canada's over-a price system, and changes in it tend to have far-reaching consequences for many parts o the economy.

Equitable Distribution of Rising Incomes.—This is an extremely complex goa defying simple formulation. The Council believes that much more information is neede about the distribution of income among individuals, families and various occupation groups. For example, why do some groups receive little benefit from the general rise i incomes and living standards? What elements lie behind the vicious circle of povert that still traps far too many people? Although some of these problems may range fa beyond the field of economics, the Council has said that these difficult matters will have t be understood and faced if appropriate policies are to be devised to achieve the goal o equitable distribution of rising incomes. To date, the Council's work in this area has bee concentrated on two aspects of the fifth goal, namely, regional disparities and poverty

The problem of assuring an appropriate participation on the part of each region in th over-all process of national economic development has long been an elusive goal and continuing concern of the people of Canada. The Council's analysis showed that over th past four decades there has been relatively little progress toward the achievement of better balance in this respect. Despite various policies and programs, very wide dis parities have continued to exist in average per capita income. Also, there have continue to be wide differences in the extent to which the human and material resources of each regio have found opportunities for productive use. Although national prosperity has alway tended to have a favourable influence everywhere, rapid national growth has not by itsel served to bring about any significant or lasting reduction in these large and stubborn dif ferences.

The emergence of some slack in the late 1960s and the development of more slack i 1970 is again being accompanied, as in earlier similar conditions, by the slower growth o employment and high unemployment rates in the lower-income regions. Employmen growth in the Atlantic Provinces has averaged only 4,000 a year over the past three year (total employment in the Atlantic Provinces was 605,000 in 1969). Similarly, in this three year period, employment growth in Quebec averaged less than 20,000 a year (total employ ment in Quebec was over 2,130,000 in 1969).

Rates of unemployment have become very high in the Atlantic Provinces, Quebec an British Columbia, in all of which the unemployment rates tend to be relatively high whe slack develops in the Canadian economy generally. An unusual feature in the recent patter of increases in unemployment rates is that the Prairie Provinces, which typically have a rat below that of Ontario, had a higher rate in mid-1970. This was a reflection of specia difficulties with wheat and potash marketing and problems in the construction industry. Another unusual feature is the exceptionally high rate of unemployment in British Columbi in mid-1970, reflecting, in part, the effects on the regional economy of increased industria disputes and perhaps also a stepped-up flow of migration to that province.

Like the objective of improved regional balance, the elimination of poverty is one aspect of the still broader goal of an equitable distribution of rising incomes. Poverty is a relative matter, and generally accepted conceptions of it vary through time and space. Poverty today is not the same as poverty in the Great Depression of the 1930s and poverty today in Canada is not the same as poverty in the underdeveloped countries of Southeast

sia. In order to get a statistical grip on the problem of poverty, the Council agreed to fine it as "an insufficient access to certain goods, services, and conditions of life which e available to everyone else and have come to be accepted as basic to a decent, minimum ndard of living". Thus stated, the definition begs many questions, most of which could come the subject of a long and inconclusive debate. Rather than engage in such a bate, the Council proceeded directly to a statistical embodiment of the definition suffi-ntly simple that it could be appreciated and judged by a broad public in relation to rsonal, everyday economic experience.

On the basis of information regarding family spending patterns, so-called "poverty es" were traced for individuals and families of different sizes. A basic assumption for the ain set of estimates was that any family or individual spending more than 70 p.c. of total come on food, clothing and shelter was in a low-income situation and likely to be suffering m poverty. These poverty lines were expressed in the *Fifth Review* in terms of 1961 llars; adjusted to dollars of 1968 purchasing power, they come out at $1,800 a year for a gle person, $3,000 for a family of two, $3,600 for a family of three, $4,200 for a family of r and $4,800 for a family of five. Obviously, these are conservative cut-offs; living ndards at or just above such levels would be modest indeed.

Using income data derived from the 1961 Census, it was possible to analyse some of e characteristics such as the age, sex and education of family heads, size of family, geo-aphical region of residence, and place of residence (metropolitan, other urban or rural) those falling below the poverty lines. As of 1961, some 916,000 non-farm families plus 6,000 individuals were living below these levels. The total number of persons involved s 4,200,000, including 1,700,000 children under 16 years of age. In all, they accounted some 27 p.c. of the total non-farm population of Canada in that year.

Statistics cannot adequately describe poverty but, used with care, they are capable furnishing important clues to types of policies likely to be effective against poverty.

It is evident from the incidence figures that income is more likely to be low when one more of the following characteristics are present: (1) the head of the family has no formal ucation beyond elementary school; (2) the family lives in a rural area; (3) the family lives the Atlantic Provinces; (4) the head of the family is not a member of the labour force; no member of the family worked during the year; (6) the head of the family is 65 years age or over; (7) the head of the family is a woman. From that list, it is all too easy to m a picture of poverty in Canada that consists of a relatively few stereotyped categories, t a more balanced picture of the total low-income population of Canada is necessary. view of the following observations, it is therefore vital in framing policy not to be over-uenced by rates of incidence: (1) 62 p.c. of the low-income non-farm families in 1961 ed in urban areas and of this group more than half lived in metropolitan areas; (2) 83 p.c. ow-income non-farm families lived elsewhere than in the Atlantic Provinces— 53 p.c. of m lived in Ontario and the Western Provinces; (3) 68 p.c. of the same group of families d heads who were in the labour force for at least part of the year; (4) 76 p.c. of the group d one or more earners in the family; (5) 77 p.c. of the family heads in the group were der 65 years of age; (6) 87 p.c. of the families in the group were headed by men. It can us be seen that a set of anti-poverty policies directed toward major groups or geographical as showing a very high incidence of low incomes would almost certainly fail to deal equately with poverty.

The Council called for a more concerted and purposeful attack on poverty in Canada. e challenge, in the short run, is to alleviate conditions which today thrust many Canadian nilies and individuals into involuntary poverty and hold them there. In the long run, challenge is to prevent the development of these conditions.

allenges for the 1970s

There are many economic challenges for Canada in the 1970s. A large number of m arise from questions about how Canadians wish to make use of their growing resources meet the future aspirations of their society. Another group of challenges are the

economic performance challenges which arise in the context of five basic economic a social goals—full employment, a high and sustained rate of economic growth, reasonal price stability, a viable balance-of-payments position, and an equitable distribution of risi incomes. The key requirement for sustained good performance in relation to these goals that they must be achieved concurrently, even though they are not all complementary a reinforcing.

To attain potential output in 1975, GNP (in constant 1969 dollars) will need to rise an average annual rate of about 5½ p.c. from 1969 to 1975. This would imply an increa (in terms of 1969 dollars) of over $30,000,000,000 to a level of close to $110,000,000,0 in 1975. Over the last half of the 1970s, the potential growth rate of the Canadian eco omy would still be high—over 5 p.c. This would imply a further increase in GNP in t latter part of the 1970s of about an equivalent real dollar magnitude, so that potent GNP by 1980 would be roughly of the order of $140,000,000,000 (in 1969 dollars).

A very large rise in employment will be needed to reach the full-employment potent of the economy by 1975—about 1,300,000 to 1,400,000 more jobs than existed in 197 Moreover, over the 1975-80 period, about 1,200,000 additional jobs will be required. other words, at least 2,500,000 net new jobs will be required in Canada over the comi decade.

A new ingredient in the challenges both for adequate job creation and for productivi growth in the 1970s will be the unprecedented flow into the labour markets of high-lev manpower from the post-secondary educational systems. The returns from the expansi in education could be substantial during the 1970s but greater attention needs to be dire ted to the possibilities here, and various adjustments are needed in the private and gover ment sectors of the economy in order to employ effectively and productively the rapid rising volume of high-level manpower.

No less important in the 1970s will be the challenge of reconciling good performan in price stability with good performance in relation to employment and growth potentia Full employment and price stability have never been regarded as "either/or" objectiv Rather, the essential challenge is to pursue both of these goals together in a balanced w and in a longer-run time perspective.

The maintenance of a strong international position will also be an important perfor ance challenge for the 1970s. Increased exports and the maintenance of adequate acc to external sources of capital are needed in order to finance both the increased imports goods and services that Canadians will demand and increased Canadian foreign investme and aid. Canada's potential in international trade in the 1970s cannot be achieved unl producers and exporters struggle unrelentingly, with appropriate supporting governme policies and programs, to enhance their competitiveness in domestic and world marke Moreover, they may well have to do so under conditions that may not be as favourab as in the 1960s, when the substantial devaluation of the Canadian dollar was an importa factor strengthening the international competitive position of many industries.

The more equitable distribution of rising incomes will undoubtedly come into great prominence as an economic and social goal in the 1970s. In particular, the challenges narrowing regional economic disparities and eliminating poverty clearly need, and w claim, increasing emphasis.

Commercial Policy Issues in the 1970s

Against the background of a substantial reduction in trade barriers since the Seco World War, Canada, like other industrial countries, has come to rely more and more foreign trade to sustain and improve its economic performance. Many factors besid commercial policy have, of course, contributed to Canada's trade growth, including t growth of domestic markets which have provided a stronger base for successful expo expansion in various industries. Exports now equal about half the goods of Canad goods-producing industries, and nearly half the goods supplied to Canadians are importe

rowth of exports and imports facilitates more efficient use of productive resources, per- its greater specialization, and helps to reduce costs and to increase real income per capita.

A strong upsurge of Canadian exports in the 1960s was led for the first time by ad- anced manufactures, and sustained by rising sales of industrial materials. Automotive d other highly manufactured products accounted for about 40 p.c. of the export total 1969.

In the past, Canadian commercial policy focused strongly on two themes: (1) negotia- n of reduced tariff and other barriers to its exports to foreign countries, particularly for source-based products in which it was considered that Canada had a "natural advan- ge"; and (2) the maintenance of protection for a considerable range of manufactured oducts. Only in more recent years, with the advent of the Kennedy Round and the ecial trade arrangements with the United States, has there been some tendency to focus *free* trade opportunities for exports and imports of manufactured products in order to in the benefits of specialization and large-scale production in the more advanced manu- cturing industries.

There are good economic reasons for dissatisfaction with some of the results of Cana- 's commercial policies—in particular the emergence of a high-cost structure of produc- n for advanced manufactures. Canada's manufacturing industries are often character- ed by small-scale—and, more important, by rather specialized—production and by high it costs, despite their advantages in supplies of basic materials and labour and their access first-rate technology.

There are four essentially unresolved problems from the 1960s that remain to be tackled ternationally: (1) improved arrangements for agricultural trade, particularly wheat, d grains and beef; (2) the reduction of non-tariff distortions in trade; (3) special trade rangements for developing countries; and (4) the modification of the preferential tariff stem and the resolution of other trade problems that would arise from British entry into e European Economic Community. Beyond these more immediate tasks, there is the re fundamental issue of how Canada will respond to the "new generation" of big in- strial markets, big international firms, and the acceleration of technological change. cess to a large market for industrial products will undoubtedly be even more important the future than it has been in the past.

It is relevant to recall that Canada's position among industrial countries has special tures: Canada is one of the few industrial countries without duty-free access to a large rket for all its manufactured products; Canada has some special trade arrangements h the United States which provide an integrated market for some manufactured prod- s; and Canadian duties in several trade sectors are sufficiently high for this country be regarded now as having a relatively high tariff.

In summary, the Council discerns three broad alternative paths along which world mmercial policy could develop: (1) a continued, gradual reduction of trade barriers such occurred between 1947 and 1967; (2) a positive and constructive response by the United tes and the EEC to the issue raised by the creation of a huge trading bloc in Western rope; and (3) a possible turn toward protectionist trade policies on the part of the United tes and/or the EEC.

tterns of Growth

One of the Council's principal duties is to advise on how to achieve high, stable, sus- ned and widely shared growth in the economy. This mandate implies that economic wth, especially productivity growth, provides an essential basis for meeting human ds and aspirations of many kinds—not only those reflected in material living standards also broader human and social aims in health and education, the reduction of large- le poverty, and other diverse goals. Since the inception of its work, the Council has oted considerable effort to the development of improved understanding of the nature l sources of growth and is continuing its work in this field by focusing attention on in-

dustrial growth patterns. The present analysis is directed mainly at clarifying the basic el ments in growth of labour and capital and the efficiency with which these have been us in major groups of industries over the past two decades.

The focusing of attention on industrial growth patterns is an initial step toward t future development of potential output analysis on an industry basis, taking into accou various important interrelationships between industries. Such analysis should provid by industries, estimates of future growth of output, investment and employment, consi tent with potential output for the whole economy.

For present purposes, ten "industry" groups under three broad headings have be chosen: (1) the *primary* industries, with agriculture, forestry and fishing treated as o group; (2) four groups of other *goods-producing* industries—mining, oil and gas, manufa turing, construction and utilities—as a second group; (3) five *service* industries—transpo tation, storage and communication; trade (wholesale and retail); finance, insurance a real estate; community, business and personal services; and public administration.

The Council calculated trends in annual growth rates of output by industry gro for the 1946-67 period. With the exception of the primary group, the over-all grow rates in current dollars for all industries fell into a range of 7 to 10 p.c.; for agricultur forestry and fishing combined, the growth rate was only about 2 p.c. Also, a rough es mate was made of what portion of the over-all growth rate was due to price increases. T general pattern is that the output of the goods industries grew more rapidly in real tern and had a lower price component; utilities and mining had the highest rates of growth i real output and relatively very small increases in prices; and in the service industries t price advance was generally much more pronounced.

Components of Growth

The growth analysis of these ten parts of the economy will follow the same approac used in the Council's earlier examinations of over-all economic growth. In this framewor growth is traced to changes over time in three broad groups of elements—labour, capit and factor productivity.

There appears to be an association between the scale of price increases indicated i some industries over the 1946-67 period and the extent to which these industries relied o particular growth elements more than on others. In general, price increases were le pronounced in the industry groups that experienced relatively high rates of growth i factor productivity. Price increases were highest over that period in the construction trade, public administration, financial, and community, business and personal service in dustries, and they generally obtained much of their growth over the postwar period wit higher labour inputs and relatively little improvement in factor productivity.

In the mining and utilities groups, increases in capital stock accounted for well ove half their total growth in the 1946-67 period and both groups had substantial gains i factor productivity and the lowest rates of price increase over that period.

The transportation, storage and communication industry, with a fairly small relianc on capital stock increases for its over-all growth, experienced a situation in which facto productivity accounted for about 60 p.c. of its total gain in average annual real outpu over the two decades.

Structural Shifts

The largest part of Canada's labour force is now engaged in the production of service Since the end of the Second World War, these service industries have increased their shar of total Canadian employment from about 40 p.c. to almost 60 p.c. Their proportion o the total value of output, which was approximately 50 p.c. in 1946, now is also approachin 60 p.c.

Subsection 2.—The Department of Regional Economic Expansion

The Department of Regional Economic Expansion, which is responsible for Federal overnment efforts to overcome regional economic disparities, came officially into existce on Apr. 1, 1969. However, the process of forming the new Department began in ly 1968 with the bringing together of a number of existing agencies and programs conrned with regional development.

These programs and agencies included the Agricultural and Rural Development Act RDA) and the Fund for Rural Economic Development (FRED) from the Department Forestry and Rural Development; the Area Development Agency (ADA) from the ien) Department of Industry; the Atlantic Development Board (ADB); the Experimental ojects Branch (Canada NewStart Program) from the Department of Manpower and Imgration; and the Prairie Farm Rehabilitation Administration (PFRA) from the Depart-nt of Agriculture. The Minister at the same time became responsible for the Cape eton Development Corporation (DEVCO), and the National Capital Commission (NCC).

The new Department was formally created by the Government Organization Act, 69 (SC 1968-69, c. 28), and this legislation also provided the Department with the first two major new weapons in the fight against regional disparities. This was the authority prepare and implement, in co-operation with the provincial governments and other leral agencies, development plans and programs designed to meet the special needs of eas where the growth of employment and incomes was lagging behind other parts of nada. The second major piece of legislation, the Regional Development Incentives t, was approved by Parliament in July 1969. This provides a strong and effective pro-m of industrial incentives to encourage manufacturing and processing industries to ablish, expand or modernize in parts of the country where new jobs are badly needed. e program provides generous capital grants of up to $12,000,000 to encourage firms to ate new jobs by establishing, expanding or modernizing manufacturing and most kinds processing plants in "designated regions" of the country. These designated regions lude all of the Atlantic Region, with the exception of Labrador, much of eastern Quebec, l parts of every other province.

The amount of incentive offered in an individual case is determined on the basis of an essment of the various financial and economic implications of the project. Factors alysed include such things as the economic impact of the project on the region concerned l the company's need for an incentive in order to create a viable operation in the desiged region. Experience to date has shown that the incentives available under the pro-m are able to exert a strong pull on industry to undertake new activity in the designated ions. In the period from the introduction of the program in July 1969 to Apr. 30, 1970, applicants accepted offers of incentives. These projects are expected to create more n 6,500 new jobs in various parts of the country when they go into production.

"Special Area" Program.—To make industrial incentives as effective as possible overcoming regional disparities, there must be centres in the slow-growth regions which attractive sites for industrial and population growth. These centres must be able to vide the utilities and services that industry requires, as well as a wide variety of social lities to meet the needs of a growing population. Therefore, one of the major purposes he Department's "special area" program is to ensure and speed the development of h centres by helping the provincial government to build up the essential municipal rices.

Under the program authorized by Part IV of the Government Organization Act, 0, special areas can be designated by the Federal Government, in co-operation with the vince concerned, where it is determined that special action is needed to promote eco-ic expansion and social adjustment. The "special action" involved is a development roach designed, through federal and provincial co-operation, to meet the needs of the concerned. Therefore, the type of federal action will vary from area to area acling to the need.

The first 22 special areas under the program were designated in March 1970 and federa provincial agreements have been signed covering specific infrastructure development pr jects to begin in 1970 in 18 of these areas. In the other four areas, the main federal a sistance will be in the form of incentives to industry. The agreements that have bee signed commit the Department to provide the various provinces with a total of up t $230,000,000 in grants and loans over the period to June 30, 1972. This is additional t any federal money that may be provided in industrial incentives. The agreements als call for the federal and provincial governments to co-operate in preparing further four-ye development plans for the areas involved. In addition, there will be consultation with th provinces regarding the possible designation of further special areas in the future.

Agricultural and Rural Development Act (ARDA).—ARDA is a federal-provinci shared-cost program in which all provinces have participated since its introduction in 196 The program to date has operated under two separate federal-provincial agreements, th first covering the period to 1965 and the second the 1965-70 period. Five-year ARD agreements for the 1970-75 period were signed with Ontario and British Columbia in Ma 1970. New agreements are expected with all provinces except Prince Edward Islan which is covered by a comprehensive rural development plan. The federal ARDA budg for the fiscal year 1970-71 is $25,000,000.

Canada Land Inventory (CLI).—The Canada Land Inventory, being undertake under the ARDA legislation, is a classification of more than 1,000,000 sq. miles of lan according to its capabilities for agriculture, forestry, recreation, wildlife and sport fis (see also p. 543). In addition, it includes one pilot-scale land-use planning project in eac province. The inventory data are being reproduced on conventional and computer-inpu maps as an aid to making decisions on land use. Inventory information is available t both the federal and provincial governments.

Fund for Rural Economic Development (FRED).—FRED was a federal fund o $300,000,000, established in 1966 to finance comprehensive federal-provincial developmer plans in various parts of the country. The FRED legislation was replaced, when th Department of Regional Economic Expansion was established, by the "special area powers given to the Department. Therefore, no new programs will be initiated unde FRED but the five programs already in operation, for terms ranging from five to 15 years will continue to completion, with financing through the Department's annual estimates the northeast and Mactaquac areas of New Brunswick; the Lower St. Lawrence–Gasp area of Quebec; the interlake area of Manitoba; and the whole of Prince Edward Islan

Prairie Farm Rehabilitation Administration (PFRA).—Since its creation i 1935, PFRA has turned 2,500,000 acres of marginal and submarginal land into communit pastures, and has been instrumental in the construction of many large irrigation and wate control projects, notably the Bow River and St. Mary irrigation schemes in Alberta, th South Saskatchewan River Project, the Shellmouth Dam and the Portage Diversion Projec At the farm level, PFRA has assisted 100,000 "dugout" projects for irrigation, stock watering and domestic water supplies. It has also distributed, free of charge, up t 10,000,000 seedlings a year for farm shelterbelts. PFRA continues as an entity within th organization of the Department of Regional Economic Expansion and has been given ne responsibility in implementing departmental programs in the Prairie Provinces.

Canada NewStart Program.—Part of the function of the Department's Social an Human Analysis Branch is to serve as the federal arm of "Canada NewStart" by helping t devise, test and apply programs that will motivate and train disadvantaged adults fo stable and rewarding employment. Professional staff act as consultants to the six New Start corporations that have been established in areas of New Brunswick, Nova Scotia Prince Edward Island, Manitoba, Saskatchewan and Alberta.

Newfoundland Resettlement Program.—This is a federal-provincial shared-cost ogram established to help people in Newfoundland move from areas where economic ospects are poor to other parts of the Island where there are better employment oppor- nities and public services.

Atlantic Development Council.—The Atlantic Development Board ceased to ist with the passage of the Government Organization Act, 1969, but projects begun by it e being continued by the Department. The Board's former advisory role is carried on the new 11-member Atlantic Development Council, appointed by the Federal Govern- ent in consultation with the governments of the Atlantic Provinces. It advises the inister of Regional Economic Expansion with regard to plans and programs for economic d social development and their effects on the region.

Canadian Council on Rural Development (CCRD).—The function of the CCRD to advise the Minister of Regional Economic Expansion on rural development policies; is composed of representatives of private organizations concerned with rural development, ho are appointed by the Minister to serve on the Council.

Subsection 3.—The Cape Breton Development Corporation

The Cape Breton Development Corporation was created by an Act of Parliament, sented to on July 7, 1967 (SC 1967-68, c. 6) and came into existence by proclamation on ct. 1, 1967, as a proprietary Crown corporation. The Corporation was established to omote and assist the financing and development of industry on the Island and to provide ployment outside the coal producing industry to broaden the base of the economy of e Island.

The Corporation has acquired the former interests of the major coal producer in the dney coalfield and, in accordance with its approved plan as required by Sect. 17 of the t, is operating and reorganizing four mines with a view to the rationalization of coal oduction.

The Act provides for a board of directors, comprised of a chairman, a president and e other directors. Head office is located in Sydney, N.S. The Corporation reports Parliament through the Minister of Regional Economic Expansion. Its operations are anced by the Government of Canada with some assistance from the Government of va Scotia for industrial development projects. During 1969, approximately $36,000,000 s expended for all purposes.

Subsection 4.—Provincial Government Economic Planning Agencies

In a number of provinces, economic planning agencies have been set up or are in the rmative stage. Only those that are currently active are described here. Other sources information on economic planning are listed in the Directory of Sources of Official formation in Chapter XXVII, under the heading "Economic Planning".

va Scotia Voluntary Economic Planning Board

The Voluntary Economic Planning Board (VEP), formed by an Act of the provincial gislature in 1963, is an autonomous body and represents non-government elements in e community. It was set up to enable the private sector to participate in the provincial nning process on a purely voluntary basis. Its purpose is to assist the government in eparing an economic development strategy for the province.

During the first years of its existence, it was, in effect, the only economic planning up in the province; it completed its first plan for the economic development of Nova otia in 1966. This plan, which set a number of growth targets for the provincial economy d outlined policies for future growth, emanated largely from the private sector and was

advisory to the government. The Board, however, was not set up to handle the on-goi economic planning for the province. This function has now been assumed by the provinci government (Cabinet Committee on Planning and Programs).

The Board's inputs into the provincial economic planning process now under wa are as follows:—

(1) Policies, strategies, proposals and/or recommendations emanating from segment ar sector committees are channelled through the Board to the Cabinet Committee on Planni and Programs.

(2) Simultaneously with (1), draft papers prepared by the government are forwarded to th Board for consideration at the sector and segment level. The relationship between gover ment planners and the economic "grass-roots" are now maintained by nine sector commi tees and 38 segment committees served by VEP sector secretaries. About 700 peop serve under the Board.

Quebec Planning and Development Board

An Act passed by the provincial Legislature in June 1968 authorized the establishmer of the Quebec Planning Board, which was set up in the same year. Under amendin legislation of June 9, 1969, this organization became the Quebec Planning and Developmer Board and, in addition to its previous functions, now includes ARDA and the Easter Quebec Development Board and is charged with the administration of special developmer funds such as those available under the Canada–Quebec agreement for the developmer of the Quebec City, Trois-Rivières and Sept Îles–Port Cartier areas of the province.

The Board is a corporate body administered by a director-general, who is chairma and five other members appointed by the Lieutenant-Governor in Council. It is authorize to act as an agent of government in the acquiring or disposing of goods on behalf of th government.

The functions of the Board are: to prepare plans, programs and projects for economi and social advancement and for area development, with the object of making the bes possible use of the natural and human resources of the province, and in so doing to gathe required information from provincial government departments and agencies on the policies, programs, projects and accomplishments; to undertake or commission research studies, surveys and inventories, the results of which are needed to carry out its functions and to co-ordinate like activities of other departments and agencies; to make recommenda tions to the government based on its own research and studies and advise the governmer on policies and programs prepared by other departments and agencies; to direct an implement the execution of any plan, program, project or development with which it i charged by the Lieutenant-Governor and to act as liaison between the departments c agencies involved; and to administer the funds made available to be used for the carryin out of its projects.

The Act authorizes the establishment of an Interdepartmental Planning and Develop ment Commission comprised of all Deputy Ministers of the Quebec Government whic will act as adviser to the Board on the conduct of its affairs.

The Ontario Economic Council

The Ontario Economic Council was formed initially by Order in Council on Feb. 1, 1962 and established by An Act to Establish the Ontario Economic Council on May 30, 1968 The Council was conceived as a vehicle whereby representatives of a broad cross-section c knowledgeable persons throughout the province could pool their information and experienc regarding social and economic matters, commission research and formulate policy recom mendations to the public and private sectors.

Twenty Ontario citizens serve as members of the Council: six represent business and industry; one each the financial community and the Consumers' Association of Canada three, organized labour; three, agriculture; and one, the provincial universities. On member comes from the senior ranks of the Ontario Civil Service and the remaining fou are drawn from the Ontario Research Foundation, the Ontario Regional Developmen Council, The Hydro-Electric Power Commission of Ontario, and the Ontario Northland

ilway. Each serves as an individual citizen without compensation for a term of one, o or three years. The Council meets monthly in Toronto.

Essentially, the Council operates as an advisory body to the Government of Ontario. me of its findings are reported directly to the government; other reports and recommendations are published and distributed more widely. Recent reports cover the fields of immiation, forestry policy, reform of government, poverty, transfer taxation, education, labour, ll-training and plant location. Also published, annually between 1965-69 and now nnially, is an index of research projects carried on within provincial government agencies d departments and certain industrial companies operating in Ontario.

The Council shares the view of the Government of Ontario that the economy of Ontario not an entity separate from Canada. For this reason the Council does not undertake parately for Ontario what the Economic Council of Canada has done and is doing for nada as a whole. Projects are undertaken with the Economic Council of Canada on a operative basis and information is exchanged between the two Councils. Another way which the Ontario Economic Council pursues its responsibilities is through the work of *hoc* committees which involve a broad cross-section of the Ontario community.

A small permanent Council staff undertakes direct assignments and superintends the sign and administration of projects assigned to others. Close contact with government partments avoids unnecessary duplication of effort. Research facilities, academic rsonnel and graduate students in Ontario universities have been used for certain projects, ich have included the professional services of members of the departments of economics, litical science, geography and business administration in provincial universities. From ne to time, the Council engages the professional services of private consulting firms.

PART I.—BANKING AND OTHER COMMERCIAL FINANCE

Section 1.—Banking

Subsection 1.—The Bank of Canada*

Canada's central bank, the Bank of Canada, began operations on Mar. 11, 1935 under the terms of the Bank of Canada Act of 1934 which charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation" and conferred on it specific powers for discharging this responsibility. Through the exercise of these powers, the Bank broadly determines the combined total of the most common forms of Canadian money held by the community—chartered bank deposits and currency. The 1967 revision of the Bank of Canada Act contained a number of technical amendments designed to assist the Bank in discharging its responsibilities and account is taken of these changes in the following description of the Bank's operations.

The provisions of the Bank of Canada Act enable the central bank to determine the total amount of cash reserves available to the chartered banks as a group and thus to control the rate of expansion of the total assets and deposit liabilities of the banking system

* Revised (December 1970) by the Research Department of the Bank of Canada.

a whole. The Bank Act, which regulates the operation of the chartered banks, requires
at each chartered bank maintain a stipulated minimum average amount of cash reserves,
culated as a percentage of its Canadian dollar deposit liabilities, in the form of deposits
the Bank of Canada and holdings of Bank of Canada notes. (The minimum cash
erve requirement, which came into effect under the new legislation beginning Feb. 1,
38, is 12 p.c. of demand deposits and 4 p.c. of other deposits.) The ability of the chartered
nks as a group to expand their total assets and deposit liabilities is therefore limited by
e total amount of cash reserves available. An increase in cash reserves will encourage
e banks as a group to expand their total assets (which consist chiefly of loans and market-
le securities) with a concomitant increase in their deposit liabilities; a decrease in cash
erves will bring about a decline in their total assets and deposit liabilities as they seek
restore their cash reserve ratios.

The chief method by which the Bank of Canada alters the level of cash reserves of
e chartered banks, and through them the total of chartered bank deposits, is by pur-
ases and sales of government securities. Payment by the central bank for the securities
purchases in the market adds to the cash reserves of the chartered banks as a group and
ts them in a position to expand their assets and deposit liabilities. Conversely, pay-
nt to the central bank for securities it sells causes a reduction in the cash reserves of
e chartered banks and requires them to reduce their holdings of assets and deposit
bilities.

The influence that the Bank of Canada exerts on credit conditions (i.e., on the interest
t and other terms of borrowing in financial markets) stems from its ability to limit
e growth of bank credit and of the community's holdings of bank deposits and currency.
e growth rate of the banking system is one of the factors exerting an important influence
the level of interest rates and other terms of access to credit prevailing in financial
rkets generally. Current credit conditions (and expectations about future trends in
h conditions) in turn have an influence on business and household decisions to spend
to save. Many other factors also have an important effect on spending decisions,
wever, and the behaviour of the economy is subject as well to such influences as economic
l financial developments abroad; the investment, price and wage policies of business
ns in Canada; and the character of public policies at all levels of government with regard
expenditure and taxation. In using the powers at its disposal, the Bank attempts to
p bring about credit conditions appropriate to both domestic and external conditions.
operations must be based, not on any simple mechanical formula, but rather on con-
uous observation and appraisal of the constantly changing prospects for the economy
reflected in the complex pattern of economic and financial developments.

In a technical sense, the powers which the central bank possesses allow it to exert a
ong influence over economic activity but, in practice, the range through which credit
nditions can be permitted to vary is necessarily limited. Changes in credit conditions
Canada affect the position of some groups in the economy much more than that of others,
l this uneven impact is bound to inhibit the central bank's operations. Furthermore,
erest rates in Canada cannot change greatly in relation to those abroad without producing
ge capital movements which might complicate Canada's international payments position.
ese considerations suggest that monetary policy must be used in appropriate combina-
n with other public economic policies in order to help achieve national economic goals.

Although the Bank of Canada has the power to determine the rate of growth of the
mbined total of currency and chartered bank deposits, it has no means of determining
w much of this total is held in the form of currency and how much in the form of chartered
nk deposits. This depends entirely on the preferences of the public, since bank deposits
be converted freely into notes and coin and back again.

Although the cash reserve system in Canada—which is similar to that in a number of
er countries—enables the central bank to determine within broad limits the total
ount of chartered bank assets and deposit liabilities, the Bank of Canada leaves the
cation of bank and other forms of credit to the private sector of the economy. Each

chartered bank is free to attempt to gain as large a share as possible of the total cash r serves available by competing for deposits and to decide what proportion of its funds t invest in particular kinds of securities and in loans to particular types of borrowers. Th influence of the central bank—based in essence on its power to expand or contract charter bank cash reserves through its market purchases or sales of securities—is both indire and impersonal and is brought to bear on financial conditions generally through the cha tered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are contained in the Bank of Canada Act, 1934 (RSC 195 c. 13), revisions in which were made in 1936, 1938, 1954 and 1967. Some of these powe are outlined below.

The Bank may buy or sell securities issued or guaranteed by Canada or any provinc short-term securities issued by Britain, treasury bills or other obligations of the Unite States and certain types of short-term commercial paper. The Industrial Developme Bank Act authorizes the Bank to purchase securities issued by that institution. Th Bank may buy or sell gold, silver, nickel and bronze coin, or any other coin, and gol and silver bullion as well as foreign exchange and may accept non-interest-bearing deposit from the Government of Canada, the government of any province, any chartered ban and any bank regulated by the Quebec Savings Bank Act. The Bank may open account in other central banks. It may accept deposits from other central banks, the Internation Monetary Fund, the International Bank for Reconstruction and Development, and an other official international financial organization, and it may pay interest on such deposits The Bank does not accept deposits from individuals nor does it compete with the charter banks in the commercial banking field. The Bank acts as the fiscal agent for the Govern ment of Canada in the payment of interest and principal and generally in respect of th management of the public debt of Canada. The sole right to issue paper money for circula tion in Canada is vested in the Bank.

The Bank of Canada may require the chartered banks to maintain, in addition t the legal minimum cash reserve requirement mentioned above, a secondary reserve whic the Bank may vary within certain limits. The secondary reserve, which consists of cas reserves in excess of the minimum requirement, treasury bills and day-to-day loans t investment dealers, cannot be more than 6 p.c. of total deposits when first introduced no can it exceed 12 p.c.; effective April 1968, the required level was 7 p.c. In the event th Bank wishes to introduce or increase the secondary reserve requirement, one month' notice to the chartered banks is required; the amount of any increase in the requiremen cannot exceed 1 p.c. per month. In the case of a lowering of the secondary reserve require ment, however, the percentage change in any one month is not restricted.

The Bank of Canada may make loans or advances for periods not exceeding six month to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on th pledge of certain classes of securities. Loans or advances may be made under certain conditions and for limited periods to the Government of Canada or of any province. The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. From Nov. 1, 1956 until June 24, 1962, the Bank Rate was established weekly at a fixed margin of ¼ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills. Since June 24, 1962, the Bank Rate has been fixed from time to time as follows:—

From June 24, 1962 to Nov. 12, 1970, the Money Market Rate—the rate at which the ınk of Canada is prepared to enter into purchase and resale agreements with money-ırket dealers—was either $\frac{1}{4}$ of 1 p.c. above the average rate on 91-day treasury bills at e preceding weekly tender or the Bank Rate, whichever was lower; since Nov. 12, 1970, e minimum rate is the Bank Rate less $\frac{3}{4}$ of 1 p.c.

The Bank of Canada is not required to maintain gold or foreign exchange reserves ainst its liabilities.

Prior to the 1967 amendment of the Bank of Canada Act, there existed some un-rtainty about the exact relationship between the central bank and the Government. ıe changes in the Bank of Canada Act in 1967 were designed to clarify this matter. ıey provide for regular consultation between the Governor of the Bank and the Minister Finance as well as for a formal procedure whereby, in the event of a disagreement between e Government and the Bank which cannot be resolved, the Government may, after further nsultation has taken place, issue a directive to the Bank as to the monetary policy that is to follow. Any such directive must be in writing, it must be in specific terms, and it ıst be applicable for a specified period. It must be published immediately in the *Canada zette* and tabled in Parliament. The amendment makes it clear that the Government ıst take the ultimate responsibility for monetary policy and it provides a mechanism r that purpose but the central bank is in no way relieved of its responsibility for monetary licy and its execution.

The Bank is under the management of a Board of Directors composed of a Governor, Deputy Governor and twelve Directors. The Governor and Deputy Governor are

appointed for terms of seven years each by the Directors, with the approval of the Gover in Council. The Directors are appointed by the Minister of Finance, with the appro of the Governor in Council, for terms of three years each. The Deputy Minister Finance is a member of the Board but does not have the right to vote. There is an Exe tive Committee of the Board composed of the Governor, the Deputy Governor, two Dir tors and the Deputy Minister of Finance (who is without a vote); this Committee has t same powers as the Board except that its decisions must be submitted to the Board at next meeting. In addition to the Deputy Governor who is a member of the Board, th may be one or more Deputy Governors appointed by the Board of Directors to perfo such duties as are assigned by the Board.

The head office of the Bank is in Ottawa. It has agencies in Halifax, Saint Jo Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represent in St. John's and Charlottetown.

The Industrial Development Bank.—The Industrial Development Bank, a su sidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 a its banking operations commenced on Nov. 1, 1944. Its functions are described in t preamble to the Act as follows:—

> To promote the economic welfare of Canada by increasing the effectiveness of moneta action through ensuring the availability of credit to industrial enterprises which may reasonab be expected to prove successful if a high level of national income and employment is maintaine by supplementing the activities of other lenders and by providing capital assistance to indust with particular consideration to the financing problems of small enterprises.

The President of the Industrial Development Bank is the Governor of the Bank Canada and the Directors are the Directors of the Bank of Canada and the Dep Minister of Industry, Trade and Commerce. The authorized capital of the Bank $75,000,000 and it may also raise funds by the issue of bonds and debentures provide that its total direct liabilities and contingent liabilities in the form of guarantees an underwriting agreements do not exceed ten times the aggregate of the Bank's paid-u capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada whic by definition in the Act, include any industry, trade or other business undertaking o any kind. With respect to such enterprises, the Bank is empowered to lend money o guarantee loans and where an enterprise is a corporation the Bank may also enter int underwriting agreements with regard to any issue of stock, bonds or debentures; acqui stock, bonds or debentures from the issuing corporation or any person with whom th Bank has entered into an underwriting agreement; and acquire certificates issued by trustee to finance the purchase of transportation equipment. The total amount of com mitments of the Bank, in the form of loans, guarantees, etc., in excess of $200,000 eac may not exceed $200,000,000.

The Bank may accept any form of collateral security against its advances, includin realty and chattel mortgages which constitute the usual kind of security taken. Th Bank is intended to supplement the activities of other lending agencies, not to compet with them, and the Act of incorporation provides that it should extend credit only whe in the Bank's opinion, credit or other financial resources would not otherwise be availabl on reasonable terms and conditions. Its lending takes the form of fixed-term capita loans rather than current operating loans. The Bank is specifically prohibited fro engaging in the business of deposit banking. It has branch offices in the following cities St. John's, Halifax, Saint John, Moncton, Rimouski, Quebec, Trois-Rivières, Montrea

erbrooke, Ottawa, Toronto, Hamilton, Waterloo, London, Windsor, Sudbury, Thunder y, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Kelowna, Vancouver, Victoria d Prince George.

Subsection 2.—Currency

Note Circulation.—The development by which bank notes became the chief circuing medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. ose features of the development which then became permanent are outlined in the 1941 ar Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for minion notes outstanding. These were replaced in public circulation and partly replaced cash reserves by the Bank's legal tender notes in denominations of $1, $2, $5, $10, $20, 0 and $100. Deposits of chartered banks at the Bank of Canada completed the replacent of the old Dominion notes of $1,000 to $50,000 denomination that had previously en used as cash reserves. The chartered banks were required under the Bank Act of 34 to reduce gradually the issue of their own bank notes during the years 1935-45 to an nount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada tes thus replaced chartered bank notes as the issue of the latter was reduced. Further trictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered nks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' bility for such of their notes issued for circulation in Canada as then remained outnding was transferred to the Bank of Canada in return for payment of a like sum to e Bank of Canada.

[1] Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been d since 1944.

The Royal Canadian Mint.—The Ottawa Mint, established as a branch of the yal Mint under the (Imperial) Coinage Act of 1870, was opened on Jan. 2, 1908. On . 1, 1931, it became the Royal Canadian Mint and operated as a branch of the Depart- nt of Finance. Under the provisions of the Government Organization Act, 1969, the nt was established as a Crown (agency) corporation, reporting to Parliament through Minister of Supply and Services. The latter change was designed to provide for a more ustrial type of organization and for flexibility in producing coins of Canada and other ntries; buying, selling, melting, assaying and refining gold and precious metals; and ducing medals, plaques and other devices.

The Master of the Mint is its chief executive officer and one of a Board of seven Direc- appointed by the Governor in Council. The Master of the Mint is appointed to hold e during pleasure, the Chairman of the Board is appointed for a term of four years ject to re-appointment, and the other five Directors for terms of one to three years.

Financial and budgeting arrangements are similar to those of other Crown companies ying on industrial or commercial operations. Loans are made from the Consolidated enue Fund for operating and capital expenses, with the total outstanding at any time ted to $35,000,000. Provision is made for loans for temporary purposes and a reserve stablished against losses. Operations are conducted with the aim of making a small it.

Subsection 3.—The Chartered Banks

Canada's commercial banking system consists of nine privately owned banks. Eigh have been in operation for many years and one commenced operations in July 1968. At th end of December 1969, these banks operated 6,038 banking offices in Canada and 20 abroad. Canadian chartered banks engage in a very wide range of activities; they accep various types of deposits from the public including accounts payable on demand, bot chequing and non-chequing, notice deposits and fixed-term deposits. The banks, i addition to holding a portfolio of securities, make loans under a wide variety of condition for commercial, industrial, agricultural and consumer purposes. They also deal in foreig exchange, receive and pay out bank notes, provide safekeeping facilities and perform variety of other services. For the most part, these operations are carried out in Canad by the extensive network of bank branches. The head offices of the banks confine the activities largely to general administration and policy-making functions, the manageme of the banks' investment portfolio and related matters. A detailed account of the branc banking system in Canada is given in the 1967 Year Book, pp. 1126-1128.

All banks operating in Canada are chartered (i.e., licensed) by Parliament und the terms of the Bank Act. The Act regulates certain internal aspects of bank operation such as the auditing of accounts, the issuing of stock, the setting aside of reserves an similar matters. In addition, the Bank Act regulates the banks' relationship with th public, the Government and the Bank of Canada.

It has been the practice in Canada to revise the Bank Act at approximately ten-yea intervals. The most recent revision was enacted by Parliament early in 1967 and cam into effect on May 1 of that year. The remainder of this Subsection deals with the principa changes incorporated in the new Bank Act.

Acceptance by the Government of some of the main recommendations of the Roya Commission on Banking and Finance for increased competition and flexibility in the Cana dian banking system was reflected in various new Bank Act provisions. These impose certain restrictions on corporate and other relationships between banks and other financia institutions, while removing certain existing restrictions on the banks' operations whic had placed them at some competitive disadvantage in recent years compared with thei principal financial competitors.

In the past, various forms of intercorporate financial relationship between chartered nks and other financial enterprises had developed in Canada. In some instances this volved investment by banks in the shares of these enterprises, and vice versa; in others e relationship involved interlocking directorships. These practices are severely re-icted under the terms of the new Bank Act, which limits bank ownership of any Canadian rporation to 10 p.c. of the voting shares and also provides that no more than one fifth the directors of any company may become directors of a bank. In addition, after a o-year period a director of a trust or mortgage loan company which accepts deposits m the public may not be appointed or elected a director of a bank. In order to ensure at competition is not curtailed by agreements among the banks on interest rates to be id on deposits or charged for loans, the new Bank Act prohibits the making of such reements (except with the consent of the Minister of Finance). At the same time the ovision that was formerly in the Bank Act limiting to 6 p.c. the interest rate which artered banks could charge on loans, was abolished effective Jan. 1, 1968. Under the new nk Act, the determination of interest rates on loans and deposits is left to market forces.

The new Bank Act also granted the banks new mortgage-lending powers. Banks y now charge current rates of interest on mortgage loans under the National Housing t, and they may also make conventional residential mortgage loans for the first time. the case of conventional residential mortgages, the amount of an individual mortgage not exceed 75 p.c. of the appraised value of the property. After 1973 the maximum ount of a bank's assets to be held in the form of conventional residential mortgages st not be more than 10 p.c. of the bank's Canadian dollar deposit liabilities plus de-ntures. In the interval, the percentage limitation will rise by 1 p.c. each fiscal year; was 4 p.c. until Oct. 31, 1968 when it rose to 5 p.c. for the subsequent fiscal year and will continue until the 10-p.c. maximum is reached.

The banks have also been given authority to issue their own debentures with an ginal term to maturity of at least five years; such securities are not subject to a reserve uirement and rank in priority after deposit liabilities. The amount of debentures t any bank may have outstanding is limited by restricting the increase per annum to p.c. of the paid-up capital and rest fund and an upper limit of one half of the bank's d-up capital and rest fund.

The amendments to the Bank Act in 1967 contained a number of revisions respecting ownership of Canadian chartered banks. No individual or associated shareholders y vote more than 10 p.c. of a bank's total shares outstanding and, if more than 25 p.c. a bank's shares are owned by non-residents, the total outstanding liabilities of the bank y not exceed twenty times its authorized capital stock.

The Bank Act also stipulates the minimum statutory cash reserve requirement that chartered banks must observe. The minimum amount of Bank of Canada notes and posits each bank must hold as cash reserves was changed in a series of monthly steps m 8 p.c. of all Canadian dollar deposits under the old Bank Act to 12 p.c. of demand posits and 4 p.c. of other deposits as of February 1968. In addition, the Bank of Canada been given stand-by powers to require the banks to hold a "secondary reserve" which ld consist of cash in excess of their statutory requirements, holdings of treasury bills day-to-day loans to investment dealers. When initially introduced, this secondary rve cannot exceed 6 p.c. of a bank's deposit liabilities. Thereafter it may be increased nonthly steps of 1 p.c. to a maximum of 12 p.c. The Bank of Canada may reduce or ove such a secondary reserve at any time. Effective April 1968, the required level was .c. and, effective June 1969, it was increased to 8 p.c.

Branches of Chartered Banks.—Although there are fewer chartered banks now n at the beginning of the century, there has been a great increase in the number of nch banking offices. As a result of amalgamations, the number of banks declined from n 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—e Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amal-nation in 1955 of the Bank of Toronto and the Dominion Bank as The Toronto-

Dominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Ba of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and t Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 19 reduced this number to eight. The Bank of British Columbia was granted a chart by Parliament in December 1966 and commenced operations in July 1968, increasing t number of chartered banks to nine. The number of branches of chartered banks in ea province periodically from 1920 to 1969 is given in Table 8.

12.—Canadian Cash Reserves, 1960-69

NOTE.—Bank of Canada deposits are averages of the juridical days in the month shown; Bank of Canada no and Canadian dollar deposits are averages of the four consecutive Wednesdays ending with the second last Wednesd in the previous month. Until June 1967 the required cash reserve ratio was 8 p.c. on both demand and notice dep its. For the next eight months the required minimum monthly average on demand deposits was increased by ½ 1 p.c. per month and that on notice deposits was decreased by ½ of 1 p.c. Since February 1968 the required rat have been 12 p.c. for demand deposits and 4 p.c. for notice deposits as prescribed under the Bank Act.

[1] Excluding realized profits and losses on securities held in investment account which are included in the i "Loss experience not included in other operating expenses". [2] Includes provision for losses based on five-y average loss experience which in 1969 amounted to $29,600,000 or 0.136 p.c. of related loans, and also includes t other than income taxes. [3] Before provision for income taxes and appropriations for losses other than t included in "Other operating expenses". [4] General and tax-paid appropriations for losses: net after any trans out of accumulated appropriations for losses to undivided profits or rest account.

Cheque Payments.—Historical data on a monthly basis are available from 1924 the amount of cheques charged to customer accounts in 35 major clearing house centr The value of payments rose steadily throughout the country from 1924 to 1929. Fr 1929 to 1932 the value declined sharply and thereafter fluctuated within rather narr limits until the outbreak of the Second World War. Since 1939 the total value of chequ cashed in these centres has increased steadily. The value of cheques cashed in 35 cleari centres during 1969 reached a high of $714,993,156,000, an increase of 15.6 p.c. above t value of $618,313,206,000 for 1968. All five economic regions showed an increase, w British Columbia recording a gain of 21.9 p.c., Ontario 21.5 p.c., the Atlantic Provin 21.0 p.c., the Prairie Provinces 9.5 p.c. and Quebec 7.4 p.c. Payments in the two leadi centres also reached all-time highs, Toronto advancing 23.1 p.c. and Montreal 7.6 p.c. o the previous year.

Subsection 4.—Other Banking Institutions

In addition to the savings departments of the chartered banks and of trust and loan mpanies, there are provincial government savings banking institutions in Ontario and berta, as well as two important savings banks in the Province of Quebec—the Montreal y and District Savings Bank and La Banque d'Économie de Québec—established under eral legislation and reporting monthly to the Department of Finance. Co-operative dit unions also encourage savings among low-income classes and extend small loans to ir members.

Province of Ontario Savings Office.—The establishment of the Province of Ontario ings Office was authorized by the Ontario Legislature at the 1921 Session and the first nches were opened in March 1922. Interest at the rate of 6 p.c. per annum (as of Nov. 1, 0), compounded half-yearly, is paid on accounts and deposits are repayable on demand. al deposits as of Mar. 31, 1970 were $109,000,000 and the number of depositors was proximately 68,000; 21 branches are in operation throughout the province.

Province of Alberta Treasury Branches.—Savings deposits are accepted at 70 asury Branches throughout the province and the total of such deposits at Mar. 31, 1970 s $152,071,924. Of that amount, $43,769,964 was payable on demand, on which cash ers can be drawn and on which interest is paid at the rate of 4 p.c. per annum; $24,669,810 s in Super Savings, bearing interest at the rate of 6 p.c. per annum; and $83,632,150 was Term Deposits, for terms ranging from 30 days to five years and bearing interest at rates nparable with those paid on the open market.

Province of Quebec Savings Banks.—The Montreal City and District Savings Bank, nded in 1846 and operating under a federal charter since 1871, had, at Oct. 31, 1970, aid-up capital and reserve of $20,500,000, savings deposits of $527,979,571, and total bilities of $559,574,169. Assets of a like amount included $159,846,003 of federal, vincial, municipal and other securities.

La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de tre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, ame part of the Provincial Bank of Canada on Aug. 3, 1970. At the time of the merger,

savings deposits amounted to $60,920,791, paid-up capital and reserve combined total $3,500,000 and assets and liabilities each amounted to $67,593,212.

Credit Unions.—The first credit union in Canada was founded in Lévis, Que., 1900, its purposes being to promote thrift by encouraging saving and to provide loans members who could not get credit elsewhere or could get it only at high interest rat For many years growth was slow; in 1911, when the first figures were available, ass amounted to $2,000,000 and by 1940 they were only $20,000,000. However, since t time there has been a spectacular increase. Assets of the Quebec credit unions amoun to over $1,000,000,000 at the end of 1964 and to over $2,200,000,000 at the end of 19 In other provinces, credit unions have not attained the same importance as they have Quebec; the first credit union legislation was passed in Nova Scotia in 1932 followed legislation in Manitoba and Saskatchewan in 1937 and in Ontario and British Colum in 1938.

Credit unions are under provincial legislation. Almost all local offices in each provi belong to central credit unions operating within the province either directly or throu regional unions. There is a considerable difference between Quebec and the other provin in the asset-holding of credit unions; Quebec unions have a large proportion of their inve ments in the form of mortgages and government bonds while unions in the other provin have a greater percentage in loans. Credit unions probably play their most important r in smaller communities where they may function to a large extent as local banks. T number of chartered credit unions in Canada at the end of 1969 was 4,769, of which 4,4 reported a total membership of 5,003,000 and assets of $4,064,065,000. Quebec, w 2,756,887 members and assets of $2,202,680,000, accounted for 55 p.c. of both total memb ship and total assets of all credit unions in Canada. Credit unions classified by bond association on a percentage basis were: occupational 28, residential 59 and associational

Canadian credit unions in the 1960-69 decade have continued the steady growth g erally in evidence since credit unions were first organized in Quebec in the early part of t present century. Loans granted by credit unions increased by 3 p.c. in 1969 to rea $1,525,655,000, being a 217-p.c. increase over the corresponding figure of $481,192,000 1960. Assets at $4,064,065,000 increased by 209 p.c. and savings at $3,657,500,000 creased by 206 p.c. in the same comparison. Membership of 5,003,000 represented 24 p of the total population, compared with 2,544,000 and 14 p.c., respectively, in 1960.

There were 20 central credit unions in 1969; these unions act as credit unions for t credit unions, mainly by accepting deposits of surplus funds from them and providing source of funds for them to borrow when they cannot meet the demand for local loa Most of the centrals also admit co-operatives as members. Total assets of the centr increased by 8 p.c. to $562,399,000 and loans to members increased 19 p.c. to $437,000,0 over the previous year. The Canadian Co-operative Credit Society serves as a cent credit union for the provincial centrals and large co-operatives all across Canada.

Section 2.—Other Commercial Finance

Subsection 1.—Trust and Mortgage Loan Companies

Trust and mortgage loan companies are registered with either the federal or provincial ernments. They operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 amended in 1953, 1958, 1961 and 1964-65, and RSC 1952, c. 272 as amended in 1953, 8, 1961 and 1964-65, respectively) or under corresponding provincial legislation.

The first mortgage loan companies were established in Ontario in the 1840s as c operative associations to provide mortgage finance for their members. These associatio evolved under legislation which was amended to give them permanent corporate status mortgage-lending institutions. They obtained their funds principally by selling mediu and long-term debentures to the public but also had the power to open deposit accoun Trust companies were first incorporated in Ontario in the 1880s. Although the tru company legislation prevented them from borrowing funds, they had the power to acce funds in guaranteed trust accounts and invest them in specified types of assets. Th feature of trust company legislation is now general throughout Canada. The trust co panies operate as financial intermediaries in the same way as mortgage loan compani chartered banks or savings and other financial institutions and are the only corporatio in Canada with power to act as trustees for property interests and to conduct other fiducia business. In this capacity they act as executors, trustees and administrators under wi or by appointment, as trustees under marriage or other settlements, as agents in the manag ment of estates of the living, as guardians of minor or incapable persons, as financial age for municipalities and companies, as transfer agents and registrars for stock and bond issu as trustees for bond issues and, where so appointed, as authorized trustees in bankruptci

Trust and mortgage loan companies were established and grew rapidly under provinci legislation in the late nineteenth and early twentieth centuries. Some companies we chartered by special Acts of Parliament but it was not until 1914 that federal legislation w passed and the Federal Government began to regulate trust and loan companies register under its Acts. In 1967 there were nine federal trust companies and 12 federal loan comp nies. The Superintendent of Insurance examines these companies and also, by arrangeme with the provinces, trust and loan companies incorporated in Nova Scotia and trust co panies incorporated in New Brunswick and Manitoba. Companies must be licensed l each province in which they wish to operate.

Although there are many differences among the various federal and provincial Ac the broad lines of the legislation are common. In their intermediary business the compani have the powers mentioned above to borrow or, in the case of trust companies, accept fun in guaranteed accounts subject to maximum permitted ratios of these funds to shareholde equity. The funds may be invested in specified assets which include first mortgages real property, government securities and the bonds and equity of corporations havi established earnings records, and the companies may grant loans on the security of su bonds and stocks. Trust and loan companies are not required to hold specified cash r serves, as are the chartered and savings banks, but there are broadly defined "liquid asse requirements in a number of the Acts.

The trust and mortgage loan companies have been substantial members of the Canadi financial system since their early years. In the 1920s they held about one half of the priva mortgage business in Canada but their growth rate fell off sharply because of the impa of the depression of the 1930s and World War II on the mortgage business. In the yea since the War the re-emergence of strong demands for mortgage financing and the willin ness of many trust and loan companies to compete aggressively for funds have led to su tained rapid expansion.

According to DBS figures, mortgage loan companies had assets before investment subsidiaries of $3,007,136,000 at the end of 1969 compared with $2,762,364,000 a year earli Their holdings of mortgages amounted to $2,507,943,000, or 83 p.c. of total assets. T finance their investments, these companies had borrowed $2,141,384,000 or 71 p.c. of th total funds by the sale of debentures and $440,571,000 from demand deposits.

At the end of 1969, company and guaranteed funds of trust companies in the DB survey were $5,770,682,000 compared with $4,971,582,000 a year earlier, an increase 16 p.c. Trust companies, while not specializing in mortgage financing to the same exte as loan companies, in recent years have been putting a high proportion of their funds in these investments with the result that mortgages were 57 p.c. of their assets at the end 1969 compared with 48 p.c. six years earlier. The trust companies had $3,849,754,0

rm deposits outstanding and $1,338,975,000 demand deposits in December 1969, account-g for 90 p.c. of total funds. About one third of the demand or savings deposits were chequable accounts. There is considerable variety among the trust companies and a w have developed a substantial short-term business, raising funds by issuing certificates r terms as short as 30 days and also operating as lenders in the money market. Neverthe-ss, it remains true that the main business of the trust companies in their intermediary le is to channel savings into mortgages and other long-term investments. In addition, ust companies, as of Dec. 31, 1968, had $18,796,962,000 under administration in estate, ust and agency accounts.

More complete and up-to-date financial information may be found in quarterly balance eet statements published by the DBS and the Bank of Canada, the reports of the Super-tendent of Insurance on Loan and Trust Companies and the reports of provincial super-sory authorities.

Subsection 2.—Licensed Small Loans Companies and Licensed Money-Lende

Small loans companies and money-lenders are subject to the Small Loans Act (R 1952, c. 251, as amended by SC 1956, c. 46). This Act, first passed in 1939, sets maxim charges on personal cash loans not in excess of $1,500 and is administered by the Dep ment of Insurance. Lenders not licensed under the Act may not charge more than 1 per month. Those wishing to make small loans at higher rates must be licensed each y by the Minister of Finance under the Small Loans Act. The Act allows maximum ra including charges of every kind, of 2 p.c. per month on unpaid balances not exceeding $3 1 p.c. per month on the portion of unpaid balances exceeding $300 but not exceeding $1, and one half of 1 p.c. on any remainder of the balance exceeding $1,000. Loans in exces $1,500 are not regulated and lenders operating entirely above this limit and the la loans of licensed lenders are thus exempt from the Act. Nor does the Act regulate char for the instalment financing of sales. Prior to Jan. 1, 1957, the Act applied only to lo of $500 or less and the maximum rate was 2 p.c. per month.

At the end of 1969, there were five small loans companies and 52 money-lenders licen under the Act. Small loans companies are incorporated by special Acts of the Parliamen Canada, the first of them commencing business in 1928; the money-lenders include p vincially incorporated companies and one partnership. Many of the small loans co panies and money-lenders are affiliated with other financial institutions, principally nadian sales finance companies and United States finance or loan companies, and th subsidiary companies account for a high proportion of the total business of licensed lend The affiliations with sales finance companies reflect the close relationship between ins ment financing and the consumer loan business. The Dominion Bureau of Statis publishes quarterly balance sheets for sales finance and consumer loan companies as a wh and does not attempt to distinguish the two groups within the industry.†

The subsidiary small loans companies and money-lenders obtain most of their fu through their parent companies. A few of the larger companies have supplemented th bank loans by selling short-term paper in the market but the amount has been small co pared with the short-term market borrowing of the sales finance companies. The sma independent companies rely mainly on their shareholders and on borrowing from chartered banks.

The annual figures of assets and liabilities given in Table 24 for 1966-69 are from Department of Insurance report.†

* Prepared by the Superintendent of Insurance for Canada.

† See *Financial Institutions* (Catalogue No. 61-006). More complete data on the business of licensed lenders given in the *Report of the Superintendent of Insurance for Canada* on *Small Loans Companies and Money-Lenders* for year ended Dec. 31, 1969 (Catalogue No. In 3-4/1969).

24.—Assets and Liabilities of Small Loans Companies and Money-Lenders, 1966-69

Assets and Liabilities	1966	1967	1968	1969
	$	$	$	$
Assets	**995,273,267**	**1,042,901,678**	**1,132,835,283**	**1,484,703,**

Balances, large loans and other contracts	311,984,099	372,603,457	470,874,565	847,609,
Cash	10,432,107	11,604,924	11,711,354	9,793,
Other	24,969,935	22,870,940	31,031,719	31,642,
Liabilities	**995,273,267**	**1,042,901,678**	**1,132,835,283**	**1,484,703,**
Borrowed money	799,454,035	823,137,246	883,773,537	1,122,404,
Reserves for losses	24,380,272	25,893,727	27,925,147	34,611,
Paid-up capital	50,687,274	50,795,964	47,757,361	46,920,
Surplus paid in by shareholders	7,702,743	8,702,743	6,929,393	14,085,
Earned surplus	46,246,460	54,631,858	73,354,582	93,483,
Other	66,802,483	79,740,140	93,095,263	173,198,

There was little change in 1969 compared with 1968 in the amount of small loans siness done by the combined companies. Small loans made to the public during the ar numbered 1,351,092 as against 1,455,816 in 1968, a drop of about 7.2 p.c.; the amount such loans decreased from $878,186,607 to $823,277,807, a drop of about 6.3 p.c. The erage small loan made was $609 in 1969 and $603 in 1968. At the end of the year, small ns outstanding numbered 1,155,108 for an amount of $595,658,632, or an average of 16 per loan; comparable figures for 1968 were 1,203,993, $619,217,638 and $514, respecely.

Gross profits of small loans companies and money-lenders before income taxes and ore taking into account any increase or decrease in reserves for bad debts increased from 5,580,033 in 1968 ($11,110,435 being the profit on small loans and $24,469,598 the profit business other than small loans) to $51,348,419 in 1969 ($8,427,200 being the profit on all loans and $42,921,219 the profit on other business).

In comparing balances of large loans and other contracts, and gross profits on business ier than small loans for the years 1968 and 1969, it should be noted that one lender acired the business of an associate company on Jan. 1, 1969, which contributed significantly the totals for these items in that year.

Subsection 3.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act 1870, was defined as 15/73 of the British gold sovereign.* That is, the par rate of hange between the dollar and the pound sterling was fixed at $4.866, making the Canan currency the equivalent of the United States dollar at parity. With minor variations ween the import and export gold points representing the cost of shipping gold in either ection, the value of the pound sterling in Canada remained at this level until the outak of World War I. The United States dollar, on the other hand, was at a discount in ms of Canadian funds for the first eleven years after Confederation since it was not eemable in gold from February 1862 to January 1879. On the basis of gold equivalents would appear that the greatest monthly average discount on the United States dollar er Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 4 the dollars of the two countries remained at par, varying only within the gold points under $2 per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. r some weeks both the pound and the Canadian dollar rose to a premium in New York. bsequently both fell back with the pound going to a slight discount. In January 1916 pound was officially pegged at $4.76 in American funds. This level was maintained h the help of funds realized by sales of United States securities owned by residents of tain, by borrowing in the United States and, after the American entry into the War, by United States Government financing Allied purchases in that country.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian l United States dollars did not exceed 2 p.c. on either side of parity; the pound was ble in terms of United States dollars during this period. In 1918 the Canadian dollar gan to weaken. After the pound was unpegged in 1919, the Canadian dollar declined ther and in 1920 it fell to 82 cents in New York with sterling going as low as $3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in w York. Despite some further weakness in sterling, the dollar remained close to that el during the next two years, averaging 98.04 and 98.73 cents in terms of the United tes dollar in 1923 and 1924, respectively, and fluctuating between a discount of about

* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined erms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United es gold coins were, however, legal tender in Canada for this whole period.

3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold paym in April 1925, the range of fluctuation of the Canadian dollar narrowed further. F Canada's return to the gold standard in the period July 1, 1926 to January 1929, the change rate remained within the gold points. The Canadian dollar then went to a sl discount in New York. With the exception of the period July to November 1930, whe went to a small premium in New York, the dollar remained below parity until Bri abandoned the gold standard in September 1931. After that month the pound ster depreciated sharply and the Canadian dollar followed, reaching lows* in New York 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United Sta the pound and the Canadian dollar strengthened rapidly in terms of American fu By November 1933 both currencies had reached a premium in New York. Meanwh in a series of steps beginning with permitting the export of newly mined gold in Aug 1933, the United States moved toward resumption of the gold standard. As of Feb 1934, the United States Treasury undertook to buy all gold offered at $35 per ou After that the exchange rate between the Canadian and United States dollars stabiliz Until the outbreak of war in 1939 much of the trading was conducted within one cent parity although the Canadian dollar in New York did go as high as 103.6 cents (Septem 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, Britain and other sterling co tries introduced foreign exchange control involving fixed buying and selling rates of $4.(and $4.03½, respectively, in terms of the United States dollar. The Canadian dollar New York declined until Sept. 16, 1939, when the Government instituted foreign excha control† in Canada and established fixed buying and selling rates of $1.10 to $1.11 for U.S. dollar and $4.43 to $4.47 for sterling. As compared with previous months, the preciation of the Canadian dollar in terms of United States funds was approximately h as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. doll and sterling were lowered to $1.10½ and $4.45, respectively, the official rates for Canadian dollar remained unchanged until July 5, 1946. At that time the rate on U.S. dollar was restored to par, with buying and selling rates for that currency of $1.00 $1.00½ and for sterling $4.02 to $4.04. These rates continued in effect until Sept. 1949 when, following a 30.5-p.c. reduction by Britain in the value of sterling to $2.80 U (an action which was paralleled in varying degrees by numerous other currencies), Cana returned to the former official rates of $1.10 and $1.10½ for United States funds. Sterl was quoted at $3.07¼ and $3.08¾ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign change rates which had been in effect at varying levels since 1939 would be withdra effective Oct. 2, and that the rate would henceforth be determined in the market for forei exchange. This policy was carried out within the framework of exchange control ur Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked the Governor in Council, terminating the period of exchange control that had prevail in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. May 2, 1962, the Minister of Finance announced that the Canadian dollar was bei stabilized at a fixed par value of 92½ cents in terms of United States currency. This acti was taken with the concurrence of the International Monetary Fund and, in accordar with the Articles of Agreement of that organization, the Government of Canada underto to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of t established par value.

* Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the terminat of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

On May 31, 1970, the Government of Canada announced a decision not to maintain he exchange rate of the Canadian dollar within the 1-p.c. parity band prescribed by the MF for the time being. The movements of the U.S. dollar in Canadian funds from nuary 1961 to December 1970 are shown in Table 25.

[1] Convertible foreign currency holdings of the Exchange Fund Account, the Receiver General for Canada and e Bank of Canada. [2] Valued at official parity rates in terms of U.S. dollars. [3] A positive figure icates a net commitment to take delivery of foreign exchange in the future and a negative figure indicates a com-tment to deliver foreign exchange in the future. [4] Insofar as forward transactions between the Exchange nd Account and the Bank of Canada are matched by spot transactions, they do not have any effect on total official dings of gold and U.S. dollars. [5] Includes overnight suspense transactions with the Bank of Canada and ers, as well as the net forward position with the market. The transactions of the Exchange Fund Account with e market are carried out by the Bank of Canada.

Subsection 4.—The Bond Market*

Sales of Canadian Bonds.—A net total of $3,774,000,000 was raised in the bo market by Canadian government and corporate borrowers in 1969. This amount w about $925,000,000 less than that raised in 1968, and was more than accounted for by t declines of $1,200,000,000 in net new issues of the Government of Canada, the major bo borrower historically.

As a result of rising consumer prices, fiscal and monetary policy became restricti and the rate of real growth of the economy slackened. The curtailment of expenditu growth relative to increases in revenue, improved the net position of the senior levels government substantially. The debt operations of the Government of Canada consist mostly of the refunding of maturing issues in the domestic market.

The $2,101,000,000 of net new issues of provincial governments included $805,000,0 purchased by the Canada Pension Plan Investment Fund and about $165,000,000 throu the Quebec Pension Plan. Part of the Canada Pension Plan proceeds were channelled local governments. In addition, local government securities amounting to $285,000,0 were sold to provinces and their financing agencies. This is not included in the total bonds outstanding shown in Table 27. Net new market issues of municipal governme bonds amounted to $278,000,000. Corporations resorted to bond financing to the exte of $969,000,000 in 1969, and institutions had net new issues in 1969 of $80,000,000.

Bond-yield averages increased considerably in 1969. Government of Canada secu ties for terms of ten years and over yielded 8.33 p.c. at the end of Dec. 31 compared to 7. p.c. a year earlier. Comparable figures for 10 provincials were 9.19 p.c. and 7.92 p.c., a for 10 municipals, 9.29 p.c. compared to 8.18 p.c.

There was an increase of $229,000,000 in finance and loan company paper, and $245,000,000 in other short-term paper in 1969. Yields on 90-day finance company pap increased to 9.17 p.c. at year-end compared to 6.65 p.c. a year earlier. Bank loans business increased during the year as did net issues of preferred and common stock, e pecially the latter which rose by 50 p.c.

Bonds Outstanding.—Total government and business bonds outstanding at t end of 1969 amounted to $64,974,000,000, an increase of 6 p.c. over 1968 and of 40 p. since 1964. In the 1964-69 period, the largest increase was one of 76 p.c. in the bond debt of provincial governments. This increase includes issues held in the Canada Pensi Plan Investment Fund and the Quebec Deposit and Investment Fund since the inceptio of the plans in 1966. Corporate bonds outstanding increased by 57 p.c. and municip government bonds by 30 p.c. between 1964 and 1969.

* A study of developments in Canadian bond markets dealing with behavioural aspects, 1962-69, was publish in DBS *Financial Flows Accounts*, System of National Accounts, Fourth Quarter, 1969 (Catalogue No. 13-002).

27.—Canadian Bonds Outstanding as at Dec. 31, 1964-69, and Annual Changes in Bonds an in Short-Term Paper Outstanding

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; institutional bonds exclu bonds payable in Canadian dollars of the International Bank for Reconstruction and Development and certain forei governments, amounting to $65,000,000, $84,000,000, $102,000,000, $119,000,000, $133,000,000 and $116,000,000 in t years 1964-69, respectively. [1] Death, disability and maturity under insurance contracts.

Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continu advance year by year since the beginning of the record in 1869. The amount per cap of the estimated population has more than doubled since 1955.

The operations analysed in the tables of this Subsection, with the exception of Tabl include only those of companies under federal registration and are exclusive of frater organizations and provincial licensees. However, companies under federal registrat account for over 93 p.c. of the life insurance in force in Canada.

2.—Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1960 and Annually 1961-69

NOTE.—Figures for 1869-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855 1940-54 in the 1957-58 edition, p. 1168; and for 1955-59 in the 1967 edition, p. 1147. Statistics of fraternal society surance, excluded here, are given at pp. 1257-1258.

Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 7 and 8 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

ubsection 4.—Life Insurance in Canada Transacted by Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance nefits to members, notably sickness benefits, but these are relatively unimportant. Table gives statistics of life insurance in Canada transacted by fraternal benefit societies and ble **10** shows statistics of assets, liabilities, income and expenditure relating to all busi- ss of Canadian societies and to the business in Canada of foreign societies. The rates arged by these societies are computed to be sufficient to provide the benefits granted, ving regard for actuarial principles. The benefit funds of each society must be valued nually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of eat Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and eadjustment of rates or benefits must be made, unless the actuary certifies to the solvency each fund. The first sections of Tables **9** and **10** relate to the Canadian societies regis- ed by the federal Department of Insurance; there were 14 such societies at the end of 69.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal nefit societies were required to obtain authority from the Federal Government prior to nsacting business in Canada. However, any such societies which at that date were nsacting business under provincial licences, although forbidden to accept new members, re permitted to continue all necessary transactions in respect of insurance already in ce. Most of these societies and some foreign societies that had not been licensed pre- usly by the provinces have since obtained federal authority to transact business. At e end of 1969 there were 32 foreign fraternal benefit societies federally registered to nsact business in Canada, although two of these do not grant life insurance benefits.

Report of the Superintendent of Insurance for Canada, 1967 (Vol. I) because of revisions made after this Report went
press.

Subsection 5.—Life Insurance Effected and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1968 and 1969 summary statistics f insurance effected and insurance in force at the end of the year in currencies other than anadian dollars, as written by Canadian companies under federal registration. The data iven are in terms of Canadian dollars, the conversions from the various foreign currencies aving been made at the book rates of exchange used by the various companies.

Canadian life insurance companies operating under federal registration at Dec. 31, 969 had life insurance in force amounting to $29,239,513,014 in countries outside Canada. nsurance in force in currencies other than Canadian dollars amounted to $29,112,595,945; ne difference between these figures is presumably the net amount of business in countries utside Canada transacted in Canadian currency. The business in force in Canada of anadian companies registered by the Federal Government amounted to $70,760,763,191 t Dec. 31, 1969, and the total business on the books of these companies, in and out of anada, amounted to $100,000,276,205. Thus, over 29 p.c. of the total business in force r Canadian companies registered by the Federal Government was in force in countries utside Canada. In connection with their business outside Canada, the Canadian life surance companies registered by the Federal Government held, at the end of 1969, ommonwealth and foreign investments in the amount of $4,596,137,561.

Approximately 74 p.c. of all business in force in currencies other than Canadian is in nited States currency and 15 p.c. is in sterling. From a slightly different point of view, pproximately 20 p.c. of this business in force is in currencies of Commonwealth countries ther than Canada, and 80 p.c. in currencies of foreign countries.

Section 2.—Fire and Casualty Insurance

At the end of 1969 there were 240 companies registered by the Federal Government t transact fire insurance in Canada (82 Canadian, 51 British and 107 foreign). Of thes companies, 233 (78 Canadian, 49 British and 106 foreign) were also registered to transac casualty insurance. In addition, 119 companies were registered by the Federal Govern ment to transact casualty insurance but not fire insurance (33 Canadian, 8 British and 7 foreign). Of the companies registered to transact fire and/or casualty insurance, 95 wer also registered to transact life insurance; 13 of these were registered for fire, life and casualt insurance and 82 for life and casualty but not fire insurance. It should also be noted tha in addition to the companies registered by the Federal Government to transact casualt insurance, there were 31 registered fraternal benefit societies transacting accident and sick ness insurance, of which 29 also transacted life insurance.

The operations analysed in the tables of this Section, with exception of Table 1 include only those companies under federal registration. As shown in Table **12**, some fi and casualty insurance is transacted in Canada by companies that are provincially license only. These companies generally confine their operations to the province of incorporatio

nd many of them are mutual organizations transacting only fire insurance on a county, unicipal or parish basis. The table relates to insurance companies only; no data are ncluded for fraternal benefit societies.

Section 3.—Government Insurance

deral Government Insurance

In recent years, various insurance schemes have been adopted by the Federal Governnt or undertaken co-operatively by the federal and provincial governments. Informan on unemployment insurance, hospital insurance, veterans insurance, export credit urance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, reign Trade, etc.

Deposit Insurance.—During 1967, deposit insurance became available through the mation, by SC 1967, c. 71, of the Canada Deposit Insurance Corporation. The Corporan was established to provide, for the benefit of persons having deposits with a member of Corporation, insurance against the loss of deposits up to a maximum of $20,000 for one depositor.

Membership in the Deposit Insurance Corporation is obligatory for chartered banks, ebec savings banks and those federally incorporated loan and trust companies that ept deposits from the public. Provincially incorporated loan and trust companies that ept deposits from the public are eligible to apply for membership if they have the consent he province of incorporation.

The definition of deposits, as set out in the general by-law of the Corporation, might be mmarized as money received by a member institution that is repayable on demand or ice and money that is repayable on a fixed date not more than five years after the date on ch the money is received. Deposits not payable in Canada or in Canadian currency are insured.

vincial Government Insurance*

Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown coration established by the Saskatchewan Government Insurance Act, 1944, commenced iness in May 1945. It deals in all types of insurance other than sickness and life. The of the legislation is to provide residents of the province with low-cost insurance deed for their particular needs. Rates are based on loss experience in Saskatchewan only the surplus is invested, to the extent possible, within the province. Premium income 1969 amounted to $14,780,063 and earned surplus to $727,075. The total amount le available to the Saskatchewan Government Finance Office from 1945 to Dec. 31,

* Prepared by the provincial authorities concerned.

1969 was $8,618,479. Assets at the latter date were $41,202,657, of which $17,900,0 was invested in bonds and debentures issued by the Province of Saskatchewan and Saskatchewan schools, municipalities and hospitals. Independent insurance agents, nu bering 591, sell government insurance throughout the province.

The Automobile Accident Insurance Act, administered by the Saskatchewan Gover ment Insurance Office on behalf of the provincial government, provides a comprehensi automobile accident insurance plan for the protection of the public in this province. Prem ums paid by motorists create a fund from which benefits are paid in the event of deat injuries and damages sustained in automobile accidents. Any surplus over payments used to increase benefits, reduce premiums, or absorb deficits in periods of high accide frequency. The surplus is not transferable to the general operations of the Saskatchewa Government Insurance Office, nor is any surplus credited to the provincial governmen The plan provides for public liability insurance, with an inclusive limit of $35,000 for bodi injury and property damage, as well as comprehensive and collision coverage subject to $200 deductible for private passenger cars. Rates vary from $5 a year for older farm truc to $94 for late-model private passenger cars, and also vary for other types of motor vehicl depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1969, mo than $167,000,000 was paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatch wan Department of Natural Resources, offers insurance to farmers covering damage unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, be and antelope.

Information regarding the operation of the Saskatchewan Government Insuran Office or the Automobile Accident Insurance Act may be obtained from the Office Librari Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.—Provincial government insurance in Alberta, coming within the purvie of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, which the entire business of the fire branch of the Alberta Government Insurance Offi was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Compa of Alberta, which was constituted on the same date to take over the life branch of th Alberta Government Insurance Office. Each company is administered by a separa board of directors. The Lieutenant-Governor in Council appoints the members to th respective boards but the charter of the Life Insurance Company of Alberta provides f the election of two policyholder directors. Although both companies are Crown corpor tions, they are not entitled to the usual immunities of the Crown, since they may sue and b sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding t insurance but the nature of the enabling legislation governing these plans emphasiz the fact that they do not constitute insurance. Because such exemptions are specificall provided by the insurance laws of the province, reference to these plans is necessary onl to make it clear that they do not come within the scope of the Alberta Insurance Ac It should be noted that the Alberta Hail Insurance Act and the Alberta Crop Insurance A are administered by the Alberta Hail and Crop Insurance Corporation and each contains clause exempting its operations from the provisions of the Alberta Insurance Act.

Further information on provincial insurance matters may be obtained from th Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Section 1.—The Department of National Defence

The control and management of all matters relating to national defence, the Canadian Armed Forces and the Defence Research Board are the responsibility of the Minister of National Defence; the duties and functions relating to civil emergency operations in peace and war have also been assigned to the Department of National Defence, with the Canadian Forces undertaking the role.

The Canadian Forces Reorganization Act, which came into force on Feb. 1, 1968, "unified" the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force into a single service called the Canadian Armed Forces.

Effective Aug. 1, 1964, the Headquarters of the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force were integrated to form a single Canadian Forces Headquarters (CFHQ) under a single Chief of Defence Staff. The role of CFHQ is to provide military advice to the Minister of National Defence, the Chief of Personnel, the Chief of Technical Services and the Comptroller General, who are responsible for advising and supporting the Chief of Defence Staff in matters relating to their assigned spheres of activity. The Defence Research Board conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister, assisted by an Associate Deputy Minister, maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. Each of three Assistant Deputy Ministers administers a division of the Deputy Minister's Branch responsible for Manpower, Logistics and Finance. Also responsible to the Deputy Minister are the Judge Advocate General, the Departmental Secretary and the Director General of Information Services.

The Defence Council meets at regular intervals to consider and advise on major policy matters. The Council consists of: the Minister of National Defence as Chairman; the Deputy Minister of National Defence, the Chief of Defence Staff, the Chairman of the

* Prepared by the Director General, Information Services, Department of National Defence, Ottawa.

Defence Research Board and the Vice Chief of Defence Staff as members; and a Secretary. The Branch Chiefs at CFHQ, the Vice Chairman of the Defence Research Board and the Associate and Assistant Deputy Ministers are associated members.

Liaison in Other Countries

The Chief of Defence Staff, who is the Canadian Military Representative to the North Atlantic Treaty Organization, is responsible for advice on all NATO military matters and acts as a military adviser to the Government and to Canadian delegations to NATO.* For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Defence Liaison Staff London, representing the Canadian Armed Forces and the Defence Research Board in Britain, the Commander of which is the principal military adviser to the Canadian High Commission in London; (2) the Canadian Defence Liaison Staff Washington, representing the Canadian Armed Forces and the Defence Research Board in the United States, the Commander of which is the principal military adviser to the Canadian Ambassador in Washington, and is the Canadian National Liaison Representative to the Supreme Commander, Allied Command Atlantic (SACLANT) Headquarters; two logistic liaison units are also located in the United States; (3) in Brussels, a Canadian member of the NATO Military Committee in Permanent Session, a Military Adviser to the Canadian Permanent Representative to the North Atlantic Council and also a Canadian National Military Representative to SHAPE; and (4) Canadian Forces Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, which provides advice on such matters to the respective governments.

Rates of Pay Issuable to the Canadian Forces

The entire pay structure for comparable ranks in the former three services is on a uniform basis. Tables **1**, **2** and **3** contain the monthly rates of pay for officers and men of the Regular Force effective Jan. 1, July 1 or Oct. 1, 1970.

* Canada's contributions to NATO are outlined on p. 189.

Allowances Issuable to the Canadian Forces.—The following are the most com- n entitlements, aside from pay, for members of the Regular Forces. Other entitlements ted to special duties and to the Reserve Forces are not shown.

Outfit Allowance.—Female officers receive a single payment of $450 on appointment in t of a free issue of clothing.

Clothing Upkeep Allowance.—All members receive a monthly clothing upkeep allow- e (males $7 and females $8) commencing one year from the date of enrolment subject to ious restrictions which prescribe periods of time during which the allowance is not vable.

Aircrew Allowance.—Aircrew allowance in varying amounts may be paid to a member of rew, or an officer or man undergoing flying training to become a pilot, navigator or other mber of aircrew if he is not already receiving the special rate of pay applicable to pilots navigators.

Foreign Allowance.—Officers and men posted for duty to a country outside of Canad are entitled to allowances to compensate for additional living expenses or hardships in curred; these vary with rank, appointment and location.

Isolation Allowance.—Isolation allowance, at rates that depend on the specific locatio is paid to personnel serving at isolated posts in Canada.

Submarine Allowance.—An officer or man undergoing submarine training or filling a appointment in a submarine receives from $60 to $180 a month, depending on rank.

Parachutist Allowance.—An officer or man undergoing parachutist training or fillin a designated position requiring parachute jumping and not entitled to air specialty allowanc is paid parachutist allowance at the rate of $60 a month.

Air Specialty Allowance.—An officer or man not entitled to aircrew or parachutis allowance who is training in or employed in the duties of certain flight specialties is pai air specialty allowance at the rate of $45 or $60 a month.

Casual Air Duty Allowance.—An officer or man not entitled to air specialty allowanc or aircrew allowance is entitled to casual air duty allowance at the rate of $3, to a maximu of $45 a month, for each day during which he performs duty in an airborne aircraft othe than as a parachutist or as a passenger.

Sea Duty Allowance.—An officer or man serving in a ship receives $30 or $60 a month depending on rank.

Diving Allowance.—An officer or man undergoing diving training or filling an appoint ment as a diver receives from $30 to $150 a month, depending on qualifications.

Section 2.—The Command Structure of the Canadian Forces

The Canadian Forces are organized on a functional basis to reflect the major commit ments assigned by the Government. Under this concept, all Forces devoted to a primary mission are grouped under a single commander who is assigned sufficient resources to dis charge his responsibilities. Specifically, the Canadian Forces are formed into a Canadian Forces Headquarters and seven major Commands reporting to the Chief of the Defence Staff. Canadian Forces Headquarters, in addition to its headquarters function, is re sponsible for the logistic support of the Forces and, for this purpose, retains operationa command of major logistic units. The roles of the Commands are:—

Mobile Command

The role of Mobile Command is: to provide military units suitably trained and equipped to support United Nations or other peace-keeping/peace-restoring operations; to provide ground forces, including tactical air support, for the protection of Canadian territory; and to maintain operational readiness of combat formations in Canada required for support of overseas commitments.

The Forces assigned include: three combat groups in Canada; the Canadian Airborne Regiment; the United Nations Force in Cyprus; two tactical fighter squadrons; one trans port helicopter squadron; and one combat training centre. The combat groups are being reorganized to perform a wide variety of roles and will be provided with air-portable equipment.

The Militia and the Air Reserve components are also controlled and administered by Mobile Command.

Maritime Command

All Canadian Maritime Forces, both sea and air, are under the command of the Com mander Maritime Command whose Headquarters is in Halifax. The Deputy Commander is the Commander Maritime Forces Pacific with Headquarters in Esquimalt. The role of Maritime Command is to defend Canadian interests from assault by sea and to support NATO by assisting in conducting anti-submarine warfare in the Allied Command, Atlantic. The Commander Maritime Command is the NATO Commander of the Canadian Altlantic

Sub-Area of the Western Atlantic Command, under the Supreme Commander, Allied Command Atlantic (SACLANT). Additional roles are to provide any sea lift required by Mobile Command, and to conduct search and rescue operations within the Atlantic and Pacific Search and Rescue Areas (roughly, the Maritime Provinces and British Columbia).

The Naval Reserve component is controlled and administered by Maritime Command.

The resources assigned to Maritime Command include destroyers, operational support ships, submarines, minesweepers, and aircraft for short- and long-range patrol, as well as training and communications facilities within the Command.

Air Defence Command

Air Defence Command participates with the United States in the air defence of North America, through NORAD. It has command of three interceptor squadrons, two SAM squadrons, one SAGE control centre, two BUIC centres and two transcontinental radar lines. Operational control of NORAD assigned forces is exercised by HQ NORAD.

Air Transport Command

The role of Air Transport Command is to provide air transport support to Canadian Forces everywhere, and to conduct search and rescue operations in the Eastern Search and Rescue Area (roughly, Ontario and Quebec). It has five squadrons operating short- and long-range cargo- and troop-carrying aircraft as well as four transport and rescue squadrons.

Training Command

The role of Training Command is to provide individual training for the Canadian Forces and to conduct search and rescue operations within the Western Search and Rescue Area (roughly, Manitoba, Saskatchewan and Alberta). All former training units of the RCN, the Canadian Army and the RCAF where individual training is carried out have been placed under functional control of Training Command. The Canadian Military Colleges (Royal Military College, Royal Roads and Collège militaire royal de Saint-Jean), the Staff Colleges and National Defence College, are under the direct control of Canadian Forces Headquarters (see pp. 1278-1280). Land/air warfare operational training and basic parachutist training are the responsibility of Mobile Command; basic fixed-wing and helicopter pilot training are a Training Command responsibility.

The Canadian Forces Communications Command (CFCC)

The role of the CFCC is to provide fixed communications networks for the Canadian Forces and to provide a national communications system for survival operations (civil defence). To carry out this role, CFCC commands all fixed communications installations within Canada.

Canadian Forces Europe

The Canadian Forces allocated to support NATO in Europe are part of Canadian Forces Europe. The land element is 4 Canadian Mechanized Battle Group operationally responsible to the Central Army Group. The air element, 1 Canadian Air Group, consisting of three CF-104 Starfighter squadrons, is operationally assigned to 4 Allied Tactical Air Force. These elements are located in the Lahr area of Germany and are administratively supported by CFB Europe at Lahr.

dministration of Military Bases in Canada

Staffs and services required below Command Headquarters level to administer and support units based in a particular locality have been organized on Canadian Forces bases. he primary role of each base is to provide base-level administration and supporting services those units located on or near the base. Each base has been allocated to a functional ommander, to whom the base Commander reports.

unction/Regional Organization

Functional Commanders have been assigned a regional as well as a functional responsibility for such actions as representation to provincial governments, aid of the Civil Power, nergency and survival operations, administration of cadets, as well as regional support rvices for all units in the region.

Canada has been divided into five regions which have been assigned to functional ommanders as follows: Atlantic (Newfoundland, Nova Scotia, Prince Edward Island, ew Brunswick)—Maritime Command; Eastern (Quebec)—Mobile Command; Central ntario)—Air Transport Command; Prairie (Manitoba, Saskatchewan, Alberta)—raining Command; Pacific (British Columbia)—Maritime Forces Pacific.

Other Command Elements

Northern Region Headquarters located at Yellowknife, N.W.T., provides representation to the Governments of the Yukon Territory and the Northwest Territories and will exercise a co-ordinating function for all military activities in that region of Canada.

The Canadian Defence Education Establishment controls and administers the staff colleges and military colleges for CFHQ and co-ordinates officer training and development for the Canadian Forces.

Section 3.—Operations

Maritime Forces

The Fleet.—As of September 1970, the following vessels were in service: 18 Destroyer Escorts/Destroyer Escorts Helicopter Equipped (three of which are undergoing major modernization); three Operational Support Ships; three Oberon Class Submarines; one Tench Class Submarine; six Coastal Minesweepers (employed as training vessels); four Gate Vessels (employed as training vessels); one Experimental Hydrofoil; and two Escort Repair Vessels (retained in service as alongside workshops and temporary accommodation vessels). Four Iroquois Class Helicopter Destroyers under construction are expected to join the Fleet in 1972 and 1973.

Operations in 1970.—Maritime Forces participated in six NATO exercises carried out in the North Atlantic and, in addition, one destroyer was assigned to the NATO Standing Naval Force Atlantic throughout the year. Combined exercises with United States Forces were conducted on both the Pacific and Atlantic Coasts and training was conducted in the Bermuda and San Juan areas in order to maintain individual ships at an operational standard. Between these exercises, ships made goodwill visits to the United States, Britain, the Netherlands, Ireland, Denmark, Norway, France, Germany, Italy, Portugal, Mexico and Japan.

Four land-based maritime air squadrons were contributed in 1970 to the Maritime Defence of North America; three of these based on the East Coast and one based on the West Coast are equipped with *Argus* aircraft, the largest modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was conducted throughout the year. The East and West Coast squadrons participated in a number of national, international and NATO anti-submarine exercises, and maintained daily patrols and surveillance of ocean areas adjacent to the Canadian coastlines. A shore-based squadron of CS2F-3 (*Tracker*) aircraft was also operational in 1970 in the surveillance role. Up to nine CHSS-2 (*Sea King*) helicopters are borne on Destroyer Escorts (DDH ships) and assist in carrying out long-range ASW surveillance at sea.

Land Forces

Operations in 1970.—In fulfilment of obligations under NATO, Canada continued to provide ground forces for the defence of Western Europe. The 4th Canadian Mechanized Battle Group, the major units of which are the Royal Canadian Dragoons, 1st Regiment Royal Canadian Horse Artillery, 1st Battalion Royal 22e Regiment and 3rd Mechanized Commando, constitutes the Land Forces' contribution in NATO in the Federal Republic of Germany. The Headquarters of the Battle Group is at Lahr and the married quarters are located in the vicinity of Lahr and Baden-Soellingen. Canada has also earmarked from within its Canadian-based Forces a combat group for external reinforcement of the NATO North Flank. Included within this formation is a battalion group held at a high state of readiness for operations on the North Flank under command of the Commander, Allied Command Europe Mobile Force (Land Component) (AMF[L]).

The Canadian Forces continued to provide support for United Nations operations. Canadian participation in the UN Force in Cyprus included provision of a reduced Infantry Battalion, a Canadian Contingent Headquarters and a Canadian element in the UN headquarters—a total of 581 officers and men. A total of 39 officers and men was employed in other UN missions in the Middle East, Kashmir and Korea. In addition, a specially trained and equipped force equivalent to an infantry battalion group in size is maintained in Canada to provide a force for service in support of the UN on short notice to any part of the world.

In addition to its UN commitments, the Canadian Forces, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet-Nam, Cambodia and Laos, provided approximately 21 officers and men for truce supervisory duties in the region formerly known as Indo-China. On Oct. 14, 1969, the Canadian Government announced its decision to withdraw Canadian Delegation personnel from Laos and Cambodia. The Commission in Cambodia adjourned *sine die* on Dec. 31, 1969, and the Delegation subsequently withdrew. The Delegation in Laos was also reduced until, on Feb. 10, 1970, only a small military component was left in Vientiane.

On Sept. 13, 1968, Canada agreed to a request by the Federal Military Government of Nigeria to participate in an International Observer Team in Nigeria. Canadian participation, which had consisted of two officers, terminated on Feb. 27, 1970.

In accordance with obligations embodied in the provision of the National Defence Act and departmental policy, the Canadian Forces provided aid and assistance in response to requests from civil authorities. Major undertakings were: (1) aid to the Government of the Province of Quebec in maintaining law and order in Montreal during the Montreal City Police strike on Oct. 7, 1969; (2) assistance to the Ministry of Transport in a program to minimize the harmful effects of oil pollution caused by the grounding of the tanker *Arrow* in Chedabucto Bay, Feb. 5, 1970; (3) assistance to the Governments of New Brunswick, Saskatchewan and Manitoba during floods in the spring of 1970; and (4) assistance to the Governments of Saskatchewan and Alberta in fighting serious forest fires during the summer of 1970.

Northern Region Headquarters was formed in May 1970. The Headquarters, at present located in Ottawa, will move to Yellowknife, N.W.T., in January 1971 and will initially consist of approximately 50 military personnel. The main role of the Headquarters will be to co-ordinate Canada's increasing military activities north of the 60th parallel of latitude. The Headquarters will also co-ordinate Armed Forces northern activities with other federal agencies, including the Governments of the Yukon Territory and the Northwest Territories.

To help alleviate student summer unemployment, the Department of National Defence operated certain programs for students between the ages of 16 and 24. The programs undertaken in summer 1970 were: Project 1—to employ up to 4,000 persons on general maintenance tasks on Canadian Forces bases and stations; Project 2—to train an additional 500 cadets within existing programs; Project 3—to employ 1,000 persons on range clearance at Canadian Forces Bases Gagetown and Valcartier; Project 4—to support 100 students on leadership training at Collège militaire royal de Saint-Jean in Quebec in co-operation with the Canadian Red Cross and the Department of Manpower and Immigration; Project 5—to provide additional militia training for 7,850 applicants at local units and at militia training centres; Project 6—to provide facilities and equipment to the Department of the Secretary of State for emergency sleeping quarters for transient youths at 14 locations; Project 7—to conduct a pilot trades course for 30 persons to teach engineer-type trades; and Project 8—to provide casual labour employment for 700 persons.

Air Forces

Operations in 1970.—The Canadian Forces contribution to the air defence of North America during the year consisted of three CF-101B interceptor squadrons, two Bomarc surface-to-air missile squadrons and 27 radar sites. These forces, together with the Distant

Early Warning Line (DEW), operated under the operational control of North American Air Defence Command (NORAD). No. 1 CAG (Canadian Air Group), Canada's NATO air contribution in Europe, decreased from six squadrons of CF-104 aircraft to three. Two of these squadrons were employed in the strike/attack role and the other in the photo-reconnaissance/attack role. Mobile Command's two CF-5 squadrons continued to emphasize close support and photo-reconnaissance operations. Additionally, one of the squadrons carried a collateral commitment for basic operational training of pilots destined for CF-5 and CF-104 aircraft.

Air Transport Command (ATC) continued to provide support to CFB Europe using long-range *Boeing 707*, *Yukon* and *Hercules* aircraft. A *Caribou* was maintained in India/Pakistan in support of UN MOGIP. In Canada, ATC airlifted Department of National Defence personnel and cargo from coast to coast and into the Arctic regions. *Hercules* aircraft were employed for paratroop training of the land forces. Search and rescue services were provided in the Canadian areas of responsibility. Throughout the year the Canadian Forces processed some 2,900 separate search and rescue incidents and flew more than 8,700 hours on this task.

The Canadian Forces gave assistance to the Department of External Affairs in providing relief to Peru after an earthquake that occurred on May 31, 1970. This assistance included the airlift of 161,703 lb. of relief supplies from Canada to Peru and the airlift of supplies and evacuation of refugees within Peru, wherein 97 sorties were flown by *Caribou* aircraft, which carried a total of 1,902 passengers and 358,570 lb. of cargo.

Section 4.—Training

All recruit and most basic and advanced trades training in support of the Canadian Armed Forces takes place at various schools under the supervision of Training Command. Maritime Command and Mobile Command maintain functional control of training for their personnel.

The Combat Arms School of the Combat Training Centre, CFB Gagetown, N.B., conducts training for officers and men of the armoured, artillery and infantry units of the Regular and Reserve Forces, ranging from basic trades to advanced courses. Basic trades training for French-speaking personnel is conducted at the Combat Arms School Detachment, CFB Valcartier, Que. Training for field engineers is given at CFB Chilliwack, B.C.

Recruit training takes place at CFB Cornwallis, N.S., for English-speaking recruits and CFB St. Jean, Que., for French-speaking recruits. St. Jean is also the site of the English–French Language Training School. Training in other languages is given at the Canadian Forces Foreign Language School in Vanier City, Ont.

Support trades training is conducted at the School of Administration and Logistics, CFB Borden, Ont., and technical trades training at a number of locations across Canada. Basic technical training in French is conducted at CFB St. Jean, Que.

Flying training to "wings" standard is based in the Prairie Provinces—pilot selection and basic helicopter flying training at Portage la Prairie, Man., basic fixed-wing flying training at Moose Jaw, Sask., and advanced flying training at Gimli, Man. Navigator and observer training is given at Winnipeg. During 1970, 260 pilots, 98 navigators and 70 observers were awarded "wings" and went on to further training in support of tactical air, air defence, long-range air transport operations and search and rescue.

Two Fleet Schools, one at CFB Esquimalt, B.C., and the other at CFB Halifax, N.S., provide basic Maritime trades training as well as training facilities for the operational warships on the East and West Coasts.

Canadian Military Colleges

The three Canadian Military Colleges are the Royal Military College of Canada, founded at Kingston, Ont., in 1876; Royal Roads Military College, established in 1941 near Victoria, B.C.; and Collège militaire royal de Saint-Jean, established at St. Jean, Que.,

imarily to meet the needs of French-speaking cadets. The Royal Military College and e Royal Roads Military College were constituted as the Canadian Service Colleges in 48 and Collège militaire royal de Saint-Jean was opened in 1952. In 1959, the Ontario egislature granted the Royal Military College a charter empowering it to grant degrees. 1967, the Canadian Services Colleges were redesignated as the Canadian Military Colleges, keeping with unification of the Canadian Forces.

The role of the Colleges is to educate and train officer cadets for careers as commissioned ficers in the Canadian Forces. Courses of instruction are designed to develop character d to provide a balanced liberal, scientific and military education leading to degrees in arts, mmerce, science and engineering. The Royal Military College of Canada accepts senior atriculants and offers a four-year course. Royal Roads Military College accepts senior atriculants who, on successful completion of the second year, go to the Royal Military llege of Canada for their third and fourth years. Collège militaire royal de Saint-Jean cepts junior and senior matriculants to pursue a five- or four-year program; the final two ars in some disciplines are completed at the Royal Military College of Canada.

To be eligible for admission to a Canadian Military College, candidates must be single, nadian citizens and physically fit. Candidates must have reached their 16th but not eir 21st birthday on the first day of January preceding entrance, with the exception of nior matriculation candidates for Collège militaire royal de Saint-Jean who must have ached their 16th but not their 20th birthday on the first day of January preceding en- nce. On entry into one of the Canadian Military Colleges, applicants are enrolled as gular Force Officer Cadets in the Canadian Forces. Costs of tuition, uniforms, books, struments and other fees are borne by the Department of National Defence. Officer dets receive a salary of $193 a month and are charged $86 a month for board and lodging. successfully completing their academic and military training, officer cadets are granted rmanent commissions in the Regular Force.

Most officer cadets entering the Canadian Military Colleges enrol under the Regular ficer Training Plan. Provision is also made for the entry of a number of Dominion dets. These are sons of persons who were killed, or died, or are severely incapacitated a result of service in a component of the Canadian Forces, or the Canadian Merchant arine, during hostilities. Dominion cadets enter the Reserve Force and receive free tion during the first academic year at a Canadian Military College. A limited number Reserve cadets who pay tuition and other fees during the duration of the course may also admitted.

During the 1969-70 academic year, 1,124 officer cadets were enrolled at the Canadian litary Colleges, 532 of them at the Royal Military College, 206 at Royal Roads Military llege and 386 at Collège militaire royal de Saint-Jean.

aff and Defence Colleges

The Canadian Land Forces Command and Staff College at Kingston, Ont., gives a -week course for the training of Captains and Majors for command and staff appoint- nts. Although most of the student body is composed of officers of the land element of Canadian Armed Forces, officers from the sea and air elements and from the armies of ier Commonwealth and NATO countries also attend. Instruction involves study of erence material, syndicate discussions, lectures and tutorial indoor and outdoor exercises. addition to military subjects, the curriculum includes studies in the fields of military hnology and operational research; leadership, command and management; national and ernational affairs; communication skills; and geopolitics. The syllabus is enhanced by a iety of expert military and civilian guest lecturers and by visits to Canadian and United tes military and civilian establishments.

The Canadian Forces College in Toronto, consists of three institutions for the staff ining of officers: (1) *The Canadian Forces Staff College* where Majors and Lieutenant- onels from sea, land and air elements of the Canadian Armed Forces take a 44-week rse to prepare them for assumption of higher rank and greater responsibility. The

course includes the study of strategic and military problems; national and international affairs; military technology and operational research; geopolitics; management; and communications skills. (2) *The Canadian Forces Staff School* where all classifications of officers in the rank of Captain take a 10-week course to prepare them to perform staff functions of a general nature that are appropriate to their rank and to provide the foundation for their subsequent professional development. The course includes the study of management and communications skills; national and international affairs; Canada's national defence structure; staff procedures; personnel support services; government and sociology. (3) *The Canadian Forces Extension School* where selected military and academic courses of study by correspondence are offered to all officers of the Canadian Armed Forces.

The National Defence College at Kingston, the senior college of the Canadian Armed Forces, provides a 47-week course to prepare senior military officers in the ranks of Lieutenant-Colonel and Colonel, and senior officers from other government departments and industry, for appointments to positions of higher responsibility, by enabling them to study together those aspects of national and international affairs which determine or significantly affect Canada's policies. Lecturers are chosen from the leaders in various fields in Canada and other countries. In addition, field studies to certain parts of Canada, the United States, Europe, Asia, Africa, Australia and Latin America familiarize students with conditions and influences in their own country and in other countries.

Section 5.—Reserves and Cadets

The Naval Reserve

Recruiting and training of officers and men of the Naval Reserve is conducted mainly through 16 Naval Reserve Units across Canada under the Commander, Maritime Command whose Headquarters is located at Halifax, N.S. Naval Reserve Units are established at the following centres:—

St. John's, Nfld., HMCS *Cabot*
Halifax, N.S., HMCS *Scotian*
Saint John, N.B., HMCS *Brunswicker*
Quebec, Que., HMCS *Montcalm*
Montreal, Que., HMCS *Donnacona*
Toronto, Ont., HMCS *York*
Ottawa, Ont., HMCS *Carleton*
Kingston, Ont., HMCS *Cataraqui*
Hamilton, Ont., HMCS *Star*
Windsor, Ont., HMCS *Hunter*
Thunder Bay, Ont., HMCS *Griffon*
Winnipeg, Man., HMCS *Chippawa*
Saskatoon, Sask., HMCS *Unicorn*
Calgary, Alta., HMCS *Tecumseh*
Vancouver, B.C., HMCS *Discovery*
Esquimalt, B.C., HMCS *Malahat*

Naval Reserve Units, commanded by Reserve Officers, provide both basic and specialized training for officers and men of the Naval Reserve. Additional training is also conducted in Regular Force schools across the country in HMC Ships.

The Militia

Following the review undertaken by the Government in 1969 of Canada's defence and foreign policy, the basic priorities of the defence policy were re-defined, with greater emphasis placed on the protection of Canada's national sovereignty. These decisions, coupled with the need for financial restraints, resulted in changes to the organization and role of the Militia within the general context of the re-defined roles of Canada's Armed Forces as a whole.

The Militia has been reduced to a strength of approximately 19,000 which has been achieved by reductions in unit establishments and in the number of service units. Little change was made in the number of armoured, artillery and infantry units because it is for this type of militiaman that the greatest need is foreseen. The Militia is now composed of 87 major units and 78 minor units, with command and control being exercised through five Militia Area Headquarters and 21 Militia District Headquarters.

The traditional role of the Militia to support the Regular Force has been re-emphasized. ecifically, the Militia will now: (1) provide trained individuals for augmentation and nforcement of the Regular Force; (2) provide trained sub-units to support the field force the defence of Canada and the maintenance of internal security; (3) provide trained rsonnel for the augmentation of the civil emergency operations organization; and (4) form base on which the Regular Force could be expanded in the event of an emergency.

To ensure a closer relationship between the Militia and the Regular Force and to ilitate a training program more closely related to its role, the Militia, less 11 communica- n units, was placed under direct command of Commander, Mobile Command, on Apr. 1, 70. The 11 communication units, whose role is to augment the communication system, re placed under the command of Canadian Forces Communication Command on the ne date.

r Reserve

The active sub-components of the Primary Reserve of the air element are designated Air Reserve, which is made up of six Reserve Flying Squadrons and four Air Reserve gional Headquarters. Montreal and Toronto each has two Flying Squadrons and one Reserve Regional Headquarters; Winnipeg and Edmonton each has a single Flying uadron and an Air Reserve Regional Headquarters. The Air Reserve Regional Head- arters is required to provide the necessary administrative support to the Flying Squadron include all phases from recruiting to release procedures, except for operational control l flying training. All Air Reserve Squadrons are responsible through 10 Tactical Air oup to the Commander, Mobile Command. All Flying Squadrons are equipped with DHC-3 *Otter*. Their role is light tactical air transport and reconnaissance for ground ces. They can be tasked as: (1) tactical air transport, including logistics support, air cuation of casualties, communications and liaison; (2) airborne surveillance in support of und forces in a permissive air environment; (3) aerial photography to provide the und forces with a limited photographic capability that will supplement the reconnais- ce provided by specialized tactical reconnaissance aircraft; (4) aerial, visual, photo- phic operations; and (5) provision of a reserve of trained pilots who could be incorpor- d into the Mobile Command Flying Units if required.

nadian Armed Forces Cadets

The object of the cadet movement in Canada is to provide the opportunity for young h, aged 13 to 18, to acquire the fundamentals of good citizenship and leadership through mbination of training at local cadet units and at summer camps. In keeping with the fied concept of the Canadian Armed Forces, the Sea, Army and Air Cadet organizations e integrated the command and control functions of their respective organizations and pted a common aim: "To develop in youth the attributes of good citizenship and leader- ; to promote physical fitness; and to stimulate their interest in the Sea, Land and Air nents of the Canadian Forces". While cadet officers remain environmental, they are missioned in the Cadet Instructor List which is a sub-component of the Canadian ces Reserve.

Royal Canadian Sea Cadets.—Royal Canadian Sea Cadets, sponsored by the Navy gue of Canada in partnership with the Canadian Forces, comprise 183 corps which are ervised jointly by the local branches of the League and by Regular Force officers. truction at corps level is carried out by Cadet Instructor List (Sea). Two training blishments, *Cornwallis* on the East Coast and *Quadra* on the West Coast, accommodate ers and cadets for two-week training periods in summer. Under an exchange program, Canadian sea cadets exchange visits with an equal number of United States sea cadets the East and West Coasts, and 10 exchange with British sea cadets. In addition, cted cadets receive a six-week training course at Canadian Forces bases. Sea experi- e is provided throughout the year in HMC Ships and Ministry of Transport Ships. f Jan. 31, 1970, the strength of the corps was 1,034 officers and 11,292 cadets.

Royal Canadian Army Cadets.—Supervision of the organization and training Army Cadets is the responsibility of the Regular Force. The training and administrati is the responsibility of officers of the Cadet Instructor List (Army), a sub-component of t Canadian Forces Reserves, and civilian instructors. As of Jan. 31, 1970, officers and civ ian instructors numbered 2,557 and there were 46,350 cadets enrolled in 447 corps.

The International Exchange Visits Program gave Army cadets an opportunity to vis and train abroad; 90 cadets went to Jamaica, Barbados, Trinidad and Tobago, Guyan and Grenada; 16 went to the National Rifle Association matches at Bisley, England, a two officers and 12 cadets attended the Outward Bound Course at Towyn, Wale Cadets from the Caribbean countries trained at Camp Gagetown, N.B., Valcartier, Qu and Ipperwash Cadet Camp, Ont. One officer and 12 cadets from Britain trained at t National Army Cadet Camp at Banff, Alta., and 14 British cadets participated in t Dominion of Canada Rifle Association matches at the Connaught Ranges near Ottaw Seven cadets from Canada attended the U.S. Ranger course at Hawk Mountain, Pa., a a similar number of U.S. Rangers attended Banff National Cadet Camp. Fourteen U. airborne cadets attended a two-week expedition in the Bruce Peninsula in Ontario and fi Canadian airborne cadets trained at the U.S. Airborne Centre in Fort Benning, Ga.

In 1970, 3,850 cadets attended six-week trades and specialist courses at Camp Gag town, N.B., CFB Valcartier in Quebec, CFB Borden, CFB London and Ipperwash Cam in Ontario, CFB Shilo in Manitoba, CFB Calgary in Alberta and CFB Esquimalt and Ve non in British Columbia; 3,413 cadets attended two-week cadet leader and special cam at Camp Gagetown, Valcartier, Montreal, Ipperwash, Shilo, and Vernon; 220 master cade attended the National Army Cadet Camp at Banff for six weeks of training which includ mountain marches, rock-climbing and survival.

Royal Canadian Air Cadets.—The Air Cadet movement operates on the basis of partnership between the Air Cadet League of Canada, a voluntary civilian organization, a the Canadian Armed Forces. The League sponsors and administers air cadet activiti while the Canadian Armed Forces provide training personnel, syllabi and equipment a also assist the League in organization and administration. The objectives of training are encourage air cadets to develop the attributes of good citizenship, to stimulate in them a interest in aviation and space technology, and to help them develop a high standard physical fitness, mental alertness and discipline. The authorized ceiling of cadet enrolme is 30,000; the strength at Jan. 31, 1970, was 28,700 cadets attached to 385 squadrons acro Canada.

During the summer of 1970, camps were conducted at CFB Greenwood, N.S., Bago ville, Que., Trenton, Ont., and Penhold, Alta., attended by 7,920 cadets. A six-week seni leaders' course for 240 cadets, a technical training course for 100 cadets, and a six-we physical training and recreational course for 75 cadets were held at CFB Borden, Ont. bush-familiarization course, teaching the techniques of survival and ground search, w conducted at Namao, Alta., for 54 cadets. Under the International Exchange Visi Program, 62 air cadets were exchanged with Austria, Belgium, Britain, France, Israel, t Netherlands, Norway, Spain, Sweden, Switzerland, the United States and the Feder Republic of Germany.

About 250 senior air cadets receive flying training annually at flying clubs throug Canadian Armed Forces sponsored scholarships; additional scholarships were awarded b the Air Cadet League and other organizations in 1970.

Section 6.—The Defence Research Board

The Defence Research Board is the agency in the Department of National Defen responsible for scientific research. It was created in 1947 by an amendment to t National Defence Act and consists of a full-time chairman and a vice-chairman, five e officio members, and a varying number of members selected from universities and industr

appointed by the Governor in Council. The ex officio members are the Deputy Minister of National Defence, the President of the National Research Council, the Chief of Defence Staff, the Vice Chief of Defence Staff and the Chief of Technical Services. The Chairman is the chief executive officer of the Board's research organization. He is a member of the Defence Council, which is the senior policy body of the Department of National Defence. The Vice-Chairman is an associate member. The Board provides, through the Chairman, scientific advice to the Minister of National Defence and scientific and technical assistance to the Canadian Armed Forces.

The research organization consists of seven research establishments which carry out an intramural program of research specifically oriented toward military needs. The Board also conducts an extramural research program through grants in aid of research to universities. These investigations are usually basic in nature and seek to provide new knowledge in fields from which important military developments are likely to arise. Support is also provided to industry on a cost-sharing basis with the object of promoting and strengthening the applied research.

There are effective arrangements with Canada's allies to ensure mutual use of defence scientific knowledge, resources and facilities. The Board represents Canada on a number of specialist committees through which NATO's scientific endeavours are processed and co-ordinated. The Board maintains liaison offices in Washington, London and Paris.

Research on maritime warfare problems, particularly those relating to submarine detection and tracking, is carried out at the Defence Research Establishment Atlantic and at the Defence Research Establishment Pacific, the latter also being responsible for related research in the Arctic. Research and development of weapons and defence against various weapons is undertaken in co-operation with the Armed Forces at several establishments, the largest of which is the Defence Research Establishment Valcartier. Its principal activities include studies on armaments, night-vision aids and detection devices, lasers, propellants and explosives, aerospace research and weapons systems analysis.

Defence communication studies are carried out by the Communications Research Centre (Department of Communications) on behalf of the Defence Research Board. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at two Defence Research establishments, the Defence Research Establishment Suffield at Ralston, Alta., and the Defence Research Establishment Ottawa; the latter is also responsible for the major northern activities and for power sources.

The Defence and Civil Institute of Environmental Medicine is an amalgamation of the Board's former Defence Research Establishment Toronto and the Canadian Forces Institute of Environmental Medicine, the research and associated facilities being available also to other Federal Government departments and agencies. Its defence program concerns the efficient performance of man in the military role and includes behavioural and bioscience investigations related to all environments. It advises on the physiological and psychological fitness of aircraft crews and on a variety of training projects. Highly specialized assistance in the investigation of accidents in all environments is available both for military and for civil agencies, with particular emphasis on human factors and environmental situations with serious hazard potentials. The Defence Research Analysis Establishment provides scientific evaluation and analysis of present and future weapons systems, tactical doctrine and other aspects of military operations, and studies broad strategic problems.

Thus, the Board continues to support the fields of research which are of foremost interest to the Canadian Armed Forces and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and other appropriate departments of government to ensure that research and development activities are closely integrated with production.

Section 7.—Canada Emergency Measures Organization

The Canada Emergency Measures Organization was brought into being to initiate stimulate and co-ordinate the civil aspects of defence policy delegated to federal departments and agencies to meet the threat of nuclear war on Canada. It is also responsible for providing support and guidance to provincial and municipal authorities in the development of their emergency capabilities.

Plans exist at all levels of government for the provision of emergency arrangements for health services, welfare services, employment of manpower and national resources and for practically every area of endeavour that is required to respond in an emergency situation.

The 1969 Year Book, at pp. 1201-1203, contains details of the establishment, powers and functions of Canada EMO, together with an outline of provincial government civil emergency responsibilities.

Section 8.—Defence Construction (1951) Limited

Defence Construction Limited (DCL) was established in 1950 as a Crown company to contract for major military construction and maintenance projects required by the Department of National Defence. The present company was incorporated in 1951 under the authority of the Defence Production Act. In April 1965 the control and supervision of Defence Construction (1951) Limited was transferred from the Minister of Defence Production to the Minister of National Defence. Defence Construction (1951) Limited is a Crown corporation as defined in Part VIII of the Financial Administration Act and listed in Schedule "C" in the Act (see p. 157).

The delineation of responsibility between the Department of National Defence and DCL is as follows. The Department of National Defence, as owner and the design authority, is responsible for providing DCL with complete plans and specifications as well as funds from which contract payments are made; the technical direction and supervision of the work of design consultants as well as procurement of land, when required, is also provided by the Department. Defence Construction (1951) Limited is the contracting and construction supervisory agency. Its function is to obtain tenders, make recommendations regarding awards and to award and to administer major construction and maintenance contracts. Upon request from the Department of National Defence, DCL also engages architects and engineers to prepare plans and specifications in accordance with the requirements of the Department. Contracts are entered into between the contractor or consultant and DCL. As an integral part of its contracting role, DCL is responsible for the administration of the contract, supervision of the construction work, the certification of the contractors' progress claims for payment and that the work has been completed in accordance with the contract and handed over to the Department. The Department of Supply and Services is responsible for payment of contract accounts.

PART I.—OFFICIAL SOURCES OF INFORMATION

Section 1.—Books About Canada

This basic list of books about Canada, contributed by the National Library, includes selection of publications grouped alphabetically by author and arranged under the subject ssifications of Biography, Country and People, Economics, External Relations, Govern- nt and Politics, History, Literature and the Arts, and General Reference Works. The lection represents many aspects of Canadian life, emphasizes the latest editions of books blished within the past five years, and includes titles issued in either or both English d French, accompanied by the publisher's address.

It should be noted that, although this list is now an annual feature of the Year Book, is not a cumulative presentation; it is limited to about 480 titles, necessitating the omis- n of some items that appeared the preceding year to permit the inclusion of others. For ditional titles, the reader should consult the lists of books in earlier Year Books or one more of the bibliographical collections listed below under the heading "General Reference orks", particularly the monthly or annual editions of *Canadiana* published by the ational Library.

Biography

DDISON, Ottelyn. *Tom Thomson; the Algonquin years*, by Ottelyn Addison in collaboration with Elizabeth Harwood. With drawings and appendix by Thoreau MacDonald. Toronto, Ryerson Press, 1969. 98 p.

AL, J. R., et Poliquin, J.-M. *Les trois vies de Pearson.* Montréal, Éditions de l'Homme, 1968. 269 p.

CHARD, Henri. *L'héroïne indienne Kateri Tekakwitha.* Montréal, Fides, 1967. 200 p.

RGERON, Gérard. *Ne bougez plus! Portraits de 40 politiciens de Québec et d'Ottawa.* Montréal, Éditions du Jour, 1968. 223 p.

ORMAN, Sylvia. *John Toronto; a biography of Bishop Strachan.* Toronto, Clarke, Irwin, 1969. 222 p.

NADA. Department of Public Printing and Stationery. *The founders and the guardians; Fathers of Confederation, Governors-General, Prime Ministers.* Ottawa, Queen's Printer, 1968. 147 p.

CANADA. Département des impressions et de la papeterie publiques. *Fondateurs et gardiens; Pères de la Confédération, Gouverneurs généraux, Premiers ministres.* Ottawa, Imprimeur de la Reine 1968. 147 p.

Canadian writers. Écrivains canadiens. A biographical dictionary edited by—un dictionnaire biographique rédigé par Guy SYLVESTRE, Brandon CONRON, C. F. KLINCK. New ed. rev. and enl. Nouv. éd. rev. et augm. Toronto, Ryerson Press, 1966. 186 p. (Articles by French language authors are in French.)

CARR, Emily. *Hundreds and thousands; the journals of Emily Carr.* Toronto, Clarke, Irwin, 1966. 332 p.

DANDURAND, Raoul. *Les mémoires du sénateur Raoul Dandurand, 1861-1942.* Édités par Marcel HAMELIN. Québec, Presses de l'Université Laval, 1967. 374 p.

DESROSIERS, L. P. *Paul de Chomedey, sieur de Maisonneuve.* Montréal, Fides, 1967. 322 p.

Dictionary of Canadian biography. Toronto, University of Toronto Press, 1966- (to be complete in 24 v.)

Dictionnaire biographique du Canada. Québec, Presses de l'Université Laval, 1966- (l'ouvrage entier doit comprendre 24 v.)

EATON, Sara. *Lady of the backwoods; a biography of Catharine Parr Traill.* Toronto, McClelland and Stewart, 1969. 175 p.

EGGLESTON, Wilfrid. *While I still remember; a personal record.* Toronto, Ryerson Press, 1968. 329 p.

FRÉGAULT, Guy. *Pierre LeMoyne d'Iberville.* Montréal, Fides, 1968. 300 p.

FRENCH, Maida P. *Kathleen Parlow; a portrait.* Toronto, Ryerson Press, 1967. 167 p.

GWYN, R. J. *Smallwood: the unlikely revolutionary.* Toronto, McClelland and Stewart, 1968. 304 p.

HAMBLETON, Ronald. *Mazo de la Roche of Jalna.* Toronto, General Pub. Co., 1966. 239 p.

HARVISON, C. W. *The Horsemen.* Toronto, McClelland and Stewart, 1967. 271 p.

INNIS, Mary Quayle, ed. *The clear spirit; twenty Canadian women and their times.* Toronto, University of Toronto Press, 1966. 304 p. (Includes two chapters in French)

JACKMAN, S. W. *Portraits of the premiers; an informal history of British Columbia.* Sidney, B.C., Gray's Pub., 1969. 272 p.

JACKSON, A. Y. *A painter's country; the autobiography of A. Y. Jackson.* Centennial ed. Toronto, Clarke, Irwin, 1967. 177 p. (Reprinted with an additional chapter 1967)

KAVANAGH, Martin. *La Vérendrye, his life and times; a biography and a social study of a folklore figure, soldier, fur trader, explorer.* Brandon, 1967. 262 p.

KIRKCONNELL, Watson. *A slice of Canada; memoirs.* Toronto, Published for Acadia University by University of Toronto Press, 1967. 393 p.

LAPIERRE, J. E. *Calixa Lavallée, musicien national du Canada.* Montréal, Fides; Publications de la Société historique de Montréal, 1966. 291 p.

LA ROQUE DE ROQUEBRUNE, Robert. *Cherchant mes souvenirs, 1911-1940.* Montréal, Fides, 1968. 243 p. (Collection du Nénuphar, 31) (Suite de Testament de mon enfance et de Quartier Saint-Louis publiés dans la même collection.)

LEGATE, D. M. *Stephen Leacock; a biography.* Toronto, Doubleday Canada; New York, Doubleday, 1970. 296 p.

LEPROHON, Pierre. *Le destin tragique de Cavalier de La Salle.* Paris, Nouvelles Éditions Debresse, 1969. 275 p.

LOWER, A. R. M. *My first seventy-five years.* Toronto, Macmillan, 1967. 384 p.

MORIN, Renée. *Un bourgeois d'une époque révolue: Victor Morin, notaire, 1865-1960.* Montréal, Éditions du Jour, 1968. 159 p. (Les idées du jour, D-34)

MORRIS, Audrey Y. *Gentle pioneers; five nineteenth-century Canadians.* Toronto, London, Hodder and Stoughton, 1968. 253 p. (Strickland family)

Section 2.—Federal Government Information Services

The preparation and distribution of information on activities of the Federal Government is the responsibility of special divisions operated for this purpose in more than three dozen governmental departments and agencies. Because each of these information divisions concerns itself almost entirely with the functions of its respective branches of government, the Cabinet decided in 1970, upon recommendation of a Task Force which conducted a year-long study of the services, to create a new co-ordinating, advisory and resource unit designated as "Information Canada".

Information Canada's role is not to centralize federal information services, but to assist in offering a better performance and to initiate information programs on subjects dealing with nationhood in general and federalism in particular, which go beyond the interests of individual departments. In addition to providing information to the public through press releases, booklets and other means used in the past, Information Canada has embarked upon the establishment of a network of inquiry centres in the principal centres of Canada where citizens may seek and obtain data on any aspect of Federal Government operations and other matters pertaining to Canadian society as a whole. It has also been assigned the duty of keeping Parliament and Government advised on a continuing basis of the news and comments Canadians are receiving through the news media, of the public's aspirations and complaints and its attitudes toward federal policies and programs as indicated in surveys, polls and other testing methods.

To help Information Canada perform its function, three components attached to other departments of government in the past have been transferred to it. These are the Publishing Division of the Canadian Government Printing Bureau, the Canadian Government Exhibition Commission and the Still Photo Library of the National Film Board. Their staffs comprise more than two thirds of the personnel of the new organization.

The basic assignment the Cabinet has given to Information Canada, as set out by the Prime Minister in a policy statement on information services to Parliament on Feb. 10, 1970, is one of assistance in "bringing government ever closer to the people" and "expanding the dimensions of democratic dialogue in this nation".

Approximately 400 Information Service Officers are engaged in the gathering and dissemination of information relating to operations of the Federal Government. As many more men and women, while not formally classified as such, perform one form of information function or another, either on a full-time basis or in association with other duties.

Among the information services provided by the Government of Canada, those offered by the Dominion Bureau of Statistics are of a particular nature. The Bureau is the chief source of statistical information on all phases of the Canadian economy supplied to both the general public and various branches of government at all levels. The operations of the Bureau are dealt with in greater detail on pp. 1302-1303.

Citizens with specific inquiries concerning Federal Government programs, policies and other aspects of operation should direct these to the information division of the department of government concerned, either at national headquarters in Ottawa or at regional offices where these exist, or they may seek the data desired through the inquiry offices of Information Canada. Inquiries relating to provincial activities may be directed to the provincial government department concerned.

Section 3.—Sale of Official Publications

Under the provisions of Order in Council PC 1970-559, responsibility was transferred from the Queen's Printer to Information Canada for the sale of official publications of Parliament and the Government of Canada that are issued to the public (with a few exceptions covered by statute), as well as the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statute to receive them.

Information Canada issues a *Daily Checklist of Government Publications* which records for the information of the public services, libraries, etc.—Federal Government publicatio immediately upon release. Those authorized by law or regulation to receive free copies such publications receive the *Daily Checklist* without charge; others desiring the servi may purchase an annual subscription to be forwarded daily or in weekly lots as requested.

Information Canada also issues the *Monthly Catalogue of Canadian Government Pu lications*, a comprehensive listing of official publications, public documents and papers n of a confidential nature published at government expense, an *Annual Catalogue* listi publications issued during the previous year, as well as sectional catalogues and selecte titles bulletins advertising new government publications.

Information Canada is the national sales agent in Canada for publications issued b the United Nations; the United Nations Educational, Scientific and Cultural Organizatio the World Health Organization; the Food and Agriculture Organization; the Organizatio for Economic Co-operation and Development; the International Atomic Energy Agenc the International Civil Aviation Organization; the Council of Europe; the Organization American States (Pan American Union); the General Agreement on Tariffs and Trade; th New Zealand Government; the International Labor Organization; the World Meteor logical Organization; the International Telecommunications Union; and the Assembly Western European Union.

Publications of the Canadian Government and international organizations liste above may be obtained from Information Canada bookshops located in Halifax, Ottaw Montreal, Toronto, Winnipeg and Vancouver or by mail from headquarters of Informatio Canada, 171 Slater Street, Ottawa, K1A 0S9.

Section 4.—Publication Services of the Dominion Bureau of Statistics

The Dominion Bureau of Statistics, established by statute in 1918 as Canada's centra statistical agency, has become a vast storehouse of current and historical information o almost every kind of Canadian economic and social activity. It conducts the Census Canada at 10-year intervals (years ending in '1') and five-year intervals (years ending i '6') and, in addition, regularly surveys social and economic change under some 20 broa subject-matter headings. Surveys are conducted monthly, quarterly, annually and a special studies, and the results are published on corresponding bases.

The Bureau is a separate department of government (to be known in future as *Statistic Canada*), reporting to Parliament through the Minister of Industry, Trade and Commerce Its growth, both in personnel and in complexity of statistical activity, has closely parallele the development of the nation as a modern and increasingly sophisticated industrial state The total staff of the Bureau, which includes the largest single body of social scientists i one organization in Canada, has more than doubled in the past 15 years to some 3,300 i 1971.

The Bureau's statistical collection activities range throughout the nation, from larg industrial cities to remote northern areas. The statistics resulting from these activitie vary from well-known national aggregates, such as the national accounts, the consume price index, and employment and unemployment, to small census detail on urban localitie a few city blocks in size. The information produced describes in quantitative terms the eco nomic and social environment, and is used mainly to improve the quality of decision-makin and research in the Canadian economy. Basic uses in the public sector are concerned wit the development and administration of social and economic policies and programs; uses i the private sector are important and extensive, and are frequently in marketing and mer chandising, in connection with the establishment of branch plants, retail outlets and a variety of other projects associated with the generation of economic activity. In addition uses by business include various types of business research and economic forecasting.

DBS information is, for the most part, made available to the public in the form of blications although, for more sophisticated users, there is an increasing output in machine-dable form, such as computer tapes and sets of punch cards. In the most recent count, 3S publications totalled 1,177. Of these, 114 appear monthly or more frequently, 39 are ued quarterly, 377 annually, and 24 every two or three years. The publications pro-ced as a result of the national census include 278 for 1961 and 122 for 1966. The other 3 publications are issued on an occasional basis and include special studies and manuals ociated with statistical activities. DBS statistical reports are increasingly published in ingual form or appear in separate English and French editions.

About 1,250,000 copies of DBS publications are issued yearly on a subscription basis, clusive of the DBS Daily and the DBS Weekly Bulletins which contain information in mmary and preliminary forms and which have a total distribution of some 800,000 copies ear.

The publications program is designed to include the statistical information from each bject area which is most commonly used. However, in response to individual inquiries more detail than may be contained in a regular publication, a large amount of unpub-hed information is issued in the form of special tabulations.

In addition to the publications program, there is a very large secondary distribution of tistical information through newspapers, magazines, trade journals, trade associations d by radio and television broadcasts. Much DBS material also becomes part of a wide ge of reference publications such as year books and encyclopedias and is incorporated o research studies, in books, learned journals, reports of Royal Commissions or Com-ssions of Inquiry, and in a great variety of other public and private documents.

The nature and extent of DBS output is made known to the public in several ways. e principal vehicle is the DBS Catalogue which is issued approximately every two years d kept up to date by means of current supplements. The Catalogue and supplements free on request to DBS headquarters (postal address: Dominion Bureau of Statistics, tawa, Ont.). The catalogue lists and describes the publications issued and the machine-dable and unpublished information that are available. Publications are grouped by bject areas; a commodity index has several thousand entries arranged in alphabetical ler and cross-referenced where necessary to show the several publications in which infor-tion on a given subject may be found.

DBS publications may be obtained from DBS headquarters by using the order form pplied with the Catalogue; they may also be obtained through DBS regional offices in John's, Halifax, Montreal, Ottawa, Toronto, Winnipeg, Edmonton and Vancouver sted in city telephone directories under "Government of Canada"). More frequently d DBS publications are also stocked by Information Canada bookstores in principal nadian cities. Major public and university libraries, provincial libraries and the Na-nal Library in Ottawa have DBS publications available for reference. The DBS rary in Ottawa contains a complete collection of all DBS publications issued since the reau was founded.

DIRECTORY OF SOURCES OF OFFICIAL INFORMATIO

NOTE.—In the "Federal Data" column, the major source of information on each subject is given first; ot sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau Statistics which appear at the end of each listing with which they are concerned, except where they are the m source.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and escriptive text of previous editions. Therefore the following list has been compiled as index to such miscellaneous material and special articles as are not repeated in the esent edition. This list links the Year Book with its predecessors in respect of matters at have not been subject to wide change. Those Sections of Chapters, such as "Popula-on", which are automatically revived when later census material is made available and which adequate references are made in the text, are not listed unless they are in the nature special contributions. The latest published article on each subject is shown, except hen an earlier article includes material not repeated in the later one. When an article vers more than one subject it is listed under each appropriate heading.

Joseph Maingot, Ottawa, Ont.: to be Law Clerk and Parliamentary Counsel of th House of Commons from Jan. 1, 1971, *vice* P.-M. Ollivier.

PART IV.—ORDER OF CANADA AWARDS

In 1967, the Centennial of Confederation, there was established a system of honour and awards for Canada. On the recommendation of the Government, Her Majesty Queen Elizabeth the Second approved the issue of Letters Patent establishing a society of honour to be known as "The Order of Canada" for the purpose of according recognition to Canadian citizens and other persons for merit. The Order consists of three awards—the Companion of the Order of Canada, the Medal of Courage and the Medal of Service. The Chancellor and Principal Companion of the Order is the Governor General and nominations for awards are made directly to the Governor General by an Advisory Council composed of the Chief Justice of Canada (Chairman), the Clerk of the Privy Council, the Under Secretary of State, the Chairman of the Canada Council, the President of the Royal Society of Canada and the President of the Association of Universities and Colleges of Canada. Companions of the Order are selected on the basis of "merit, especially service to Canada or to humanity at large" and the maximum number shall never exceed 150. The Medal of Courage is awarded for the performance of "an act of conspicuous courage in circumstances of great danger" and is not, of course, limited to a fixed maximum number. The Medal of Service is awarded for different categories of meritorious service from that for Companions and not more than 50 may be given in any one year.

The first appointments were made on July 6, 1967 by the Governor General in his capacity as Chancellor and Principal Companion of the Order of Canada; they are listed in the 1969 Canada Year Book at p. 1269, together with subsequent appointments of Dec. 22, 1967, Apr. 30, 1968, June 28, 1968 and Dec. 20, 1968. From the latter date to December 1970, the following appointments were made:—

June 28, 1969

Walter C. MacKenzie, M.D.
Right Reverend Malcolm A. MacLellan
Margaret Murray
Bruce Nodwell
Thomas H. Raddall
Group Captain Stefan Sznuk, C.B.E.
Maud Watt
William A. White
Ethel Wilson

PART V.—FEDERAL LEGISLATION, 1969-70

Successive issues of the Canada Year Book carry a continuous record of legislation passed by the Parliament of Canada. Listed here is legislation passed in the latter part of the First Session of the Twenty-eighth Parliament from May 9, 1969 to Oct. 22, 1969; in the Second Session from Oct. 23, 1969 to Oct. 7, 1970; and in the beginning of the Third Session from Oct. 8, 1970 to Dec. 18, 1970, when Parliament adjourned for Christmas recess. Naturally in summarizing material of this kind it is not possible to convey the full implication of a statute but only to give some indication of its content. The reader who is interested in any specific Act is referred to the *Statutes of Canada* in the given volume and chapter.

Legislation of the First Session of the Twenty-eighth Parliament, May 9, 1969 to Oct. 22, 1969*

Subject, Chapter and Date of Assent	Synopsis
17 Eliz. II	
Agriculture—	
50 June 27	*The Pest Control Products Act* updates the pest control legislation passed in 1939 by adding government authority to regulate the manufacture, handling, use and advertising of products used for the control of pests and the organic functions of plants and animals, and authority to regulate manufacturing establishments in regard to prescribed control products for export or interprovincial movement.
Finance—	
36 June 27	*Appropriation Act No. 3, 1969* (Main Supply) grants certain sums of money for the public service for the financial year ending Mar. 31, 1970.
Fisheries—	
40 June 27	*An Act to amend the Fisheries Improvement Loans Act* increases the maximum amount of loan to a fisherman from $10,000 to $25,000, establishes a new period during which loans made by banks and other lenders to fishermen may be guaranteed by the government, and limits the federal liability during that period to $10,000,000 for each type of lender.

* The First Session of the Twenty-eighth Parliament opened on Sept. 12, 1968; legislation passed and assented to between that date and May 8, 1969, is listed in the 1969 Canada Year Book at pp. 1272–1274.

Legislation of the First Session of the Twenty-eighth Parliament, May 9, 1969 to Oct. 22, 1969—continued

Subject, Chapter and Date of Assent	Synopsis
overnment—	
47 June 27	*The National Library Act* repeals the legislation under which the National Library previously functioned (RSC 1952, c. 330) and provides a new charter which will enable the Library to cope with current explosive library developments, to co-ordinate all federal library services and permit the development of a national network of library service. Reorganization of the National Library Advisory Council (as a Board) will enable it to give more adequate assistance to the National Librarian.
54 July 9	*The Official Languages Act* declares that the English and French languages are the official languages of Canada for all purposes of the Parliament and Government of Canada, and possess and enjoy equality of status and equal rights and privileges as to their use in all the institutions of the Parliament and Government of Canada.
stice—	
37 June 27	*An Act to amend the Criminal Code* makes it an indictable offence for a person to engage in the practice of placing or agreeing to place bets on behalf of another person for a consideration.
38 June 27	*The Criminal Law Amendment Act, 1968-69* makes major changes in criminal law and procedures, amending particularly the Criminal Code with respect to abortions, homosexuality, lotteries and impaired driving and also amending the Parole Act, the Penitentiary Act, and the Prisons and Reformatories Act; in addition, certain consequential amendments are made to the Combines Investigation Act, the Customs Tariff and the National Defence Act.
venue—	
44 June 27	*An Act to amend the Income Tax Act* implements certain approved budget proposals, the most important being those dealing with the taxation of life insurance companies and the establishment of a 2-p.c. social development tax to help finance health insurance services, welfare and post-secondary education costs, and social development payments to the provinces.
ade—

PART VI.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; and annually from that year in successive editions. A reprint entitled *Canadian Chronology, 1497-1960* is also available from the Dominion Bureau of Statistics. The following listing covers the period May 1, 1969 to Dec. 31, 1970 and it should be mentioned that certain of the dates given therein are approximate. The publication *Canadian News Facts,* Toronto, has been very valuable in the preparation of this chronology. References regarding changes in federal and provincial legislatures or ministries are not included but may be found in Chapter II on Constitution and Government or in the Appendix.

1969

May: *May 1,* Judge Lucien Coe Kurata removed from the Bench by the provincial Cabinet following Ontario Supreme Court finding that he was unfit to serve by reason of misbehaviour. *May 2,* Agreement completed between the Federal Government and the Trans-Canada Telephone System for the establishment of a communications satellite, *Telesat Canada.* Commercial and industrial construction contractors in Toronto locked out members of 14 building trades unions, following a strike May 1 by 3,000 members of the International Brotherhood of Electrical Workers who rejected the wage increase offered. National Indian Conference announced establishment of a six-member committee to define Indian rights and advise the Government of desirable changes in the Indian Act; accepted by Indian Affairs and Northern Development Minister Chrétien. Death in Montreal of Donald Gordon, age 67, former President of Canadian National Railways. *May 3,* 95th Kentucky Derby won by Majestic Prince owned by Frank McMahon of Vancouver and Calgary. *May 4,* Montreal Canadiens won the Stanley Cup, symbol of hockey supremacy, for the 16th time, in playoff with the St. Louis Blues. The Federal Government prohibited fishing in Placentia Bay, Nfld., and banned the export of fish from that area because of pollution suspected of being caused by the release of waste from the plant of Electrolytic Reduction Co. of Canada. *May 6,* Dr. Léo Marion, Dean of Pure and Applied Sciences, Ottawa University, named winner of the Chemical Institute of Canada Montreal Medal for significant leadership in the chemistry profession. The Governor General's Literary Award to Leonard Cohen for English language poetry, announced Apr. 21, declined by the author. *May 7,* The CBC announced the removal of all tobacco advertising from its radio and television networks. *May 8,* Plans to establish in Canso, N.S., the world's first commercial plant to produce high-purity fish protein announced; considered by nutritionists as a major breakthrough in solving world shortage of protein. Mrs. C. H. A. Armstrong, Toronto, elected President of the Victorian Order of Nurses for Canada, the second woman President since its founding in 1871 when it was presided over by Lady Aberdeen, wife of the then Governor General. *May 11,* Death in Toronto of Kenneth L. Carter, Chairman of the Royal Commission on Taxation. *May 12,* Report of the federal task force on sport tabled in the House of Commons. International Joint Commission proposal that specific standards be established for control of pollution of the Red River accepted by Canadian and U.S. Governments. *May 19,* The 6,300-member Air Canada unit of the International Association of Machinists, on strike for a month, accepted a settlement giving an increase in wages of 16 p.c. over 26 months and other benefits. *May 21,* 34 distinguished Canadians elected Fellows of the Royal Society of Canada. Major amendments to the Ontario Highway Traffic Act of Ontario, increasing both fines and jail sentences, approved by the Legislature. The Federal and Quebec Governments announced agreement for the establishment of the first national park in Quebec, to be located in the Gaspé region. Death in Cannes, France, of Pierre Dupuy, former Canadian Ambassador to France and Commissioner-General of Expo 67. *May 26,* U.S. spacecraft *Apollo 10* completed an eight-day mission, successfully performing manoeuvres preliminary to a

noon landing in July. 31 students arrested following the February riots at Sir George Williams University committed to trial. *May 28*, Alberta Resources Railway, a 235-mile line from Grande Prairie north to Solomon, officially opened by Premier Strom. *May 29*, Establishment of federal Commission of Inquiry into the non-medical use of certain drugs and substances; Gerald LeDain, Chief Commissioner. *May 30*, The parents of six juveniles convicted of mischief in the Sir George Williams University computer centre lost their appeals against the imposition of $250 fines for neglecting to exercise due care of their children. *May 31*, National Arts Centre in Ottawa officially opened by Prime Minister Trudeau.

June: *June 3*, Dr. W. G. Schneider, President, National Research Council, and Dr. J. A. Jeletsky, Geological Survey of Canada, awarded medals of the Royal Society of Canada for exceptional work in their respective fields of science. Finance Minister Benson announced Canada's agreement to the immediate application of all Kennedy Round tariff cuts, with one exception. *June 4*, Prime Minister Robarts of Ontario and Prime Minister Bertrand of Quebec signed historic agreement establishing a permanent Commission for Ontario-Quebec Co-operation to provide public services in the English and French languages and education to minority language groups wherever feasible, and to implement an exchange program between public servants. Federal and Saskatchewan governments signed cost-sharing agreement for financial assistance of $4,500,000 to assist in the development of the Meadow Lake area. *May 13*, Report of the House of Commons public accounts committee investigating the cost of refitting the aircraft carrier HMCS *Bonaventure* tabled; several senior officials and public servants severely criticized. *May 15*, Mail service in Montreal paralyzed by 5,000 mailmen and inside postal workers attending study sessions; strike vote set for May 19; disruption of service spread across Quebec and Ontario. *May 17*, A 1,500-pipe organ, to be built in Holland over the next 2½ years and installed in the National Arts Centre, presented, in token form, by Dutch-Canadians as formal thanks for Canada's role in the Second World War liberation of Holland; the token, a small six-stop instrument, was already installed. *May 19*, Report of a committee appointed in 1967 to study agricultural problems in Canada tabled in the House of Commons; recommendations included a three-year crop diversion scheme to prevent extension of acreage planted to wheat, and abolition of ineffective subsidies and price supports. *May 19-20*, Postal workers began a series of rotating 24-hour strikes in the face of deadlocked negotiations; efforts of mediator A. W. R. Carrothers, President and Vice-Chancellor of the University of Calgary, collapsed June 2. *May 22*, The CRTC announced new regulations, including the requirement of 50-p.c. Canadian programming throughout the TV broadcast day, including prime time, effective in the fall of 1970 for the CBC and before September 1971 for the private sector. *May 25*, Former Magistrate Frederick J. Bannon of Toronto, whose association with an ex-convict was the subject of a judicial inquiry in 1968, disbarred by the Discipline Committee of the Law Society of Upper Canada. *May 29*, In a ceremony at Government House, the Great Seal of Canada was applied to the Hudson's Bay Company's 300-year-old charter, making the oldest established firm in North America officially Canadian; the head office was transferred to Winnipeg from London, Eng. *May 31*, Canadian dollar unpegged from U.S. $0.925 in effect since May 2, 1962. A strike of 2,500 workers in 54 private hospitals in Quebec in support of a new wage contract began.

June: *June 1*, Soviet Union launched a two-man spacecraft, *Soyuz 9*, into orbit around the earth. Quebec Government announced establishment of a $50,000 reward fund for information about those responsible for five bombings that occurred in Montreal, May 31. *June 2-13*, Federal emergency relief assistance following earthquakes and extensive flooding in Peru, including gift fund, aircraft ferrying service, tents and flour, totalling about $1,000,000. *June 3*, Relief assistance of up to $7,500,000 in food aid offered to Romania to assist in its recovery from disastrous floods. *June 4*, In a meeting with the Prime Minister and Cabinet Ministers, 200 Indians from across Canada rejected the Government's Indian policy presented in the White Paper of June 1969. *June 5-6*, Federal and provincial Finance Ministers at a Winnipeg meeting agreed on limiting inflation, upholding wage restraints and the provision by Ottawa of extra funds for provinces most in need, but challenged federal plans for tax reform. *June 12*, Death in Toronto of J. Keiller Mackay, age 81, former Lieutenant-Governor of Ontario and Justice of the Supreme Court of Ontario. *June 17*, Federal White Paper on unemployment insurance tabled in the House of Commons; proposals include increased coverage to $100 weekly for up to 51 weeks and universal coverage except for self-employed persons. *June 18*, 50th anniversary of the Group of Seven commemorated by opening of an exhibition of 203 of their paintings at the National Gallery in Ottawa; attended by A. Y. Jackson, only living member of the Group. *June 19*, Interim report of the LeDain Commission tabled in the House of Commons. *June 22*, Following a wave of 12 terrorist incidents in Montreal during the past month, four men and two women appeared before a special inquiry for questioning regarding alleged subversive activities after seizure by police of money, dynamite, detonator caps, firearms, etc. *June 24*, Bomb explosion in a Department of National Defence building in Ottawa killing a woman employee. *June 25*, White Paper on foreign policy tabled in the House of Commons; its objectives included the fostering of economic growth, safeguarding of sovereignty, working toward peace and security, promoting social justice, enhancing the quality of life and ensuring environmental harmony, and announced Canada's plan to increase foreign aid allocations. Final volumes

of the Royal Commission on Bilingualism and Biculturalism tabled in the House of Commons. *June 26*, The revised Canada Elections Act lowering the minimum voting age in federal elections to 18 from 21 received Royal Assent; other provisions include the right to place party labels on ballots and the right to vote by proxy in certain instances. *June 30*, Ceremonies took place initiating the Changing of the Guard for the 1970 summer season; for the first time, the guard was composed entirely of students. *June 30-July 1*, Celebration of Manitoba's Centennial began with the arrival in Winnipeg of the Prime Minister and 23 federal Cabinet Ministers.

July: *July 2–15*, H.M. Queen Elizabeth II, H.R.H. the Duke of Edinburgh, H.R.H. Prince Charles and H.R.H. Princess Anne visited Manitoba and the Northwest Territories, taking part in centennial celebrations; H.R.H. Prince Charles was in Ottawa July 3–5. *July 5*, Crash near Toronto of an Air Canada DC-8 en route from Montreal to Los Angeles killed all 108 persons aboard; improper pre-landing procedure later found to be the cause; detailed investigation pending. *July 10*, Quebec Government passed its controversial health insurance Bill, bringing the province into the federal medicare plan. *July 11*, Damage estimated at $2,000,000 caused by hail and wind in area of Viking, Alta. *July 14*, Mountain in the St. Elias Range, Yukon Territory, named Mount Leacock in memory of the Canadian humorist. A Canadian lake freighter, the *Eastcliffe Hall*, loaded with pig iron, sank in the St. Lawrence Seaway near Cornwall, Ont., with the loss of nine lives; the captain later found to be responsible. *July 15–17*, Conference of provincial attorneys general held in Halifax; agreement reached regarding divorce and compensation for victims of violent crime. *July 16–26*, 9th British Commonwealth Games held in Edinburgh, Scotland; nearly 2,000 athletes from 41 nations participated; Canada came third after Australia and England, with 18 gold medals, 24 silver and 2 bronze. *July 22*, Agreement reached in British Columbia's three-month strike in the construction industry following an ultimatum by Labour Minister Peterson forcing return to work under threat of fines and jail terms. *July 26*, Death in Montreal of Rt. Hon. Robert Taschereau, age 73, former Chief Justice of Canada. *July 28*, Public inquiry into the relationship between personnel of the Ontario Provincial Police force and any person or persons of known criminal activity, more specifically with persons alleged to have Mafia connections, begun in Toronto; the report, released Dec. 17, stated that there was no evidence of any improper relationship between OPP personnel and persons of known criminal activity but was critical of the behaviour of several senior officers. The Federal Government directed a reprimand to the Soviet Ambassador stressing the need for observance of international rules governing shipping, pointing to recent incidents involving Canadian and Russian vessels, the latest of which was the sideswiping in fog of a B.C. fishing boat on July 25 by a Soviet vessel off the west coast of Vancouver Island; agreement reached on Oct. 1 under which Soviet vessels would not fish in Big Bank area off the west coast of Vancouver Island in return for use of port facilities. *July 30*, Alberta Government announced establishment of stricter oil pollution standards, effective Nov. 1, including continuous reports on volumes of raw gas and condensate produced at a plant, and installation of automatic closing gates to be activated in the event of a leak.

August: The Ontario Federation of Agriculture and the Ontario Farmers' Union protested against the financing of education through property taxes, by withholding part of their taxes. *Aug. 2*, British Columbia ferry *Queen of Victoria* and Soviet freighter *Sergey Yesinen* collided in Active Pass between the mainland and southern Vancouver Island; three passengers were killed and two injured; the Soviet vessel was placed under formal arrest at Vancouver; public investigation found the pilot of the freighter and the master of the ferry to be equally at fault. *Aug. 2–4*, Conference of provincial Premiers held in Winnipeg with pollution the major topic of discussion. *Aug. 2–9*, Prime Minister Trudeau on tour of the Yukon and Northwest Territories and British Columbia. *Aug. 5*, Federal Government made an extra $100,000,000 available for low-income housing. *Aug. 10*, Following strike-ending legislation passed at an emergency session of the Quebec National Assembly, 40,000 striking construction workers returned to their jobs, union and employer groups to resume negotiations in conjunction with a government-appointed conciliation officer. *Aug. 13*, An ancient burial ground, estimated by archaeologists to be more than 3,000 years old, found in the Grand Lake area of New Brunswick. Automobile insurance in Manitoba came under government jurisdiction; supplementary coverage may continue to be sold by private companies. *Aug. 17*, Architectural Institute of Japan announced that the Canadian pavilion at Expo 70 in Osaka had won the top architectural award. *Aug. 17–20*, Conference of provincial Municipal Affairs Ministers held in Winnipeg; discussions included constitutional reform, pollution, financial matters and a national building code. *Aug. 19*, In a further development in the 11-month postal dispute, Thomas O'Connor of Toronto named mediator. Canada sent $3,540,000 in emergency aid to Pakistan following devastating floods, mainly in food aid. *Aug. 20*, A heavy windstorm caused damage in the Lively, Copper Cliff, Sudbury and Field area of Ontario, killing at least four persons; damage in Sudbury alone estimated at $6,000,000. *Aug. 23*, Federal–Quebec agreement signed creating a national park in the St. Maurice Valley 100 miles northeast of Montreal, known as Mauricie. *Aug. 24*, Saskatchewan Centre of the Arts, centennial project of Regina, officially opened by Governor General Michener. *Aug. 26*, Death in Quebec of Senator Jean-Marie Dessureault, age 81. *Aug. 27*, Controversy in St. Leonard, Que., over the teaching of language in elementary schools ended with assurance that the St. Leonard School Board would allow the children to return to English classes.

September: *Sept. 2*, Agreement reached between negotiators for the British Columbia pulp industry and the workers' unions, some of whom had been on strike since July 24, giving a 22.5-p.c. wage increase in a new contract. *Sept. 3*, The Vanier Medal awarded to Hon. Marcel Cadieux, Under-Secretary of State for External Affairs, for significant contributions to Canada as a public servant. *Sept. 4*, Agreement reached between the Council of Postal Unions and the Federal Government, giving the workers a 55-cent-an-hour wage increase over 21 years, amounting to an average 7.2-p.c. increase. *Sept. 8*, Ten suspended Sir George Williams University students each fined $1,000 for participating in the computer centre "sit-in". General Election in Yukon Territory (see p. 1379). *Sept. 9*, A 100-p.c. ban on the use of pesticide DDT, effective Jan. 1, 1971, announced in Ottawa. Canaport, the first deep-water terminal for supertankers in North America, opened at Mispec Point, N.B., near Saint John. *Sept. 14–15*, Provincial Premiers and Prime Minister Trudeau held closed sessions in Ottawa to discuss the amendment of the British North America Act and financial problems. *Sept. 15*, Voting age in Manitoba elections lowered from 21 to 18. *Sept. 16*, Federal and Saskatchewan Governments approved plans for a $2,000,000 park project on land in southeast Saskatchewan owned by four Indian bands, the Indians to operate the

venture involving rental of land by cottagers. *Sept. 20,* Unmanned Soviet spaceship *Luna XVI* landed on the moon and obtained samples of the lunar surface, loaded them aboard a rocket and fired the missile toward earth. *Sept. 21,* Seventh Annual Review of the Economic Council of Canada released; its major concerns were health and education costs, trade barriers in the U.S. and Europe, the impending acceptance of Britain into the EEC, and Canada's dependency on exports. *Sept. 28,* Death in Cairo, Egypt, of President Gamal Abdel Nasser. *Sept. 30,* Agreement signed between Telesat Canada and Hughes Aircraft Company of California for construction of Canada's first domestic communications satellite.

October: *Oct. 3, Goin' Down the Road* named best Canadian movie of 1970. *Oct. 5,* James Richard Cross, senior British Trade Commissioner in Montreal, kidnapped from his home at gunpoint; the FLQ demanded a $500,000 ransom, a charter flight to freedom for Quebec's most dangerous convicted terrorists and the publication of the FLQ manifesto in exchange for his release; both Federal and Quebec Governments rejected their demands; Mr. Cross was held hostage during nearly two months of negotiations that ended in his release Dec. 3 and in the safe conduct of the kidnappers and some members of their families—seven persons in all—to Cuba. *Oct. 8–18,* Medical specialists in Quebec on strike over the provincial medical care insurance plan ended their protest when fear of violence and "possible emergency medical requirements" followed the political crisis in the province. *Oct. 9,* The British flag was lowered for the last time in Suva, Fiji Islands, marking the end of British rule; H.R.H. Prince Charles represented H.M. Queen Elizabeth II at the ceremonies. *Oct. 10,* Roland Michener Award for meritorious public service in journalism established; to be presented for the first time in 1971. *Oct. 10–18,* Pierre Laporte, Minister of Labour in the Quebec Government, kidnapped by members of the FLQ and held hostage for a week until found dead of strangulation. *Oct. 12,* Combat-trained Army troops left Camp Petawawa for Ottawa to guard Members of Parliament and diplomatic officials. *Oct. 13,* External Affairs Minister Sharp announced in the House of Commons that Canada and People's Republic of China have agreed to establish diplomatic relations; Canadian and Taiwan (Formosa) diplomatic ties severed. General Election in Nova Scotia; Liberals under Gerald Regan defeated Progressive Conservative government under Premier Smith; party standing—23 Liberal, 21 Progressive Conservative and 2 New Democratic Party. *Oct. 15,* Prime Minister Bourassa of Quebec announced that he had asked for armed forces to assure the safety of the people and public buildings; 1,000 officers and men from the 22nd Regiment moved into Montreal. *Oct. 16,* Proclamation of the War Measures Act to deal with the danger of an "apprehended insurrection", violence and other illegal action in the Province of Quebec. Canadian ship CSS *Hudson* returned to Halifax, ending an 11-month circumnavigation of South and North America. *Oct. 22,* Rt. Hon. Lester B. Pearson named first Chairman of the Board of Governors of the Canada-based International Development Research Centre. *Oct. 26,* General Election in New Brunswick; Progressive Conservatives under Richard Hatfield defeated Liberal government under Premier Louis Robichaud; party standing —32 Progressive Conservative, 26 Liberal. *Oct. 30,* Robert Hudon, admitted leading figure in FLQ, received 30 separate sentences for armed robberies and conspiracy to commit holdups to finance FLQ subversive activities, adding up to 25 years.

November: *Nov. 2,* Rewards of up to $75,000 offered jointly by the Federal and Quebec Governments for information leading to the arrest of the "kidnappers or murderers" of Pierre Laporte and for information leading to the arrest of the kidnappers of James R. Cross, and unspecified rewards for information leading to the arrest of Paul Rose, Marc Carbonneau, Jacques Rose, Bernard Lortie and Francis Simard. Federal Government announced further ban on arms sales to South Africa, in line with the UN Security Council's more severe resolution regarding such sales. *Nov. 6,* Bernard Lortie, 19, arrested in Montreal in connection with kidnapping of Pierre Laporte. *Nov. 9,* Death of General Charles de Gaulle, former President of France. *Nov. 11,* Agreement signed between the Quebec Federation of General Practitioners and the provincial government regarding payment of fees under medicare. *Nov. 12,* Quebec's first nuclear power station, located at Gentilly, officially opened; built as a co-operative effort by AECL and Hydro-Quebec. *Nov. 14,* Cyclone and tidal wave in East Pakistan caused deaths officially set at more than 200,000 and unofficially at 500,000. *Nov. 16,* Development loan of $20,000,000 made by Canada to Botswana. *Nov. 17,* Unmanned Soviet spacecraft, *Luna 17,* landed on the moon; vehicle controlled from earth emerged to explore moon surface. Death in Montreal of Bernard Pilon, Liberal MP for Chambly, Que. *Nov. 20,* UN General Assembly voted 51 to 49 to seat the People's Republic of China; Canada voted for the resolution; a previous resolution required approval of two thirds of the Assembly. *Nov. 27,* Dr. J. M. Harrison, Assistant Deputy Minister of the Department of Energy, Mines and Resources, named 1970 winner of the Outstanding Achievement Award of the federal Public Service. *Nov. 28,* Montreal Alouettes won the Grey Cup, symbol of Canadian professional football supremacy, over Calgary Stampeders by a score of 23 to 10 in Toronto. *Nov. 30,* White Paper on income security tabled in the House of Commons; recommended limitation of family allowances on a sliding scale to families with incomes less than $10,000 and an increase in the guaranteed income supplement.

December: *Dec. 1,* The Public Order (Temporary Measures) Act, 1970, replacing the War Measures Act, passed in the House of Commons. *Dec. 2,* Increases announced of 10 p.c. in pensions for disability and death related to military service and of 15 p.c. in veterans allowances, effective Apr. 1, 1971. *Dec. 3,* Royal Assent given to legislation changing the name of the Exchequer Court of Canada to the Federal Court of Canada, making it the main court of appeal in place of the Exchequer Court and extending the jurisdiction of its Trial Division; the number of judges is increased from eight to 12. *Dec. 7,* Report of the Royal Commission on the Status of Women tabled in the House of Commons; major recommendations relate to provision of day-care services for children, abortion on demand in certain circumstances, widespread provision of birth control information, restriction of marriage age to 18 years, relaxation of divorce laws, etc. *Dec. 7–8,* Federal and provincial Finance Ministers met in Ottawa to discuss tax concessions for small businesses. *Dec. 8,* Hon. John P. Robarts announced his resignation as Prime Minister of Ontario, effective after a new provincial Progressive Conservative leader has been chosen. *Dec. 9,* Report of the Senate committee on mass media tabled in the Senate; recommendations include establishment of a press ownership review board, subsidization of promising new journals, scholarships for postgraduate training in journalism, self-improvement in the media, etc. *Dec. 11,* Five Canadian Armed Forces pilots honoured by Peruvian Ambassador for assisting in earthquake disaster relief operations in Peru in June. *Dec. 14,* Salary increases recommended in the Report of the Advisory Committee on Parliamentary Salaries and Expenses. *Dec. 15,* The

ski hill constructed at Saskatoon for the Canada Winter Games officially opened by Nancy Greene Raine. *Dec. 16*, Three-month strike of 23,500 employees of General Motors of Canada settled by award of an immediate increase of 34 cents an hour and compromise on the issue of parity with their U.S. counterparts. *Dec. 17*, Agreement over medicare terms arrived at by the Quebec Government and the Quebec Federation of Medical Specialists. Vol. I of the Report of the Senate Committee on Science Policy released; recommends central planning and co-ordination by efficient government policy-making machinery, emphasis on the life and social sciences, on engineering and development and on economic and social objectives, and government encouragement of research and development by industry. Retirement announced of Dr. Maurice Ollivier, Law Clerk of the House of Commons, after 46 years of service. *Dec. 20*, Death in Ottawa of Arnold D. P. Heeney, Chairman of the Canadian sections of the International Joint Commission and the Canada–U.S. Permanent Joint Board on Defence, former Canadian Ambassador to the United States and Chairman of the Public Service Commission. *Dec. 21*, General Election held in Northwest Territories (see p. 1379). *Dec. 23*, Death in Trois-Rivières of Joseph-Alfred Mongrain, Liberal MP for that constituency. *Dec. 28*, Three suspects in the kidnapping and murder of Pierre Laporte surrendered to police after discovery of their hideout at St. Luc, near Montreal.

APPENDIX I

CONSTITUTION AND GOVERNMENT

Certain information given in Chapter II on Constitution and Government (closed off May 1, 1970) is updated in this Appendix to Dec. 31, 1970. Appointments during that period to the Queen's Privy Council for Canada, the Cabinet and the Senate are included in the Register of Official Appointments at pp. 1343-1344.

PAGE 78

Provincial Secretary and Minister of Trade and Industry	Hon. Ralph F. Fiske
Minister of Public Health, Minister i/c of administration of Housing Development Act, and Minister i/c of administration of Human Rights Act	Hon. D. Scott MacNutt

PAGE 112

A General Election was held in New Brunswick on Oct. 26, 1970, which resulted in a return of 32 Progressive Conservatives and 26 Liberals. Following is the Twenty-fourth Ministry as at Nov. 16, 1970:—

Office	*Name*
Premier	Hon. Richard Hatfield
Minister of Agriculture and Rural Development and Minister of Economic Growth	Hon. Edison Stairs
Minister of Education	Hon. Lorne McGuigan
Minister of Finance	Hon. Jean-Maurice Simard
Minister of Fisheries and Environmental Affairs	Hon. William Cockburn
Minister of Health	Hon. Paul Creaghan
Minister of Highways and Minister of Public Works	Hon. J. Stewart Brooks
Minister of Justice	Hon. John B. M. Baxter
Minister of Labour and Provincial Secretary	Hon. Rodman E. Logan
Minister of Municipal Affairs	Hon. Jean-Paul LeBlanc
Minister of Natural Resources	Hon. Wilfred Bishop
Minister of Youth and Welfare	Hon. Brenda Robertson
Minister of Tourism	Hon. J. C. Van Horne
Minister i/c of New Brunswick Electric Power Commission	Hon. George E. McInerney
Minister without Portfolio	Hon. G. Everett Chalmers
Minister without Portfolio	Hon. Cyril B. Sherwood
Minister without Portfolio	Hon. Horace B. Smith

AGE 122

At a General Election held in the Yukon Territory on Sept. 8, 1970, the following ouncil Members were elected:—

Carmacks-Kluane	Hilda Watson
Dawson	Mike Stutter
Mayo	Ronald A. Rivett
Watson Lake	Donald E. Taylor
Whitehorse East	Norman S. Chamberlist
Whitehorse North	Clive Tanner
Whitehorse West	John Kenneth McKinnon

AGE 126

A General Election was held in the Northwest Territories on Dec. 21, 1970. The ommissioner, Council and Council staff as at Jan. 29, 1971, were as follows:—

Commissioner	S. M. Hodgson
Deputy Commissioner	J. H. Parker
Members of the Council—	
Appointed	J. H. Parker
	Hugh Campbell
	Louis-Edmond Hamelin
	Leo Gerard Lemieux
Elected—	
Central Arctic	Lena Pedersen
Eastern Arctic	Bryan Pearson
Great Slave North	Jimmy Rabesca
Great Slave South	Paul W. Kaeser
High Arctic	Welland Wilfred Phipps
Keewatin	Willie Adams
Lower Mackenzie	Lyle R. Trimble
Mackenzie Liard	Nick G. Sibbeston
Western Arctic	Tom Butters
Yellowknife	David Searle
Council Staff—	
Clerk	W. H. Remnant
Legal Adviser	F. G. Smith

AGES 137–161

On Dec. 9, 1970, a Bill was placed before Parliament relating to the organization of the overnment of Canada, including measures to establish a Department of the Environment; delineate certain duties of the Minister of Energy, Mines and Resources and distinguish tween his duties and those assigned to the Minister of Environment; to place responsibility r astronomical observatories in the National Research Council; to provide for Ministries d Ministers of State; to increase the number of Parliamentary Secretaries from 16 to a mber equal to the number of Ministers holding office; and to provide for a Postmaster eneral.

This Bill had not yet been approved by Parliament at Dec. 31, 1970 nor has it been ssible to include the changes in the Government Organization Chart (dated April 1971) serted facing page 138.

APPENDIX II

VITAL STATISTICS

PAGES 285-290

The following are 1969 figures for Tables 1 and 2 of the Chapter on Vital Statistics:

1.—Principal Vital Statistics, by Province, 1969

Province or Territory	Live Births		Deaths		Natural Increase[1]		Infant Mortality[2]		Maternal Mortality		Marriages	
	No.	Rate[3]	No.	Rate[3]	No.	Rate[3]	No.	Rate[4]	No.	Rate[5]	No.	Ra
Newfoundland	13,000	25.3	3,005	5.8	9,995	19.5	278	21.4	—	—	4,279	8.
P. E. Island	2,009	18.3	1,007	9.2	1,002	9.1	45	22.4	—	—	868	7.
Nova Scotia	13,618	17.8	6,663	8.7	6,955	9.1	267	19.6	1	0.7	6,568	8.
New Brunswick	11,695	18.7	4,849	7.8	6,846	10.9	221	18.9	3	2.6	5,705	9.
Quebec	95,610	16.0	40,103	6.7	55,507	9.3	1,942	20.3	33	3.5	47,545	7.
Ontario	130,398	17.5	55,707	7.5	74,691	10.0	2,299	17.6	20	1.5	67,150	9.
Manitoba	17,809	18.2	8,040	8.2	9,769	10.0	388	21.8	5	2.8	8,864	9.
Saskatchewan	17,592	18.3	7,492	7.8	10,100	10.5	395	22.5	4	2.3	7,668	8.
Alberta	30,855	19.8	9,921	6.4	20,934	13.4	587	19.0	2	0.6	14,846	9.

[1] As at the date of the 1966 Census: residents only. [2] Deaths under one year of age. [3] Deaths under 28 days. [4] By place of occurrence. [5] Per 1,000 live births. [6] Population fewer than 20,000 at date of 1966 Census but included as the largest urban centre in Prince Edward Island.

APPENDIX III

INCOME SECURITY AND VETERANS PENSIONS AND ALLOWANCES

GES 374, 378 AND 383

A White Paper on Income Security for Canadians was tabled in Parliament on Nov. 1970, proposing a shift of Federal Government direct payments more in favour of people need. The paper deals with income security programs for dependent children and aged sons, the Canada Pension Plan and the Canada Assistance Plan, and also summarizes proposals presented in the White Paper on Unemployment Insurance. All the recommendations in this White Paper had not been approved by Parliament by Dec. 31, 1970 e closing date for this volume) but since, if approved, they will change considerably the ormation under the headings on pp. 374, 378, 383 and 404, they are summarized in the owing paragraphs.

Family Income Security Plan.—The existing Family Allowances program is to be laced by a Family Income Security Plan expected to be effective in September 1971. der the FISP, children up to age 16 in families with annual family incomes (husband and e) of $4,500 or less will get $16 per month per child. The $16 monthly benefit will be dually reduced as incomes rise until a benefit of $5 monthly is payable with respect to h child in families with annual family incomes of up to $10,000. The benefit is to be minated for children in families whose incomes exceed $10,000. No change is proposed the Youth Allowances program but it is hoped that it can be integrated with the new SP.

Guaranteed Income Supplement and Old Age Security.—Beginning January 1, the basic Old Age Security pension is to be a flat $80 a month. In April 1971, the aranteed Income Supplement is to be increased to $55 monthly for a single person and $95 a month for a two pensioner couple. These increases in GIS will ensure that no alified single person has income from all sources of less than $135 a month, and no qualitwo pensioner family less than $255 a month. OAS pensioners who qualify for GIS be entitled to annual escalations ranging from 1 p.c. and up to a maximum of 2 p.c. on combined total to reflect price rises. Legislation has now been passed by Parliament bring the new program into effect.

Canada Pension Plan.—Changes in the Canada Pension Plan cannot be effective il January 1973, because three years notice must be given to the provinces before major nges can be made in the Plan.

A number of changes are proposed for the Canada Pension Plan. The major changes te to increasing the earnings ceiling so as to improve future pensions, improving the el of benefits for disabled contributors and widows and to introducing a new benefit for wife of a disabled contributor.

It is proposed to increase the ceilings on pensionable earnings in annual stages from the 00 it will be in 1972 to $6,300 in 1973, $7,100 in 1974, and $7,800 in 1975.

With respect to the benefit for a disabled contributor, it is proposed that the pension ncreased effective January 1973 so that the flat rate portion would be raised from $27 onth to $80 a month and the percentage component increased from 75 p.c. to 100 p.c. he imputed value of the retirement pension, the total reduced by the amount received er Old Age Security at age 65.

With respect to the widow's pension under age 65, it is proposed to increase the flat rate ion from $27 a month to $80 a month and the percentage component from 37½ p.c. to .c. of her late husband's actual or imputed retirement pension. For widows age 65 or e, the pension is also to be set at $80 plus 75 p.c. (rather than the present 60 p.c.) of late husband's retirement pension, less the amount of the OAS pension.

A new benefit of $80 a month is proposed for the wife of a disabled pensioner if she under age 65 and has dependent children in her care.

It is also proposed to fix the basic exemption for a year at the current level of $600; retain $800 as the lower limit for determining contributory status of self-employed perso to continue (rather than discontinue as at present) benefits for the children of disabl contributors when the contributor reaches age 65; and to review the earnings test retired pensioners in the 65-69 age group.

Canada Assistance Plan.—The Federal Government supports provincial soc assistance through the Canada Assistance Plan under which it contributes one half of t costs. Discussions with the provinces will be held to try to overcome many of the ina quacies of social assistance by resolving a number of major issues such as entitlement assistance, incentives, adequacy of assistance, appeals, communication and informati administration, cost-sharing arrangements, welfare and community development servic work activity projects, and the relationship of social assistance to welfare and manpow programs.

The Federal Government also proposes to give notice to the provinces of its intenti to discontinue its cost-sharing agreements under the Old Age Assistance Act, the Blind P sons Allowances Act, the Disabled Persons Allowances Act and the Unemployment Assi ance Act. The Canada Assistance Plan would then be the only instrument for shari social assistance costs with the provinces.

Unemployment Insurance.—Major changes proposed in the Unemployment I surance program include the extension of coverage, reduction in the qualifying contributo period, improvements in the amount of benefits and the introduction of special benefits be paid on retirement and for unemployment due to sickness and maternity. The Feder Government will no longer contribute to administrative costs, which will be met by e ployers and employees, but it will pay for benefits due to a higher rate of national or region unemployment. For the first time in Canada, experience rating will be used to determi contributions by large employers.

PAGE 404

On Dec. 2, 1970, the Minister of Veterans Affairs announced in the House of Commo increases of 10 p.c. in pensions for disability and death related to military service and 15 p.c. in the maximum allowances paid under the War Veterans Allowance Act, bo effective Apr. 1, 1971. The announcement also included increases in the War Veter Allowances income ceilings by amounts equivalent to the dollar value of the rate increas and a statement to the effect that pensions and allowances, paid under the Civilian W Pensions and Allowances Act, will be aligned with those of the Pensions Act and the W Veterans Allowance Act.

On the same day, the Minister moved First Reading of a Bill to amend the Pensi Act to incorporate therein most of the proposals of the Government's White Paper Veterans Pensions, released Sept. 9, 1969, and the recommendations in the Report of t Standing Committee on Veterans Affairs, released June 9, 1970.
